The little mate is now sitting on a nest full of eggs, and Cooney is again on guard. He considers it his duty to remain in the shop with her over night; but on this point Mr. Worth is inexorable. Toward sunset he will say, "Cooney, it's time to go to bed," and the bird will march out of the rear door, around the shop, and into the woodshed in the next building, where his roost is. Several times he has tried to induce Mr. Worth to let him occupy the dark loft overhead for the night. Toward nightfall he will approach the stairway leading to it, mount a step and crow, then wait to see if there is objection. If not, he mounts another step and crows and waits; then another. Usually by the time the third step is reached he hears the stern command, "Cooney, come down! Go to bed!" and marches back and off to his roost.

"That fowl knows as much as some humans," said Mr. Worth, recently. "He knows what is said to him, and I think he reasons. The other night, on going to roost, he found the wood-house door closed against him, and at once came back. I was sitting here as I am now, and he began picking at my feet and taking hold of my pants and pulling as if he wanted me to go with him. 'Well,' says I, 'something's wrong,' and I went with him and found the door shut."

CHAS. BURR TODD.

A Florida farmer put out paris green to kill the birds which were ruining his oat crop. It killed the birds, also a \$300 gray mare and two \$200 mules.

Animals of Ancient Sculptors.

THE sculptures and frescoes of ancient Assyria, Babylonia, and Egypt abound in representations of men, and of domestic and wild animals. These were undoubtedly reproduced from specimens more or less familiar to the sculptors or painters, and were not flights of the artist's imagination. Nevertheless, very little attention has been paid to these figures by naturalists, and they have been called by names that were most inappropriate.

In a recent number of *Nature*, Mr. R. Lydekker has figured numbers of animals represented in these ancient monuments, showing that in many cases the animals are so well represented that there is no difficulty whatever in identifying them. Thus a figure reproduced from the Ptahhetep Chapel shown in the work entitled, "The Mastaba of Ptahhetep," at Saggareh, is clearly a Nubian ibex (*Capra nubiana*). It is true, the cross ridges on the front surfaces of the horns are not indicated, but the great circular horn sweep is unmistakable, while the beard on the chin makes the identification certain.

Another ungulate figure is that of the aoul or

FIG. 1.—Nubian ibex, from the Ptahhetep Chapel.

Soemmerring's gazelle (*Gazella soemmerringi*). The difference between the short and sturdy legs of the goat and the long and slender ones of the gazelle are clearly brought out, the horns are as they should be, and so is

FIG. 2.—Soemmerring's gazelle, from the Ptahhetep Chapel.

the tail. Another specimen less certainly identified is perhaps the lesser kudu.

Very characteristic of the North African desert is the oryx (*Oryx leucoryx*), here pictured, whose long back-

FIG. 3.—White oryx, from the Ptahhetep Chapel.

ward sweeping horns and long and thickly haired tail are absolutely unmistakable. This oryx is still common in upper Nubia, as is another species—*Oryx beisa*—which ranges in Somaliland, east Abyssinia and northeastern Africa generally.

In some of these Egyptian frescoes which show the

Bull Hunt.

coming of people bearing tributes from the land of Cush, the carnivora are represented by undoubted lions and leopards, the figures being shown in Goss's "Ancient Egypt," and in this same volume is found a portrait of a giraffe with a dogface baboon clinging to its throat. Nor are the smaller animals entirely neglected in the

representations on the Ptahhetep Chapel. Here are found, among other things, the figure of what is probably the little great carped fox of Africa, known as fennec (*Canis famelicus*). The little beard seen under the chin (Fig. D) probably represents the well developed bristles or whiskers which are found in that species.

The animal A is thought to be the Egyptian mon-goose, the snake killer, which was so greatly venerated by the inhabitants of the Nile Delta. The little animal

marked B is a jerboa or jumping rat, while the two animals at C are hedgehogs. Of these last, Dr. Lydekker says:

"A remarkable instance of fidelity to nature occurs in the two portraits of a hedgehog shown at C, from the Ptahhetep hunting scene, one of these representing the animal standing in the open, and the second showing it coming out of a hole with a locust in its mouth. The well developed ears clearly show that the species depicted is the long-eared hedgehog (*Erinaceus auritus*), which differs from its European cousin by the large size of the ears."

In Vaux's "Nineveh and Persepolis" are found many figures of wild animals, and among them is one shown in the bull hunt which Dr. Lydekker very reasonably considers a gnu, and very likely the white-tailed gnu, specimens of which may now be seen in the collections of the New York Zoological Society at Bronx Park. The animal differs from the bulls ordinarily shown in Egyptian frescoes, and suggests in horns and tail the white-tailed gnu (*Connochaetes gnu*).

A further study of these old sculptures may give hints to the naturalists of the ancient range of some of these species which have long been extinct in the territory where their figures are still found.

Breeding Wildfowl.

Editor *Forest and Stream*:

A sportsman friend down in St. Joe writes me that they have a mallard farmer down there who is destined to make a stir in the Western decoy business. "That *Anas boschas* can be reared in captivity," he says, "and at a neat profit at that," has been conclusively established by Peter Follman, a resident of that city. Follman has at present on his place more than 150 of these beautiful game birds so much prized by our wildfowlers.

"Mr. Follman is a stationary engineer employed at one of the St. Joseph packing houses. He works twelve hours a day and yet finds time to look after the needs of his feathered family. So quietly he has conducted his duck industry that it has passed beyond the experimental stage with little notice except from sportsmen. The building in which he has hatched and reared his ducklings is one admirably adapted to the purpose. It is an old, well lighted storeroom, formerly used by the packing house in which Follman works. In one corner is a large vat or tank, which makes an ideal swimming pool. Around it pebbles and gravel have been spread, and cattails and reeds have been planted.

"In another part of the building the hatchery is located. It consists of a space on the floor about six feet square inclosed with cleats made with lath. In this place the food, which is mostly fragments from packing house employes' dinners, is deposited once a day by Mr. Follman. On these occasions one may hear an unusual number of quacks, and the flutter of many wings, and, were he not watching, might readily suppose that the birds were eagerly flocking to the feast prepared for them, after the fashion of chickens or domestic ducks. But such is not the case. On the contrary, his daily visit seems to be a signal for them to hunt cover, which they do with surprising alacrity.

"By the time he has gotten fairly into the room, there is not a duckling in sight, nor can one be heard anywhere. Shortly after he has left, however, they emerge from their hiding places and fairly tumble over one another in their greed to get at the good things left for them. This wildness of their nature has been a perplexing problem to Mr. Follman, and a determination to overcome it was for a time his only incentive in rearing them.

"The ducks are all mallards, and the first were obtained from eggs found at Mud Lake, near St. Joseph. Follman had these eggs hatched by a hen, and took particular pains to domesticate the orphans. They would not take kindly to his overtures of friendship, however, and he decided that perhaps the next generation would be more inclined to do so.

"In this lot, however, he was as much disappointed as in the first, and finally he gave up all hope of domesticating 'the little devils' as he called them, and told a friend that he guessed he would turn them loose. But the friend had a commercial head, and was somewhat of a sportsman besides; so he told Follman just to wait and he would show him something worth while.

"Accordingly he took several of the ducks to a near-by lake and had them anchored as decoys, and came home with a full game-bag where other sportsmen got nothing. There was a general inquiry as to where he had obtained his decoys, and he revealed the secret. Then there was a stampede for Follman's place, but the friend had been there ahead of them, and had given Follman an idea of about what a pair of decoys should sell for. His whole stock would have been sold out in a single day, had he not remembered that he had better keep a few ducks with which to raise more. Thus it was that he discovered the commercial value of the little feathered creatures,

and now he has no thoughts of wasting his time trying to domesticate them.

"This last season Follman has had a big demand for his ducks as decoys, and a yet larger and more lucrative demand from that class of sportsmen who go hunting and fail to bag anything, and yet don't dare go home without something to make a showing. So steady and strong has been the latter demand that Mr. Follman has been forced to raise his prices on all his ducks, as he has frequently been offered from \$5 to \$10 for the birds in case 'nothing is said about it.'"

When asked whether or not he would continue the duck business on a larger scale, Mr. Follman replied that he would.

"I can, with a little more work, double or treble my present output," he said, "and I have not yet found it necessary to advertise my business in order to find buyers. I think that this next year I will try raising teal as well as mallards, for I find there is a large demand for them, especially for decoy purposes."

SANDY GRISWOLD.

OMAHA, Neb.

Rest, Robins and Rain.

NASHVILLE, Tenn., Aug. 2.—After years of wandering I came back the other day to the old home in Middle Tennessee, and I find with gratification that the robins have usurped the ancient nesting and feeding places of the blackbirds. This is just around our house, situated quite in town, but surrounded by five acres of trees, garden, and meadow. A great and venerable chestnut stands in the blue-grass lawn, and the feathery tassels have but lately dropped to give place to the delicate pin-cushions through which great white black and red woodpeckers dart continually. This imposing center is flanked by a noble company of mountain ash, spruce, and pine, and in consequence of this forest growth I can sit any day on our front veranda and see a half dozen or more varieties of wood birds, including orchard orioles, vireos, warblers, cuckoos, nuthatches, titmice, woodpeckers, and flickers; besides, there are the suburban catbirds, cardinals, robins, blackbirds, jays, and mockingbirds.

It is a fine thing to sit thus for hours on these rainy days with a book, half nodding, half reading, and with a look now and then at the comedies of bird life all around. A pair of robins have a nest in some umbrageous box elders near where I now write, and they are engaged in a continual warfare with the jays and blackbirds who invade their territory. In periods of truce the male mounts to a topmost twig or on a favorite perch on the carriage-house and gives out his rollicking triumph. He has no great repertoire, but I am very much pleased at being awakened every morning at five o'clock by his cheery notes, and to see him running on the grass in his comical way, capturing an occasional worm, is worth coming many miles.

Yesterday afternoon after the rain Bre'r Rabbit also appeared on the lawn, jerking his ears in the most knowing fashion, and heading toward the pea patch.

Between showers yesterday my nephew and I went out after doves, this being the first day of the open season for this game. The bunching had hardly begun, but we found enough to give my companion some fine targets, which he brought to bag in good form. He is one of the best shots in the State, and his long reaches after these curving rockets sustained admirably this reputation. From the size of the covey of young quail we flushed on the way home, there is evidence of a fine lot of hunting here, beginning November 1. The same reports come from my peach orchard, Mabellon, in northern Alabama, where I have lately had the pleasure of gathering bushels of luscious Elbertas with my own hands.

E. M.

The Ruffed Grouse in Captivity.

WORCESTER, Mass., Aug. 7.—Editor *Forest and Stream*: I have this day witnessed a sight which has caused me more surprise and interest than anything connected with our grandest game bird ever did before. I have seen four birds, two cocks and two hens, which were hatched in captivity ten weeks ago yesterday, just as healthy, just as happy, and just as contented as domestic fowl. These birds do not seem to possess any fear of man. I stood close beside the wire netting and watched one wallowing in the dirt, and though I was within three feet of him, he betrayed not the slightest fear. And to further illustrate their confidence in their worst known enemy, the gentleman who raised them opened the door of their house, and stooping down with some blueberries in his hand softly whistled, and behold, the birds came and fed from his hand. They betrayed not the slightest timidity. At which I marveled much. As I understood it, the eggs were hatched under a motherly bantam hen, and twelve eggs were selected, six each from two separate nests. A very cold storm was responsible for the death of two or three, and cats for one or two others, but he has four beautiful, vigorous birds left, and they give every promise of maturing. The gentleman who has accomplished all this is Dr. Hodge, of the Clarke's University faculty, and he is the most enthusiastic, sanguine individual regarding the feat it was ever my good fortune to meet. In the fall he will transfer them to more commodious quarters, and I shall be glad to apprise you of their condition then. They are nearly or quite two-thirds grown.

J. W. B.

THE Herald, of Aug. 4, published the following, which will be read with a feeling of sadness by all sportsmen:

"Percy C. Ohl, twenty-five years ago one of Plainfield's wealthiest men, has been taken to the New Jersey State Hospital for the Insane, at Morris Plains, demented and poverty stricken. For some time he had had a hallucination that his friends were plotting against the life of President Roosevelt, and he had written to the chief executive, offering to divulge the plot upon the receipt of \$20 and a pair of shoes. These letters were returned to the authorities here and resulted in his commitment, after Drs. Lufborough and Zeglio examined him. Mr. Ohl at one time owned an interest in the Clyde line steamers and disposed of his stock for \$150,000. He lived in luxury and took great interest in promoting gentlemen's sports, including breeding fine dogs."

Comparison of Rifles.

ROME, N. Y.—*Editor Forest and Stream:* Being something of a rifle crank myself, I read with keen satisfaction the article by Mr. David E. Wheeler, bearing the caption, "A Comparison of Rifles," in *FOREST AND STREAM* of August 6. While I do not presume to be so well posted on the scientific points as is Mr. Wheeler, much of what he wrote in said article is contrary to what I believe and what I have observed. Without doubt Mr. Wheeler can make it plainer by more elaboration of the points in question.

Under the sub-head, "The Kentucky Rifle," he states that "The Kentucky rifle was long enough and heavy enough to have burned 70 grains of black powder without giving much recoil or sacrificing accuracy. There seems to be no reason why this should not have been done, and I believe it was done. If this was so, and Davy Crockett's rifle shot a 219-grain bullet with a velocity high enough to give it a flat trajectory, its shooting qualities would have been not unlike those of the .30-40-220, the Krag-Jorgenson."

The Kentucky rifle, as I have been taught, was a short range rifle as compared to modern high power rifles. It shot a round ball, and therefore a ball which had but a slight bearing surface on the bore of the gun. This ball, as a rule, was seated on a linen patch, at the muzzle of the rifle and forced carefully down and seated on the powder. The linen patch serves a double purpose in holding the bullet to the grooves when discharged from the barrels and in forming a gas-tight check to prevent any gas escape around the bullet. Those rifles had a very slow twist, about one turn in twenty or twenty-four inches. Still, if overloaded with powder, the round ball would strip, or go out of the barrel as if it were a smooth bore, when discharged, and fly wild. I fail to see how this kind of rifle was the precursor of the express rifle any more than the old flint lock was the precursor aside from the fact that they were rifles.

I have been taught to believe that the precursor of the express was the long bullet, which gave a greater weight to the projectile, a much greater bearing surface to the lands and grooves, and permitted of a sharper twist, about one turn in sixteen inches on an average. This gave the bullet a greater spin, a higher velocity with a larger powder charge, and an incomparably truer flight on its axis. However, there was a limitation to the powder charge with the long conical bullet, for even when hardened with an alloy of tin, it would "strip" if the propelling power was too great.

The next advance was in encasing the bullet with a tough metal "jacket," of steel, nickel or copper, a sharper twist, and a higher velocity. The tough metal jacket held the bullet to the grooves, the sharp twist of one in ten held it to a truer axis on a much further flight, and the increased velocity gave a very flat trajectory, which is of paramount importance in a military rifle. Mr. Wheeler says: "Flat trajectory was a secondary consideration." I have always been led to believe that it was of the highest value in any kind of rifle, military or sporting, and was the desideratum sought by makers and users of rifles since rifles came into use.

Mr. Wheeler further states as follows:

"The jacketed bullet was not designed from humane motives, for experiments on the human cadaver seemed to show that the full mantled bullet would have the explosive effect we now know is only produced on the live subject by some form of mushrooming bullet." In this he is in error. The experiments with the full jacketed bullet proved that it had no so-called "explosive" effect whatever. It made a clean, small hole, though it produced variable results at different distances. The shock produced by it was so insignificant that it had no stopping power. Indeed, soldiers would oftentimes continue fighting when hit, wholly unconscious of the fact that they had been hit. This was such a serious detriment to the jacketed bullet of small caliber that the British government was constrained to use a bullet which was only partially jacketed, the nose being left uncovered slightly at the point, and which was known as the "Dum-Dum." This had a limited mushrooming quality, but was found to be inefficient. The present service bullet of the British is known as "Mark IV," and is much the same in size and shape as the "Dum-Dum," excepting that it has a hollow point, which insures to a certainty that on striking it will spread wide, communicate a powerful shock and wound or maim frightfully.

I think that Mr. Wheeler is in error concerning the following: "In changing to the military rifles of today, smokeless powder was used, not to increase the power, for charges almost equivalent to the old black powder loads were employed, but to prevent undue fouling of the small bore."

The smokeless powder was used to obtain several advantages, namely, to increase the power, to insure greater cleanliness, and to conceal the whereabouts of the riflemen from their enemies. Concealment was im-

possible when black powder, with its immense volumes of heavy smoke, was used.

The smokeless military powder is much more powerful than black powder. It generates enormous pressures, about sixteen tons to the square inch at the breech, and as a consequence the barrels are made of a special steel, which is strong enough to resist the enormous strains and stresses. Rifle manufacturers warn their patrons against the use of nitro powders in rifles designed for the use of black powder, for that reason. So great is the latent force of smokeless powder, that, in rifles of different caliber, it performs differently, and special kinds have to be used for different calibers.

I may be wrong in all this, but if so I would be pleased if Mr. Wheeler will show why I am wrong.

DARBY.

Minnesota Penalties Not Excessive.

We reported last week the decision of the Minnesota Supreme Court in the appealed case of Poole and Kerr, who had been convicted of having wild ducks unlawfully in possession. Executive Agent Sam F. Fullerton sends us the text of the decision, and we give here that part of it which has to do with the question of the reasonableness of the scale of penalties imposed by the statute:

The defendants were jointly indicted by the grand jury of the county of Jackson for having on September 28, 1903, in their possession two thousand wild ducks with intent to sell them. They were tried together upon the indictment in the District Court of the county of Jackson, and each was found guilty by the jury of having in his possession two thousand ducks with intent to sell the same. Thereupon it was adjudged, in the case of defendant Poole, that he pay a fine of \$20,000, and that he be imprisoned in the county jail until the fine is paid, not exceeding two hundred days. The judgment in the case of the defendant Kerr imposed a like fine with imprisonment in the county jail until the fine is paid, not exceeding three hundred days. Each of the defendants appealed from the judgment against him.

1. The statute for a violation of which the defendants were convicted is section 45 of Ch. 336, Laws 1903, which, so far as here material, reads as follows:

No person shall * * * have in possession with intent to sell * * * at any time any * * * wild duck of any variety.

Whoever shall offend against any of the provisions of this section shall be guilty of a misdemeanor, and upon conviction thereof, shall be punished by a fine of not less than ten dollars, or more than twenty-five dollars, or by imprisonment in the county jail for not less than ten days nor more than thirty days for each and every bird so * * * had in possession with intent to sell. * * *

The defendants contend that if this statute be valid, then under the form of the indictment in this case only a single misdemeanor is charged, and the maximum penalty cannot exceed a fine of \$25 or imprisonment for thirty days; and further, that if the State desired or intended to avail itself of the penalty for each bird charged to have been unlawfully in the defendants' possession, the indictment should have contained a separate count for each bird. It is obvious that the indictment charges one act, that is the possession by the defendants at a particular time and place of two thousand wild ducks with intent to sell them.

It necessarily follows that the indictment charges only one offense, and that the act constituting the offense cannot be subdivided and made the basis for two thousand indictments. The punishment, however, for a single act is graded by the statute according to the number of birds unlawfully possessed, hence the fine imposed upon the defendants was authorized by the statute. Is the statute, so construed, constitutional? The defendants insist that it is not for the reason that it is in conflict with section 5 of article 1 of the State Constitution, which provides: "Excessive bail shall not be required; nor shall excessive fines be imposed, nor shall cruel or unusual punishments be inflicted."

Although each of the defendants was fined \$20,000, the trial court imposed the mildest punishment the statute would permit for the offense of which the defendants were convicted. It must be admitted that the penalties fixed by the statute are drastic, when imposed in cases where there has been a wholesale violation of the law. It is, however, clear that the purpose of the statute is to protect the wild game of the State, and that if the punishment were not graduated according to the number of birds unlawfully possessed this purpose would be defeated. If the penalty were not graduated so that the greater the offense the greater the punishment, the statute would invite its own defeat. It would be absurd to punish the unlawful possession of two thousand or more birds on the basis of one. It would have been competent for the Legislature to have provided that the unlawful possession of each bird should be a distinct offense punishable by a fine of not less than \$10 nor more than \$25, or by imprisonment in the county jail for not less than ten nor more than thirty days. If such were the statute it could not be fairly claimed that the fine was excessive or the imprisonment cruel or unusual, although separate indictments might be found for each offense, and in case of convictions cumulative sentences would be legal. Now the statute in question secures

the same result by treating the unlawful possession of wild ducks, no matter how many, as one offense, and graduating the punishment according to the number of birds; that is, the number of offenses, if the possession of each were declared a separate offense, thereby avoiding separate indictments and cumulative sentences. So, in its last analysis, the fines imposed in this case are seemingly excessive, not by reason of the statute, but by reason of the magnitude of the offense or of its equivalent, the number of offenses of which the defendants were convicted. The fault is theirs, not that of the statute.

This method of fitting the punishment to the crime by graduating the penalty according to the number of animals, birds or fish unlawfully killed, taken or possessed, has been adopted by the statutes of many of our sister States, and sustained as a proper exercise of legislative discretion. In this connection the case of *State vs. Lube*, 93 Me., 418, is an instructive one. The statute under consideration in that case made it unlawful to have in possession any short lobsters, and fixed the fine at five dollars for each lobster. The value of such lobsters was from one to two cents, and it was urged that the statute provided for excessive fines. The court held otherwise, and sustained the law for the reason that: "If the law, as urged by the respondent's counsel, be onerous to those who, like the respondent, have large numbers of small lobsters in their possession, it is the fault, not of the law, but of the infractors."

The question we are considering is settled by the decision of this court in the case of *State vs. Rodman and Cobb*, 58 Minn., 393. The statute considered in that case was Laws 1893, Ch. 124, S. 9, which provided for the punishment of any person who should have in his possession during the closed season any variety of deer by a fine of not less than \$50 nor more than \$100, or by imprisonment in the county jail for not less than sixty days nor more than ninety days for each animal in possession. Such punishment is relatively quite as severe as that provided in the statute here in question. One of the defendants in that case was charged with having in his possession parts of fifty-eight deer, the maximum punishment for which as provided by the statute was a fine of \$5,800 or imprisonment in the county jail for some sixteen years. It was, however, held that the statute was not a violation of the mandate of the constitution prohibiting the imposition of excessive fines or the infliction of cruel or unusual punishments. The basis of the decision was that graduating the penalty according to the number of animals unlawfully possessed was in legal effect the same as making the unlawful possession of each animal a separate offense, so that the greater the offense committed the greater the punishment would be. We are unable to distinguish in principle this case from the one referred to, and following that case, we hold that the statute under which the defendants were convicted is not unconstitutional because it provides for the imposition of excessive fines and the infliction of cruel or unusual punishments.

Squirrel Barking.

Editor Forest and Stream:

I have been an interested reader of the discussion anent the barking of squirrels, and trust I may be pardoned for saying a few words on the subject after the editorial verdict in favor of the defendants has been pronounced. I know that squirrels can be barked with a rifle, for I have done the trick myself. I do not know whether they could be barked with a revolver or not, but imagine they could not; at least with revolvers like some of those I have used, which, owing to imperfect barrels, gave the bullets fired from them little or no rotary motion, which, in my opinion, is just the thing needed in this barking business. The fact that the squirrel which was shot through the body by Mr. Kelly with a .44 caliber revolver was not cut in two, or at least killed, is pretty good evidence that the bullet had little or no rotary motion, and that this revolver was an unsuitable weapon with which to demonstrate the possibility or the impossibility of barking squirrels. Mr. Kelly seems to be a candid, conservative man, and I think his statement of facts which have come under his personal observation should be accepted as truth, just as we accept as truth the statement of facts by Audubon.

A. D. McCandless makes one of his friends say that "Marksmanship is a thing of the past, because all fixed ammunition is overloaded." I do not agree with this opinion. It is true that it was not necessary to exercise the care in holding the old-time heavy rifle with its light charge that is necessary with modern rifles and heavy charges. It made no difference with the flight of the bullet whether the old rifle was rested on hard or soft substances, whether the rest was at the muzzle, mid-way of the barrel, or at the breech, whether the rifle was held loosely or tightly in the hands of the shooter, or whether the position of the hands on the rifle were the same for each shot, simply because there was no recoil. With the comparatively light rifles and heavy charges of the present day, it is different. To insure greatest possible accuracy with the modern arm, it is necessary that the holding be uniform for each shot. A short chapter from my own experience will illustrate the point which I wish to make clear.

I began shooting at the long ranges—800, 900, and 1,000

yards—with a Remington-Creedmoor rifle. This ten-pound rifle, with its charge of 100 grains of powder and 550 grains of lead, of course recoiled excessively. I shot this rifle in the "back position," namely, lying on my back, with my feet toward the target, the butt of the gun resting in my right arm pit. At first I grasped it firmly with both hands, one at the grip and the other about mid-way of the barrel. While holding in this way I did no good shooting, my scores never reaching 200 points out of a possible 225, simply because I did not exert the same force in holding the rifle for each shot, and I presume it rested differently on my person as I gave no attention to such details at that time.

My next method of holding was to rest the rifle on my person as nearly alike as possible for each shot, and not touch it with my hands at all, except to pull the trigger with one finger. The trigger pull and weight of rifle was of course uniform for each shot. Holding in this way my average for an entire season was a fraction over 213 points out of a possible 225, and my best score was 223 points. In the latter score, 44 out of 45 shots struck the bull, and the shot which did not do so was no doubt owing to an imperfect cartridge. I believe this great difference in accuracy was due mainly to difference in holding the rifle.

It is, of course, a difficult matter to fairly compare the accuracy of modern rifles with the old-time rifle. However, in testing the Remington match rifle with which I now do my offhand target shooting, I put ten consecutive bullets in a 2½-inch ring at 200 yards distance. In testing a Sharps Creedmoor rifle which I now own, I put ten consecutive bullets in a 1¾-inch ring at 200 yards. The charge for the latter rifle was 105 grains of powder and 550 grains of lead. It is extremely doubtful if Daniel Boone, or any other of the old-time riflemen, ever shot a rifle which was capable of greater accuracy than this. I have shot a good many of the old heavy muzzleloading rifles of the best makes, and while I was able to do good shooting with them at very short ranges, I found them unreliable at any range above 150 yards. This was necessarily the case as the light round bullet would not hold enough of its initial velocity, and its flight was too easily affected by variable winds and atmospheric conditions.

It is not often the case that we get an unvarnished account of what the old Kentucky rifle was really capable of doing. The history of the battle of New Orleans, however, furnishes such an account. Europe was amazed at the results of this battle, and we may safely conclude that the rifles and riflemen on the American side were at least as good as any in the country at that time. When the Emperor Napoleon learned that the deadly work in this battle was done by a few Tennessee and Kentucky riflemen, he had four of the rifles they used sent to him for inspection and tests, also some targets which were shot by Coffee's Kentuckians. These targets, it was certified, were shot at 75 and 125 yards. At the first named distance, ten bullets had been put into a square 4 by 4½ inches. At the further distance the shooting was at a 6-inch square, and all of the bullets were well within the square. Now, we must assume that the best available men and guns were selected for this test, and that the best targets which they could make were the ones sent to the French Emperor. It is perfectly fair, therefore, to compare these targets with the best shooting done at the present time, for instance with the target made at Walnut Hill by F. J. Rabbeth, when he put 15 consecutive bullets in a 2-inch ring at 200 yards.

It would be strange, indeed, if modern machinery and skill could not produce as fine rifle barrels as those used by our ancestors, and as to our fixed ammunition, I do not think it too much to claim that it is more accurate and uniform than a charge of powder hastily measured in the hand and a bullet defaced by the ramrod of the old muzzleloaders. I am with Mr. Kelly in thinking that there are many myths in regard to ancient rifle-shooting which should be "busted."

JOS. W. SHURTER.

GANSEVOORT, Aug. 4.

MILFORD, Conn.—*Editor Forest and Stream:* In order to add, if possible, to the discomfort of Allen Kelly (for I am one who believes in the old Daniel Boone, Davy Crockett, Natty Bumppo tales), let me tell him that it is a well recognized fact in military surgery that a rifle or cannon ball need not touch the victim in order to kill.

The "Medical and Surgical History of the Rebellion" furnishes many such instances; some in which a conical or spheroidal ball, passing close to the leg, caused comminuted fracture of the bones about the knee joint; others where sudden death occurred from the effect of the ball passing close to the heart, etc. All surgical works devote space to wind contusions and wind fractures.

Old Daniel need not have hit the limb of the tree to kill by shock. The ball passing within the fraction of an inch of the heart or back of the head would have killed. But it was more sport to bark the varmint; and then, perhaps, Daniel, like Allen Kelly, didn't know about wind contusions.

M. D.

Editor Forest and Stream:

I beg to tender to Mr. Allen Kelly my sincere apologies for having implied a doubt of any of the statements which he has made in the squirrel-barking controversy. I did not intend to express any such doubt, but sometimes one's feelings carry him a little further than he intended.

I trust that Mr. Kelly will accept the assurance of my distinguished consideration. Though we have differed on one point about rifle shooting, I heartily agree with the remarks which he recently expressed on the Palma trophy fiasco in your rifle columns.

RIFLEMAN.

Editor Forest and Stream:

I notice that Mr. Kelly gives me the credit of being able to knock out the squirrels by hitting the limb a foot away from them.

I did not claim to be able to kill them that way; in fact, stated that I did not want to hurt them, and I probably did not.

By the way, these little .22 caliber Stevens rifles have made another record, this time in Philadelphia. Some boys were shooting at a tin can set on top of a post in a back yard, when the ball passed clear through the can, then through a board in a fence and next struck a stone wall which deflected it, and then going next through a pane of glass in a window, struck a woman in the fore-

head, deflecting it again; but it kept on, and may be still going, as the detective who had been sent to find out how this woman had been shot did not trace its course any further.

I do not wonder that a man who had never seen bullet-molds before would mistake them for nut-crackers; they are seldom seen now. The last time I ever saw a pair in use, a party of young Indians had them molding balls for their old Colt's powder and ball .45 army pistol, and they were doing it just as I had often done it, even to floating a piece of charcoal in the lead in their ladle. I could not show them anything about it that they did not already know.

In regard to barking the squirrels, if I may be allowed to mention an opinion, I think that quite enough evidence has already been brought before the court to convince Mr. Kelly, or any one else, that they can be barked, provided you only know how to do it, and that should allow the defense to rest their case.

CABIA BLANCO.

Snuffing the Candle.

Editor Forest and Stream:

The feats of skill attributed to Kentucky riflemen of the last century, were discussed by the members of a shooting club recently, the squirrel barkers having revived interest in the question. Difference of opinion developed when the trick of snuffing a candle was mentioned, and the matter was put to the test of experiment by three members of national reputation as expert marksmen. A lighted candle was placed at a distance of eight yards from the firing point. The shooters used a .22 caliber match rifle of the highest type, fitted with peep and globe sights, and fired from a rest, insuring the most perfect accuracy. They had no difficulty in hitting the wick, and they snuffed the candle frequently. But invariably when the wick was hit the candle was extinguished.

Now we are told that at a distance of fifty yards the Kentuckians, using rifles of large caliber—Crockett's seems to have been .52—and shooting offhand, frequently snuffed the candle without putting out the light. Indeed, it appears that the contestant whose bullet extinguished the flame was regarded as an inferior shot.

Is it possible that the most skillful riflemen of this day, using the most perfect weapon obtainable, are unable to shoot from a table rest at a distance of eight or ten yards as accurately as the old-timers shot offhand at fifty yards? Or is the disturbance of air caused by the passage of a heavy round ball so much less than that produced by a .22 conical bullet as to account for the difference in results?

Perhaps a modern candle is more easily extinguished than an old-fashioned tallow dip with its thick wick. The latter leaves a long, charred tip of wick as it burns down, and possibly the extreme end of that may be shot away without affecting the flame.

If readers of FOREST AND STREAM have tried the feat under exact Kentucky conditions, their reports of results should be interesting. What somebody's uncle told him he saw his grandfather do is of no consequence. Let us have direct and competent testimony. Has anyone seen a candle snuffed with a rifle ball without putting out the light?

MANHATTAN.

Massachusetts Game.

BOSTON, Aug. 6.—*Editor Forest and Stream:*—The search law passed last winter is beginning to bear fruit. Deputy John F. Luman, assisted by deputies D. F. Shea and A. D. Putnam, have recently raided the premises of a taxidermist of Worcester, where they found twenty-six quail, four woodcock, six pheasants, sixty-nine partridges, and a large number of song and insectivorous birds, besides several nests. The full amount of fines would be \$4,740. In court, J. R. Kane, Esq., conducted the case for the commonwealth.

Reports of deer being seen are numerous. A few days ago a fawn appeared on the lawn of a summer resident at Annisquam. One was also seen in the North Shore woods at Beverly Farms. A lad at Country Farms, in Greenfield, while driving cows to pasture, reported seeing four, and several citizens of Pochassic, near Mt. Tekoa, report seeing a herd of fifteen between Peter S. Malone's house and the tracks of the Boston and Albany Railroad.

Deputy Luman, who has been in the western part of the State for several days, and has had an opportunity to observe, says the outlook there for game is very good. He thinks partridges have wintered better than was expected.

Mr. Frank N. Swan, of Bellevue avenue, Springfield, while seated on his piazza overlooking his back lawn, saw a deer trot across into the garden, where she regaled herself for a half hour with his sweet corn. He approached within half a dozen rods before she moved on. Mr. A. P. Butterfield, of Dunstable, called in at the office this week and reported that one of his neighbors has been visited by a deer several times, and the animal enjoys a meal now and then in his garden.

In the quail sections of the State it is not expected that birds will be very plenty, and there is no question that it will require another year's restocking and much self-denial on the part of sportsmen the coming fall to give our stock of quail a chance to recuperate. If the next winter should prove a mild one, by a year from next fall, provided the work of restocking is kept up, we may hope for good quail shooting.

CENTRAL.

The Dog and his Skin.

In England, according to the Shooting Times, from which the appended excerpt is taken, a dog and his skin is in much the same state of jeopardy as a fool and his money, to wit:

"It appears as if there were some solid foundation for the rumors that have for some time been prevalent of dogs being stolen for the sake of their skins to turn into motor coats and rugs. In a police court case the other day, when a man was charged with stealing two dogs—a spaniel and a mongrel—he is reported to have stated that he could get 25s. for a spaniel's skin, and 10s. for the nondescript's covering. This adds an extra risk to the dog owner, as, if this story is true, the dog stealer will endeavor to kill and skin the dog at the earliest moment; so that there will be little chance of recovering from such a class of thieves."

Sea and River Fishing.

In Colorado Waters.

DENVER, Colo., July 30.—Catching bullbats on the fly seems to be a common occurrence on the banks of the Gunnison at least. My yarn in a recent issue of this paper has been read with widespread interest locally, and has brought out a similar experience. This time the hero is Thomas D. Parker, secretary of the Colorado Promotion and Publicity Committee, and an enthusiastic angler. He ranks with the experts in long distance casting, and it was while doing some tall stunts of this kind near Gunnison a couple of weeks ago that he almost jerked his arm out of its socket by hooking onto something behind him. It was rather late in the afternoon, dusk was falling, and he says he noticed that for some time the bullbats had been hovering about him in large numbers. Of course, the idea that they were trying to take his flies never entered his head until he accidentally hooked one. It was a rather delicate task to reel the captive in, particularly as the barb had anchored in the wing of the bird. When almost within arm's length, the bird fluttered off and disappeared.

Mr. Parker then returned to the whipping of the stream, and was doing very nicely when he got another "air strike," and behold, there was another bullbat circling skyward with his tackle. The experience might have been pleasant enough if he had been out for bullbats, but it was rather ticklish business reeling in from the clouds, and there was danger of smashing a tackle. However, the captive bird was finally reeled in and netted in the presence of half a score of other anglers, who quit casting to witness the queer proceeding. Examination showed that the poor bird had actually taken the fly in its mouth while darting through the air in search of insect food. It was released as gently as possible and returned to its native element. At the time the air over the water was literally alive with the little stone fly, and Mr. Parker was using the ginger-quill and blue-quill midges for his battery.

More than 10,000 fine trout were killed by the cloud-burst which visited South Platte Cañon last Sunday night. A burst dam released a flood of water twenty feet high, and it swept everything before it. When the waters became normal, anglers and boys went along the banks and gathered sacks and dish-pans and other utensils full of large fat trout. Orlando Preston, of Denver, says he saw boys gather up strings of forty and fifty handsome trout, ranging from twelve to fifteen inches in length. Trout smaller than these were left to decay on the banks. Digging in the newly made sand banks always revealed a number of dead fish. Some few of them weighed as much as six pounds. Thousands of the dead fish rotted in the sands.

At Cimarron, on the Rio Grande Railroad, where the two forks of the Cimarron flow into the Gunnison, there is most excellent fishing ground. But up to the present the opportunity for good sport has been fraught with more of discomfort, not to say privation, than the average tenderfoot could stand. Now, however, a good hunting lodge has been opened there, and sportsmen who stop there from now on will find ample accommodations of a liberal kind awaiting them. The lodge is conducted under the auspices of the Rio Grande road. Trout are very plentiful in the three streams that come together here; it is only a matter of a couple of hours to take all one wants for food purposes, and there are some as big and lusty chaps lurking in the deep pools as are to be found lower down the Gunnison.

William Doty is high line for the State up to date. He captured Colorado's prize trout at Wagon Wheel Gap on the Rio Grande River last week. He had the fight of his life before he brought his captive to beach at the end of ten minutes. Weight, 11½ pounds; length, 30 inches; girth, 22 inches. Mr. Doty presented it to T. J. Fisher, of Colorado Springs, and the latter has had it mounted by Stainsky, the local taxidermist.

This is the day of the midge. Heretofore flies mounted on No. 6, 8, and 10 hooks have had the call, but I fail to hear of any one doing successful work with other than the midges. Almost every big catch reported has been made with the lightest of tackle. The best killers are the stone fly, the ginger and blue-quill; the hackles and red ants are also good killers. Wise anglers are putting away their tackle, except for single day's sport, until about the 20th of August, when the real sport with the real big ones begins and lasts clean up to the last of the open season. September will record some big catches.

A party of four anglers, A. R. Merriman, J. B. Milner, and R. G. Spencer, of Loveland, and Byron Haywood, representing A. G. Spalding & Co., at Denver, fell into the hands of an ambitious game warden while fishing the Big Thompson a few days ago. They were bound over for trial on the charge of having trout in their possession under the legal length, seven inches. Yesterday their trial took place, and the four were discharged. And now Mr. Haywood is putting in some busy moments explaining to his numerous friends how such an old and seasoned angler as himself got caught in bad company.

DENVER, Colo., Aug. 5.—Mrs. A. B. Schmidt, wife of the Rock Island's City Passenger Agent at this point, is just back from the Gunnison, having put in several weeks at Iola. Mrs. Schmidt has the reputation of being one of the "best fellows" that ever unfurled a leader over a Colorado pool. She acquired her woodlore back in New England. She makes one of the most picturesque figures to be found in a day's journey. No fine fishing togs for her—just a plain woolen sweater that looks suspiciously as if it might have once belonged to her husband, a pair of 75-cent overalls, a straw hat, firmly tied on, and a pair of wading trousers. Those who have seen the lady on the waters up to her waist say she can handle a string of flies as gracefully and accurately as the next one, and that her manipulation of a bleached minnow leaves nothing to be desired. She must have a tantalizing method, for on her return to the city last week she invited a number of railroad men to the Schmidt domicile and fêted them on baked trout—mind you, they were too big to fry—as they were never fêted before. Mrs. Schmidt is also a famous camp cook, and is so popular among those who have had

the pleasure of once "marooning" with her, that she has more invitations to "go again next time" than she could fill if the whole year were just a vacation. She always goes for the "big fellows," and thinks no more of plunging in up to her arm-pits than a dog does of chasing a cat.

Just now, and for a week past, fly-fishing has been at its best all over the State. On the Eagle and Frying-Pan rivers in the western part of the State the fishing has been delayed by high water. Now, however, the coy little fellows have "returned to their chops" quite avidly, and the catches are both large and numerous. From July 1 to 15 the catches on these rivers were very heavy, trout taking the fly readily. Then the snows began to melt and fishing became poor. The abundance of food brought down by the melting snows was most likely responsible for this in part. From the present time until the latter part of September, however, there will be "something doing" all the time, with a noticeable improvement after Labor Day.

Near Leadville on Tennessee, Lake Park, Arkansas, and Willow creeks, large baskets have been the rule right along. The latter creek is very narrow, as one approaches its head, and the fly cannot be used. Grasshoppers are the thing, and anglers have no trouble in appropriating from twenty to forty handsome trout in a short time. The creek is very narrow, and very deep, and abounds in many secluded holes. It is seldom fished.

Bait-casting on the Eagle River is giving good results. Bullheads are the favorite morsel. Carey Bates, of Leadville, is high to date in these waters. He enticed a 5½-pound rainbow with a bullhead last Wednesday, and says he had the sport of his life making the killing. It's all right, perhaps, while playing a big one taken with live bait, but the long waits incident to that sort of fishing does not appeal to some. Kinder reminds me of fishing for mudcats in the Mississippi—go to sleep, wake up at the end of a couple of hours, and if there is anything on the hook he's "jes' nacherly got ter come in, 'case he kaint git off," as the old darkey said. The element of uncertainty—so large a part of fly-fishing—makes a strong appeal, even though one does take more small than large fish. Bait-fishing is somewhat aptly described as like waiting for a politician to come around and "make you take the job" he promised you before election. Fly-casting, on the other hand, is as full of incident and "atmosphere" and the "unexpected" as a first-class insurance agent's daily routine.

Robert Maxwell is credited with having caught a two-pound eastern brook trout a few days ago in Clear Lake, near Georgetown, with two perfectly developed mouths. My informant was unable to say whether it required two flies to do the business or not. Mr. Maxwell is preserving his finny *lusus naturæ*.

Trappers' Lake, in Garfield county, is probably the most wonderful body of water in the State. Cast a battery of three flies and you withdraw it with a trout attached to each fly. Repeat the operation ad lib until tired, and that's about all the sport there is to it. The unexpected cannot happen. Strange to say, the trout are almost of a size—about 12 inches, but are measly and thin. Anglers who have visited the lake say the absolute certainty of filling one's creel takes away the pleasure of the sport (?) in a short time. It is a favorite resort for tenderfeet, who are sure to "get their money's worth," as the trout will strike at one's fingers if he sticks them in the water. Its banks are dotted with many camping parties just now.

Foster Hight, of Lafayette, Ind., was almost "scairt" out of a year's growth this week while fishing in the Rio Grande at Wagon Wheel Gap. He came face to face with a big bear, but did not stop long enough to gather whether it was a grizzly, a silver-tip or a cinnamon. At first he thought it was a Colorado mammoth come to life. The bear was feeding on berries on a table about 500 feet above Mr. Hight, and could not have come down if he had wanted to.

Deputy Game Warden Wilson has placed 600,000 trout fry in the Rio Grande River at Creede. These fry had to be packed over Weminiche Pass from Emerald Lake on the backs of pack mules. The State and the National hatcheries are doing great work in stocking the streams, and there is little likelihood that the sportsmen who come to Colorado will be disappointed of good angling for years to come, if ever. There is still some vandalism, such as dynamiting the streams by construction men on railroads, reservoirs, etc., but the game wardens are doing good work, and making it hot for the few who do these things.

Speaking of vandalism, Game Warden Charles A. Purington made it cost August Schempf, of Sidney, Colo., \$34 for killing a deer on July 16 last. Magistrate E. F. Gardner, of Steamboat Springs, assessed the fine. Schempf is a ranchman. While there is an occasional miscreant like this one, yet it is fair to the ranchmen in the districts where big game abounds to say that few of them are law breakers. Game law criminals can soon be spotted and brought to book, if the officers are earnest in their endeavors.

James Slane, of Saguache, in the southern part of the State, caught a bear in one of his traps last week. It was a monster and hobbled away on three legs before Mr. Slane made his rounds, leaving the severed foot as a memento.

August 1 was opening day of the dove season, and every sportsman (?) who went out came back with a big bag. The gentle creatures have been free from molestation for so long a time that they sit on the wire fences of the roadways and refuse to move, in many instances, at the passage of wagons and other vehicles. Killing them at this stage of the game is about as exciting and "sportsmanlike" as picking off a brood of half-grown chicks in the backyard. In a few days, however, they become so wild that it takes a good shot to tumbel them off the wing.

J. D. C.

Maine Fishing.

THE fishing in Maine this season has been about up to the average. The trout, I think, have fallen off; but the introduction of the landlocked salmon has more than made up for the decrease in trout. They thrived wonderfully, making their appearance in many new lakes year by year. If it were not for our landlocked salmon, the fishing would have deteriorated very perceptibly. They are going to be the coming fish in game.

HENRY O. STANLEY.

The Perils of Angling.

IF there is any place requiring a cool head, it is when one is in a light boat or canoe angling for heavy fish in deep or swift water. Undue excitement has cost many a life under such circumstances.

A curious example of the outcome of undue excitement has just been related to me by a friend—in fact, the individual himself.

Unfortunately for my friend, although a man of thirty-five years, yet only once previous to this occasion had he experienced the joys of angling.

Business took him up near the pine woods, and between trains, after his business had been transacted, he was invited by two of his customers to try the maskinongé. And off they started, he throwing out his lure, and within a few moments getting a vicious tug at his line which bent his rod and set his reel screeching. The tug on the line, the bending of the rod, and the screeching, whirring reel were too much for him, and giving a spasmodic leap he cleared the boat and landed feet first on the bottom of the lake that was covered with five feet of water—holding fast meanwhile to the rod. The cool water calmed his nerves at once, and being a six-footer he simply elevated his chin and arms, and in his own fashion began to manipulate the rod and reel. The fish began to leap and run, and when turning his head toward the boat to ask for advice as to the proper way to handle the fish, no one was to be seen in the boat. Both his friends had just simply rolled off their seats and were guffawing with laughter; the only thing to be seen by him were two corn-cob pipes that his friends had removed from their mouths and held aloft while they roared with amusement.

He landed the fish. I asked him what it weighed. "It was a maskinongé," he replied, "and weighed 2½ pounds." "Much ado about nothing," I exclaimed, and I made up the third man who heartily enjoyed the episode.

CHARLES CRISTADORO.

The Foolish Pickerel.

UNCLE GEORGE H. is a man of weight and substance. He is large and very stout, but is very fond of pickerel both as food and for game. It was in pursuit of this mighty fish early one spring that the following adventure occurred, which I will relate in his own language:

"Well, you see, a couple of fellows took me in a flat-bottomed boat spearin' up in the creek that comes out of Lake George. We had no luck to speak of until we ran the boat up a sort of long narrow ditch, at the end of which we saw a big back fin waving in the light of the torch. I harpooned the mighty old man of the sea, and we managed to get him into the boat. He wasn't hurt much, only a flesh wound, and swam about the leaky old craft, which was half full of water most of the time, and we were afraid he would jump out. We did our best, but that was the only fish we could get, although the water was thick with them sometimes. The fellow who did the poling finally managed to run the old catamaran on a big rounding stone, and in less than no time we were all in the drink up to the waist, and the boat was full of water. To say that I felt disgusted would hardly express my sentiments. To get wet like that on a cold night and far from home was bad enough, but the idea of losing my big pickerel was enough to enrage a saint. However, there was no help for it, so I began to bail out the boat. Well, the water began to subside a little, and what do you think? That fool pickerel hadn't left the craft at all during the melee. He had just retreated away up under the bow seat as far as he could go, and kept quiet, waiting further developments. I tell you I was pretty proud to ride into the village with my 18-pound beauty that night."

PETER FLINT.

Rare Gulf Fish.

ST. LOUIS, Mo.—In the Forestry and Fish and Game Palace of the Exposition at St. Louis, Mississippi has a curious fish which bears the common name of the feathered eel or Irish el. Louisiana also possesses an individual of the same kind which will shortly be placed on exhibition. The fish is eel-like in shape, but has no near relation to the eel family, since it is a very well marked member of the gobies, or fish with the ventral fins united to form a sort of disk.

This particular goby is called in the scientific books *Gobioides broussoneti*, Lacépède, but the fishermen preferred to bestow upon it the names mentioned above.

The name "feathered eel" is not inappropriate, because the rays separating the back fins project far beyond the membrane and look very much like feathers.

Professor Dodson, Director of the Experiment Station of Mississippi, and Mr. Koppman, of the Louisiana exhibit, both told me that the two specimens shown here were collected by a taxidermist in Harvey's Pass. The writer now knows of three specimens of this interesting goby which is native to the West Indies and southward to Brazil. One of these is in the United States National Museum, and was described in its Proceedings for 1895, page 631. The other two are among the curiosities of the Fish and Game Department of the Universal Exposition at St. Louis.

TARLETON H. BEAN.

An Erie Sturgeon.

ERIE, Pa., Aug. 6.—Two young men who were out in the bay fishing with hand lines to-day, caught a sturgeon that is likely to be the record fish of this season here, unless someone takes that big maskinongé out of Misery Bay that is always going to be, but never is, caught. The sturgeon weighed 33 pounds, and measured 4 feet 9 inches.

A party of three ladies and two men who were out on the bay fishing on Thursday, caught, among other fish, a yellow bass weighing 6 pounds, and the largest maskinongé that has been reported here this season. It measured 34 inches, and weighed 14 pounds.

CABIA BLANCO.

Death of Abner Kellogg.

LOON LAKE STATION, N. Y., Aug. 5.—Abner Kellogg, 45 years old, an Adirondack guide for many years, and who lived alone in this place, not being seen for two days, neighbors entered his house and found him lying on the floor, paralyzed and unconscious. He died two hours afterward without regaining consciousness.

Enlist the Local Press.

BUFFALO, N. Y., Aug. 8.—*Editor Forest and Stream:* An account was given in the Sunday Express of a fishing trip to Port Rowan, Ont. It was composed of E. W. McIntyre, William Conboy, and Charles H. Cutting, all lawyers, and William H. Siebold. According to the Express, they kept an accurate account from day to day, and in the five days they caught 1,125 black bass, weighing 700 pounds. Port Rowan is a fine place for bass fishing this year, and is on the Canadian shore of Lake Erie. These men sold their 700 pounds of bass for \$90, and, after paying all expenses of the trip, were ahead \$4.50 each. Undoubtedly a great many just such items appear in the local papers throughout the country. They are given as news items, and incidentally to give a little free advertising.

But what a relief it would be to see some of these fellows criticised editorially for their excesses. I hope some day to see our local papers preaching against this kind of slaughter as they would against any public enemy. There is no question about the great good done by such papers as FOREST AND STREAM, but unfortunately they do not reach only a portion of the people. We all know those who fish and hunt, but are not regular readers of papers and magazines catering to such sports. This is to be deplored, for unless a man is case-hardened, FOREST AND STREAM would cure the worst case of greed in sport in a very short time.

In this connection, it is encouraging to read an editorial in a Portland, Oregon, paper regarding breaking the game laws on the Northwestern Coast. If these Buffalo men had any idea of the proper limitations of a string of fish, they would not have been proud enough of the catch or of prices obtained for fish to give out the information as a news item.

DIXMONT.

St. Lawrence Anglers.

THE twenty-first annual meeting of the Anglers' Association of the St. Lawrence River, was held at the Murray Hill Hotel on Murray Isle, August 3. A protest was made by the Association against the new regulation of the Province of Ontario which requires that Americans fishing in Canadian waters shall pay a fee of \$5 for every rod fished unless such persons are guests at Canadian hotels or boarding-houses, or have purchased their supplies in Canada. A committee of two Canadians and three Americans was appointed to make efforts to secure the rescinding of the regulation which was declared injurious to the sport.

Officers were elected as follows: President, Charles R. Skinner, of Albany, N. Y.; First Vice-President, Alexander T. Robb, of Brooklyn, N. Y.; Second Vice-President, Thomas B. Kerr, of Englewood, N. J.; Secretary, M. H. Thompson, of Alexandria Bay, N. Y.; Treasurer, R. P. rant, of Clayton, N. Y.; Executive Committee—A. C. Cornwall, of Alexandria Bay; F. H. Taylor, of Philadelphia, Pa.; A. E. Clark, of Chicago, Ill.; Gilbert T. Rafferty, of Pittsburg, Pa.; George C. Boldt and Charles G. Emery, of New York city; Col. O. G. Staples, of Washington, D. C.; W. H. Nichols, of Brooklyn, N. Y.; George Hall, of Ogdensburg, N. Y.; T. A. Gillespie, of South Orange, N. J.; C. E. Britton, of Gananoque, Ontario; and C. W. Crossmon, Walter Fox, and Dr. J. D. Cole, of Alexandria Bay, N. Y.

The Kennel.

The Tu Quoque.

BERKELEY, Cal., July 23.—*Editor of Forest and Stream:* The following resolutions were passed at the meeting of the Pacific Advisory Committee of the American Kennel Club held to-day:

Whereas, It has come to the knowledge of this committee, that the organization known as the Western Kennel League has seen fit to incorporate into its constitution and rules a clause disqualifying all persons who may exhibit dogs at shows held west of the 110th degree of longitude under the rules of the American Kennel Club, and, whereas, such a clause proves that the organization has been formed and exists in a spirit of undisguised hostility to the American Kennel Club, and, whereas, such action is prejudicial to the best interests of dogs and dog shows, therefore be it

Resolved, That from and after this date any person or persons acting in any official capacity, paid or unpaid, including that of judge, secretary, superintendent, steward, or clerk of a show, or as an officer or member of a bench show committee of a club holding a show west of the 110th degree of longitude, under the rules of the Western Kennel League, or under any rules other than those of the American Kennel Club, shall be and hereby are disqualified and debarred from all privileges of the American Kennel Club. Carried.

By giving publicity to the above resolution in the columns of your valuable paper, you will much oblige,
PACIFIC ADVISORY COMMITTEE, A. K. C.,
J. P. Norman, Sec'y.

The Passing of Old Jack.

MORGANTOWN, W. Va.—*Editor Forest and Stream:* Not for many months have I felt the loss of anything more keenly than I have the loss of my old friend Jack, the grand old setter owned by Elmer Jacobs. Jack is dead, but the memory of the many pleasant days spent with him and his former owner, Mr. Stillman, of Providence, Rhode Island, will remain as long as memory lasts.

On our outing trips, whether it was a sail down to the Pawtucket banks wick fishing on a pleasant Saturday in summer, or in the marshes along Narragansett bay after ducks on a dark, chilly, misty day late in November, or tramping through the pine thickets, the old pastures and orchards of the deserted New England farms after the lordly grouse, on one of those New England Indian summer days in October, when the sun diffuses through the atmosphere a golden mellowness and all-pervading peace seems to have settled over the land, on all such occasions dear old Jack was our constant companion and faithful friend.

I have looked forward with considerable interest to the meeting of old Jack and his former master when he should visit here next winter, as I knew it would be such a meeting as would never be forgotten by anyone witnessing it.

I can but lament as did McLeod of Dare: "We can never go over the fields again, Jack, never again in all the days that are to come." As for Mr. Jacobs, the sympathy of all lovers of the dog should be his now, for as good dogs come and go and have their day, there will not be any more Jacks for him.

If at any time Elmer takes you to a little mound in his back yard, and you discover a tear in "Cub's" eye, take off your hat, for you are in the presence of all that remains of a noble specimen of "man's best friend." B. S. W.

Yachting.

A Cruise on Long Island Sound.

BY CHARLES N. ROBINSON, HARTFORD, CONN.

(Concluded from page 121.)

The men on the tow were straining at the capstan on the first box, and when they had broken out the anchor, the tug slowly pulled the tow as far as possible into the angle formed by the island and breakwater. A large two-masted schooner came in and brought up inside of us. She left her mainsail up but soon got it down and let go her second anchor. The rain and wind came in squalls of constantly increasing violence. Finally one of these almost hid the schooner from view, and through the blur of rain we saw her fall off broadside and walk away with both anchors. Our own dragged soon after this, but the second one brought her up and then chafing gear had to be put on the cables, which was wet work with the bow going under at every dip in the short, sharp sea. To be on the safe side our spare 55-pound anchor and cable were put overboard, and then we crouched in the cockpit and waited for something to happen. Inside quarter of an hour all three cables were taut.

The coal boxes appeared to be making fair weather of it, being well protected by the island. One of them was leaking badly, and six men were constantly pumping. Finally the tug came alongside, and after some delay got a length of hose into the box and connected it to her own pump. As for ourselves, with 116 pounds of anchor and a goodly scope of cable out, we felt pretty sure of not going ashore—barring accidents. The barometer had dropped steadily at the rate of 0.10 inch an hour from 30.02 at 6 o'clock to 29.38 at noon. The tide was nearly high, and when it turned we hoped the wind would veer and go down. At 1 o'clock the barometer had risen to 29.46, and the wind was working around into the south. This made the breakwater a lee, but only a partial one, as the waves were breaking clear over the top. Our position was far from comfortable, but we had the satisfaction of knowing that it would improve as the tide fell. Our small boat was more than half full of water, and as it seemed possible that there might be more wind, H. put on a bathing suit and managed to bail her out.

Although the barometer only rose to 29.55 during the afternoon, the wind dropped with the tide and died away at sunset. The schooner had just escaped going ashore after all. The frame-work for the light on the end of the breakwater was knocked out of true, and when the keeper came out in his power boat to light up he tested the ladder a good many times before climbing to the top. On shore a great deal of damage was done, especially by the very high tide. The Patchogue and Menunketesuck really became rivers for a while, and the waters were backed up to such an extent that the main road to Clinton was three feet under water near the bridge spoken of above.

That night we slept soundly on a quiet sea with nothing to disturb us—not even a nightmare.

Saturday the 13th brought a clear sky, plenty of heat, and no wind. Breakfast was soon out of the way, as it had been partially prepared the evening before. We started to break out our assortment of anchors at 7 o'clock. I was surprised to find the heavy canvas that had been put around the cables where they passed through the brass chocks, actually worn out on two of the ropes. All the anchors came up without much trouble, and from the samples on the flukes the bottom appears to be a mucky sand. We got the two large ones on deck and unbent the cables, then as a light air crept in from the S.W. the small anchor was hauled up and we gradually crawled away from the wall behind which we had spent such an exciting morning the day before. As soon as we were clear of the breakwater, the club-topsail and jib-topsail were set, and after several short tacks we passed the red spar buoy on Stone Island reef and then headed close-hauled on the starboard tack for Faulkner's Island. The wind was very light, but with the help of the tide we were off the south side of the island by noon, when the wind faded away completely. Passed the time by starting one of the stoves and toasting some hardtack, which had been previously well buttered. Also made some cocoa with the last of the milk, but it was hardly a success, as the milk objected to the way it was treated and curdled. The cables were now dry, so they were carefully coiled, stopped and stowed away forward with the anchors on top.

About 1 o'clock the tide turned ebb and a nice breeze came in from the S.W. Sheets were started a trifle, and Ramea was headed for the New Haven breakwater. The wind gradually backed into the S., so the main sheet was eased well off and the balloon-jib set. Three hours, more or less, followed of that delightful kind of sailing when you get just the right angle for the tiller, and, with a cushion between your back and the rail, let your mind wander where it may while the boat pretty nearly sails herself.

We slipped past the inner end of the east breakwater at half-past three, and were soon anchored in Morris Cove rather close under the south shore and somewhat west of the Yale-Corinthian Y. C. house. I ran up to Hartford for the night, while H. remained on board. Came down again on the early Sunday train. It rained

all the way to New Haven, and, as I had no umbrella, I looked for a good wetting. Fortunately the rain let up until I got on board. I reached the Cove somewhat before the time arranged, but H. finally saw my signals and rowed ashore. Ramea had been rolling in good old-fashioned Morris Cove style all night, and consequently H. didn't get much sleep, and was in an un-Christian frame of mind. We left the Cove at half-past ten with a good whole-sail breeze from the S. The tide was fair outside, though we did not feel the full effect of it until we had passed the Sperry light on the western breakwater. The wind was unsteady, varying from S.E. to S. by W., and it had begun to rain again. A course of S.W. by W. carried us well outside the red spar buoy off Stratford Point, while W. by S.½S. took us up the Sound. At 4 o'clock the Norwalk Islands were abeam, and as the wind was coming out of the S. with increasing strength, we decided that it would be well to get over under the Long Island shore. So we headed her close-hauled for Oyster Bay, and let the ebb tide lee-bow us across. When about half way over a heavy rain squall swept down on us, and for a while we hardly knew whether we were sailing on or under the water. And we ran out of this squall only to run into another just as bad. Before it passed the wind moved around to the N. of W. and the compass said we were heading back for the Norwalk Islands. We concluded not to bother with Long Island any more and began to mildly wonder where we should bring up for the night. The rain had completely killed the strong breeze, and we banged and slatted around in that quiet, nerve-soothing way a boat has at such times. I got out the glasses and finally picked up a big schooner yacht close under the Long Island shore coming up with her sheets apparently eased off. That meant that the wind had backed around into the S.E. again, which was just what we wanted. After about an hour it reached us, and the mainsail filling lifted the sheets out of the water. As it was now late in the afternoon, we headed in for Shippan Point, intending to go into Stamford harbor, but the wind pushed us along so well that we kept on, and finally, at 7:30, brought up in Indian Harbor at Greenwich. The barometer was still low and the wind was becoming lighter. There was no sunset, the sun simply dropped out of one mass of cloud like a great red-hot cannon ball and disappeared almost immediately behind a lower darker bank from which later on a few pale rays escaped.

Monday morning it was blowing hard from the N.E. and raining. We took our time over breakfast, and about half-past eight got into oilers and went on deck. A couple of reefs were soon put in the mainsail, and getting up the anchor we set the storm jib and stood out of the bay before the wind, passing between Great Captain and Calve's Island.

On a clear day this narrow western end of Long Island Sound is one of the most picturesque and interesting stretches of water imaginable. The low, rocky northern shore, with its many harbors and coves, is well wooded and gradually rises inland to higher ranges of hills. The towns are well back from the shore, and for the most part hidden among the trees. Attractive summer homes are everywhere. In striking contrast is the southern side of the Sound, five or six miles away, with its high sand bluffs gleaming white in the sun below the dark green of the forest. Instead of little harbors are the great bays and bays within bays. But perhaps it is a waste of space to describe such a well known body of water as this, and at any rate it was not especially attractive to us on this dull and rainy day.

One of the trial races for the 90-footers had been scheduled for the 15th, and we hoped to find the three big boats already under way. But everything was quiet at Larchmont, and a mile or so beyond Reliance lay at her moorings outside of Echo Bay with covers on her sails and no signs of life aboard. We sailed around her several times taking a good look at her enormous overhangs and huge mast, with its apparently light rigging. Then we beat back to Larchmont harbor, which was well filled with yachts of all sizes, and anchored about opposite the club house.

After lunch we rowed ashore, and found that the race had been postponed. To fill up the afternoon, we took the trolley over to New Rochelle and visited Huntington's yard. Three weeks before, when Ramea was being put in commission, the yard was full of boats; now but a handful were left, and we realized that the yachting season had begun. H. had to be in New Haven on Tuesday, so after a dinner on board he departed, and Ramea's crew was reduced to one for the return trip to New London.

It rained most of Monday night, but cleared up Tuesday morning. After lunch I got under way and sailed around to Echo Bay, anchoring on the east side of the harbor among the boats of the New Rochelle Y. C., and just inside of a dredger that was picking up fragments of rock from a ledge that had been recently blasted. Rowed up the creek to Huntington's, and loaded the various things I had come for into the 8-foot dinghy, which is as stiff as a church, and took them on board. I never pass over the body of water lying inside the rock on which stands the gasoline tank without wishing that it were something besides a few narrow channels and a collection of mud flats at low tide. It would make an ideal anchorage for small boats.

The weather was bright and pleasant once more, so opened up everything and dragged the cushions, bedding, etc., out of the cabin for a good airing. The cabin of a small boat gets damp pretty quickly in bad weather, even if she doesn't leak, and I can truthfully say that Ramea does not leak a drop anywhere. But the combination of bad weather and a leaky house—spare me from the affliction! It's bad enough, after a hard day's sail, to find the water sloshing about over the floor, but when at the same time the skylight and cabin roof have been letting in a steady drip, drip, drip, when your cushions are wet and bedding damp—well, what is the use of talking about it; most of us have been there at some time or other in our cruising experiences.

While resting in the cockpit watching the scoop of the dredger bring up fragment after fragment of rock, most of them as large as my hand, I concluded to run into town for the evening, and not caring to leave Ramea in her present position alone, I hastily stowed everything below and ran back to Larchmont with the ebb tide and

the last of the breeze. Making all secure and putting up the riding light, I rowed over to the club float, and tying the boat, walked up to the station and took the train for New York. Came out again after the theatre, and turned in before one o'clock.

Slept late Wednesday morning, and spent the rest of it in straightening out the cabin. After an early lunch I started out for a sail, taking a look at the yachts in the harbor, and then running over to Echo Bay and anchoring off Hudson Park. Later in the season, on a pleasant Saturday or Sunday afternoon, this park presents a very animated appearance. The rocky wooded point jutting out into the little bay and the small bathing beach are crowded with women and children, while the men, for the most part, are the victims of the fishing habit. They speak not, neither do they look to the right or the left, but occasionally they dislodge their hooks from some rock, and once in a great while a tiny cunner comes quietly out of the water and disappears into the fish basket. The waters of the bay are everywhere dotted with skiffs full of more motionless fishermen. Their silence and calmness form a strong contrast to the frivolous babble on the shore among the trees. Empires may totter, but the fisherman cares not. In his "Notes and Recollections," Ludovic Halevy says that one of the strangest sights in Paris during the terrors of the Commune was the dozen or more men he saw calmly fishing in the Seine during the close season, while fighting went on in the streets, and the buildings almost over their heads were in flames.

But to get back to the cruise. Friday the 19th the three big Cup boats were to try conclusions off Indian harbor, and I determined to start back and see as much of the race as possible. After breakfast it was a flat calm, but I got up the mainsail and then tackled the anchor. There was a long scope out, and when I had hauled about half of it on deck, it began to come hard. All of a sudden something gave way, and I sat down hard on a lot of wet rope. Then it stuck again, and it was quite evident that a big fish had been hooked. Slowly the cable came in, with much language and labor. Finally the anchor came to the surface with one of its flukes caught on the fluke of a much larger anchor. There were no moorings near me, so I presume it was a lost anchor; at any rate I did not investigate, as my back was rather weary, but unhooked it and let it drop to its former resting place.

In getting out of the bay Ramea lost all steerage way, turned around once or twice, and then insisted on drifting into a large sloop moored off "All View." Pushed off with the boat hook and managed to get out into the Sound. Down to the eastward the big fellows were maneuvering about and a crowd of lesser sails surrounded them. A heat haze lay over the land and water and distant outlines looked unreal. As I didn't care much about drifting around, I took in the jib and dropped the anchor. About one o'clock the wind came in light from the S.E., and by four I had tacked down to Parsonage Point. Here the wind dropped again, and it began to rain heavily, so eased off the sheets and ran back to Larchmont. By five it was clear, at six a gentle breeze came in from the S.W., and it was not long before Ramea was headed out of the harbor. As usual, there was much less wind outside, but it carried me down to Rye Point nicely, and I anchored for the night near a schooner yacht behind Scotch Cap rocks.

Up at three o'clock Saturday morning, prepared to make an early start, but found a heavy fog and S.E. wind. Having gotten up, however, went ahead with breakfast, and at four was ready to start. The fog was still too thick, so lay down just as I was and dozed until seven. By that time the fog had lifted somewhat, and I got under way. The breeze during the night had left a confused sea, and going to windward in the light air was slow work. The tide turned flood off Great Captain Island about noon, and as no headway could be made against it, the sheets were started, and I ran into Greenwich. Brought up off the Indian Harbor Y. C. house, and leaving the small boat at the club landing, walked up to the town which lies some distance inland. Bought some meat and berries and on the way back stopped at a small hotel and had dinner. The long road leading down to the harbor is completely overarched by large trees at places, and these spots, in consequence of so much rain, had a strong smell of wet vegetable matter, while the stone walls were green with moss. This odor suggested some memory very strongly, and suddenly for a few moments I stood again in front of the wet walls of the stone house on a cattle ranch or "pen" in the St. Thomas-Vale district of Jamaica, with the morning sun shining through a white mist and the moisture dripping from everything.

By one o'clock I was under way again, and standing to the S. E. with a faint N.E. air. Out in the middle of the Sound the Cup yachts were fighting out a race, which was evidently Friday's postponed. They had a good breeze, but were half hidden by a gray mist. When the wind came it was from the S. and lasted long enough to take me down to the Stamford lighthouse. Then it flopped into the E. and the rain came down as though the bottom of the pitcher had fallen out. Just then a sloop with a "putter, putter" engine in her went by bound into Stamford, and I gave up and followed her in, wet and disgusted. Stamford harbor is a fairly deep but somewhat rocky bay, from the head of which two creeks run up to the city. It is entirely open to the south, but pretty well protected otherwise. The anchorage is off the Stamford Y. C. house on Shippan Point, and with the wind from the E. is a perfect lee. While maneuvering about among the yachts looking for a good place to anchor, I miscalculated a distance and missed smashing into a dinghy by a foot. The man on the yacht rushed aft to pull it in and glared frightfully at me, but I glared back at him, and we let it go that.

It rained all night, and the E. wind blew hard against the windward side of the Point, where the trees let it through in strong gusts that darkened the surface of the water. Sunday ushered in the same old condition of things, and I took my time with breakfast, afterwards shutting up the cabin and letting the stoves dry up some of the dampness. At 10:30 the rain ceased, and I went up to the city, bought a supply of Sunday papers, and got into communication with home over the long distance telephone. Stopped at the old Stamford House and ate a very good dinner, which was the last square meal I had for some time, as it turned out. While at dinner a

terrific thunderstorm burst, and the streets ran with water. I hoped this was a clearing shower, and such it proved to be. By the time I reached the float at two o'clock the sun was out and a light air from the north in evidence.

Got under way at once, and outside the Point cut off a long angle by following a fisherman across the reef close inshore. Headed somewhat outside the lighthouse on Green Ledge, and the course allowed the sheets to be started. Passed the light at four o'clock. Off the Northwalk Islands the wind increased in strength and worked around to N.-N.E., so that I could just head close-hauled for Stratford Point, the other side of Bridgeport. Several large sloops passed me here, going at a great rate. Our wind, however, only reached half way across the Sound, and the vessels on the Long Island side lay motionless on a glassy surface. It must have aggravated them to see us with all we wanted.

Off Penfield's Reef about six with a falling wind. The sloops went into Black Rock harbor, but I decided to keep on. By the time I had worked past Stratford Point, it was beginning to grow dark. Heavy, wet clouds with long streamers hanging down drifted slowly off the land, and it seemed as if some of them would touch the mast. I luffed up, pulled the jib to windward, and keeping the tiller hard down, went below to light the cabin lamp and a lantern for the compass; also put on more clothing, for there was a decided chill in the air. Then filled away again, and apparently had the first of the ebb, though further out the tide was still running flood. As it grew darker the clouds began to disappear, and a few stars peeped out. The wind became variable and often headed me off. I wanted to get in behind Charles Island off Milford, but finally about half-past nine, when I could no longer distinguish the outlines of the island, I luffed up and anchored where I was. Before turning in, after a dinner of canned soup and bread, I sat in the cockpit for half an hour. It was very dark, though hardly a cloud obstructed the light from a star-strewn sky. The wind brought off the smell of the land and a never-ending procession of small waves rippled along the sides of the boat.

On getting up Monday morning, I found myself about half a mile southwest of Charles Island. The sun rose into a clear sky, and revealed a world whose outlines were sharp and clear; whose colors were vivid. Very much the same impression one gets when approaching a tropical island in the early dawn. Started at exactly 4 A. M. under mainsail and storm jib, with the wind from the N. Off New Haven a big three-master was trying to tow a lumber laden tub of a two-master, probably a Nova Scotian. They appeared to have been in collision, as the small fellow had lost all his headgear. It was blowing hard by this time, but the big schooner could not make the harbor with her tow, and the tide was steadily setting her to the westward. With whole mainsail and the small jib Ramea would not keep off in the hard puffs, so I had to stick in a reef. I eased the jib well off and let the mainsail out until it shook. She went along under jib while I lowered the mainsail enough for two reefs. Then I hauled it in flat, and put in one reef as she held her course. When the reef had been put in, I let the sail out again and hauled it up. She handled nicely with reduced sail, and I let her sail herself for a time, while I put on all the clothing that was on board, including an overcoat. It was chilly and no mistake. Kept in close to the Thimble Islands, and off Sachem's Head caught the first of the ebb. But with the ebb tide the wind canted around more to the eastward, and I could barely head a course for the red buoy off Hammonasset Point. Passed Clinton harbor at 10:30. From here it was a long and a short leg to Cornfield Point, where the wind finally went back into the east, and it became a dead beat to windward. The strong tide, however, swept the boat along in fine style, and I passed the mouth of the Connecticut at noon. The river was on the rampage, and was pouring out a huge quantity of brown flood water from between the breakwaters. Before I realized what was going on, I was carried well out into the Sound. The wind began to lighten and I just managed to get past Black Point and into Niantic Bay before the tide turned flood. It was necessary to shake out the reef in the mainsail and set the large jib. Having been at the tiller since four in the morning, I felt rather cramped and hungry, so let Ramea take care of herself while I got something to eat.

The weather grew steadily worse, and the wind veered from N. to S.E., and back again. By carefully taking advantage of every slant I had managed to work through the channel between Millstone Point and Two Tree Island, when in swept a thick fog, accompanied by a fine rain. The wind was now dead E., and with New London only a few miles away, I was forced to turn tail and run back for a lee behind Millstone Point. Two schooners gave up at the same time and anchored in the bay. I anchored in the little bight north of the artificial harbor at the stone quarry, which I was afraid to negotiate alone, and passed a most uncomfortable night. It quickly grew black as pitch, and the wind whistled through the trees on the point in a most dreary way. The current was strong enough to hold the boat broadside to the wind most of the time, and she rode all over her anchor. The motion was vile, and I could neither eat nor sleep. Toward daylight, however, the motion became more regular, and I dozed for a while.

With the first light of dawn I went on deck and found a gale of wind from the east, and Ramea sliding over the round-topped swells running six feet high. The two schooners were preparing to get under way, and I thought to myself: "Anything would beat this place, and the quicker I get out of here the better." A cake of chocolate answered for breakfast, and then I put three reefs in the mainsail and put on the storm jib, though it made too much headsail. When the anchor came up the cable had taken two turns around one of the flukes and a half hitch on top of them. But I didn't notice that at the moment, for the shore was not very far away on the port hand, and she must pay off to starboard. She obediently did so, and rode the big swells like a bird. It was now 3:45 A. M., and the tide would not turn ebb before nine o'clock. One of the three-masters was standing out, but the other seemed to be in trouble, and before she finally payed off and got steerage way, she was perilously near the west shore of the bay. Behind her, high and dry on the beach, lay a two-masted schooner which had gone ashore during the gale about two weeks before. Even

with three reefs in, the rail was under most of the time, but Ramea was making some headway against the strong current. I made up my mind to reach New London or bust. And if it came to busting, why, I could run back behind Black Point and make a good harbor in at the old fish works.

To the eastward of the black buoy off the northern end of Bartlett's Reef all protection from the land ended, and a fearful jumble of a sea was running. With so little sail it seemed impossible at first to do anything to windward against the tide and sea, but the storm jib began to get in its work and lift her through the smother. I had to ease it up smartly every time she came about to prevent it from pulling her head half around, but she never missed coming about once. First I stood well out, but found the sea much worse, so stood in again and let her go in short tacks over the reefs off Goshen Point, judging the rocks by the look of the water. Every other wave broke over the house, and I watched the anchor rope anxiously to see if it would break away from its fastenings. Then the little boat began to fill. If I could get by Goshen Point before she swamped, all would be well, as I should soon be in comparatively quiet water. Finally I got into a position where I thought I could make the harbor, but had to make another short hitch. On the next tack I passed the lighthouse. It was now half-past nine, so that it had taken five and three-quarters hours to cover five miles.

The two three-masters were coming in, and a schooner yacht under storm jib, foresail, and a jib-headed storm sail set over a furling mainsail. The harbor was full of storm-bound coasters. The small boat came through the fight gallantly, but as soon as smooth water was reached, grew groggy and promptly filled. However, it did not matter now. Just below the fort I luffed, got down the jib and mainsail, and ran into Wilkinson and Anderson's basin under bare pole.

And I was glad to get there.

British Letter.

In the race from Eckernförde to Kiel which took place on June 29 last, for the splendid gold cup given by King Edward VII., and valued at £2,000, the Fife-designed and German-owned schooner Susanne was returned an easy winner on the handicap. It appears, however, that Susanne was carrying a large main topmast staysail for which she had not been measured, and which she would not have been allowed to carry in a class race, as she was measured for German rating with only a small main topmast staysail. The committee have disqualified her, though it is hard to see on what equitable grounds, for this particular race was an ordinary handicap, in which class ratings were not taken into consideration. Iduna was second, and Ingomar third on handicap time, consequently, Susanne being disqualified, the trophy goes to the German Empress, and Ingomar takes second prize. It seems very hard on Herr Huldinsky to be thus done out of his prize on a technical quibble, and one can hardly imagine the Empress feels flattered in having a prize thrust upon her that she feels her boat has not won on her merits. Fortunately such incidents are scarce, for they do not tend to the promotion of good feeling or good sport.

Ingomar won her first race in English waters at Deal on July 14, but her second venture at the regatta of the Royal Cinque Ports Y. C., Dover, on the following day was fraught with disaster, owing to a nasty collision which occurred between her and Navahoe soon after the start. Both vessels were placed *hors du combat*, the schooner's bowsprit being broken off short, and Navahoe's mainsail being badly torn and her rail and binnacle smashed. It appears that they started from Dover close-hauled on the starboard tack, Navahoe leading the fleet, with Ingomar next. Navahoe drew away from the schooner, and, according to eye-witnesses on the end of the Admiralty Pier extension works, she was leading by two lengths when they passed the pier end. Navahoe tacked to port to pass round the back of the pier and cheat the strong channel tide, and it is stated by some that Ingomar luffed and tried to jam herself in between Navahoe and the pier, the result being that the two vessels collided heavily, and had to give up, crippled. Two versions of the story have found publicity; one being that when Navahoe tacked to port the strong tide held her, and she found herself right across Ingomar, which could not luff because the pier was close on her weather, and could not bear away for the yawl. The other version is that had Ingomar held her course she would easily have cleared Navahoe's stern. Both vessels entered protests, and the committee, after considering them, stated that after very careful consideration they were unanimously of opinion that Navahoe was solely to blame for the collision, and that both at the start and afterwards Navahoe was sailed recklessly. This is a very sweeping statement—far too sweeping for a committee to make who are not in a position to judge for themselves from the end of the promenade pier where the starting guns are fired, exactly what takes place off the end of the Admiralty Pier, and their decision appears to have been biased by the fact that in maneuvering for first place at the start, Navahoe cut it very fine in crossing Ingomar when on the port tack. Moreover, it casts a slur on the judgment and ability of Sycamore who is a first-rate skipper, and has never before had such strong things said about him. It does not appear to have been proved that Ingomar could not have cleared Navahoe had she held on, as many spectators on the Admiralty Pier believe would have been the case, and until that has been done the decision of the committee will not be received with general satisfaction. The case might well be referred to the Y. R. A., who would at any rate adjudicate upon it with unbiased feelings. The case has aroused a considerable amount of interest, and it would be well to have it well thrashed out.

Ingomar won the race from Dover to Ostend on July 18, after a hard thrash to windward of fifty miles to the West Hinder lightship, and a broad reach of twenty to the finish, Navahoe being the only boat anywhere near her. They were both at scratch, but the weather was too strong for the smaller vessel, which was 11m. astern at the finish. On July 21, Ingomar did not sail, owing to a misunderstanding as to the depth of water over the Ostend course. Two days later Ingomar, Navahoe, Therese and Valdora sailed over the triangular course of

thirty miles in a light breeze. The race lay between the two American-built boats, but Navahoe had the heels of the schooner all day, and beat her handsomely. Navahoe did not take part in the race back to Dover the following day, which Ingomar won.

The Irish regattas were again spoilt owing to the absence of big yachts which were busy with the racing at Ostend and Boulogne, but a big gathering is anticipated for Cowes Week.

The reliability tests for motor boats which took place in Southampton water on July 26 and 27 appear to have been very satisfactory, and show that great strides have been made with these craft during the past twelve months. Sixteen boats took part in the trials, and all kept going without any pause save to make good some trifling defects, but nothing like an actual breakdown occurred. On the first day five boats made absolutely non-stop runs, and on the second day eight boats went over the course without a hitch. The second race for the Harnsworth cup will be a much bigger affair than it was last year, and should give far better results.

Ingomar's Collision.

It is always a pity when disputes arise as the result of a race, for they lead frequently to much trouble and vexation, both to the parties concerned as well as to the committee which has to settle them, and they seldom do any good to the sport. A typical example of a useless and vexatious quibble was that recently raised by Mr. G. Moir, the owner of the ex-20-rater Dragon, which he has raced with conspicuous ability and success on the Clyde for many years past. In a handicap match of the Royal Northern Y. C., Dragon was scratch boat and Kelpie, Mr. G. Coat's, received 15m. from her. Kelpie arrived at the line precisely 15m. astern of Dragon, and the two consequently sailed a dead heat for first prize. The club committee settled the business by putting first and second prizes together, and dividing them equally between the two boats, giving the owners to understand that each boat should be considered to have won a first prize. Mr. Moir, however, did not seem satisfied with this wise and just solution of a really simple case, and put forward the extraordinary plea that as he was set to allow Kelpie 15m. and had done so, he was therefore entitled to the first prize. This, of course, is a clear fallacy, and shows beyond doubt that Mr. Moir has looked at the question from one point of view only, and not from both sides. Supposing Dragon had come in 16m. ahead of Kelpie, how much would she have beaten her? The answer is clearly 1m. Therefore as she came in just 15m. ahead, she beat her by just 1m. less 60s., which is nothing; or, plainly speaking, a dead heat. If a man gives another 15 yards in a foot-race and breasts the tape simultaneously with his opponent, the result is clearly a dead heat, and yet the scratch man would have quite as much justice in a claim to a clear win as Mr. Moir has, though he would never have his claim allowed by any honest committee. Dragon by arriving home 15m. before Kelpie had just got on level terms with her, but had not beaten her by a fraction of a second, and was theoretically in precisely the same position as if she had started 15m. after Kelpie and finished dead level with her at the winning line. The committee of the Royal Northern came to the only sensible and practical decision they could have come to (unless they had ordered the race to be re-sailed), and it is refreshing to find they have the courage of their convictions. It is to be hoped that all such frivolous disputes will meet with equal firmness on the part of sailing committees.

E. H. KELLY.

Bensonhurst Y. C.

Bensonhurst, L. I.—Saturday, August 6.

TWELVE boats started in the second closed race of three for cups offered by Commodore A. C. Bellows, of the Bensonhurst Y. C., which was held on the afternoon of Saturday, August 6, over courses in Gravesend Bay. They competed on handicaps arranged by the race committee on past performances, etc., starting in two divisions, according to rig. Dorothea, a big black boat of old type, carried off the honors of the sloop class, and Colleen was the winner among the catboats. There are three cups up for competition. Two of them go to the boats winning first and second places on points for the series in the sloop class, and the other is for the catboat scoring similar honors under like conditions. The standing on points to date is: Sloops—Ogeemah 12, Indian 11, Cayuga 10, Dorothea 9, Esperance 7, Trio 5, Limit 2, Quinke 1. Catboats—Colleen 10, Martha M. 10, Orient 6, Rosali 6, Beth 3, Albert, 0.

The boats went twice over the regular Association course. The start was off Ulmer Park, and a S.W. breeze made the journey a reach to the Atlantic Y. C. mark, another reach to Fort Hamilton, a run to the Marine and Field Club and a reach home. On the second round of the course, a shift of the wind toward the S. turned the first leg into windward work. Ogeemah led the fleet home. She had to allow Trio 17m.; Esperance, Cayuga and Indian each 15m., and Dorothea 10m. Dorothea and Indian were respectively first and second on corrected time. In the catboat class, Colleen won from Martha M. by 28s. corrected time. The last race of the series is scheduled for September 10. The summaries follow:

Sloops—Mixed Class—Start, 3:10.				
	Finish.	Elapsed.	Corrected.	
Dorothea, C. L. Dingens.....	4 42 54	1 32 54	1 32 54	
Indian, H. F. Menton.....	4 53 22	1 43 22	1 38 22	
Ogeemah, Alfred Mackay.....	4 39 24	1 29 24	1 29 24	
Cayuga, H. F. Cunningham.....	4 59 07	1 49 07	1 34 07	
Esperance, T. A. Hamilton.....	4 59 35	1 49 35	1 34 35	
Trio, C. H. Clayton.....	5 05 07	1 55 07	1 38 07	
Catboats—Mixed Class—Start, 3:15.				
Colleen, W. F. Remmey.....	4 52 19	1 36 19	1 36 19	
Martha M., Richard Moore.....	4 53 17	1 37 17	1 36 47	
Rosalie, F. A. Bolles.....	5 05 45	1 50 45	1 42 45	
Orient, Richard Rummell.....	5 04 30	1 49 30	1 45 30	
Beth, H. F. Eggert.....	5 29 50	2 14 50	1 59 50	
Albert, H. F. Lane.....	Did not finish.			

Marine and Field Club.

Bath Beach, L. I.—Saturday, August 6.

THREE of the new one-design boats of the Marine and Field Club started in a race for a cup offered by F. J. Havens on the afternoon of Saturday, August 6. Alpha won, beating Delta by 2s. at the finish. Beta, which has been carrying off all the honors of the class, was last boat. The little sloops went three times over a triangle, with the start off the club station at Bath Beach and buoys at the Atlantic Y. C. and Fort Hamilton. It was a close reach to the first mark, another reach to the second and a run home. The summaries follow:

Sloops—Class RR—Start, 3:05.			
	Finish.	Elapsed.	
Alpha, Holcombe & Howell.....	5 52 15	2 47 15	
Delta, J. J. Mahoney.....	5 52 17	2 47 17	
Beta, Snedeker & Camp.....	5 54 30	2 49 30	

Teacher: "Why weren't you at school yesterday, Tommy?" Tommy: "'Cause me mudder was making bread, and I couldn't get the basin to wash me face in—that's why."—Shooting Times.

Seawanhaka Cup Races.

BY WILLIAM Q. PHILLIPS.

THE present match is the tenth which has been sailed for the cup, the trophy having been offered in 1895. The original medallions on the cup itself have all been filled with records of races, and this year sees a new series begun on the base. In the first and second matches the Seawanhaka Y. C., as the original trustee, assumed the defense, the Royal St. Lawrence Y. C. winning the cup in 1896. Since then they have defended it against the following successive challenges: Three from the Seawanhaka Y. C. and one each from the White Bear Y. C., the Island Sailing Club, the Bridgeport Y. C., and the Manchester Y. C. It will be seen that with the exception of the first White Bear match and the English challenge, that the challenges have been from the Eastern seaboard; and in deciding to accept the challenge of the White Bear Y. C. for this season, there was a frank recognition of the fact that the West ought to have another chance, particularly as the special type of boat required for the work has been more highly developed on the small western lakes than elsewhere. Again, the White Bear people, more than any others, have kept closely in touch with the racing for the Seawanhaka cup, one or two of their men always being present; and finally, it may be added, that the White Bears are very popular at Dorval, both afloat and ashore, and as the social side of the match is by no means unimportant, the present event has been attractive in many ways outside of the racing.

The boat finally selected to represent the challenging club was known as Sigma in the trial races, and finally named White Bear. She comes from the shop of Jones & Laborde, Oshkosh, Mr. Jones being present at Dorval to look after her, and is a typical scow of the Oshkosh type, with more beam, and, if anything, fuller ends than the Tecumseh of two years ago. She is noticeably well built, her framing being heavier than the rules demand. She is fitted with bilge boards of the normal type, and port and starboard rudders working together. While maintaining the flat, low-sided appearance of her predecessors, she is really quite powerful and able to carry sail in a breeze—a quality lacking in the last two or three challengers. In light airs she is perhaps too stiff, and even with the crew to leeward does not get down to her best form. Her strong point is all-around work in moderate to fresh breezes with fairly smooth water.

The Noorna, selected for the defense, is one of two boats built this year from designs by Mr. F. P. Shearwood, and is of the same general type as his previous creations. Two details claim attention, however; the main halliards are of flexible wire, leading down through the deck, where they are wound on drums operated by large wooden hand wheels. The arrangement is very neat, and reduces the amount of loose gear both on deck and below. The bilge boards, now an established feature of the Shearwood boats, are not flat, but shaped like a spoon oar, and in addition are of a compound type. The upper half of each board is a sheath or case, through which the lower blade works, the same gear controlling both. In lowering the board, the sheath drops first, and then discharges the single blade, the concave side of the spoon being to leeward. The arrangement works very smoothly, and is a clever piece of mechanical design and construction, but—beware of the weeds!

Noorna is regarded as a good all-around performer, and a fair match for Thorella, the boat of last year. This perhaps is enough, for Thorella is quite an exceptional boat, and the selection of a new boat for the defense this year has been as much a matter of sentiment as of necessity.

The races, as usual, were managed by three judges: H. P. Clark, appointed by the White Bear Y. C.; W. Q. Phillips, appointed by the Royal St. Lawrence Y. C.; and W. P. Stephens, unanimously selected as third judge.

On Wednesday and Thursday morning, August 3 and 4, the judges were busy measuring; both boats carried practically the full sail area of 500 square feet, but were well inside the limit of waterline, the figures being White Bear, 25ft. 7in.; Noorna, 25ft. 5½in. The crews weighed in as follows: White Bear, L. P. Ordway (helmsman), F. M. Douglass, T. L. Wann, Jack Ordway; total, 636 pounds. Noorna, Chas. Routh (helmsman), M. C. Finley, Thornton Davidson, Huntley Gordon; total, 645 pounds.

Thursday, August 4.

The skipper of Noorna won the toss, and elected that the first race should be to windward and return. There was a light breeze in the morning, but at one o'clock, when the fleet arrived at the mark off Point Claire, there was not enough wind to warrant an attempt to lay a course. Except for fitful catpaws, this state of affairs continued throughout the afternoon. The sun was hot, and the general conditions uncomfortable; the judges waited until after three o'clock, when all hope of a race was abandoned, and the red ball half-masted, showing that the race was off.

Friday, August 5.

There was a moderate breeze from the south all morning, and at one o'clock it was working around to the west. The mark in Beaconfield Bay was therefore selected as the starting point, and two miles to windward logged out by Sir George Drummond's steam yacht Wild Rose. The start was made at 2:10, White Bear leading over the line by a fair margin. The boats worked out in short tacks, and so long as the wind held true White Bear kept her lead. In less than half an hour, however, the wind dropped to about three or four miles per hour, and very fluky. First one boat would get a puff and then the other. The luck favored Noorna, and she gradually drew ahead, turning the weather mark with a lead of over 2m. From this to the completion of the second round Noorna continued to gain, but the wind was so soft that there seemed to be small chance of a finish in the time limit of 3½ hours. On the final round, however, the wind backed to the south, making a reaching course, and as it improved in strength, White Bear gained over a minute. It is therefore fair to say that White Bear lost the race in a drift which would never have allowed a finish. However, this is the luck of the game. The times were as follows:

First Round.		
	1st Buoy.	2d Buoy.
Noorna	2 59 20	2 23 00
White Bear	3 01 45	3 25 10

Second Round.		
Noorna	4 13 04	4 40 05
White Bear	4 20 30	4 46 20
Third Round.		
Noorna	5 02 35	5 19 17
White Bear	5 07 30	5 25 02

Just after the finish the steam yachts Nama and Karma were in collision, Nama getting off easily, but Karma's stem was split to the waterline. Fortunately the break was outside the rabbit and left the plank ends uninjured; she was repaired the same evening at Dorval.

Saturday, August 6.

There was a fresh south wind all morning, working round to southwest in the afternoon, its strength varying from 15 to 25 miles per hour. The triangular course was used, all marks to starboard giving windward work on the first leg and two reaches home. A start was made at 2 P. M., the wind and sea being quite vicious at the time; both boats were under three reefs and small jibs. White Bear led across the line 27s. after the gun, Noorna following at 2:11:18. The windward work was very trying for both boats and crews, nothing but the finest of seamanship keeping the boats going. The wind and sea were at their worst on this first round, and the club steamer St. Louis could not get near enough to take accurate times at the weather mark. Apparently White Bear led by 4s., and in any case her lead at the start had been considerably reduced. On the two next legs, sailed with a full sheet, she pulled away again, the following times being taken:

	1st Mark.	2d Mark.	3d Mark.
White Bear	2 23 34	2 29 38	2 36 32
Noorna	2 23 38	2 30 45	2 38 25

On the second round the wind was a little steadier, but the relative performances of the boats were much the same; in fact, the elapsed times on the weather leg were almost identical with those of the first round, Noorna gaining as before, but losing on the reaching. The times were:

	1st Mark.	2d Mark.	3d Mark.
White Bear	2 59 56	3 06 58	3 14 55
Noorna	3 00 50	3 09 03	3 16 42

On the final round, the wind moderated so that the reefed sails were carried more effectively, and in addition Noorna shook out a reef for the final reaching; thus showing a gain on every leg. As it was, the finish was close and exciting, both boats driving across the line at high speed. The final round was timed:

	1st Mark.	2d Mark.	Finish.
White Bear	3 36 13	3 42 40	3 49 29
Noorna	3 37 30	3 43 45	3 50 22

White Bear wins by 53s. Lead at start, 51s. Difference in elapsed time, 2s.

Both yachts sailed down to the club wharf with a fair wind, and until they arrived no one but the crew of Noorna knew that she had met with a mishap that nearly put her out of the race just before the second gun. Each of her two rudders carries a short tiller, and these are connected by a wooden rod, to which the main tiller is attached. This rod broke, putting the port rudder out of action. Fortunately the break was scarf-wise, and it was possible to effect hasty repairs by fishing it with battens. This cost valuable time at the start, and was a constant source of anxiety, and, to some extent, an interference with the handling of the boat throughout the races. When the fact became known there was much gossip and speculation as to what might have been, but this talk was entirely subordinate to the hearty congratulations to the White Bear crew, who had won a hard race in weather by no means suited to the scow type. This race proved White Bear to be a distinct advance over Tecumseh, the Oshkosh boat of two years ago, which was hopelessly beaten under similar weather conditions.

For this race Mr. Douglass and Mr. Wann, of the White Bear crew, were replaced by Commodore Elmer and Evan Rees. Mr. Douglass was merely out of sorts, but Mr. Wann had been nipped by sciatica on Friday during the race, and on his return was unable to climb the stairs. Unwilling to miss Saturday's race, he was carried aboard the Karma and made comfortable on the deck, although unable even to sit in a chair.

Rhode Island Letter.

PROVIDENCE, R. I., Aug. 6.—Race week for the Narragansett Bay Y. R. A., the most important event of the season in Rhode Island waters, begins Monday, August 15, and the arrangements for the series of five open regattas to be held are about completed. There are four clubs in the Association, each of which will have charge of one of the events of the week, and the fifth race will be an Association race, as the Conanicut Y. C., of Jamestown, is not in the membership this year. All the races are open to the yachts of any club of recognized standing anywhere, and a number of outside craft are expected to enter and compete with those of local fame for cups and honors. The executive committee of the Association has made careful plans to insure success, and the series is expected to eclipse the fairly successful race week instituted last year, both in the number of entries and in the smoothness of management. The schedule for the week is as follows:

Monday, August 15.—Edgewood Y. C.
Tuesday, August 16.—Bristol Y. C.
Wednesday, August 17.—Fall River Y. C.
Thursday, August 18.—Association race at Jamestown.
Saturday, August 20.—Rhode Island Y. C. at Potter's Cove.

During the same week the annual cruise of the Edgewood Y. C. will take place, the itinerary being identical with that of the racing. The first race of the series is to be held with this club, and the plans are to make the day a gala occasion. All the club fleet, except the boats engaged in racing, will dress ship for the day, and the hospitality of the club will be extended to all visiting yachtsmen. In the evening there will be fireworks and an illumination, and the visitors will be welcomed to a dance in the club house. The cruise will begin Tuesday morning, when the fleet will make a racing run to Bristol, the place of the second race. There will also be racing by the fleet on the runs from Bristol to Newport, and from Newport to Potter's Cove, suitable prizes being offered the winners in all three runs. After the Association race at Jamestown, Thursday, the fleet will lay over at Newport until Saturday morning in order to witness the Astor cup races and the illumination of the New York Y. C. fleet in the evening. The fleet will also remain at Potter's

Cove after the Rhode Island race Saturday, and the cruise will conclude Sunday with a clam-bake at that place, to which many of the craft of other clubs taking part in the Association races will probably remain.

Commodore H. G. Fossner will be in charge of the fleet, and will be assisted by Fleet Captain Benjamin Peckham. The idea of combining the Edgewood cruise with the Association race week is a happy one, and cannot fail to stimulate interest in both events.

Mr. Frederic S. Nock has recently completed at his shop at East Greenwich a new cabin launch, The Buffalo, built as a demonstration boat for the Buffalo Gasolene Motor Company, of Buffalo, N. Y. Rhode Island yachtsmen who have seen this craft have found a type of boat seldom seen in this vicinity. The cabin and top sides present the same general appearance as the average cabin launch, but as seen out of water the peculiar shape of the underbody is very striking. The rabbit line is almost straight from the forefoot to the waterline at the stern, the latter being of the torpedo boat destroyer type. This is conceded to be the form of least resistance, and it is calculated that such a boat can be driven at good speed with a comparatively small amount of power. The exterior finish of the craft is mahogany, and the interior is in light quartered oak. The pilot house and saloon are combined, and there are extension berths giving accommodation for a party of six. The engine room is aft, and there is a galley and a toilet room. The power consists of a Buffalo four-cylinder motor of 20 horse-power, capable of developing about 35 horse-power at its best, turning a 24-inch propeller 800 revolutions a minute. The general dimensions of The Buffalo are as follows: 43ft. over all, 41ft. 6in. waterline, 7ft. 6in. breadth, and 2ft. 6in. extreme draft.

The letter of Mr. Gilbert Ray Hawes, published in a recent number of FOREST AND STREAM, regarding his protest against Little Rhody and Newasi in the ocean race for the Lipton cup, aroused more than a little resentment here in Rhode Island, where it is felt that the little sloop bearing the State's pet name won the race fairly and squarely, and is entitled to all the honor thereof without detracting. It is, perhaps, late in the day to run up signals of distress to the masthead on this matter. The race has been decided by the committee and the cup has been awarded to Little Rhody on merit. As the good faith of the committee is unquestioned, it is to be assumed that Little Rhody is a cruising boat, and that in every way she complied with the conditions of the race. Still, Mr. Hawes' statements on several points are sufficient, perhaps, to cause a misapprehension of the facts that might reflect both on the committee's good judgment and on the integrity of the owner of the winning boat. What Mr. Hawes insists upon in terming Little Rhody a "racing machine" is of small consequence, for, after all, what constitutes a healthy type of boat is largely a matter of personal opinion in many cases, and at all events that question is settled by the decision of the committee. The crew of Little Rhody were beyond suspicion of professionalism. Here are their pedigrees, presented for the enlightenment of those who may still entertain a lingering suspicion on that point:

Charles F. Tillinghast, owner, graduate of Massachusetts Institute of Technology, '95; in business in Providence, R. I.

James H. Thurston, Brown University, '96; lawyer in Providence, and representing the city in the Rhode Island Senate.

George Owen, designer of Little Rhody, Massachusetts Institute of Technology, '94; formerly of Providence, recently engineer for the Hamilton Iron and Steel Company, of Hamilton, Ont., and now with the General Electric Company at Lynn, Mass.

Irving O. Hunt, Brown University, '99; lawyer in Providence.

S. Foster Hunt, navigator of Little Rhody, Brown University, 1904; in business in Providence.

George A. Fuller, Massachusetts Institute of Technology, '97; home in Springfield, Mass., now with the Edison Electric Company, Boston.

These men are all amateurs, although they have some knowledge of seamanship, as they proved, and they finished the race on good time. F. H. Young.

New Rochelle Y. C. Cruising Race.

New Rochelle to Stratford Shoal.

IN the long distance race of New Rochelle Y. C., held on July 16, around Stratford Shoal and return, there were six starters; La Cubana, yawl, J. H. Ives, Manhasset Bay Y. C., finished at 6:10 A. M., July 17, winning by a comfortable margin over the yawl Sayonara, Commodore J. P. Donovan; H. T. Noyes's Ola third, J. B. Ricketts's Katherine fourth, and John Lambden's Gracie fifth. The Idler and Laddie Boy started, but they did not finish.

The start was made at 3:10 P. M., and the times taken at the Stratford Light were: La Cubana, 7:10 P. M.; Katherine, 8:00; Sayonara, 8:15; Ola, 8:32; Gracie, 9:10.

A HIGH SPEED CRUISER.—Mr. Robert C. Fisher, N. Y. Y. C., expects to take possession of his new power yacht Aletes III. next week. She is from designs of Mr. Theo. E. Ferris, and was purchased from the Townsend-Downey Company through the agency of Stanley M. Seaman, New York. A 110 horse-power, six-cylinder Standard engine has been installed, and a speed of 17 miles an hour is looked for by the designer. She is 64ft. over all, 11ft. beam, 4ft. draft, and provides accommodations of pilot house, large engine room, two saloons, toilet room, galley, and cockpit.

A CORRECTION.—One slight error appeared in Mr. Charles D. Mower's splendid story of the Brooklyn Y. C.'s ocean race and we are making a correction at the suggestion of Mr. Charles F. Tillinghast, owner of the winning boat, Little Rhody. It was stated that Little Rhody was entered from the Rhode Island Y. C., which was a mistake, for while Mr. Tillinghast is a member of that organization, the boat was really entered from the Bristol Y. C., which is Mr. Tillinghast's home club.

ADROIT SOLD.—Mr. Alfred G. Vanderbilt has purchased the high speed steam yacht Adroit (ex-Viven), which boat he has had under charter. She is 100ft. over all, 96ft. waterline, 12ft. breadth, and 4ft. draft.

Hempstead Harbor Y. C.

Hempstead Harbor, Long Island Sound.—Saturday, August 6.

THIRTY-SIX boats started in the thirteenth annual regatta of the Hempstead Harbor Y. C. that was held on Saturday August 6. The start was made at 1:30, at that time there was a little air from the S.W., but the breeze softened to such an extent before the race was half over that the contest was an inconclusive drifting match. The 36 and 30-footers covered a 14-mile course. The starting line was in Hempstead Harbor, thence to Prospect Point, thence to Scotch Caps buoy, thence to Matinicock buoy and back to the starting line. The three smaller classes covered a 6½-mile triangle, and the rest of the starters went over a 1¼-mile course.

At 1:35 the 36-footers were sent away, Mimosa III. crossing in the lead, followed by Anotok and Spasm. Spasm soon moved into the lead, and from that time on was never headed. Spasm beat Mimosa III. 5m. 35s., and Anotok 12m. 22s.

Nike was the only starter in the 30ft. class, and she took a sailover. Alert, Mimosa and the other contenders in this class were conspicuous by their absence. Una had an easy win in the 25ft. sloop class. Snapper was nearly 5m. behind at the finish.

Tomboy, the most likely competitor for Tartan in the race-about class, did not put in an appearance. Rascal II., the new Crowninshield boat, managed to get away with Tartan. The kid finished only 18s. behind Rascal II., and Howdy was 6s. astern of The Kid..

Gazabo captured another first in the 21ft. sloop class. Jeebi was second. In the 18ft. sloop class, Plover trimmed her two competitors easily. Wa Wa added another win to her almost unbroken record in the Indian Harbor one-design class; Kenoshi was second. Chichioer and Wister were outclassed in the Manhasset Bay one-design class, Arizona, the third starter, won with minutes to spare.

There was a good turn out of Hempstead Harbor one-design boats, and of the five starters, Scud had all the best of it. Edsa won in the 18ft. sloop class, while Dunlea won in the 18ft. catboat class. The summary:

Sloops—36ft. Class—Start, 1:35—Course, 14 Knots			
	Finish.	Elapsed.	
Mimosa III., T. L. Park.....	4 15 38	2 40 38	
Spasm, E. D. King.....	4 10 03	2 35 03	
Anotok, W. G. Brokaw.....	4 28 00	2 53 00	
Sloops—30ft. Class—Start, 2:00—Course, 14 Knots.			
Nike, Victor I. Cumnock.....	4 52 32	2 55 32	
Raceabouts—Start, 1:40—Course, 1¼ Knots.			
Tartan, A. H. Pirie.....	4 30 53	2 50 53	
Hobo, T. L. Park.....	4 33 56	2 52 56

Why Not, W. Murdick.....	3 55 10	1 55 10	
Catch Me, E. Fabys.....	3 53 50	1 53 50	
Sloops—Start, 2:05—Course, 6½ Knots.			
Edsa, Samuel Bailey.....	4 34 40	2 29 40	
Unknown.....	5 25 00	3 20 00	
Cats—18ft. Class—Start, 2:05—Course, 6½ Knots.			
Dunlea, C. A. Dunning.....	4 02 05	1 57 05	
Bowton, H. North.....	4 07 45	2 02 45	

Rhode Island Y. C.

Annual Cruise—July 23 to 31, inclusive.

THE annual cruise of the Rhode Island Y. C. was altogether the most enjoyable and successful event in the history of the club. In none of the details upon which such an affair is dependent for success was there anything lacking to give the utmost pleasure to yachtsmen. The weather was well-nigh perfect throughout, the wind was fair on all the port-to-port runs, there was some fine racing, and the week was crowded with social events.

Altogether, there were fifty-one yachts that participated in the cruise, the largest fleet at any one time, including forty-eight, in addition to the fleet of the Sachem's Head Y. C., with which there was a joint cruise for three days.

There was racing on each of the port-to-port runs, for which handsome souvenir prizes were presented by Commodore F. T. Rogers, M.D., a rule being established that no yacht was to receive more than two of the prizes, thus giving more interest to the others in each class.

The yachts included in the fleet were as follows:

Schooners.—Flagship Rusalka, Com. F. T. Rogers; Valmore, John M. Richmond.

Steamers.—Endion, Leroy Fales; Azubah, Col. F. R. Mendelschaefer; Aida, L. H. Tillinghast; Panther, T. Z. Lee.

Launches.—Roberta, Rear-Com. W. O. Todd; Alice, W. C. Perkins; Tuscora, W. Schedley; Grace Alice, H. G. Possner; Golden Rod, G. B. Langmaid; Sahneto, R. L. Greene; Zeta, Otis Brothers; Nautilus, A. J. Scattergood; Buzz, W. E. Hartwell; Lucy W. G. Titcomb.

First Class Sloops.—Millie, W. S. Killey; Rufina, Vice-Com. W. P. Church; Cornelia, R. W. Comstock; Daffodil, W. Halkyard; Lady Mary, Hon. N. W. Aldrich; No. 7, H. E. Kimball; Wena A. Rowland, G. H. Rowland.

Second Class Sloops.—Sachem, W. H. Thurber; Micaboo, W. R. Tillinghast; Petrel, A. E. Johnson; Eumareia, E. K. Hill; Frey, G. F. Brownell; Uarda, H. R. Dean; Dazzler, C. D. Reynolds; Ethelka, A. M. Read; Priscilla, Wood Brothers; Daisy Bell, Fred Mack; Elite, J. B. Sweet; Jocelyn, A. A. Greene; Dixie, D. M. Stearns.

Yawls.—Katherina, A. Homer Skinner; Wanderer, J. I. Maxson; Yebis, Dr. A. M. Potter; Keto, G. L. Robinson; Wemalla, J. Barney; Rahnee, L. A. Budlong; Ragnild, G. W. Evans; Quivette, H. R. Robinson; Rana, E. C. Myrick.

Cats.—Scatt, H. B. Scattergood; Onaway, B. W. Comstock; Mblem, G. E. Darling; Marion, J. R. Bullock; Amphitrite, A. L. Knight; Elizabeth, W. D. Wood.

The racing was good, and several of the boats showed up remarkably well, especially Scatt, which finished first in her class in each of the four runs. The sloop Millie also made a good showing.

The fleet made a rendezvous at Newport, on Saturday afternoon, July 23, the captains holding a meeting aboard the flagship in the evening.

Sunday, July 24—Run to Stonington, 32 Nautical Miles.

There was a fair wind from the N.E., and the sea was smooth. The run was made in good time. The winners were Alice, Millie, Priscilla, Ragnild and Scatt. It rained in the evening, and it was a quiet night for the fleet.

Monday, July 25.

The fleet made a "naval parade," all dressing ship to Watch Hill, 5 miles, starting at 9 o'clock. In the evening there was a complimentary dinner and a dance tendered to the fleet at the Watch Hill House by the proprietor, J. F. Champlin, and an elaborate display of fireworks, provided by Com. Rogers.

Tuesday, July 26—Run of 23 Miles—From Stonington Breakwater to Shelter Island.

In towing out from Watch Hill, several of the fleet ran aground,

and one, Priscilla, sustained damage to her keel that necessitated repairs. The winners in the several classes were Millie, Micaboo, Ragnild and Scatt.

At Shelter Island the fleet was joined by the Sachem's Head Y. C. fleet, under Com. W. E. Peck.

In the evening there was a band concert and a fine display of fireworks in honor of the visitors, at the Shelter Island Y. C. house.

Wednesday, July 27.

In the afternoon there was a regatta by the three clubs, the Rhode Island boats taking two of the four prizes, and the Sachem's Head and Shelter Island boats one each. In the evening the Shelter Island Y. C. tendered a dance at the Prospect House to the visiting fleets, which was a very brilliant affair.

Thursday, July 28—Joint Run of Rhode Island and Sachem's Head Fleets to Block Island.

Eleven of the Sachem's Head boats made the run, including the sloops Mariquita (flagship), Possum, Meudon, Spray, Gloria, Santa, Thelga, and Helene, and the yawls Umbrina, Altair and Pawnee. Com. Rogers, of the R. I. Y. C., offered a club prize, a handsome marine etching, to the fleet making the best average time on the run, and it was won by the Sachem's Head fleet. Two cups, offered by Com. Peck, to the boats making the best and next best time, were won by Lady Mary and Rufina. Millie and Scott won again in their respective classes, but, according to the rules limiting to two prizes, the prizes were awarded to Daffodil and Elizabeth. The other winners were Roberta, Priscilla and Keto. In the evening Com. Rogers, Fleet Capt. Barlow, and Fleet Surgeon Risk, were entertained at dinner by Com. Peck and the officers of the Sachem's Head Y. C., and there was a dance at the Hygeia Hotel, which was largely attended by the yachtsmen.

Friday, July 29—Lay at Anchor in Great Salt Pond, Block Island.

In the evening Com. Rogers entertained the Sachem's Head Y. C. with a dinner and vaudeville entertainment. There were one hundred and fifty-seven guests present from the two fleets, and many pronounced the evening the most conspicuous success of the cruise.

Saturday, July 30.

The two fleets exchanged parting courtesies and the Sachem's Head fleet started for New London, the Rhode Island fleet making a 32-mile run to Bristol. There was a dead calm at the start, but the wind freshened into a rattling breeze. The winners were Alice, Daffodil, Sachem, Rahnee and Elizabeth. Priscilla and Scatt again finished first in their classes, but were barred from the prizes. Scatt won a special prize offered by the commodore for the best showing made by a cat on the cruise, and Alice won a special prize offered by the rear-commodore for launches.

Saturday evening there was a complimentary dance at the Bristol Y. C., and Sunday morning the fleet disbanded at Potter's Cove, where a club bake was served.

Altogether, in the size of the fleet, weather, sailing conditions and the social events of the week, the cruise was far and away the most brilliant success ever achieved by the club.

F. H. YOUNG.

Shelter Island Y. C.

Shelter Island, N. Y.—Wednesday, July 27.

AN interclub regatta, incident to the visit of the Rhode Island and Sachem's Head yacht clubs to Shelter Island on their annual cruises, was held Wednesday afternoon, July 27, under the auspices of the Shelter Island Y. C. The event was highly successful, as there was a strong S.W. wind that held throughout the afternoon, and the leaders made fast time over the triangular course, which was sailed twice over, a distance of 12 miles. There were eighteen entries, arranged in four classes, with a good representation from each of the three clubs.

For the first class sloops the prize was a handsome silver dish, offered by proprietor Hathaway, of the Prospect House. In the other three classes the prizes were club mugs, presented by the Shelter Island Y. C. The special prize was captured by a Shelter Island boat, the Rhode Island boats winning in two of the other classes, and the fourth prize going to a Sachem's Head boat. In the first class, the Shelter Island sloops Kalmia and Woglinde had things their own way, Kalmia winning out and giving Possum, of the Sachem's Head Y. C., her first defeat in sixteen races. Priscilla and Ethelka, of the Rhode Island Y. C., both fast boats, especially Priscilla, were clearly outclassed. Woglinde protested Kalmia for having a professional skipper, and there was some talk of Possum protesting both boats for alleged fouls. The Kalmia won, however, and it was a beautifully sailed race. The start, the first round and the finish were in among the big fleet of about one hundred yachts anchored in the cove off the club house, and there was some clever navigating exhibited by the skippers in all classes.

In the smaller sloop class there were seven entries, and a Rhode Island boat, Micaboo, won by 6m. Of the four boats in the cat class, Elizabeth (R. I.) won in a prettily sailed race, and the Sachem's Head yawl Altair defeated Ragnild (R. I.) by over 14m. Many of the launches of the three clubs carried large parties over the course to view the racing. The summary:

First Class Sloops—Special Prize—Start, 2:05.			
	Finish.	Elapsed.	Corrected.
Kalmia, G. T. Hollister (S. I.).....	3 58 34	1 53 34	1 47 33

Edgewood Y. C.

Narragansett Bay, R. I.—Saturday, Aug. 6.

AN open club regatta was held by the Edgewood Y. C. on the afternoon of Saturday, Aug. 6, in a stiff S. breeze that sent the racers over the course in good time, and provided some interesting sport. There were fourteen entries arranged in four classes, in one of which there was only one boat. The course was a short triangular one, sailed three times over, making a total distance of 11 nautical miles. With the prevailing wind this gave good conditions, a broad reach, a close fetch to windward with a little tacking, and a run down the wind, enabling the sloops to use their spinnakers.

As usual in club regattas in this club, the interest centered in the 30ft. cat class, in which there were five entries. Mblem started first and led the fleet over the first round; but Elizabeth picked up and passed her on the second round, winning by nearly 3m.

Scatt, the champion of her class in the Rhode Island Y. C. annual cruise, did not show up well, and was over 7m. behind Elizabeth. The Flint boys had made some changes in Wanderer III., and gave her the first try under new conditions. The lead on the keel had been removed, and inside ballast substituted, and one of the sails of the old Wanderer was bent on in place of the original. The effect was noticeable, and the boat did the best work she has yet shown in a race, holding close behind Scatt for about half the race. Her owners, however, were only trying her out, and withdrew at this point, as they were going away on a short cruise over Sunday.

There was some close work in the 25ft. sloop class, Priscilla, of Fall River, finishing first, but losing to Amanita, of Jamestown, on time allowance. There was a protest entered against Amanita for failure to follow the right side of a buoy on the course, and Amanita's owner protested Priscilla, a considerably larger boat, on the ground that she did not belong in the class. This made a complex situation for the committee, and a decision on the race was deferred.

Mae Hope sailed alone in the 25ft. class, and in the 15ft. class

only two boats finished out of the five entries, two of them carrying away their masts. The summary follows:

25ft. Knockabouts—Start, 2:19—Course 11 Miles.			
	Finish.	Elapsed.	Corrected.
Amanita, E. Bonsick.....	4 28 08	2 09 08	2 06 15

Southern Gulf Coast Y. A. Racing Circuit.

Gulfport, Miss., Sound—July 29 and 30.

THE fifth event in the season's racing circuit of the six clubs forming the Southern Gulf Coast Y. A. took place at Gulfport, Miss., Friday and Saturday, July 29 and 30. The Gulfport Y. C. splitting its regatta up into two days' sport. The first day was given over to small open sloops, racing machines of the Seawanhaka cup class type and catboats. The day was a splendid one, with a good breeze, and the sport was excellent. Kayoshk sailed away from the rest of the fleet. The summary:

Open Sloops—Racing Machines—18ft. and Over.

Uncle Dick.....	2 23 30		

The cabin sloops, knockabouts and racing machines were on the programme for the second day, and it turned out to be one of the grandest yacht races ever seen in the South. At the start the wind was 7 knots, which increased on the second round of the 5-mile triangle to fully 12 knots. The feature of the day was the second duel in these waters between the 25-footers Calypso and Chewink III., and a finer, tighter race could hardly be imagined. Calypso winning by the narrow margin of 32s. Calypso started 40s. in the lead of Chewink, and they drove around the first 5 miles holding these relative positions exactly, neither gaining nor losing, so that when they were timed for the start of the second round they were still 40s. apart.

On the second round, with the increasing breeze, Calypso pulled away 27s., and counting a time allowance of 5s., she won by just 1m. 2s. These are probably the two best known cabin sloops of their size in the country; and although the scene of their contests has shifted from Massachusetts waters to those of the Gulf, their battles are continuing to be keen and interesting. Calypso carried her last year's mainsail, which is none too good, and a new jib. Both boats were black-leaded to the rail. Chewink was rather light in ballast, and she would have handled better if she had carried a thousand pounds more lead. In the North she carried about two thousand pounds in her centerboard, but this was carried away when she was being sailed from Boston to New York, preparatory for shipment by steamer. A new board was made for her here which contained only 700 pounds of lead, her owners deciding to carry a larger crew to make up the difference in weight. The live ballast idea has hardly seemed satisfactory, and it is probable that she will be given the designed chunk of lead and the crew cut down to about six.

The contests in all the other classes was also notably close and exciting. Kayoshk beat Moki only 50s. in the scow class; in the one-design knockabout class, Sinner beat Siren by 1m. and 19s., and in the second class of cabin sloops Nyda lost to Invader by 2m. and 19s. after taking a severe blanketing from both Calypso and Chewink III. in turn as they passed her on her course.

The last event in the S. G. C. Y. A. series takes place under the auspices of the Southern Y. C., at New Orleans, Saturday, Aug. 6. The summary:

Cabin Sloops—30ft. Rating and Over.			
	Elapsed.	Corrected.

Procyon, C. A. & F. S. Goodwin.....	19 28 44	

Erie Y. C.</

Boston Y. C.

Midsummer Series, Y. R. A. Open—Hull, Mass., July 27.

With a lively breeze from the S. and a smooth sea, the annual midsummer series of Y. R. A. open races, given by the Boston Y. C., commenced at Hull on Wednesday, July 27. Forty-five yachts crossed the starting line, all of which finished. In the 30ft. class, Chewink IV. was across the starting line first with Sauquoit on her weather quarter. They at once started to luff, but Chewink IV. pulled away and led to the finish. Warrior was first across the starting line in the 22ft. class, followed by Peri II., Clotho and Medric. Medric and Clotho went at the windward end of the line and in the best positions for the first reach. At the first mark Clotho had the lead, followed by Peri II., Medric and Warrior. On the beat to windward Peri II. went to the lead and held it until the Peddock's Island mark was turned for the second time. On the second beat to windward Clotho took the lead and held it to the finish. The 18-footers were all bunched at the starting line, twenty-three of them in all. Napier was the first boat in the class to get across. They held well together until the first mark was reached, where Menace was first and Hayseed second, with the rest of the class bunched. On the beat to windward Hayseed went by Menace to first place, while Boo Hoo went into second place, with Menace, Arrow and Arbeka II. right after them. Hayseed held her lead for the rest of the way, with Boo Hoo second, while Miladi II. went up to third place. Tabasco, Jr., led from the start in the 15ft. class, and this was also true of L'Aiglon in the first handicap class and Scapegoat in the second handicap class. The summary:

Thursday, July 28.

A rail breeze from the S., with smooth sea and a rather hazy sky was given the yachtsmen for the second of the midsummer series. In the 30ft. class Sauquoit was over the starting line ahead of the gun and had to return. Chewink IV. got the start and led all over the course. Sauquoit's mast went by the board just after she had turned the first mark. In the 22-footers, Peri II. got the weather berth at the start and opened up a good lead before the first mark was reached, holding it all the way around the course, with Clotho second. Twenty-three starters in the 18ft. class did their usual crowding at the start. Arrow got her wind clear first and had the lead before the first mark was reached. She also led on the windward leg, but Miladi II. cut in on her at the Strawberry Hill mark and led until this mark was turned again, when Hugi was first, with Kittiwake V. second. Miladi II. went through her lee, however, and finished in first place. In the 15-footers Vera II. got the start and led all over the course. Meemer got the start in the first handicap class and led all over the course. L'Aiglon stuck close to her all the way, however, and got first on corrected time. Scapegoat got the start in the second handicap class and led all over the course, but lost to Jacobin on time allowance. A close race in the dory class was won by Lurline II. The summary:

Saturday, July 30.

The last of the midsummer series of open races of the Boston Y. C., sailed on Saturday, July 30, was the best of all. The breeze was fresh, S.S.E. at the start, hauling to S.S.W. at the finish. The hauling of the wind, however, did not in any way spoil the racing. Fifty-one yachts crossed the starting line, and all but three of these finished. In the 30ft. class, Chewink IV. got the start and again led to the finish. Sauquoit again had hard luck, carrying away her throat halliards on the first leg, which compelled her to withdraw. In the 22-footers, Peri II. got the start, but on the windward leg Opitsah V. took the lead, with Clotho second and Peri II. third. On the next leg, a reach, both Clotho and Peri II. passed Opitsah and Peri got the lead before the next mark was reached, only to lose it to Clotho and Opitsah on account of failing wind. Clotho led to the Peddock's Island mark, after turning which, Opitsah managed to get the windward berth on her. Opitsah kept Clotho under her lee all the way on the second windward leg until the mark was reached, when Opitsah stood too far and Clotho turned inside of her. Clotho led from this out, while Peri II. went into second place. In the 18-footers Bat came out of the bunch of twenty-three starters and took the lead, with Arrow following only a few seconds behind all the way around the course. In the 15-footers Tabasco, Jr., got the start, but Vera II. went ahead of her before the mark was reached and led all around the course. In the first handicap class Meemer led all around the course, but L'Aiglon again got first place on corrected time. In the second handicap class Scapegoat led all the way. The summary:

Class C—30-Footers.

Marblehead, Tuesday, Aug. 2.

A Y. R. A. open race was given by the Boston Y. C. at Marblehead on Tuesday, Aug. 2, which, on account of almost an entire lack of wind, might be called a clear fluke. Chewink IV. got the start in the 30-footers, and led until the wind failed entirely, when Sauquoit drifted up by her and led to the finish. Medric got the start in the 22-footers, with the rest of the class bunched. Medric and Clotho had a S.W. breeze near the finish, while Opitsah got it off the other shore, and Opitsah won out. Otter won in the 18-footers, Crescent in the dories, Tabasco, Jr., in the 15-footers, Jingo in the first handicap class, and Scapegoat in the second handicap class. The summary:

Class C—30-footers.

Corinthian Y. C.

Marblehead, Mass.—Wednesday, Aug. 3.

Thick fog spoiled the first of the midsummer series of races of the Corinthian Y. C., held off Marblehead on Wednesday, Aug. 3. There was a lively S.E. breeze moving, but the fog shut in so thick before the yachts had sailed 4 miles that each could not see the other. In the 30ft. class Sauquoit got the start, but Chewink IV. went through her lee before they had sailed half a mile, and led to the finish mark. Urchin got the start in the 22-footers, and Medric led at the first mark. On the beat to windward Clotho went up, and it looked as though the race would surely be hers. Both she and Opitsah V., however, stood too far to windward in the fog, and Medric took advantage of this to get into first place again. Tayac managed to find Pig Rocks bell buoy before Medric, and led from this mark to the finish. In the 18-footers Arrow sailed a great race, taking the lead soon after the start, and picking up all the marks in the fog without trouble. In Class A, handicap, Meemer got the start, and was leading when the fog shut in, but was passed in the mist by Meemer. Yarico was first boat to finish in Class AA, handicap. In Class B, handicap, Gringo led across the finish line, but lost to Suzanne on corrected time. None of the boats in the special 15ft. class and in Class C, handicap, finished. The summary:

Friday, August 5.

The last of the Corinthian Y. C.'s midsummer series was sailed on Friday, in a reefing S. breeze. In the 30ft. class Sauquoit got the start and led to the first mark. On the beat to windward, however, Chewink IV. soon went ahead and led to the finish. In the 22-footers Opitsah V. got the start and led to Archer's Rock. On the beat to windward Peri II. took the lead and held it to the finish. The 18-footers were well bunched at the start, and at the first mark Dorchen was first with Hugi second. On the beat to windward Hugi went into first place and was never headed. Vera II., in the 15ft. class, was another of the boats that was good at windward work, on which she got the lead that brought her home a winner. Seboomook, Carina II. and Gringo did all the leading respectively in Classes A, AA and B, handicap. Raccoon won easily in Class C, and Barbara won in the dory class. The summary:

Saturday, August 6.

The race of Friday settled the midsummer series cups upon the following yachts: 30-footers, Chewink IV.; raceabouts, Baggarah. There were other classes, however, in which three yachts had each won a race, and the sail-off was held Saturday morning, with the following winners: 22-footers, Opitsah V.; 18-footers, Hayseed; Class AA, Kit; Class B, Suzanne.

On Saturday afternoon, Aug. 6, there was a special invitation race, which wound up the Corinthian week. The wind was light from the S. In the 30ft. class Sauquoit got the start and led at the first mark. On the windward leg Chewink IV. went into the lead and held it to the finish. In the 22-footers Medric got away first and led to the first mark. Clotho showed up well on the windward work, turning the south mark in the lead. She led from this mark to the finish. In the 18ft. knockabouts Fudge took the lead soon after the start and held it all over the course. Seboomook got the start in Class A, handicap, bettered her lead by avoiding a tow, and finished 10m. to the good. Kit won easily in Class AA, handicap. Gringo won a close race in Class B. In Class C, Raccoon finished first, but lost to Tartar on corrected time. Barbara was again first in the dory class. The summary:

30-Footers.

Y. R. A. of Massachusetts.

Squadron Run, Hull to Marblehead—Sunday, July 31. An open squadron run was given by the Y. R. A. of Massachusetts, from Hull to Marblehead, on Sunday, July 31. Ninety-two yachts, including power boats, crossed the starting line, making this event one of the largest held in Massachusetts Bay in many years. There was a two-reef breeze blowing in Boston Harbor and in Hull Bay in the morning, which deterred many yachts from entering, or otherwise a greater percentage of the 195 entries would have been present. Outside of Boston light, however, the wind was considerably lighter than it was in the harbor, and there were few yachts which did not have their reefs shook out before reaching Marblehead. The fleet made a beautiful appearance as the yachts sailed along, within sight of the shore, to Boston Lightship, from which point they proceeded to Marblehead. The schooner Monataka, sailing in the first handicap class, was the first yacht to reach the finish line, there being quite a race between her and the committee boat. The 30-footer Chewink IV. made the fastest time of any yacht over the course. Cups were given the winners in the regular Y. R. A. classes, while cash prizes were awarded the yachts in the other classes. The summary:

Class C—30-footers.

Shinnecock Y. C.

Good Ground, L. I.—Thursday, August 4.

The first of the three days' racing given by the Shinnecock Y. C. began on Thursday, August 4. The number of boats starting was about the same on all three days. Good time was made by the boats over the courses on the first day, and the following craft won in their respective classes: Frontenac, Wynnabust, Tiger Lily, Brunhilde, Charon and Jean.

Friday, August 5.

All but two of the twenty-one boats that started in Friday's event finished. A full sail breeze from the S.E. held true throughout the race, making good times possible and results conclusive. The winners were Frontenac, Wynnabust, Tiger Lily, Brunhilde, Charon and Jean. The summary follows:

Sloops—Class Q.

Medea, Edgar Lynn.....1 54 55
Frontenac, C. de Hart Brower, Jr.....1 54 05

Class AA.

Rainbow, Eugene Reynolds.....2 15 50
Memory, Harry Growtage.....2 16 35

Tiger Lily, Norman Lynn.....2 26 08
Spalpeen, W. S. Creevy.....Did not finish.

Class B.

Melody, James Crowell.....2 26 30
Lorna, P. J. Gill.....2 27 25
Enigma, W. P. Bonbright.....2 26 37
Brunhilde, Arthur Fowler.....2 24 02
Defender, A. Willis.....2 36 16
Hirondo, R. H. Fowler.....2 27 35

Jib and Mainsail Class.

Charon, Edgar Lynn.....2 25 12
Lauralee, C. B. Bancher.....2 35 35
Tar Baby, Dan S. Loughran.....2 31 40

Knockabouts.

Jean, F. W. Cooke, Jr.....2 18 30
Metawack, Gardiner Gilsey.....2 24 05
Natalie, H. O'Brien.....Did not finish.

Saturday, Aug. 6.

The third and last of the series of races took place on Saturday. There were fewer starters than on the day previous, but all the boats finished. The wind was light and the racing was not satisfactory.

Media made the best time over the 1 1/4 mile course, and beat her only competitor, Frontenac, easily. The other winners were Memory, Spalpeen, Brunhilde, Charon and Metawack.

Brunhilde won the series prize in Class B, while Wynnabust took the series prize in her class.

Sloops—Class Q.

Frontenac, C. de Hart Brower, Jr.....Corrected.
Media, Edgar Lynn.....2 47 17
Media, Edgar Lynn.....2 40 30

Metawack, Gardner Gilsey.....2 56 50

Eastern Y. C.

A SPECIAL open race of the Eastern Y. C. was sailed off Marblehead on Monday, August 1. Rain squalls, calms and flukes, generally, took away interest from this race. The yachts were sent away in a heavy rain, and after this ceased there came a dead calm. This was followed by a fairly decent breeze, which held to the finish. In Class L, Chewink IV. made a fine start and was the first to catch the breeze after the calm. She led all over the course. Medric got a good start in the 22-footers, but was turned around in the calm which came afterward. Urchin got the breeze first by holding farther inshore than the others and she led to the finish. The 18-footers were bunched at the start. Aladdin got the breeze first after the calm, and she led to the windward mark. On the next leg, however, Arrow overhauled her and led to the finish. The summary:

Class E—Y. R. A. 22-Footers.

Urchin, John Greenough.....Elapsed.
Clotho, Cheney & Lanning.....1 43 18

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

AUXILIARY SCHOONER AZARA LAUNCHED.—Azara, the tobin bronze auxiliary schooner owned by Mr. Chester W. Chapin, was launched from the yards of Messrs. Townsend & Downey Co., Shooters' Island, S. I., on Saturday, August 6. Azara was designed by Mr. A. Cary Smith. She will be rigged as a schooner with three pole masts, and she will be fitted with a Craig motor. She is 113ft. in, over all, 85ft. waterline, 21ft. 4in. breadth, and 5ft. 9in. draft.

SALES AND CHARTERS.—Messrs. Macconell & Cook have made the following sales: The steam yacht Mindora to Mr. Henry Crawford, Chicago, Ill.; the gasoline launch Nancy to Mr. Wilnot D. Porcher, Charleston, S. C., and

the 42ft. auxiliary yawl Charmer, by Reverend J. O. Bergh, New Haven, Conn. The same agency has made the following charters: Gasolene launch Florida to Mr. A. Hildebrandt, New York city; 42ft. auxiliary sloop Phebe to Dr. W. B. Brinsmade, Brooklyn, and the sloop Narika to Mr. F. C. Hinkley, of New York city.

RECENT CHARTERS.—The steam yacht Calypso, owned by Richard C. Veit, of New York city, chartered earlier in the season to George W. Perkins, has been rechartered by Gardner & Cox to S. M. Roosevelt. The same agency has also effected the following charters: Steam yacht Saghaya, Howard C. Smith to Senator Nelson W. Aldrich; steam yacht Seyonara, W. Lamman Bull to Abram Baudouine; steam yacht Zara, Commodore Harrison B. Moore, Atlantic Y. C., to W. B. Bacon; steam yacht Wana, estate of S. R. Van Duzen to J. B. Dennis.

ATLANTIC Y. C. OCEAN RACE.—The Atlantic Y. C. has arranged an ocean race for schooners and sloops to start on September 3, the Saturday before Labor Day. The start is from Sea Gate, thence to Fire Island lightship, through to Cape May lightship, and return to Sea Gate. Very valuable prizes have been offered—as fine as the Astor cups—and it is expected that many boats will enter on account of the three holidays coming together, which will give a fine opportunity for a splendid race.

A. C. A. Membership.

The following have been proposed for membership to the A. C. A.: E. L. Stevens and Rodney Prizer.

Rifle Range and Gallery.

Handbook for Military Riflemen.

"THE Rifleman's Handbook, for Military Riflemen," by J. G. Ewing, Asst. Insp. Gen'l Small Arms Practice, Delaware National Guard, contains 63 pages of good practical information for riflemen. In his preface the author modestly states that "this pamphlet is intended as a primer. There is nothing new or original in it excepting the arrangement, the idea being to handle in logical sequence the different steps which lead up to a knowledge of rifle shooting. The subjects have been dealt with as briefly as possible, and in the simplest manner." And yet within its 63 pages is contained all the information essential to the making of a good rifleman, military or otherwise, and which the rifleman must learn before he can attain a degree of intelligent proficiency. Each subject is treated clearly and briefly, yet fully. Everything which the military rifleman needs to know is told in plain terms, without redundancy. And yet, when a rifleman has mastered its contents, in a theoretical and practical manner, he may be classed as an expert. Some of the subjects treated are the loading mechanism of the .30cal. magazine rifle, assembling and dismounting, aiming and sighting drill, indoor gallery work, positions in shooting, scoring, ammunition, outdoor rifle shooting, ballistics, table of wind allowances, mirage, general observations. The main features are fully illustrated.

Of this valuable work, the eminent authority, John F. Guilfoyle, Inspector Small Arms Practice, U. S. Army, wrote as follows: "This little book has my heartiest approval and good wishes. It will be an excellent guide to the firing regulations, and will tend to stimulate interest in that important accomplishment, 'how to shoot.'" The author's address is Wilmington, Delaware.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association at Four-Mile House, Reading road, July 31.

Conditions: 200yds., offhand at the 25-ring target. An irregular, fish-tail wind prevailed throughout the day, and the thermometer ranged from 95 to 98 in the shooting pavilion.

Payne was declared champion for the day with the good score of 228; he was also high on the honor with 67. He also fired 100 shots for record, and beat his former record of 2162 by 21 points by scoring 2183. This establishes a new record for the range.

To-day finished the classified contest for the Topf trophies, and the results will be announced later on. Owing to the fact of a German Shooting Society picnic and shooting festival held on our next regular shooting day, Aug. 14, this Association's shooting days will occur on Aug. 21 and 28. Scores appended below:

Payne	228	224	222	221	218
Roberts	223	219	214	212	211
Hasenzahl	223	219	210	210	206
Nestler	222	217	213	207	204
Odell	219	213	210	209	208
Hoffman	216	210	205	201	190
Bruns	216	210	198	197	...
Trounstein	210	193	186	178	...
Hofer	208	207	195	195	193
Freitag	204	199	196	191	190

Presque Isle Rifle Club.

ERIE, Pa., July 30.—Only four members of the club put in an appearance to-day, though they could not have had a much finer day to shoot in. The scores:

J. Stidham	73	73	69	215	J. Bacon	68	66	65	199
J. Almeda	72	69	65	206	A. Mount	71	65	62	198

CABIA BLANCO.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Aug. 10-11.—Allentown, Pa.—Two-day target tournament at Duck Farm Hotel. C. F. Kramlich, Mgr.

Nov. 1-3.—St. Louis Mo.—World's Fair shoot; live birds and targets. Alec D. Mermod, Mgr., 620 Locust street.
*Western Pennsylvania Trapshooters' League tournaments. C. G. Grubb, Sec'y, Pittsburg.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM goes to press on TUESDAY OF EACH WEEK.

The New Haven (Conn.) Gun Club will combine a clam-bake and target shoot on Labor Day, Sept. 5.

Ossining and Poughkeepsie, Aug. 6, joined issue in a seven-man team contest at the traps to obtain a definition as to who's who. Poughkeepsie won.

September 21, the Berlin (Conn.) Agricultural Society will hold its second annual shoot. Competition will begin at 10 o'clock. J. H. Gould, manager, New Haven.

A seven-man team contest between the Springfield, O., Gun Club and the Rohrer's Island Gun Club, at Springfield, Aug. 5, resulted in defeat of the Rohrer's Island team by a score of 288 to 279.

At the shoot of the Mexia, Texas, Gun Club, July 26-29, Mr. T. E. Hubby made high average for the four days. Mr. R. J. Jackson won the Hunter Arms Co. trophy for the high amateur average.

The grand tournament and clam bake of the New Haven Gun Club, Sept. 5, given by the New Haven Gun Club, is worthy of the trapshooters' attention. For programme address Mr. John E. Bassett.

At Capt. J. R. Malone's tenth annual summer tournament, Aug. 2-5, held at Love Point, Md., the high averages for the two days at 400 targets, were as follows: Professionals—First, Elliott, 376. Amateur, Griffith, 354.

The contest between Messrs. O'Brien and Clayton, for the pigeon wing trophy, at Kansas City, Mo., Aug. 4, 100 birds each, was won by Mr. Clayton, with a score of 97 to 95. The five-man team shoot, between Kansas and Missouri, was won by the latter, 93 to 89 out of a possible 100. Each man shot at 25 birds.

The continuous performance in the matter of an installment long run made at the traps, by the famous shooter, Mr. Fred Gilbert, at Spirit Lake, Ia., on four different days, is indeed a noteworthy event in the doings of trapshooting. It also emphasizes the position of FOREST AND STREAM concerning the 16yds. mark as a standard of high performance—that is, it is too close.

The Lowell Rod and Gun Club, Mr. E. J. Burns, secretary, announces an all-day shoot for Labor Day, for which there will be offered \$40 in prizes, and a five-man team prize, valued at \$25. On the 18th inst., there will be an interesting race between the old-timers and the new-timers, the oldsters, ten men, to shoot from 16yds., the youngsters, eight men, to shoot from 18yds.; any gun, load, and both barrels.

At the shoot of the Consolidated Gun Clubs of Connecticut, at Hartford, Aug. 4, sixty-three shooters participated. There were six teams in the five-man team contest, representing the Colt's Gun Club, of Hartford, and the South Manchester, Rockville, Williamantic, Waterbury and New Haven clubs. The Rockville team won by a score of 84 out of a possible 100. The next shoot of the Consolidated will be at Waterbury, Conn., Aug. 18, under the auspices of the Mattatuck Gun Club.

The secretary-manager, Mr. Elmer E. Shaner, has forwarded to us an advance copy of the programme of the Interstate Association trapshooting tournament, given for the Hot Springs, S. D., Gun Club, Aug. 24-25, which provides ten events of 15 and 20 targets each day, entrance \$1.50 and \$2. Added money, \$7.50 and \$10. Event 7 on the second day is to be a five-man team race, for silver trophy, entrance \$2. Targets, 2 cents. Lunch can be obtained on the grounds. Class shooting, 35, 30, 25 and 15 per cent. Guns and ammunition, prepaid, and marked in owner's name, care of Hot Springs Gun Club, Hot Springs, S. D., will be delivered on the grounds free.

Mr. Elmer E. Reed, of Manchester, is now the champion target shooter of New Hampshire, consequent to scoring 89 out of 100 and defeating ten contestants at Dover, Aug. 3, in a State championship contest.

Mr. J. L. D. Morrison, of St. Paul, Minn., and Mr. J. L. Head, representing the U. M. C. Co., both famous as skillful trapshooters, participated in the competition of the Sheephead Bay, L. I., Gun Club on Thursday of last week.

Mr. Frank Lawrence, of the Winchester Repeating Arms Co., has established his headquarters in New York, whence he will travel betimes and without doubt will continue the business success which has made him so valuable as a representative of the Winchester company.

The programme of the North Carolina Trapshooters' Association first annual tournament, Aug. 23-24, at Raleigh, consists of twenty-two events, eleven each day. Ten each day are at 20 targets, \$2 entrance, \$10 added. Event 11 on the first day is a five-man team race, 25 targets, \$15 entrance. Event 9 on the second day is for a Marlin repeating shotgun, and event 11, 50 targets, \$1 entrance, is the State championship race. Shooting commences at 9:30. Handicaps in sweepstake events 16 to 20yds. Manufacturers' agents will be allowed to shoot from the 16yd. mark. Events are open only to amateur members of the Association, and any shooter can become a member by paying annual dues. Guns and ammunition shipped prepaid to the secretary, R. T. Gowan, will be delivered on the grounds free.

The secretary, C. L. Kites, writes us that "the Springfield, Mass., Shooting Club will hold their annual fall tournament at flying targets on Labor Day, Monday, Sept. 5. The programme calls for twelve events, 200 bluerock targets in all; \$16 entrance in the sweeps, \$25 added money. There will be five merchandise prizes for the amateurs shooting the entire programme and making highest averages, as follows: First, loving cup; second, Stevens rifle; third, trout rod; fourth, multiplying reel; fifth, 100 loaded shells. All purses will be divided Rose system, four moneys, less than ten entries, three moneys. Targets included in all entrances at 2 cents each. Targets will be thrown from three expert traps, arranged Sergeant system. Sweepstakes being optional, any one may enter any event for targets only. To reach the grounds, which are located at Red House Crossing, take Indian Orchard or Palmer cars. Loaded shells will be for sale at the club house. Targets will be thrown about 50yds. Professionals and paid experts will be allowed to shoot for targets only. Guns and ammunition shipped to the secretary, C. L. Kites, 499 Main street, if received before Sept. 4, will be delivered on the grounds free of charge. Programmes are now ready, and may be had by addressing the secretary."

BERNARD WATERS.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Aug. 6.—The scores made at the club shoot to-day follow:

Events:	1	2	3	4	5	6	7	8	Shot	Broke.
Targets:	25	25	25	25	25	25	25	25	at.

J. Gasper	17	19	18	11	100	65
Douglass	8	16	20	75	44
Robinson	8	12	11	75	31

For Morrison cup, 50 targets. At 18yds.: Partington 37, Parry 46, Michaelis 46, Moller 37, Dickman 44, Bell 34.

At 17yds.: Gregory 41, Moore 35, Dixon 37, Medico 41, Anderson 39.

At 16yds.: Finley 45, Hill 40, Intewiler 35, Leib 37, Gasper 37.

At 14yds.: Yonnegut 16, Hill 43.

New York Athletic Club.

TRAVERS ISLAND, N. Y., Aug. 6.—The N. Y. A. C. shoot to-day was a success in every detail. Mr. J. L. D. Morrison, of St. Paul, gave an exhibition of brilliant trap performance.

Event No. 1, 25 targets: F. W. Perkins (3) 24, J. S. Woodhouse (5) 17, L. T. Duryea (3) 22, W. P. Norton (1) 19, J. L. D. Morrison (0) 24.

Tie: Perkins and Morrison. Shoot-off won by Morrison.

Event No. 2, 25 targets: F. W. Perkins (3) 20, J. S. Woodhouse (6) 22, L. T. Duryea (5) 23, W. P. Norton (2) 21, J. L. D. Morrison (0) 23.

Tie: Duryea and Morrison. Shoot-off won by Morrison.

Event No. 3, 25 targets: F. W. Perkins (5) 24, J. S. Woodhouse (6) 18, L. T. Duryea (5) 24, W. P. Norton (4) 21, J. L. D. Morrison (0) 25. Won by Morrison.

Event No. 4, 25 targets: F. W. Perkins (6) 22, L. T. Duryea (6) 23, W. P. Norton (4) 25, J. L. D. Morrison (0) 24.

Won by W. P. Norton.

Event No. 5, 25 targets: J. L. D. Morrison 24, W. P. Norton (2) 23. Won by Morrison.

Event No. 6, 25 targets: J. L. D. Morrison (0) 25, W. P. Norton (3) 24. Won by Morrison.

Event No. 7, 25 targets: J. L. D. Morrison (0) 25, W. P. Norton (3) 24. Won by Morrison.

Event No. 8, 25 targets: J. L. D. Morrison (0) 25, W. P. Norton (3) 25. Shoot-off won by Morrison.

Event No. 9, 5 pairs doubles: J. L. D. Morrison (0) 10, W. P. Norton (2) 9, F. W. Perkins (2) 10, L. T. Duryea (2) 7.

Tie: Morrison and Perkins. Shoot-off won by Morrison.

Lowell Rod and Gun Club.

LOWELL, Mass., Aug. 6.—The Lowell Rod and Gun Club's regular Saturday shoot was well attended to-day, and a few good scores were made. Climax easily took first, but the second prize was hotly fought for, as the following scores will show:

Shot	at.	Broke.	Av.	Shot	at.	Broke.	Av.
Climax	90	90	.90	K. J. McKittrick	36	36	.72
G. C. Moore	90	75	.833	Wellington	60	39	.65
Edwards	100	83	.83	G. C. Moore, Jr.	30	30	.60
Burton	90	74	.822	Roderick	100	56	.56
Rule	100	82	.82	Chase	50	26	.52
Dean	100	74	.74	Bunker	50	24	.48

The "old-timers" of the club have an old-fashioned shoot the 18th inst., and have offered to shoot a 50-bird race with the "young lads" under the following conditions: Old-timers to shoot ten men from 10yds., and young lads to shoot eight men from 18yds; any gun, load and both barrels, if necessary. The match will undoubtedly come off.

On Labor Day the club holds an all-day shoot, and will offer \$40 in prizes and a team prize valued at \$25 to winning five-man team; open to all.

E. J. BURNS, Sec'y.

Love Point Tournament.

THE tenth annual summer tournament given by Capt. J. R. Malone was held at Love Point, Md., on Aug. 2-5. The programme provided three days at targets and one at live birds.

The tournament was held on the beach, and the water background offered a clear view of the targets. The excellent hotel accommodations and the convenient transportation, all in pleasant surroundings, combine to make an ideal trapshooting location.

The first day of the programme, Aug. 2, was devoted to a warming up shoot, the programme providing eight preliminary practice events at 10 and 15 targets, commencing at 4 o'clock.

The high guns of the day were: Professional—First, Mr. J. A. R. Elliott; second, Mr. J. M. Hawkins. Amateurs—First, E. C. Griffith; second Dr. E. H. Lupus. Scores:

Aug. 2, First Day.

Events:	1	2	3	4	5	6	7	8	Broke.

P. T. Ortel	6	6
Van Winkle	5
Poleter	5

Aug. 3, Second Day.

The programme of the second day provided twelve events, of which eight were at 15 targets, four at 20 targets, entrance \$1.30 and \$1.40; added money, \$3 and \$5. Thirty-eight men participated in the events of the day.

James A. R. Elliott, of Kansas City, was high with 189 out of 200. J. Mowell Hawkins was second with 188. Luther Squier third with 186.

Among the amateurs Foord, of Wilmington, was high, with 177; E. C. Griffith, of Providence, was second, with 175; Dr. H. E. Lupus, of Baltimore, was third, with 172. The highest straight run was 60 from the 20yd. mark, by Hawkins.

George Mordecai broke straight in a 20-target event, and was in the money in nearly every event he shot. John George got 19 out of 20 in one event, and this was good for Queen Anne's county.

Dr. H. E. Lupus was straight in two 15-target events, and Samuel Register in one. J. E. Bowen, of Pikesville, Md., made a straight in a 15-target event, and won the entire money in the seventh event. Those equalling him were professionals, and were not in for the money, but for targets only. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Broke.

Alberger	12	11
Bond	13	17
Street	8	10
Harker	11	16
Hartlove	10	17

Extra at 15 targets, entrance \$1.50: German 14, A. R. M. 12, Boyd 14, Mordecai 13, Orrison 13, Hartlove 12, Harker 12, Street 9, McHugh 12.

In the morning one trapshooter saw some marsh hens flying about the borders of a lake about 200yds. from the traps. He killed one, but before he could retrieve it a countryman, clad in high boots and a big straw hat, emerged from the woods. He quickly picked up the bird. The marksman thought that marsh hens might be protected in Maryland, so he started back to the traps. The native tried to overtake him to give him the bird, and the shooter broke into a run and joined the trapshooters. The countryman came up to the crowd, but no one claimed the bird, so the retriever carried it away.

Aug. 4, Third Day.

The third day had a programme of three live bird events. No. 1 was at 5 birds, \$3, moneys divided, 60 and 40 per cent. The winner of this event to receive a gold badge.

No. 2 was at 10 birds, \$5 entrance, 60 and 40 per cent. The winner of this event to receive a silver cup.

No. 3 was the Love Point handicap, entrance \$10, moneys divided 50, 30, 20. The winner of this event to receive a silver cup. The sweeps were open to experts. The cup and badge to amateurs.

The attendance was not so large as was expected. Only six men shot for the championship cup, and Mr. Malone, who gave the cup, shot with the others. The cup was won by Lester German, of Aberdeen, Md.

In event No. 2 German was again a winner. E. C. Griffith and A. R. M. tied with German on the first 10 birds. They agreed to settle the question of cup ownership in a miss-and-out. Griffith and A. R. M. lost their first birds, and German was victor.

German did good shooting. A. R. M. and he each killed 36 out of 38. Capt. L. C. Coulbourne, who won the championship trophy last year at Ocean City, did not like the idea of being beaten by a man from Aberdeen, or from any other place.

He made a verbal challenge to shoot any man on the ground for \$10, the winner to pay for the birds. German took the def. The shoot resulted as follows: German 9, Coulbourne 8.

Coulbourne and German shot a second match, which was also won by German by 10 to 9.

Coulbourne and George P. Mordecai shot a series of matches and made an even break. The first was at 30yds. each, miss-and-out, and resulted: Coulbourne 6, Mordecai 5. Second miss-and-out race: Mordecai 3, Coulbourne 2. Third shoot a 5-bird match for \$5 a side: Coulbourne 3, Mordecai 4, winning the match.

Fourth match, from the 30yds. mark. It resulted in a 4-kill tie. In the shoot-off miss-and-out, Coulbourne killed and Mordecai lost.

First event, 5 birds, entrance \$3:

A. R. M.	22222-5	Coulbourne	22022-4
Griffith	22222-5	McHugh	22202-4
Malone	21222-5	Mordecai	11110-4
German	12112-5	Hoffman	20100-2
Foord	22011-4		

Second event, 10 birds, entrance \$5; the winner to receive a gold badge:

A. R. M.	30	22102212210222
----------	----	--

Consolidated Gun Club.

HARTFORD, Conn.—The fifth tournament of the Consolidated Gun Clubs of Connecticut took place at the grounds of the Colt Gun Club, Hartford, Aug. 4.

There were fifteen events on the programme, all at bluerocks at unknown angles. Shooting began at 9 o'clock, and it was shortly after 6 P. M. that the last squad finished the thirteenth event.

The men went to the score in squads of five, and while they were shooting a hard-working, leather-lunged squad hustler rustled up five more, so that shooting was practically continuous.

The principal event was the team shoot, with six teams of five men entered. This came on about 3 o'clock, and was interesting to a large crowd in attendance. Rockville won, with Hartford second. The scores in this and other events are rather poor, due to the overcast sky and a dark background, which made the targets hard to see distinctly. The scores follow:

Team race:

Colt Gun Club, Hartford.	
Mills	111001011011111110—14
Hollister	111011111111111110—16

Clark	2 7 .. 11

It has been a long time since such a large number of shooters have appeared in Hartford. Interest in trapshooting is increasing. The next shoot will be at the Mattatuck Gun Club, Waterbury, Conn., Aug. 18. Willis M. Hall is secretary.

The second annual shoot given by the Berlin, Conn., Agricultural Society, will be held Sept. 21, from 10 A. M. to 4 P. M. Mr. J. H. Gould, of New Haven, is in charge.

The New Haven Gun Club will hold a clam bake and shoot Labor Day, Sept. 5. The main event is a three-man team race from any club in the State, 25 targets each man, \$10 added. Entrance \$7.14 per team, targets included. John E. Bassett, Secretary, 5 Church street, New Haven, Conn.

W. G. DUDLEY.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Aug. 6.—On Wednesday next the Rochester Rod and Gun Club will start a series of handicap contests, Aug. 10 to Nov. 16, for a handsome cup, which was donated by the Hunter Arms Company, of Fulton, N. Y. The handicaps are already arranged, and will be posted on the bulletin board of the club. The club has drawn up a new set of rules for the handicap, and they are as follows:

Each contestant shoots at 25 single targets flat and will have handicap targets added to actual score.

Should a contestant with his added handicap score more than 25 targets he can only count the score as 25. Ties must be shot off the same day, at same handicap. No back scores can be shot up.

The shooter having the highest score each Wednesday to score one point, and at the close of the contest, Nov. 16, the shooter having the greatest number of points to his credit shall be declared the winner.

At least five members must compete on a regular Wednesday, or it will be declared a no contest.

Handicaps will be readjusted after each third contest.

No entries accepted after 4 o'clock P. M.

Ohio Trap.

THE Sandusky, O., Gun Club held a tournament on Aug. 3 which proved a very enjoyable affair. The club had as guests members of the Leamington, Ont., Gun Club and a number of well-known shooters from other places were present, among them being F. H. Snow, of Brooklyn, O.; R. L. Trimble, J. L. Head, S. S. Saffold and J. Wherry, of Cleveland, and F. H. Conover, Leamington, thirty-six in all.

The Leamington shooters were entertained at dinner and supper by the home club, and it was late in the evening, or very early in the morning, when they embarked on the steamer Louise to return home after their day's pleasure.

The club's grounds are at Cedar Point. The targets are thrown against a water background, and many of the shooters were badly puzzled.

F. H. Snow was high man with 134; he also had the distinction of shooting from 20yds. three times, as he made that number of straight scores. Head was second with 130, and Trimble third with 128.

Thirteen shot through. Their scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	at	Broke.
Snow	13	15	10	14	12	14	15	13	15	13	150	134
Head	12	13	13	13	11	14	14	14	12	14	150	130
Trimble	13	12	11	14	12	13	14	13	13	13	150	128
Conover	14	11	12	11	14	13	14	13	12	12	150	126
Hart	11	13	13	11	13	12	12	15	10	14	150	124
Saffold	12	13	12	14	14	11	14	10	13	11	150	124
Deist	12	13	12	11	13	10	14	13	15	9	150	122

Boone	9	9	13	11	13	14	10	13	10	13	150	115
Miller	13	12	12	8	15	10	12	11	14	7	150	112

Rohrer's Island Gun Club.

There was a large attendance at the regular shoot of the Rohrer's Island Gun Club, Dayton, O., on Aug. 3. The weather was fine. In the handicap medal series twenty-three men entered and ten qualified. The winner, Carl Hanauer, is only seventeen years old. He surprised the crowd by his remarkable exhibition of skill and endurance, shooting through fifteen shoot-offs and standing the strain like a veteran, defeating such shots as C. F. Miller, who missed but 2 targets out of 98 shot at, and who made a run of 77 straight. The medal event is at 25 targets, with a handicap of extra targets to shoot at; all breaking 25 or better shooting off for the medal, which is held by the winner until the next shoot.

Springfield Gun Club.

A number of the members of the Rohrer's Island Gun Club, of Dayton, visited the Springfield, O., Gun Club on Aug. 5 and enjoyed an afternoon of good sport.

The main event of the day was a return match between teams of the two clubs, the home boys winning by a score of 288 to 279. There were seven men on a team and each shot at 50 targets. High individual scores were made by Watkins and Henderson, of Springfield, each of whom broke 47. Miller and Lockwood, of Dayton, tied with Strong, of Springfield, for second honors on 44 each. There were three 25-target events in addition to the team match, and here the Dayton boys carried off the honors, H. Oswald breaking 66 and Lockwood 64. Poole, of the home club, was third with 59.

The affair was a big success, twenty-one shooters taking part, and many good scores were made. The scores follow:

Event No. 2, seven-man team match, 50 targets per man: Springfield Gun Club—Watkins 47, Henderson 47, Strong 44, Poole 41, Snyder 39, Downs 36, Jobe 34; total 288.

Rohrer's Island Gun Club—Miller 44, Lockwood 44, H. Oswald 41, Schaefer 41, Rohrer 39, F. Oswald 35, Smith 35; total 279.

Cincinnati Gun Club.

Cincinnati, O.—The attendance on Aug. 6 was not large, twelve shooters taking part in the Parker gun contest. Peters was high in actual breaks with 85. Williams was a close second with 83, and was the only one of the shooters to break 20 straight.

A solid silver loving cup, valued at \$50, has been offered for competition. The first contest took place on Aug. 6. The conditions are 25 targets, 50 cents entrance. Members in Class A to stand at 18 to 20yds; Class B, 16 to 18yds.; Class C at 15yds. Experts at 22yds. Members may enter as many times as they wish by signifying their intentions and paying 50 cents in advance. Entries received any time except when regular club contests are taking place. Entries close and ties will be shot off when 200 entries have been received, due notice being given all contestants. When a cup has been won another will be put in competition. Winners will receive a penalty handicap of 2yds.; limit, 24yds. The number of entries and high score will be posted in the club house.

Ahlers leaves soon for Atlantic City, where, after getting a smell of salt water, he will visit the fair at St. Louis, and then go to Emil Werk's camp in Minnesota for the shooting.

In the cup race to-day there were twelve entries, as follows, handicap in parentheses: Williams (18) 18, 18, 17; Peters (19) 20, 21, 16; Medico (18) 20, 16; Gambell (18) 18, 17, 23; Maynard (18) 15. Gambell was high man, and his score of 23 must be beaten. Try it, some one.

Messrs. Pfeiffer and Pohlar have just got back from a visit to the latter's brother at Morris, Ind., about forty miles from here. While away they had some fine fishing and also smashed a few targets just to keep their hand in.

Parker prize gun, 100 targets, handicap added: Peters (20) 100, Williams (18) 100, Herman (30) 100, Pfeiffer (40) 100, Smith (28) 100, Jack (30) 100, B. Andrews (51) 100, J. Andrews (71) 100, Norris (30) 59, Jay Bee (25) 95, Maynard (18) 89, Gambell (10) 84.

Dayton Gun Club.

The conditions on July 30 were favorable, and some good work was done at the shoot of the Dayton, O., Gun Club. The initial contest in the series for the Gem City championship medal was the principal event of the day, and C. H. Cord had the honor, his score being 24 out of 25. Bailey and Rike were one behind him. The new concrete pits have been completed and are ready for use. Work has been begun on the concrete rifle pit. The Dayton Gun Club has been incorporated with a capital of \$5,000. The incorporators are: John L. Theobald, Anthony F. Kempert, O. H. Bailey, C. H. Cord and Zenas Craig.

BONASA.

Remarkable Scores.

SPIRIT LAKE, Ia., Aug. 5.—Inclosed please find some scores made by Mr. Fred Gilbert on our grounds, July 30, 31 and Aug. 1 and 4. The targets were thrown 55yds., and the last day there was a good wind blowing. You will note that he has a run of 392 straight, which I believe is the best record ever made.

I was with him while all the shooting was done, and I consider it the best shooting I ever witnessed, as during all this run he had only three birds that were not broken in good shape, and they were broken into three or four pieces:

New Hampshire Championship.

DOVER, N. H., Aug. 6.—In the shoot for the cup emblematic of the championship of the State of New Hampshire, which took place at Henniker, N. H., Aug. 3, eleven persons took part, Winchester, Henniker, Concord, Dover and Manchester being represented.

The visitors were cordially and hospitably entertained. The cup was won by Mr. Reed, of Manchester. All stood at the 16yd. mark.

WESTERN TRAP.

Mexia Gun Club Tournament.

MEXIA, Tex., July 31.—A rather prolonged, though successful, shoot was that of the gun club tournament held here July 26, 27, 28 and 29. There were forty-three shooters, and some very fine scores were made. T. E. Hubby shot steadily and regularly each day. R. J. Jackson made high amateur score, and the Hunter Arms Co. trophy went to him.

Fanning, Faurote, Sens, Curran and Atchison did not get in until the last day, when they all made top scores.

The programme of each of the first three days provided a total of 160 targets; on the fourth day, 190. The scores:

Reynolds Annual Tournament.

Reynolds, Ind., July 29.—There was a fair turnout on the occasion of the gun club shoot. Not all present were with us for the whole day, otherwise some extra good shooting would have been the result.

Vietmeyer was with us, and he did his best shooting of the year—190 out of 205. Parks shot well, but then when Brown and Nichols came in they outshone all. Brown lost 2 out of 110, and Nichols 4, to Ackerman's 6. The weather was not the best, else all would have done better. Mr. Grass proved a manager that the club can be proud of. Scores: Parks shot at 205, broke 177; Vietmeyer 205, 190; Grass 205, 171; Reumler 185, 169; Kinney 205, 190; Moulton 190, 177; Hartman 90, 79; Brown 110, 108; Nichols 110, 106; Ackerman 110, 104; Rice 55, 45; Prnett 55, 43; Slow 110, 99; Mitchell 80, 61; Samples 50, 40.

Ashland Gun Club.

Lexington, Ky., Aug. 2.—The members of the enthusiastic gun club met for practice, and a generally good time at the club grounds, Aug. 1. There were many visitors present, and a general good, sociable time was the result. Scores as follows:

Events:	1 2 3 4 5 6	Events:	1 2 3 4 5 6
Targets:	15 15 25 15 15 15	Targets:	15 15 25 15 15 15

Event No. 3 was Peters gold medal. It was won by Mr. W. Henderson.

Kansas Mourns Loss of Prestige.

Kansas City, Mo., Aug. 5.—Yesterday was a bad day for Kansas. Though Ed O'Brien shot well, he could not win out with a patched up team, as only three of his regulars were present, and one of the substitutes lost the race.

The Missouri team was this time all of Kansas City's best and hard to beat, not a man going below 17. You see, C. W. Franke, A. C. Holmes, W. M. Clayton, Harry Tipton and Dr. Leavel have won many a live-bird race, while on the Kansas team was to be found Gottlieb, of Kansas City, a Missouri man, and Kleinhaus, who had an off day entirely. Anderson, O'Brien and Gorman are good for 19 or 20 any day, and they lost but 2 out of their 60

of Elliott's choice flyers. This is their first defeat for the year, and when they get Fatty, Arnold and Timberlake added to their team they will show 'em when they come back again.

The individual race between Clayton and O'Brien for the pigeon wing trophy was one of the closest ever shot on the Blue River Park. Each got 49 out of first 50, then O'Brien was a head one at 75, only to run up against very hard luck on the last 25, when he lost 2 dead out and the race by these two, as Clayton bagged the whole 25. Scores:

Janesville Tournament.

Janesville, Wis., July 30.—The first annual shoot or tournament of the Janesville Gun Club was pronounced a success by the promoters.

Shooters to the number of seventeen were present from Madison, Broadhead, Monroe, Grand Rapids, Edgerton and Beloit.

The boys present all feel under obligation to Eugene Roeshing for the able manner in which he handled the shoot. The club was greatly encouraged by this effort, and will try and get in line for a shoot next season that shall draw to it at least one hundred shooters.

Shickley Tournament.

Shickley, Neb., July 30.—On Friday there was an all-day shoot held here by the gun club. There was a good time all round. The team shoot was especially interesting, as the home team won over Edgar by a small majority of 10 targets. Shickley has now two wins to its credit, and the next shoot will be held at Geneva. This will be interesting, as Mr. Thorpe, the retired jockey, lives there, and has taken up trapshooting as a pastime. Mr. Thorpe shot in all the events here and won the high average. Scores: Hilton shot at 110, broke 87; Thorpe 140, 103; Miner 120, 88; Winertiene 30, 22; Osborne 100, 73; Harris 140, 96; Smith 70, 45; Dodge 90, 57; Howard 140, 87; Grimm 140, 87; Ford 10, 6; Patie 140, 80; Krueger 20, 11; Marson 60, 32; Bray 50, 24; Smithson 30, 12; Johnston 20, 7.

Match shoot, 50 targets each.

Shickley Team—Thorpe 42, Harris 40, Dodge 40, Muir 36, Patie 29; total 187.

Edgar Team—Grimm 41, Hiller 38, Howard 37, Osborne 37, Bray 24; total 177.

Challenges.

After the big shoot at Kansas City, Aug. 4, W. W. Clayton was challenged by Ed O'Brien, of Florence, Kans., for the Wyeth medal, which represents the championship of the Missouri valley at live birds.

Alce Mernod, of St. Louis, challenged W. W. Clayton for the pigeon wing trophy, representing national championship, which will be contested on either 50 or 100 live birds.

A team of St. Louis live-bird experts has challenged the Kansas City or the Missouri team for a match for the Elliott live-bird cup. These teams have held some spirited and close contests in the past, and will make a struggle that will be well worth witnessing.

Trap at New Berlin.

New Berlin, O., Aug. 4.—What turned out to be a first-class tournament was that of the home gun club, which held their first open shoot Aug. 3. There were eight fifteen target events, and a five-man team event.

Tryon, the Cleveland good shot, was first with 114 out of 120. Dr. Hale, of Canton, came next with 109. Trimble was the only expert that was present, and he was busy, when not using the pumps, doing fancy rifle shooting. There were fifty-one shooters present and taking part for the day.

Shooting at 120 targets Tryon broke 114, Dr. Hale 109, Lucky 107, Snow 105, Lothamer 103, Taylor 103, Trimble 103, W. W. W. 102, Ewalt 102, Haac 101, Williams 97, Bradley 97, Young 96, Ream 96, Schulz 95, Evans 92, Becher 91, Suffold 81, Suffool 64, Runner 61. At 105 Metzger broke 93, J. K. W. 91, J. A. S. 91, Galt 90, Gilchrist 88, Gray 89, Beck 83, Winnell 78, Smith 77. At 90 Russell broke 74, Win 71, Dunn 71, Raven 62, Ellett 52, Francis 52, Baer 47, Lyman 34, Bushman 31, Gault 37.

In the team shoot Akron came out on top with 225 out of 250. Scores:

Akron—Lucky 48, Bradley 47, Metzler 47, W. W. W. 42, Waggoner 41; total 225.

Canton—Win 42, Young 45, Wate 37, Hook 46, Lothamer 42; total 212.

Barbaton—Smith 40, Gault 39, Tracy 38, Beck 38, Brudcr 42; total 197.

New Berlin—C. J. Schlitz 43, Ream 41, James 31, William 38, Winnell 39; total 192.

Sparta—Buckman 42, Buber 34, Guest 43, Bair 32, Smith 39; total 190.

In Other Places.

E. E. Hagaman, secretary of the Waterloo, Ia., Gun Club,

wishes all shooters to know that on Sept. 22 and 23 there will be a tournament on their grounds, with plenty of added money.

All sportsmen who visit the World's fair, will find much to interest them when they call at the Winchester Repeating Arms Co. exhibit. The trophies that have been won with their goods are the greatest collection ever known in the United States.

Billy Townsend, the well-known shooter and sporting goods dealer, of Omaha, was one of the lucky ones in the land drawing at Bonesteel, S. D. He secured a \$5,000 farm and he has named his ranch, Suckens, and has extended an invitation to all his shooting friends to meet him Sept. 1, 2 and 3 and enjoy a chicken hunt. Meantime there will be a sod-breaking contest, the one turning the most sod will win an Indian squaw for a wife.

Get in line for the great circuit of shoots that will be held in Illinois and Indiana during September and October, viz.: Litchfield, Sept. 6 and 7; Chicago, Sept. 9 to 11; Jacksonville, Sept. 13 and 14; Lincoln, Sept. 20 and 21; Homer, Sept. 28 and 29; Crawfordville, Oct. 4 and 5.

Who are amateurs and who are not amateurs, will be the coming subject that will interest the trapshooters of the West during the coming season. The supposition is gaining ground that there are expert amateurs who travel from one shoot to another who should be handicapped or barred, the same as the professional traveling man.

The Dalton, O., Gun Club will hold their sixth annual tournament Oct. 6 and 7. For information, programmes and all inquiries pertaining to same, address G. C. Trut, secretary.

Following the Interstate shoot at Hot Springs, S. D., there will be a two days' shoot at Deadwood. All Black Hill clubs will be represented, as the carnival will be in progress. It is not exaggerating to state that forty shooters will be present.

The Dows, Ia., Gun Club, through their secretary, L. M. Howell, has sent out the information that on Oct. 5 and 6 there will be a shoot held that will not interfere with the Concordia, Kans., Interstate tournament.

There will be a tournament at Rich Hill, Mo., Sept. 1, which the Panama, Mo., Gun Club will engineer.

Henry Davis won the shaving cup that was up for the highest score made by members of the Panama, Mo., Gun Club for the month of July.

The Grove Gun Club, of Detroit, Mich., purpose to classify their members as to ability. This will give all a chance to have in their possession the medals during the season.

Grand Rapids, Minn., is the town for a sportsman. Deer, bear, moose, ducks, etc., and such fishing as would do your heart good. No finer body of trapshooters, as there are forty members, and they will entertain shooters and lovers of outdoor sports. Just try them and see.

The Wheeling, W. Va., Gun Club defeated the Steubenville, O., Gun Club on Friday last in a team shoot for the second time. With ten men or a total of 500 targets, Wheeling made 419 to Steubenville's 397.

The Jackson, Minn., team has challenged the Fairmont team for the Peters trophy. The contest will be shot on Aug. 5, the second day of the tournament.

The game warden is searching for the man with a gun who shot prairie chickens at Ord, Neb., before the same were "officially ripe."

An interesting shoot was held on Sunday last at Trenton, Mich., between clubs from River Roynce, Rockwood and Trenton, the first-named being the winner. This is quite a drawn-out shoot, as the winner must win six times. Scores: River Roynce 60, Rockwood 57, Trenton 53.

Aug. 24, 25 and 26 will soon roll around, and on those dates one of the big shoots that Grand Rapids is noted for will be held. Much added money and many attractions, new grounds and traps. Not too many mosquitoes if you don't go in the woods.

Herman Standis won the medal, shooting on his own farm Sunday last while the Meriden, Minn., Gun Club contest was on.

It will be interesting to note the effect of the bar on outsiders at the Arkansas State shoot when the full report reaches us next week.

Mr. Feibelman, of Demopolis, won the highest score at the Meridian, Miss., shoot on July 28. Dr. Hale won the Hunter Arms Co. gold medal with a 25 straight.

R. I. Bean, of Ravenna, won the first and Roy Kelso the second medal at the club shoot at Kent, O., on last Friday, with a score of 22 and 19. "Chief High Temper" Jim was present. Jim did a little stunt of 46 out of 50, and then headed away for next town.

East End Gun Club, Toledo, O., will hold an all-day shoot on Labor Day.

At Fergus Falls the Dewey boys were out on July 28 and won the squad race, but Agern won the 50-target event with 47.

Jim Head was "snowed" in at the late Sandusky, O., one-day tournament.

Sportsmen have organized a gun club with the title of U. M. C. Club, with H. Carl, President; H. Donnelly, Field Captain; M. Daniels, Trapper, and Sam Smith, Secretary. The club holds forth at Guthrie, O. T., and it is their intention to take part in all the territorial tournaments.

Fanning is smashing things down in Texas. He missed but 6 out of 200 in the Ennis shoot. Faurote was going strong; 195 was his good round total.

The Ennis, Tex., shoot demonstrated that shooters in the Lone Star State get "cold feet" first day and do not remain for the second.

Dr. Browell, of Ada, I. T., is now the champion of two Territories, as he won same with 48 out of 50 targets shot at the Fishomingo tournament.

St. Louis will have a tournament Sept. 14 and 15 that will be a novelty, viz.: Afro-American Trapshooters' League.

The shooters at Terr Haut, Ind., report being interested in the Indiana-Illinois circuit of tournament. Why not claim a date and join in.

John T. Baker, the old-time trapshot, of Rockford, Ill., has purchased the sporting goods store formerly conducted by his son. Has been some time since he was a famous trapshot.

The North Side Gun Club, of Milwaukee, will hold their tournament Aug. 14. There will be a fine medal up for a prize, emblematic of the champion "bluerock buster." There will be four

divisions by the Rose system. Targets thrown from magatrap. Soergel was high man at the last Sunday shoot of the Wisconsin Gun Club, Milwaukee, and A. Krause was high at the North Side club shoot.

Chas. Young was out among the Grand Rapids, Mich., trap-shots, and took the opportunity to test the grounds of the Consolidated Club. The same fit him well, as he scored 49 out of 50 and "dusted" the one that was not scored.

Secretary John Brewer, of the Bowling Green, O., Gun Club, is out with an announcement that on Aug. 18 there will be a tournament for Wood county contestants. The championship of the county will be the most interesting event.

C. B. Wiggins, of Homer, Ill., is busy winning high averages, also organizing tournaments to be held throughout Illinois and Indiana.

Sunday last there was a big shoot at Billings, Mont. The Billings and Red Lodge teams held a team contest.

In a team shoot at Erie, Kans., with five men on a team and 25 targets each, Parsons made 91, St. Paul 79, Chanute 79, and Erie 80. Dr. White made high score, 23.

Dr. Frank Snow won the high gun score, which carried with it the Hunter Arms Company trophy at the Kalamazoo, Mich., shoot held on Saturday last, with 20 out of 25. This being a handicap shoot, Warnf and Keef shot from the 22yd. line.

The newly organized gun club at Freeport, Ill., held its shoot last Saturday. Dr. Boling and William Waddington made scores that they need not be ashamed of.

Massillon, O., Gun Club will soon decide upon dates for a fall tournament. It was decided that club members should pay \$2 for 250 targets with visitors and those without tickets pay 1 cent.

This week will be the Indian week at West Baden. There will be some tall shooting, and as the FOREST AND STREAM correspondent will be in attendance, a full report will be found in next issue.

The incorporators of the Dayton, O., Gun Club are John L. Thebold, F. Kempert, O. H. Baily, C. H. Cord, and Z. A. Craig. The next club shoot at St. Paul, Kans., will be held Aug. 17, at which time teams from Parsons, Erie, Chanute will try for superiority.

A reunion of the Ohio squirrel hunters will be held at Des Moines, Ia., during the latter part of August at the State fair.

A picked team from the Crawfordsville, Ind., Gun Club will shoot a series of matches with the Lebanon Club, each team to be composed of five men.

Mrs. Johnson, at present the only squaw shooter, was high at the last meet of the Minneapolis Gun Club. She scored 15 straight, 13 out of 15, 22 out of 25 twice, then 18 out of 20. This is much better than she did in late tournaments, but the gun was a handicap at that time, it being on its bad behavior.

The West End Gun Club, of Waukegan, Ill., will shoot regularly every Sunday.

The Shelbyville, Tenn., Gun Club has some fine shots. At their last meeting Mr. Cunningham was present, and he presented the club with a case of Peters shells. Mr. C. led the score with 92 per cent.

The Traverse City, Mich., shots got busy last Saturday. Will Darrow won on the first trial, 24 out of 25. Walton afterward won on the same score. A match was shot in which Stevens missed 23 and Carter broke 16.

The Ewell, Tenn., Gun Club will shoot a match with the Tracy City Club in the near future.

Laredo, Tex., sports a gun club with the title of National, though the scores show room for improvement.

A gun club will flourish at Elma, Ia. It starts with eleven members, and eleven are ministers.

W. Clayton has challenged O. Bleams, of Oconto, Neb., to shoot for the Post medal, which he lately won at the Buffalo Bill Gun Club shoot. Mr. Cunningham, of St. Joseph, Mo., one of the committee on handicap, has been notified. The match will take place at Mr. Blevin's home in the next month.

Maurice Kaufmann, of New Orleans, made some very excellent scores at the Demopolis shoot, beating out Goodbrod by two for the high average.

C. O. Le Compte, with headquarters at Nashville, Tenn., was reported at Henderson, Ky., last Friday, where he gave an exhibition that interested local trapshooters.

Wm. Gregory, of Owensboro, Ky., entertained the club at his home on Friday last, after which some shooting was indulged in. James Lewis was high with 41.

The third annual tournament of the Hopkinsville, Ky., Gun Club will be held Aug. 25 and 26, at the Cerulean Springs, a fine summer resort, sixteen miles west of the city. There will be \$50 added money, and trophy for high gun; purses will be divided Rose system. Magatrap and bluerocks. All interested should write to C. O. Prowse, the captain.

The Hales Corners, Wis., Gun Club will hold a tournament Aug. 21. This is a beautiful suburb of the city of Milwaukee, and is reached by street car. Many shooters are booked. All will be made welcome.

Garfield Gun Club.

Chicago, Aug. 6.—The appended scores were made on our grounds to-day on the occasion of the first trophy shoot of the third series. Dr. Meek won Class A trophy on 22, although his score was beaten by two visitors, Rupel and Fraunholz. W. Einfeldt won Class B on 18, and Birkland, Jr., won Class C on 16.

In the cup shoot, which followed, Hathaway won Class A on 22, W. Einfeldt Class B on 15, and Birkland, Jr., Class C on 16. The day was a fine one for trapshooting, being pleasantly cool, and twenty-six shooters lined up for the sport.

Fairmont Rod and Gun Club.

FAIRMONT, W. Va., Aug. 5.—The Fairmont Rod and Gun Club pulled off a most successful shoot to-day, which was attended by over fifty sportsmen, representing clubs from Grafton, Wheeling, Mannington, Morgantown and Bellington.

The programme for the day covered ten regular events of 10 birds each and a club team race, after which several sweepstakes were shot off.

High average for the day's shooting was won by W. A. Wiede-busch, of the Fairmont Club, with 89.6 per cent., with Price, Recreation Rod and Gun Club, Morgantown, and White, of same club, tied for second with 86.4 per cent. The scores:

Events:	1 2 3 4 5 6 7 8 9

Oneida County Sportsmen's Club.

UTICA, N. Y., Aug. 6.—Forty-one contestants participated in the events of the weekly shoot of the Oneida County Sportsmen's Gun Club to-day. The famous experts, Messrs. Sim Glover and Neaf Appar, were participants.

The shooting commenced at 2 o'clock and continued until 7. Mr. Henry L. Gates, of this city, shot at match with Mr. R. Bingham, of Rome, and won. Gates made 64 out of 75, and Bingham made 51 out of 75.

The club is composed of expert marksmen, who are advancing the sport in Utica. The scores were as follows:

Events:	1 2 3 4 5 6 7 8 9

Recreation Rod and Gun Club.

MORGANTOWN, W. Va., July 28.—The Recreation Rod and Gun Club, of this city held its regular weekly shoot at Recreation Park to-day, and we had a most enjoyable time, with twelve guns out. The light was fine to-day, but the wind was very gusty, and kept the gunners guessing at all stages of the game. The scores:

Event No. 1, 10 targets, practice: Dawson 7, Price 8, Jacobs 9, White 10, Geo. F. Miller 6, Kennedy 4, Cobun 8, Smith 8.

Event No. 2, president's cup handicap: Dawson shot at 18, broke 13; Price 21, 15; Jacobs 20, 15; White 22, 21; Geo. F. Miller 19, 8; Kennedy 26, 12; Cobun (winner of cup) 27, 20; Smith 26, 11.

President Bennett S. White wins the club championship medal for the week with a percentage of 89.5 per cent. of all scheduled events, while John M. Cobun wins the president's cup for the week with a score of 20 out of 27 shot at. President White being high gun in this event, but not being eligible, as he is the donor of the cup.

Aug. 4.—The Recreation Rod and Gun Club held its regular weekly shoot at Recreation Park, Thursday afternoon, with ten guns out. The scores:

First event, President's cup handicap: Price shot at 19, broke 15; Dawson 21, 15; L. Smith 20, 8; Jacobs 19, 15; Kennedy 22, 13.

Cup won by Price in the shoot-off.

Team shoot, 20 targets:

Price 17, Jacobs 18, J. L. Smith 11, Hickman 6, Gibbons 14; total 65.

Dawson 15, G. Miller 17, Kennedy 9, L. Smith 6, Gibbons 14; total 61.

Price wins club championship medal for the week with 85.1 per cent., and also wins president's cup for week.

E. F. JACOBS, Sec'y-Treas.

A Novel Order.

VAN BUREN, Ark., July 26.—Editor Forest and Stream: The following note was recently sent to the Van Buren Furniture and Hardware Co.:

"Please send me 1 pound sodie, 3 pounds sugar, 1/4 pound tea, 1/2 pound crackers and 6 pounds of beafe. I kant cum to town meself. Me wife had a babie last nite; also 1 hundred Peters shells. No. 6 shot, and a box of No. 2 primers."

Mr. Hunt went out and bought the grocery items for the proud parent.

Geo. E. BARTLETT.

PUBLISHERS' DEPARTMENT.

Concerning Proctor's.

The entire vaudeville world has been awaiting with interest the outcome of the recent experiments enacted by the Proctor management in using the same artists for appearances in two houses the same week. Some years ago Cissie Loftus appeared at the Twenty-third Street Theatre and Fifty-eighth Street Theatre during the same week, but the experiment was not continued until the engagement of Mr. Charles Hawtrey a few weeks ago. Mr. Hawtrey found it so easy to play at the Twenty-third Street and Fifth Avenue Theatres the same week that the following week he renewed his engagement for the One Hundred and Twenty-fifth Street and Twenty-third Street Theatres. Jessie Milward appeared also at the Fifth Avenue and Twenty-third Street Theatres, and afterward at Twenty-third Street and Newark, while the following week Blanche Ring established a record by playing six performances a day, appearing four times in New York and twice in Newark. The system has now become a regular thing, many of the minor performers appearing at two houses the same week. The success of this experiment, which is now clearly established, enables the presentation of better bills, since when good acts are scarce, the same attraction may be played in two houses, to the betterment of both bills.

In the latter part of August the Colt Patent Firearms Co. will be ready to deliver their army revolver with 6in. barrel, .38cal., blue finish, especially designed for the .38cal. S. & W. special cartridge. This revolver has the small-bore barrel and chambered cylinder of the new Colt target revolver known as the officers' model, but the plain sights and finish of the regulation army revolver. This arm will appeal to those who wish a military arm of .38cal., which can be used with various cartridges, with loads running from the lightest gallery charge with round bullet up to the full service charge.

SCOTT'S COON AGAIN.

EVEN Homer sometimes nods, and the almost invariably exact New York Evening Post so far forgets its learning as to print, in connection with the reported naval demonstration by the United States against Turkey, the following lines:

Some day the Osmanli coon may refuse to come down, and that will be an awkward pass for any Davy Crockett who then happens to have his guns trained on Smyrna.

Of American *pseudodoxia epidemica*, hardly one is more firmly established than the traditional belief that it was Davy Crockett whom the 'coon addressed when he saw the rifle leveled at him from the ground. Yet, as a matter of fact, it is perfectly well established on the testimony of witnesses recently living that the hero of that adventure, the man whose skill with the rifle was so generally acknowledged even by the birds and the beasts that it was not necessary for him to pull the trigger, was not Davy Crockett at all, but Capt. Martin Scott.

Honor to whom honor is due. Crockett was a good shot, a brave man, and gave up his life in a heroic fight. Capt. Martin Scott was perhaps a better shot and no less brave, and died as heroically, but in less spectacular fashion, before Molino del Rey. The Americans were waiting for the order to charge, in an exposed position swept by the fire of the enemy, and the men had dug rifle pits, or had lain down behind other cover by which they were protected, but Capt. Martin Scott remained erect, walking up and down before his men. Several of them spoke to him, saying, "Lie down, Captain, lie down; they'll hit you." Capt. Scott turned, and looking sternly at the men who had addressed him, said to them: "Martin Scott never lies down." It was his last word. A moment later a ball struck him, inflicting a fatal wound.

For the sake of history, as well as for justice to a brave man, the FOREST AND STREAM has constituted itself the defender of the honor of Martin Scott, and it will continue to insist that the credit for his achievements shall be given to him, and not to another.

SENATOR VEST AND THE NATIONAL PARK.

IN no one of all the editorials and obituaries written last week on the death of Senator Vest, did we see mention made of one great service performed by him for the American people, and for which they and their descendants should always remember him. It is a bit of ancient history now, and largely forgotten by all except those who took an active part in the fight. More than twenty years ago strong efforts were made by a private corporation to secure a monopoly of the Yellowstone National Park by obtaining from the Government contracts giving them exclusive privileges within the Park. This corporation secured an agreement from the Interior Department by which six different plots in the Yellowstone Park, each one covering about one section of land—a square mile—were to be leased to it for a period of ten years. It was also to have a monopoly of hotel, stage, and telegraph rights, and there was a privilege of renewal of the concession at the end of the ten years. The rate to be paid for the concession was \$2 an acre.

When the question of this lease came before Congress, it was referred to a sub-committee of the Committee on Territories, of which Senator Vest was chairman. He investigated the question, and in the report made on it used these words: "Nothing but absolute necessity, however, should permit the Great National Park to be used for money-making by private persons, and in our judgment no such necessity exists. The purpose to which this region, matchless in wonders and grandeur, was dedicated—a public park and a pleasure ground for the benefit and enjoyment of the people—is worthy the highest patriotism and statesmanship."

The persons interested in this lease came from many sections of the country and were ably represented by active agents in Washington. The pressure brought to bear on Congress was very great, and the more effectively applied, since few men knew much about conditions in the Yellowstone Park, or even where the Yellowstone Park was. But pressure and influence could not move Senator Vest when he knew he was right. He stood like a rock in Congress, resisting this pressure, making a noble fight in behalf of the interests of the people, and at last winning his battle. For years the issue seemed doubtful, and for years it was true that the sole hope

of those who were devoted to the interests of the Park, and who were fighting the battle of the public, lay in Senator Vest. So after years of struggle the right triumphed, and the contract intended to be made between the Interior Department and the corporation was never consummated.

This long fight made evident the dangers to which the Park was exposed, and showed the necessity of additional legislation.

A bill to protect the Park was drawn by Senator Vest and passed by Congress, and from that time on, until the day of his retirement from public life, Senator Vest was ever a firm and watchful guardian of the Yellowstone

GEORGE GRAHAM VEST.

National Park, showing in this matter, as in many others, "the highest patriotism and statesmanship." For many years, from 1882 to 1894, Senator Vest remained the chief defender of a National possession that self-seeking persons in many parts of the country were trying to use for their own profit.

If we were asked to mention the two men who did more than any other two men to save the National Park for the American people, we should name George G. Vest and Wm. Hallett Phillips, co-workers in this good cause. There were other men who helped them, but these two easily stand foremost.

If ever there should be erected in the National Park a memorial to those men who served their country well in securing to its people this marvelous region for the purposes for which it was originally intended, there might well be inscribed on this monument in letters of equal size the names F. V. Hayden, N. P. Langford, Founders; and George Graham Vest and William Hallett Phillips, Conservators.

CONCERNING A HUMBLE CREATURE.

THE woodchuck seems to be hopelessly of the unfortunates of the animal kingdom which are predestined to lives of worry, active perils, and constant poverty. Of the humble of the animal world, none is more humble than he. Even when his life is compared with the lives of his most unfortunate confreres, it stands out conspicuously in its wretchedness. It is broken in continuity, cheerless in its manner, and narrow in its scope. About one-half of it is lost in hibernation, which, so far as its activities are concerned, may be considered as the equivalent of death. The woodchuck's active life is limited to the time between the frosts of spring and fall, and his chief efforts are devoted to hiding in his burrow, or furtively, near his burrow's entrance, seeking grass wherewith to satisfy the cravings of hunger. When the woodchuck eats, his perils are greatest, therefore his hours, or rather moments, for meals are in the morning or evening when the farmer, the farmer's boy or dog, or both, are least likely to be prowling in his vicinity.

At infrequent intervals the woodchuck makes timorous petty forays on the farmer's bean or turnip patch in the early season when vegetation is most tender. He pilfers

his little fill without committing any wanton destruction, returning then to his burrow to resume assiduously his interrupted hiding.

Condemned as vermin, the sum total of his offense is that he digs a burrow and thereby injures about one square yard of stony, worthless land, feeds on a few other square yards of vegetation each season, and does some few pennyworths of damage to the farmer's beans, turnips, and cabbages in the early summer.

Yet, in sportsmanship, the proscription is against him. He is too humble in spirit, in body, in manner of life. From the viewpoint of men, his place is without the borderland of sport, in the miscellaneous riffraff of the rejected classed as vermin. The hand of every man and boy, and the teeth of every dog, are turned against him.

He is of the truly hunted. For him there are no fine distinctions and refinements pertaining to the ethics of correct pursuit and capture. The manner of his passing away is naught. To compass his destruction, every man, boy and dog is a sufficient warrant unto himself.

The farmer, actuated by wrath because of beans lost in the woodchuck's maw, and by the hope of sport in prospect, may legitimately flood or smoke or dig him out of his burrow or hiding place, after which woodchuck and farmer's dog battling in spectacular harmlessness, afford excitement and delight to the onlookers. There is much more din than execution in such encounter.

As a fighter the woodchuck is the embodiment of masterful inactivity. His strong feature is passivity. He sits erect in his defense, and with his long incisors nips the dog sharply when he ventures within reach, which causes consternation and retreat on the part of the assailant. If overpowered and thrown, he hides and the thick layers under it, protect him well from the puerile onslaught of the ordinary farm cur. The dog, when fighting, is in such a frantic state of excitement, so overwrought with furious barkings, silly jumpings to and fro, all conducted in a cowardly rage, that he is soon blown and helpless, whereupon he is content to loll and tremble and threaten by looks devoid of deeds. A farm dog which, unaided, has whipped an old, thick-skinned woodchuck is a revered local celebrity among the boys of his neighborhood.

Perchance the woodchuck may survive the perils of fire and flood, of man and boy and dog. There are other perils still. He has a copper wire noose, placed deftly at the mouth of his burrow with which to reckon. When he attempts to emerge, it may encompass his neck and forthwith strangle him. Or it may be a device which, with coarse iron pins, skewers him to the earth instead of strangling him.

Having escaped these many dangers, when venturing abroad he is in danger from the rifleman who, with a .25 caliber rifle and a telescopic sight, may be calculating a ballistic formula of death for him some hundreds of yards away.

All methods are good alike which reduce him to possession. No ethical tenets restrict the manner of his taking. No close seasons give him a respite from peril. No preserve affords him sanctuary. His preservation is strictly a personal problem to himself.

For gameness, beauty of physique or edibility, he is not recognized. His virtues, few and humble, are all negative. He has neither the speed nor cunning of the predatory fox, nor the beautiful fur of the mink. He compares still more unfavorably with the game birds and game animals as an animal of value.

As an esculent he holds an ill defined place even in the opinion of easily pleased primitive people. Some good men have eaten woodchuck, but they partook of him more as a gastronomic stunt than as a delectable morsel craved for the palate's sake. The woodchuck, as an esculent, would best be classed as a filler than as a *bonne bouche*. As with the mud hen and the skunk, no accredited gourmet has ever raised his voice or moved his pen in their praise as things for the connoisseur's table, nor has anyone besought that the destroyer's hand be stayed to the end that future generations may be blessed with at least one regalement on the delicate meat of the mud hen and the woodchuck.

Humble, harmless, outlawed, ill fed and worse housed, the woodchuck, ever facing death by fire and flood, by man and dog, still lives and multiplies and has his humble being.

THE SPORTSMAN TOURIST

A Boy of the Farm.

At 5:30 A. M. the boy is perched on the barnyard fence, impatiently waiting for the "hired man" and "hired girl" to finish milking the cows. The boy dangles his bare feet to drive away the mosquitoes, while he uses both hands to relieve the itching and burning caused by the invisible "no-see-ems." He looks at the mud nests under the eaves, and wonders why the swallows desert the cliffs when barns appear in the wilderness. "It shows sense, anyway," he mutters to himself.

Before the milkers are out of the yard, the boy jumps off the fence; the straight spruce bars rattle to the ground, and the cows pass out, one by one, with a clicking of toes on the lowermost bar. The boy puts up the bars, then waits for something to happen. "Old Short Legs," the leader of the herd, braces herself, throws up her head, and sends out a blast that causes the air to vibrate and the boy to wonder, for the hundredth time, what it is all about.

Down the hill through the narrow lane the boy follows the cows, listening to the rattling of hoofs, while he wonders why cows have split hoofs and the horses round. The end of the lane is soon reached. The boy drops the bars, and as they rattle to the ground he hears another boy letting down bars in the edge of the woods across a burnt land clover field. But the boy does not care for echoes this June morning, it is bird life that claims his undivided attention.

Down by the brook in the alder grounds, blackbirds are sending up a wild chorus. On all sides the boy hears the songs of native birds. The loud carol of the robin, the clear notes of the song sparrow, the tender strain of the Peabody bird, the rich, rollicking roundelay of the bobolink; the sweet, canary-like trill of the thistle bird, and over in the burnt land clover field the sprightly song of the house wren arises from many a blackened stump. Why the little bird was called house wren was beyond the boy's knowledge. He had never found a nest near a house, while nearly every hollow stump in pasture and field had its tenants. (Years later the wrens disappeared with the hollow stumps, but in that locality—northern Maine—did not build in or around farm buildings.) The boy visited several robin nests in the pasture. The nests were all in the roots of upturned trees. The boy wondered what the robins would do when there were no upturned trees.

The boy climbed over the rail fence into the clover field. He was no stranger to the birds; he had provided bread crumbs and nesting material, so the birds did not resent his curiosity. Two mornings before he had saved the eggs of a pair of house wrens by killing a large striped snake that had made its way to the top of the nesting stump. It was this nest toward which he struggled through the tangled clover.

If the birds did not resent his visit the bumble bees did. The bumble bees, little and big, thronged the clover field, and a scent of honey was in the dew-laden air, but the boy could not tell whether it came from the bees or from the sweet clover blossoms. He found nine eggs in the wren nest. They were rosy white, densely covered with brown dots and patches. The boy thought they looked like costly gems, such as his fairy books claimed for the prince and princess.

While inspecting the wren's nest, the boy thought of breakfast, and thereupon he climbed back to the lane, homeward bound. He did not follow the lane to the barn, but turned off to visit the spring at the foot of the hill. When he stooped down to quench his thirst there looked up to him a ten-year-old boy with round face, blue eyes, and a mass of curly brown hair.

To-day, fifty-six years later, the same boy knelt to drink from a Massachusetts spring. The face that looked up to him was the face of an old man, long and wrinkled. The blue eyes were there, but the mass of brown hair had disappeared, and thin white locks had taken its place.

Ah, me! How the years are drifting! HERMIT.

For the photo of San Miguel Church we are indebted to our correspondent, Cabia Blanco, to whom it was sent by Mr. McCandless, in response to Cabia Blanco's interesting notes on Santa Fé. The portrait of Senator Vest is by courtesy of the New York Tribune.

Trails of the Pathfinders—XV.

(Continued from page 133)

Zebulon M. Pike.—III.

On November 22, as Pike and Dr. Robinson, and Vasquez, the interpreter, were riding ahead of the command, they met a party of sixty Pawnees returning from an unsuccessful war party. Half of them were armed with guns, and about half with bows, arrows and lances. They met the white men in a very friendly manner, but crowded about them; and at the same time treated them in so boisterous and disrespectful, and yet good-natured a manner, as to cause them some uneasiness. Pike prepared to smoke with them, and offered them some small presents, with which they were quite dissatisfied; so that for some time the pipes "lay unmoved, as if they were undetermined whether to treat us as friends or enemies; but after some time we were presented with a kettle of water, drank, smoked and ate together." The Pawnees treated the presents given them with more or less contempt, and some even threw them away.

"We began to load our horses, when they encircled us and commenced stealing everything they could. Finding it was difficult to preserve my pistols, I mounted my horse, when I found myself frequently surrounded, during which some were endeavoring to steal the pistols. The doctor was equally engaged in another quarter, and all the soldiers in their positions, in taking things from them. One having stolen my tomahawk, I informed the chief; but he paid no respect, except to reply that 'they were pitiful.' Finding this, I determined to protect ourselves, as far as was in my power, and the affair began to take a serious aspect. I ordered my men to take their arms and separate themselves from the savages; at the same time declaring to them that I would kill the first man who touched our baggage. On which they commenced filing off immediately; we marched about the same time, and found they had made out to steal one sword, tomahawk, broad-ax, five canteens, and sundry other small articles. After leaving them, when I reflected on the subject, I felt myself sincerely mortified, that the smallness of my number obliged me thus to submit to the insults of lawless banditti, it being the first time a savage ever took anything from me with the least appearance of force."

It was near the end of November. Provisions were scarce; but on the 26th, Pike killed a "new species of deer"—a blacktail, or mule deer. The real troubles of the expedition were beginning, for the weather was growing cold, snow fell, and the water was freezing. The men who had started from St. Louis in July, prepared for a summer excursion, had worn out their shoes and clothing, and were half naked, in winter, among the high mountains of the Rockies. Some of them froze their feet. Shoes and stockings, as well as other clothing, were worn out. They made such foot gear as they could from the hide of the buffalo, but many had used up their blankets, by cutting them to pieces for socks, and had nothing with which to cover themselves at night, no matter how cold the weather, or how deep the snow. Pike worked backward and forward among the cañons, on streams at the head of the Arkansas, and passed over the divide between that river and the head waters of the South Platte, and then back on to the Arkansas, near what is now called the Royal Gorge. Here he came on the site of an immense Indian camp, occupied not long before, which had a large cross in the middle; and which, though he then did not know it, was a big camp of Kiowas and Comanches, with whom had been a white man, James Pursley. The party was constantly suffering for food, and often went for days without eating, and were almost without protection from the weather. Pike never ceased his efforts to cross the mountains to the supposed head of the Red River (the Canadian), which he had been ordered to find. Deep though the snow might be, and bitter the cold, with his men and himself equally hungry and equally frozen, passing through a country almost impracticable for horses, where the animals themselves had to be dragged along, and often unloaded and hauled up steep mountain sides, he kept on. On some occasions the little party of sixteen were divided into eight different expeditions, struggling not along the trail, but to get over the mountains, on the one hand; and on the other, to kill something which might give food to the party. Their guns now had begun to fail them; a number burst; others were bent and broken by the rough usage. Even Pike, who scarcely ever permits a word of complaint to escape him, says, on January 5, after breaking his gun: "This was my birthday, and most fervently did I hope never to pass another so miserably."

Matters had reached such a point that it was useless to attempt to drag the horses any further. Pike determined to build a small block-house, and leave there a part of his baggage, the horses, and two men; and then, with the remainder of their possessions on their backs, to cross the mountains on foot, find the Red River, and send back a party to bring on the horses and baggage by some easy route. They started on

January 14, each carrying an average of seventy pounds, and marched nearly south, following up the stream now known as Grape Creek. They had not gone far before the men began to freeze their feet, and were unable to travel. They had little or no food, but, at last, Dr. Robinson, after two days' hunting, during which they met with constant misfortunes, managed to kill a buffalo, loads of which were brought back to camp. Leaving two of the disabled men behind, with as much provision as possible, promising to send relief to them as soon as possible, Pike and the others pushed on, making their slow way through the deep snow. They were soon again without food; and again the doctor and Pike, who appeared to have been by all odds the men of the party, succeeded in killing a buffalo, and satisfying the hunger of the company. It was on this day, January 24, that Pike heard the first complaint. One of his men declared "that it was more than human nature could bear, to march three days without sustenance, through snows three feet deep, and carry a burden only fit for horses." This was very bitter to the leader, and he administered a rebuke, which, though severe, was so eminently just and sympathetic as to increase the devotion which his men must have felt for such a leader.

For a little time they had food, and the weather became more mild. Now turning to the right, they crossed through the mountains, and came within sight of a large river, flowing nearly north and south. This, although the explorer did not know it, was the Rio Grande del Norte. Traveling down toward this stream, they came to a large west branch; and here Pike determined to build a fort, for a protection for a portion of his party, while the remainder should be sent back to bring on the men who had been left behind at different points. Deer were plenty, and it seemed to be a spot where life could be supported. Pike laid out a plan for his block-house, which was on the edge of the river, and was surrounded by a moat, and a dirt rampart.

From this point, Dr. Robinson set out alone for Santa Fé. The purpose of his trip was to spy out the land, and to learn what he could with regard to the Spanish government, and the opportunities for trade there. In the year of 1804, Mr. Morrison, a merchant of Kaskaskia, had sent across the plains a creole of the country, one Baptiste La Lande, with goods which he was to trade at Santa Fé. La Lande had never returned, and it was believed that he had remained in Santa Fé, and had appropriated to himself the property of his employer. When Pike was about to start on his westward expedition, Mr. Morrison made over to him his claim on La Lande, in the hope that some of his property might be recovered, and this claim assigned to Robinson was the pretext for his trip to Santa Fé. In other words: Robinson was, as Dr. Coues remarked, a spy. It is true that Spain and the United States were not then at war, but there was a more or less hostile feeling between the two governments; or, if not between the two governments, at least between the citizens of the two powers residing on the borders of the respective territories. More than that, as already stated, the Aaron Burr conspiracy—with which Pike was wholly unacquainted—was known to the Spaniards, as was also Pike's starting for the west. The Spanish authorities unquestionably connected the two things, and were disposed to look with great suspicion on any Americans who entered their territory.

Dr. Robinson set out for Santa Fé on the 7th of February; and until the 16th, Pike was occupied in hunting, building his block-house, reading and studying. On the 16th, while hunting, he discovered two horsemen not far from him. These, when he attempted to retreat, pursued threateningly; but if he turned about to go toward them, they retired. As he was doubtful where he was, and uncertain if the territory was Spanish or American, he was unwilling to act on the aggressive; but finally he lured the horsemen so close to him that they could hardly get away, and after a little they explained their presence. It seemed that four days before Robinson had reached Santa Fé, and that the Governor had sent out these scouts to learn who the strangers were. The next day they departed for Santa Fé, which they said they would reach on the second day.

Within the next two or three days all the men he had left behind save two—Dougherty and Sparks—had come in; and on February 19 Sergeant Meek, with Miller, was ordered to go back to the point where they had left the interpreter, Vasquez, with one man and the horses, to bring them on, and on his way to pick up Dougherty and Sparks, who, on account of their frozen feet, had been unable to walk. Pike pays touching tribute to the heroism of his men, saying: "I must here remark the effect of habit, discipline, and example, in two soldiers soliciting a command of more than 180 miles, over two great ridges of mountains covered with snow, inhabited by bands of unknown savages, in the interest of a nation with which we were not on the best understanding. To perform this journey, each had about ten pounds of venison. Only let me ask, What would our soldiers generally think on being ordered on such a tour thus equipped? Yet these men volunteered it with others, and were chosen, for which they thought themselves highly honored."

On February 26, a detachment of Spaniards, consisting of two officers, with fifty dragoons and fifty mounted militia, reached the post. The sentry halted them at a distance of fifty yards, and Pike made preparations for their reception. He insisted that the Spanish troops should be left at some little distance from the fort, while he would meet the officers on the prairie. This was done, and then he invited the officers to enter the fort, where he offered them his hospitality. It was then for the first time, Pike tells us, that he knew that the stream on which he was camped was not the Red River, meaning the Canadian, but was the Rio del Norte, which, though known by several other names, is what we now call the Rio Grande, and was the boundary line between Texas and the United States. The officer in command stated that the Governor of New Mexico had ordered him to offer Pike mules, horses, money, or whatever he might need to conduct him to the head of the Red River, and requested Pike to visit the Governor at Santa Fé. Pike at first declined to go without his whole command, but after a time was persuaded to go to Santa Fé, leaving two men in the post to meet the Sergeant and his party, and to convey to them his orders to come to Santa Fé.

Naturally Pike did not wish to resist this invitation, or to be put in the position of committing hostilities on the foreign soil which he had invaded, since his orders did not commit him to any such course. Having made the error of entering the territory of another power, he thought it better to explain matters, rather than to commit an act which might involve his country in war. His compliance with the request of the Spanish officer seemed to be received by them with great satisfaction; but, he says, "it appeared to be different with my men, who wished to have 'a little dust,' as they expressed themselves, and were likewise fearful of treachery." After making the necessary preparations, and leaving orders for Sergeant Meek, Pike set out with the Spaniards to their camp on the Rio del Norte, and thence to Santa Fé. His passage through the country was an interesting one, and everywhere he was treated with the greatest kindness and hospitality by the people. At the pueblo of San Juan he met the man Baptiste La Lande, who professed to be an American, and endeavored to learn from Pike something of his journeying and his purpose; but Pike, suspecting his designs, and after a little talk satisfying himself as to what they were, had the man shut in a room, and threatened him with death if he did not confess his perfidy. La Lande was greatly frightened, and declared that he had been ordered by the Government to find out everything possible about Pike.

Not only did the common people treat Pike's men with great kindness and hospitality, but the priests and those of the better class were courteous, cordial, and very much interested in the explorer.

Santa Fé was reached March 3. It then had a supposed population of 4,500 souls, most of whom, we may imagine, turned out to see the Americans. Pike's visit with the Governor was brief. He denied that Robinson was attached to his party, excusing himself to himself on the ground that Robinson was a volunteer, and could not properly be said to be one of his command. The Governor's reception was haughty and unfriendly. Pike bore himself with great dignity, and wasted no words. At a later interview that day, his papers were examined by the Governor; and after they had been read his manner changed, and he became much more cordial. Pike's trunk was locked and the key given to him, the trunk to be put in charge of an officer, who was instructed to escort him to Chihuahua, where he was to appear before the Commandant-General. That night he dined with the Governor, and received from him money for the expenses of himself and men as far as Chihuahua.

The story of the march from Santa Fé to Chihuahua is interesting. Not far from Albuquerque they met Dr. Robinson. He was hardly recognized by Pike, for he was fat, sleek, and well looking, as different as possible from that Robinson who had left the camp on the headwaters of the Rio del Norte, "pale, emaciated, with uncombed locks and beard of eight months' growth, but with fire, unsubdued enterprise, and fortitude."

The party crossed the Rio Grande at El Paso del Norte, then a great crossing place for travelers north and south, and just over the river from our present Texas town of El Paso, situated on one of the great transcontinental railroads.

Chihuahua was reached April 2, and Pike immediately had an interview with the Governor, who treated him with reasonable consideration. Almost the whole month of April was passed here, and during this time Pike was entertained by the people of the town, among whom, we may infer, he was regarded partly in the light of hero, and partly in the light of a curiosity. On one occasion he was warned by the Governor that he spoke too freely with regard to religion, government, and other matters, to which he made a very free response, justifying himself for whatever he had done. Pike left Chihuahua April 28. He had become suspicious that there was danger that his private notes would be taken from him, so he took his small note-books and concealed them in the barrels of the guns of his men. It was now May, the weather growing very warm and dry; and sometimes as they marched they suffered from lack of water. Almost everywhere Pike continued to be received with great kindness by the people, both in the towns and by the rich haciendados, whose ranchos were passed in the country. He frequently met men of English, Irish, and American birth, most of whom were kind to him; and, on one occasion, conversed gladly with an American whom he shortly afterward learned to be a deserter from the United States Army. This made him very indignant, and he sent word to the proprietor of the house where they were stopping that if this deserter appeared at another meal all the Americans would decline to eat. His firmness brought an apology from the host, who took steps that the deserter should not again appear.

The month of June was spent in journeying through Texas, eastward, to the borders of Louisiana. Pike speaks in the warmest terms of the two Governors, Cordero and Herrera, whom he met at San Antonio. They, and all the other Spaniards whom he met in Texas, were kind to him. On the first of July the party reached Natchitoches about 4 P. M. "Language cannot express the gayety of my heart when I once more beheld the standard of my country waved aloft. 'All hail!' cried I, 'the ever sacred name of country, in which is embraced

that of kindred, friends, and every other tie which is dear to the soul of man!'"

It was in August, 1806, while he was on his way westward, on this second expedition, that Pike was promoted to be a captain, and his promotion to a majority followed soon after his return. With successive promotions in 1809, he became lieutenant-colonel, and with the coming of the war of 1812, Pike, now a colonel, was sent to guard the northern frontier. There was some fighting, but not much; but in 1813, while leading an attack on Fort York—now Toronto—he was killed by the explosion of the magazine, which the retreating enemy had fired. As an eye-witness said: The Governor's house, with some smaller buildings, formed a square at the center battery, and under it the grand magazine, containing a large quantity of powder, was situated. As there were only two or three guns at this battery, and it but a short distance from the garrison, the troops did not remain in it, but retreated to the latter. When the Americans, commanded by one of their best generals, Pike, reached this small battery, instead of pressing forward, they halted, and the general sat down on one of the guns; a fatal proceeding, for, in a few minutes, his advance guard, consisting of about 300 men and himself, were blown into the air by the explosion of the grand magazine.

"* * * I heard the report, and felt a tremendous motion in the earth, resembling the shock of an earthquake; and, looking toward the spot, I saw an immense cloud ascend into the air. I was not aware at the moment what it had been occasioned by, but it had an awfully grand effect; at first it was a great confused mass of smoke, timber, men, earth, etc., but as it arose, in a most majestic manner, it assumed the shape of a vast balloon. When the whole mass had ascended to a considerable height, and the force by which the timber, etc., were impelled upwards became spent, the latter fell from the cloud and spread over the surrounding plain."

Struck by a fragment of rock, Pike was mortally wounded. As he was being taken on board the flag-ship

SAN MIGUEL CHURCH, SANTA FE.

Built in 1582 (some say 1545). Roof destroyed by the Pueblo Indians in 1680; restored in 1692, and re-roofed as now seen in 1887. Photo, 1902, by A. D. McCandless.

Madison, he heard the cheering on the shore. He asked what it meant, and was told that the Stars and Stripes were being hoisted over the captured fort. A little later the captured British flag was brought to him; he motioned to have it put under his head, and soon after this had been done he died.

It is a melancholy commentary on the shortness of human fame that to-day the number of Americans who know who Pike was is very small. Few men have done more than he for his country. Few men in their time have attracted more attention. Pike's name has been fastened to mountains, counties, cities, villages, and even to islands, rivers, and bays; and while, as Dr. Coues suggests, it may well enough be that not all these are named after Pike the explorer, yet we may be sure that the enthusiasm of the people for Pike at the time of his death, and for some time afterward, led to the giving his name to many natural features of the land, and to many political divisions within the States. After all, Pike's most impressive and most enduring monument must always remain the superb mountain which bears his name. If Pike did not discover this, "the grim sentinel of the Rockies," which towers 14,147 feet above the sea, at least he was one of the first Americans to see it. He calls it, fitly, the Grand Peak. Nearly fourteen years later, during Major Long's expedition to the Rocky Mountains, it was named James Peak; but this name, though often mentioned in books, did not long endure, and the name Pike's Peak, first used some time during the decade between 1830 and 1840—for example in Latrobe's "Rambler in America"—is now firmly established, and will ever remain the mountain's designation.

The death of Pike at the early age of 34, so soon after he had attained the summit of his ambition, the rank of general, and at the moment when the force under his command had won a notable victory, seems very pathetic; and yet, after all, may not this have been a happy fate? For we cannot tell what sorrows and disappointments a longer life might have brought to him. It seems almost as though he may have had a premonition of the fate in store for him, since, in his last letter to his father, written just before he set out on his expedition, he writes as follows:

"I embark to-morrow in the fleet at Sackett's Harbor,

at the head of a column of 1,500 choice troops, on a secret expedition. If success attends my steps, honor and glory await my name; if defeat, still shall it be said we died like brave men, and conferred honor, even in death, on the American name.

"Should I be the happy mortal destined to turn the scale of war, will you not rejoice, O my father? May heaven be propitious, and smile on the cause of my country. But if we are destined to fall, may my fall be like Wolfe's—to sleep in the arms of victory."

It was so that Pike fell asleep.

GEO. BIRD GRINNELL.

[TO BE CONTINUED.]

Life in the Woods.—XIV.

The Joys of the Hunter.

IN the preceding pages I have endeavored to give in brief some of the incidents in the experience of a hunting party while on a trip of a few weeks in the pine woods of the north, and while I have, doubtless, taxed your patience some, I am yet loath to leave the subject giving the impression that the things I have described are the only attractions of such a trip, for such is not the case.

There are many other things that go to make the life of a hunter enjoyable and profitable when taken as a means of rest and relaxation from the manifold cares of business. The true sportsman understands that to kill and bag game is not the chief end of an extended hunt. If he does not know it, he is not a true sportsman in any sense of the word. To kill, to maim, to see the red blood flow, and to see a brute struggling in the agonies of death or staggering with pain, is not the real desire of the real sportsman. To be sure, he glories in success and in the circle of boon companions likes to tell of his triumphs. But if this be all, he is little better than a brute, though perhaps he may lack the power to express the real influence that inspires him, or may be unable to comprehend the secret power that moves. Primitive man was a wild man with a love for the woods and the prairies, with an inborn love of nature, but without the developed power of expressing his admiration. Civilized man, through all the various processes by which he has reached his present state of development, has not entirely lost this inherited trait. Take an Indian and introduce him to civilization, and if he retains any of his manhood how long is it before the love for the old wild life preys upon him, until, under its influence, he steals away to his old haunts, full of discomfort as they may seem to us? I have known a half breed who was an exceptionally fine engineer and good, all-round mechanic. He could get work at good pay at any time around the mines, but he could not be relied upon; for, after a few weeks' steady application, without warning, he would disappear, and when next heard from would be leading a perfectly savage life in the woods with a band of full blooded Indians.

I say that it is not strange, then, that civilized man likes to hunt, and craves now and then for the life which only a sojourn in the woods can give him, but I repeat it is not the desire to kill and possess that alone animates him. It is on such trips that "he holds communion with nature in her visible form." There are the great forests filled with strange sounds, some sweet and soothing, some grand and inspiring, and some terrible in their intensity. Who has stood and listened to the wind murmuring in the pine tree tops? So gentle that it seems barely to kiss the imperial tips, and yet, like a chord in a responsive breast, they vibrate to every touch, and sing and sigh until, to the ear attuned to catch the strains, they tell of song. Wait and listen and they will sing to you of love, not only that which coy maid and amorous youth delight in, but that of home, of family, of country, and of all that fills the sanctuaries of everyday life. Wait and listen, and as they increase in power they will tell you of the passions and ambitions that animate us all. They will make you feel the power of those influences which act as the mainspring of deeds of courage, of acts of self sacrifice, and are the source of heroic motives. Wait and listen and they will speak to you of the sorrows of life, of the phases of sadness through which every soul must pass. They will tell "why come those tears," and if you heed them they will teach you that suffering is but the payment for greater enjoyment. Be in the great woods when storms gather above, when lightning darts here and there and thunder crashes on every side, when the furies of the air chase here and there seeking some thing to devour, and the sounds of the wind will convince you that there is a power far greater than that of man, to which even the imperial will must bow. But greater than all, they will show you that after the storm comes the calm, more bright, more radiant, more beautiful than before.

Stand by the babbling brook and listen to the water as it bubbles and falls and sings to itself as it passes along, and tell me if there is any sweeter music for the human ear save that of the human voice. See where the wide, deep stretches are which mirror on their surface every detail of tree and form around, and tell me can artist do such perfect work? See the leaves float lazily through the air to meet that placid surface and drift along as proudly as the galleys of the Roman Emperors, yet soon to reach the rapids, there to be buffeted around by the swift current. See the kingfisher dart with swift flight to pluck a minnow from the stream, and hear his piping scream of anger as disappointed he flies upward to some lofty limb. See the active mink as he prowls along the bank; how his beady little eyes snap; quick of motion, a bold aggressive little fellow, conscious of his strength, yet wary as a fox. See that insect borne down by the wind to the bosom of the stream only to be gulped down by some ravenous trout which, like a flash, seizes his prey and is gone. Watch the clear water, ever moving, never tiring, flowing, flowing, day after day, perpetual. Where do its drops come from, and where do they go, and what do they see? Would it not make a mighty tale?

See the shadows in the woods. The sunlight gleaming among the great tree trunks casts strange pictures now and then. Sometimes it is a colossus reaching out with mighty hands to seize some pigmy as it flees. Now it is some castellated pile which charms the sense of architect-

tural beauty, and again it is the delicate tracery of foliage and limb winding in and out in patterns that for grace and beauty defy the imitative hands of man. Hear the twitter and song of birds and the chatter and bark of squirrel, now querulous, now shrill and angry, now quiet and contented—the sound of love, the sound of joy. Stand at evening in the great wild woods and watch the lone sentinels of the sky as they take their posts. Look up through the trees as they gleam calm and serene, and as the outline of the tree tops appears in bold relief, tell me is there cathedral tower or dome that so effectively expresses the idea of worship? Or has there been frozen into stone anything so grand? Take that solemn silence that prevails at night when winds are still. So calm, so peaceful, broken only now and then by the call of some night bird, and is there anything more solemn? Anything that sets the serious thoughts of the mind in more active operation? See how time's awful power is visible in the woods. Mark the decaying tree, the logs half crumbled into dust, the vegetation that blooms to die and dying blooms again—a constant falling of leaf on leaf and plant on plant, laying up a treasure of richness for the soil, which man in time will enjoy. So nothing goes in vain; nothing entirely perishes. Nothing is lost, though at first it seems as if waste were on every side.

And now autumn days begin to wane, and another power begins to make its presence felt. At first it chills, the gentle winds and couriers come who paint each leaf with color bright. Under cover of the night an army of artists and goldsmiths are at work, and, when the morning sun breaks over the hills, the landscape round is decked in colors of the rainbow and begemmed with jewels brighter than the precious stones of crown, or diadem, or treasure rare of king or emperor. They touch the waters and turn them into glass. They kiss the foliage again and again until, under the fatal breath, it wilts and dies. The regal evergreens alone greet them with a smile and preserve throughout the rich color which nature first gave them. Then the winds sob and sigh in the north, and the rain drops, kissed as they fall, come to us as downy as the dainty covering of the wild swan's breast, and the woods change to ghostly whiteness, and everything seems at once to begin the long winter sleep.

To see and to note all these things is a part of the joy of a hunter's life, and who can do it without inciting influences that are for the best? They make a man reflective. They lead his mind to trace back all influences and all power to one central source, be it called nature or by some other name. They show to him the grand harmony of all things about him—the heavens, the currents of the air, animal life, vegetable life, yea, too, human life. They loosen the strings of that wonderful organ, the heart, and cause it to thrill in response to the suggestions of nature. They tend to tear away that mask of hardness and selfish interest which the fierce competition of business life is causing all men to wear. Subject to these influences he lives life over again and notes whether he is out of tune with the world as it really is.

To be generous and open handed, to be just and forgiving, is one of the main characteristics of the true hunter, for nature teaches him these things so constantly, so plainly, that he cannot fail to profit by the lessons. Does she not give with the utmost openhandedness? Does she not quickly repair all losses and smile and smile again as if all were always well? They teach him true religion without the narrowness and restrictions of creed. They teach him to be industrious, to be patient, and not to continually complain. They teach him to be kind, to aid a suffering fellow man and to share with him that which he can. They make him liberal—liberal in home life, liberal in religion, liberal in politics, and liberal in business. They teach him independence. They show him what it is to be free—free to live and breathe the pure air and to enjoy the God-given glories of this gigantic, wonderful world of ours.

A hunter's life is a healthful life. It loosens up the cords and sinews of the body and hardens every muscle. It steadies the nerves. It tones up the blood, enriches it in color, and sends it coursing through the arteries and back through the veins that only the days of boyhood can equal. It cleanses that boiler of the body, the stomach, and sets it to working with a regularity and strength that is astonishing; and it clears away the cobwebs of the brain. It makes a man ambitious and starts him off in the morning with the strength of an athlete, to return at meal time with the appetite of a giant. It brings him home at night tired and weary, so that a bed on a plank, so long that it is warm and dry, is a luxury. It makes him rest at night with that calm, deep sleep of childhood, wherein all the damages are repaired and the constitution rebuilt for future struggles. A trip in the woods saves doctors' bills, and is worth many times all the medicines of the world. Time lost from business is nothing. The wages or profits that seem to slip away on account of it count for naught. They will all be more than made up on the other end of the journey of life, as it will lead to a more prolonged and happier old age.

Around the camp fire, too, there are many lessons that can be learned. The discussions there, though often tempered with levity, are yet more often tinged with wisdom. 'Tis there that all bigotry and bitterness are for the time cast aside. 'Tis there that religion, politics, and the other affairs of life are discussed with candor, and 'tis there that, if agreement cannot be reached, all disturbing argument is cast aside. There is a great deal of philosophy in camp fire talk, for the simple reason that it is the true philosophy of life, unhampered by artificial restraints. Perhaps I may seem to be assuming too much latitude, but if you think so put it down as due to my enthusiasm alone and not to a desire to overdraw. And yet much of this is true. Indeed, so true is it that the one who is often most unsuccessful in bagging game is frequently the happiest man who leaves the woods and the most anxious for the trip again when autumn days roll around once more. At all events, such things as those which in my poor language I have attempted to describe are some of the joys of the hunter as we have been able to find them, and if you doubt me lay it rather to my poor powers of description than to a lack of argument and proof.

All this time our hunt has been drawing to a close, and it remains for me as quickly as I can to describe the remainder of the trip, including the last night in camp.

CAROLUS.

[TO BE CONCLUDED.]

Camp and Comrades.

Editor Forest and Stream:

In arranging a camping trip, I have always advocated, and generally adhered to, the following plan, and have found it decidedly more satisfactory than the usual way, considering, however, that it would only apply to a very small party, and which has no guide employed.

Let each individual furnish himself with a complete outfit, excepting tent, bed, ax, and possibly a camp-kettle to be used for heating water, boiling meat, etc., these to be for the general use of the party. The extra weight thus entailed could not amount to more than three or four pounds to each person, and the satisfaction of being thus equipped more than compensates for the little extra weight, for the following reasons: No two persons have exactly the same tastes as to what they prefer to eat and drink, and how they have it prepared. The above plan allows each person to be entirely suited in this respect.

One may prefer to go light so far as concerns luxuries, either in bodily comfort or provisions, while another may have extravagant tastes in that direction; this will allow the one going light the advantage of a light pack while traveling, and fewer belongings to care for in camp. One may prefer to lie in bed sometimes until a late hour, and cook an elaborate breakfast on rising; while another may wish to be up at an early hour, eat a hastily-prepared breakfast, and get out. No chance for friction there!

One may be a crank on having a general dish-washing after each meal, while another may find greater comfort in turning his frying-pans and dishes upside down, ready for the next meal, instead of washing them. All right—nobody's business! One may wish to eat oftener than another, or the times of eating may not correspond on account of arrival at camp, etc.; each can thus be independent and accommodate himself without any aggravating delays or waiting, adding to the general peace and goodwill of the camp, and allowing each one the advantage of a full experience of camp life.

One of the essential benefits of camp life is that of creating and exercising a spirit of independence and self-reliance; and any arrangement which would disturb this and cause a dependence upon the other must destroy, to some extent, this important feature of camp life. Where the work of the camp is done as a whole, with each one assigned to his particular department of the work, each one is dependent upon others for a certain part of his comfort and well being, and thereby deprived of exercising that self-reliance and independence which is growing weaker in each succeeding generation of Americans. The tendency in the present day is to do nothing for ourselves which we can conveniently have done for us by others, and we only realize how helpless we are when we get out away from our modern and convenient homes, and get where all is just as nature made it, and where our existence and comfort depends entirely upon our own knowledge and efforts.

Our camp life, then, is practically the only time of the whole year when we can conveniently throw ourselves entirely upon our own resources, and revive and keep alive the spark of independence inherited from the old pioneer forefathers, and which is characteristic of Americans.

One may have attached to his name any number of college degrees, and yet be helpless because he has never learned to do things. If a person inexperienced in camp life and in doing things for himself, were to go on a camping trip, have a complete but limited cooking outfit of his own, with his own selection of provisions, etc., and learn during the trip to live comfortably in the woods without any reliance on any one but himself, it would be of value beyond that of a term in college; not only for the knowledge gained, but for the spirit of independence which such self-dependence must create.

While, as I have said, the tendency is to allow others to do for us, that, in turn, tends to make us content in allowing others to think for us; and any thing which tends to make us do our own thinking and help ourselves is worthy of consideration. Therefore, aside from the tendency to a satisfactory and harmonious camp life, it may be made productive of intellectual good.

EMERSON CARNEY.

MORGANTOWN, W. Va.

Chased by a Shark.

SEEING a small shark brought ashore the other day by one of the salmon fishermen, who had found it rolled up in his net, put me in mind of an exciting adventure I had many years ago. Both at the east, as well as the west, side of the mouth of the great River Moisie, sand banks run out to sea for a distance of two or three miles. These are covered at high tide, but being of almost a uniform height, the falling tide runs off of them in a very short space of time, and leaves them dry with the exception of some odd places where pools of water remain. The banks are dry the last two hours of the ebb and the first two hours of the flood tide.

The great river continually deposits on these sands such quantities of vegetable matter, that they are a resort for many kinds of small fishes; and numerous waterfowl come there at certain stages of the tide to feed on the fish.

I was only about eighteen at the time, and had gone out in a birch-bark canoe to shoot ducks on the banks. My companion, an Indian boy, even younger than myself in years, but several times older in experience, was to steer the canoe. The last words his father said to us before leaving, were, "Don't go too far out, or the 'Ma-tchie-ne-mak' will cut your canoe and eat you."

The sea that morning was as calm as a pond, and perfectly glassy from the strong May sun striking straight down on it. We had been out for a couple of hours, and had had pretty fair luck with sea-ducks and loons, and were just about starting for the shore before the tide left us dry on the banks. If such a thing had happened, it would have entailed on us the labor of carrying our canoe a mile or so to the beach, over soft yielding sand.

"We better go," the boy was saying, when his words were cut short in his mouth. With the remains of that breath he screeched "Ma-tchie-ne-mak!" and started to paddle like one possessed. I admit that his fright was

infectious, and coupled with the dreaded name of shark, it so quickened my strokes, that Hanlon's sixty-a-minute were slow compared to the way I worked my paddle. I had read, and heard from old whalersmen, that as long as one kept the water churned up, there was no danger of the shark getting in his work. Twice the boy called out, "There he is!" Once I caught a glimpse of the monster a few yards off on our port beam, heading for the shore also, but evidently watching for a chance to attack us.

The tide was now running out, and consequently the more we neared the shore, the shoaler the water got. The shark had not stopped to consider this in his mad rush to catch us. At last our canoe grounded on the sands and we looked back with relief at our narrow escape. But, ah! what it that about a couple of acres astern, surely not the shark! But it was, and he was floundering about in shallow water, in one of the pools, and every minute the water was getting less. "Hoop-la! we will now hunt the shark," I said to little Moses, as I started off toward him over the now dry sands.

Yes, there he was, the great, ugly beast, flopping about in a basin surrounded by banks, out of which it was impossible for him to escape. From the shore the boy's father and one of my men saw what was going on and came out with a handful of bullets and their guns. In the meantime I was employing the time with good results, by pouring into the shark charge after charge of AAA shot at close range.

By the time the men reached us the fish was pretty sick, and apart from snapping his immense jaws, was lying perfectly still. The first bullet from a distance of ten feet put an end to him. When the tide came in again we towed him into the river and cut him up and salted the chunks in barrels to feed the dogs the next winter. From the liver we rendered out three gallons of oil as clear as water. This of itself was of value to us the next winter in our lamps, it gave a clear light and emitted no smoke. Those were the days before coal oil came into general use. Our only lights at the post were home-made tallow candles, or a cotton rag from a tin spout fed by seal-oil. This, combined with the burning rag, gave off a heavy, dense, black smoke, which was, if not injurious, very unpleasant to inhale during the long winter evenings. The shark-oil being so much superior, I kept it for my own private lamps, and the teeth ornamented the mantelpiece.

MARTIN HUNTER.

Natural History.

Do Birds Smell?

Editor Forest and Stream:

I AM a little timid in quoting Audubon just at the present time, but as Coahoma refers to him, I will just give you two of the experiments he tried on vultures. The experiments were as follows: "My first experiment was as follows: I procured a skin of our common deer, entire to the hoofs, and stuffed it carefully with dried grass until filled rather above the natural size, suffered the whole to become perfectly dry and as hard as leather, took it to the middle of a large open field and laid it down upon its back with the legs up and apart, as if the animal were dead and putrid. I then retired about a few hundred yards, and in the lapse of some minutes a vulture coursing around the field tolerably high, espied the skin, sailed directly toward it, and alighted within a few yards of it. I ran immediately, covered by a large tree, until within about forty yards, and from that place could spy the bird with ease. He approached the skin, looked at it without apparent suspicion, raised his tail and voided itself freely (as you well know all birds of prey in a wild state do before feeding), then approaching the eyes that were here solid globes of hard, dried, and painted clay, attacked first one and then the other, with, however, no further advantage than that of disarranging them. This part was abandoned; the bird walked to the other extremity of the pretended animal, and there, with much exertion, tore the stitches apart, until much fodder and hay were pulled out; but no flesh could the bird find or smell; he was intent on finding some where none existed, and, after reiterated efforts, all useless, he took flight, coursed around the field, when, suddenly turning and falling, I saw him kill a small garter snake and swallow it in an instant. The vulture rose again, sailed about, and passed several times quite low over the stuffed deer skin, as if loth to abandon so good looking a prey.

"Judge of my feelings when I plainly saw that the vulture, which could not discover through its extraordinary sense of smell that no flesh, either fresh or putrid, existed about that skin, could at a glance see a snake scarcely as long as a man's finger, alive, and destitute of odor, hundreds of yards distant. I concluded that, at all events, his ocular powers were much better than his sense of smell.

"Second Experiment.—I had a large dead hog hauled some distance from the house and put into a ravine, about twenty feet deeper than the surface of the earth around it, narrow and winding much, filled with briars and high cane. In this I made the negroes conceal the hog, by binding cane over it, until I thought it would puzzle either buzzards, carrion-crows, or any other birds, to see it, and left it for two days. This was early in the month of July, when, in this latitude, a body becomes putrid and extremely fetid in a short time. I saw from time to time many vultures in search of food sail over the field and ravine in all directions, but none discovered the carcass, although during this time several dogs had visited it and fed plentifully on it. I tried to go near it, but the smell was so insufferable when within thirty yards of it that I abandoned it, and the remnants were entirely destroyed at last through natural decay.

"I then took a young pig, put a knife through its neck, and made it bleed on the earth and grass about the same, and having covered it closely with leaves, also watched the result. The vultures saw the fresh blood, alighted about it, followed it down into the ravine, discovered by the blood of the pig, and devoured it, when yet quite fresh, within my sight."

Dr. Elliott Coues, in "Key to North American Birds,"

says: "Sense of Smell—Olfaction: The sense of smell is effected by terminal branches of the olfactory (first cranial) nerve, ramifying in the mucous (pituitary or Schneiderian membrane of the nasal cavities. Owing to the comparatively small size and little complexity of the foldings and pleatings of bone or cartilage in the nasal chambers, the sensory surface being correspondingly limited, it is not probable that birds possess this sense in a high degree, etc."

If E. D. L. is not in a position now to secure a whip-poorwill and a night-hawk, if he will send to A. W. Mumford, publisher, 203 Michigan avenue, Chicago, Ill., and buy a picture of the whip-poorwill and night-hawk in natural colors, I think these will satisfy him they are not the same birds. The prints cost two cents each.

O. H. P.

Some Animals I Have Studied.

ALTHOUGH this may be called my third paper on the subject, and I wish to avoid repeating anything before written, I feel like offering some explanation, as if beginning anew. First, I would refer the reader (who cares to look back) to the first five paragraphs of "Some Knowing Dogs," in the issue of FOREST AND STREAM of Aug. 29, 1903. [I always carefully put away a copy of each number.] Second, I intend to try hereafter to "stick to the subject" until I think I have sufficiently covered it—unless the editor cuts me off sooner—and avoid, if possible, engaging in any of the numerous interesting controversies going on in the paper, although that will try my powers of self-control to the utmost. Third, and before I relate any more stories or anecdotes, let me offer a few general remarks concerning my individual opinion of animals—some of said opinions being likely to be very different from those usually held.

The hog is not the greediest animal, nor the greatest eater. A healthy hen or duck can, in proportion to weight, eat a much greater quantity, and very much more rapidly; and even they are not in it with certain insects, such as hornets, pumping leaf-hoppers, certain varieties of jumping spiders, fleas, and several sorts of worms.

What I call a quick dog is quicker in nearly all his motions than any cat.

I believe the humming bird to be the quickest moving of all living things, not excepting any insect. And that is saying much, when we consider the amazing velocity of an angry hornet.

Hawks, especially eagles and buzzards, possess a sort of kiting knowledge and skill, which ought to solve completely the problem of aerial navigation for man—suggesting the simplest, safest, surest and cheapest sort of flying machine. If the nautilus gave us the sailing vessel for use on water, may not these graceful birds be trusted to give us the sailing vessel for use in upper air? If any inventive reader thinks of apparently insurmountable objections to this suggestion, let him explain them in FOREST AND STREAM, and I will answer—or take any fitting punishment he may suggest. These birds, incredible as it may seem to any one who never intently observed them, are able not only to mount upward, but to sail in any direction, even against the wind, in any strong, steady breeze, for hours without flapping the wings. Let any strong man prepare him a pair of wings, of sufficient size, shaped like the bird's, equally strong and light, and attach them to his body in such a manner that both arms and legs can be used freely to manipulate them (it will require all four of a man's limbs to equal in strength the wing muscles of a bird), and, after a little practice and experience, he ought to be able nearly to equal the bird in its own element, if man is really a superior creature.

The horse, in a state of nature, with heavy tail sweeping the ground, and mane almost half that length, and unbroken in pride and majesty, is the most beautiful of quadrupeds; further, the domestic horse, properly brought up, never neglected, and treated with invariable kindness and wisdom, is, next to the dog, the best, most faithful, most useful, least selfish brute-friend a man can have—"through thick and thin"—always—under all circumstances. Any other animal but the dog or horse will be likely to desert in time of danger, or hunger, or great discomfort.

Dogs and horses show greater individuality—more character—than other animals, therefore, I place them in the front rank as to intelligence; though I am well aware the cat has plenty of powerful champions. But cats, whatever eccentricities they may develop, are more nearly alike in certain inborn characteristics—that is, they are less able or likely to overcome their well-known natural tendencies. For instance, no healthy cat can be patient, kind and obedient when very hungry; dogs and horses often are as unmindful of hunger as any human being. Again, no cat will voluntarily bear pain or severe discomfort for long periods just to please or serve its master or friend. Many a dog will go into ice-cold water, time after time until nearly frozen to death; or into fire; or indeed wherever duty or friendship calls. And many a horse, without fear or compulsion will struggle along all day, or all night, in storm or pleasant weather, with a drunken rider, barely able to keep on him, whom the poor beast considers it his duty to take home, or perform a dozen other services of heroic self-sacrifice not the result of mere habit or training. Horses and dogs can be taught into the possession of real moral characters, so that they will love right and hate wrong. I do not claim that moral sensibility is natural to them—nor to mankind, either. Love and pride are ruling passions in these animals (I mean pride in the higher sense—ennobling pride, not tyrant pride), without which neither beast nor man can be brought into reverence for any law save the law of force.

Many dogs and horses are unnaturally selfish and hypocritical—that is, much more so than a knowledge of mere race-instincts would cause us to expect—showing a man-like cunning and adaptability of means to ends that betokens the possession of a degree of reasoning power, as surely as does the more pleasing behavior of their nobler relatives. I want it distinctly understood that I am not a "dog lover" nor a "horse lover" indiscriminately, as some sportsmen seem to be,

though I am as kind as possible to all; but I do love a loving horse or dog. I never permit myself to love anything merely for its "fine points" or aristocratic blood.

[In writing an article like this, I find it impossible to avoid obtruding myself into the subject somewhat, for which I beg pardon, even though I can't promise to "do so no more." I declare, however, that I have no desire to distract attention from "the other animals."]

It may not be commonly known that the perch is a fighter. I have seen one, about seven or eight inches long, repeatedly drive away a gar three or four feet long. It would simply dart under the belly of the monster, and by a sudden backward jerk with its circular saw-like back, crosswise of the aforesaid belly, deliver a sawing blow that never failed to send the rascal away in ignominious disorder—very different from his gliding stealthy approach. After a number of retreats, he would flee at the mere sight of her. I attributed her subjugation of the giant more to her superior mental than physical qualities—let me hope the imputation of mind to a fish may not shock some super-sensitive scientist; but truly a perch is a very intelligent fish, or else nature does some very important thinking for her! I have been very intimate with perch, and believe them to be as wise, at least, as the ordinary domestic cat; and I have tamed several so that they would swim into my hand, in their native element, although these same fishes would flee from a stranger, and could not be caught on any hook. They were not captive fishes, either, but free and wild, some of them in the rushing Ouachita. And I can do so again. I can tame any perch, anywhere, if I can get near him several days in succession, with nothing to disturb him; and I use no means but food and kindness. This shows that the fish is observant and possesses memory—he knows his friend!

The perch can completely reverse its eye in the socket—that is, turn it wrong side out—and by that means, and with its cute little mouth, it can assume all the comical expressions ever attributed to it by pictorial humorist.

It can perform a miracle; it can dart right up a waterfall at least eight feet high, and so quickly as to look like a flash of light! This requires a strength and rapidity of motion of all its parts so great as to stagger the human mind. Flying is nothing to that! If the humming bird is the quickest of all living creatures, surely the perch must be next!

Here in Arkansas the jay has learned to imitate so closely the scream of one variety of hawk that it sometimes deceives the human ear. But the imitation is not always good; often it is very bad. This proves that the perfect imitation is not instinctive, but the result of careful, persistent practice with a purpose.

It is very difficult for the jay to shuck an ear of corn; so he lets the woodpecker do that, then he drives him away—when he can—and helps himself to the tender green grain.

Crows make friends with our chickens and turkeys, lead them to the peanut patch, teach them where to find the nuts, by pulling up a few; then hop around gleefully while the big birds scratch them out wholesale—a fine sight!

The farm birds, being better adapted to digging, soon scratch out enough to make a royal feast for all the flock. Often I have seen a score of the crows with them—and such sociability! Crows, chickens, turkeys—all working and eating together fearlessly, joyfully. I seldom interfere, for this is usually after I have harvested my share of the nuts. I find the crows such invaluable assistants when cutworms are abundant that I allow them to make their homes all about, and dislike to offend them, though that is occasionally necessary. Last spring, when they were pulling up nearly as much young corn as the chickens were, I played a low-down trick on them and won, without killing any of them; and afterward they served me as faithfully as if there had been no coldness between us.

L. R. MORPHEW.

HOT SPRINGS, ARK.

[TO BE CONTINUED.]

The Haartebeeste.

NEXT to the eland, the haartebeeste is one of the most striking of the plain-frequenting antelopes of South Africa. It derives its name from a large heart-shaped patch of white on its rump. Its horns are of a lyrate shape, very thick and corrugated at the base, and acutely bent backward at the tips. Its color is a grayish brown, with a black mark on the cheek, and an adult male will measure in the neighborhood of five feet in height. In its wanderings it freely associates with the gnu, blombok and springbok, and I frequently encountered immense herds of these animals; so large, that it was impossible to estimate their number.

I had been but a short time in Natal before I made the acquaintance of a young Boer who lived in the Transvaal, some little distance to the north of the Buffalo River, and it was my habit to stop and spend several days with him, either on going up or returning from my wife's, farther north. It so happened on one occasion that I dropped in on him, just as he and several neighbors were preparing for a regular hunt of the various species of veldt-frequenting antelopes. Leaving my heavy wagons, oxen drivers, etc., on his place, I jogged on with the hunting party, merely taking my cart, drawn by four oxen, for the conveyance of myself and a young German keeper, whom I took along for the purpose of caring for any specimens of live animals which I might pick up. We had gotten some little distance beyond Utrecht, and camped overnight on the banks of a small stream. The next morning, just about sunrise, I spied what I thought to be the horns of a blombok just showing above the top of a kopje (small hill) about a quarter of a mile distant. Pointing out the spot to my keeper, I requested him to take a stroll in that direction while our breakfast was being prepared, and was much amused at seeing him whirl just before reaching the summit of the kopje and return at full speed. On coming within speaking distance he shouted, "Mein Gott! Dere's thousands of dem." I immediately called to him to keep quiet, and one of the Boers started to make reconnaissance, and soon

returned and reported the keeper's declaration was very near the truth. All preparations for breakfast were suddenly suspended and the horses saddled for the purpose of adding venison to our bill of fare. We divided into two parties, one of which turned off to the right, while the other cantered off to the left, so as to leave a space of over a mile between them. The purpose was for those who had gone off to the left to charge into the herd and drive as many as possible in the direction of those who had gone to the right, and it was successfully accomplished. There was a regular fusillade for a short time, followed by a gathering of the slaughtered game. I was stationed in about the centre of those who had gone to the right, and was so fortunate as to kill two haartebeestes and one springbok. We returned to camp, breakfasted and then sent one of the wagons to bring in the game, which amounted to twenty-two head of elands, haartebeestes and springboks. The balance of the day was spent in skinning and cutting up the carcasses. The skins were intended for sale, while the meat was cut into long strips and slightly salted, so as to preserve it until the various homes of the hunters were reached, when it would be made into biltong, which process consisted in a further addition of salt when the flesh was hung up in the air until thoroughly dried. From making many meals, in which this pabulum was the leading dish, I can cheerfully recommend it.

The next morning one of the party offered to take me out on a stalking expedition. This was just what I desired, and the offer was gratefully accepted and we immediately trudged off. After three or four miles had been covered, we began to get distant glimpses of portions of the herd which had furnished the sport on the preceding day. They were scattered in various directions busily engaged in nibbling the fresh grass, and my companion, completely ignoring all selfishness, carefully concealed me behind two adjacent ant heaps and then turned off to make a wide detour, so as to drive the game in my vicinity. I lay down between the heaps, and, with a field glass, carefully followed the movements of my companion. This I could easily do, as he had placed me on the summit of a kopje which overlooked the entire surroundings. He slowly kept in motion until he had passed beyond a number of the antelopes, when he faced in my direction and loitered along toward me, declining several fair shots, until he had driven the game within close range of myself. I managed to get in three shots with my Winchester, dropping two haartebeestes, while he fired only once with an old-fashioned rifle, bringing down his quarry, a magnificent male eland. We then returned to camp and sent out a couple of horses to pack in our game, while the balance of the party were busily engaged in skinning and dressing the remainder of that secured the day before.

It was at this camp that I first saw one of the many devices which the peculiar mode of life forces the Boers to employ. Our stock of bread became short, and the manner in which a fresh supply was baked attracted my attention. Several deserted ant heaps were selected and hollowed out with a spade. The excavations were filled with dried cattle manure, which burned fiercely and made a quaint, impromptu oven, in which the bread was quickly and capitally cooked. I made a mental note of the expedient, and afterward frequently used it to my great comfort and satisfaction.

While engaged in securing and preserving the results of our hunt, the camp was visited by a party of kaffirs intent on securing the refuse of the game, who reported a flock of ostriches within a comparatively short distance. On receipt of the news it was determined to go after them, and when we started I was surprised to observe that not a firearm was taken by the party. It then struck me that I was to see what I had long wished to view, viz., ostriches run down and captured by parties on horseback. It is a well known fact that when followed by a persistent pursuer the ostrich runs in a large circle, and it was on account of this habit that our party started out without firearms. Following the directions given by the kaffirs, a brisk canter soon brought us in sight of our intended quarry. The entire party, with the exception of one Boer and myself, galloped off after the flock while we awaited their return. After some time had elapsed two of the pursuers returned. On my asking what had become of the others, I was informed that they had stationed themselves at equal distances apart on the circle, in order to relieve each other in the chase. One of the two then started at full speed after the flock, and was soon out of sight. Not a great while elapsed before the birds hurried past us, and one of my companions took the place of their pursuer, who stopped with us in order to rest his steed. This mode was followed until the circle had been covered some five or six times, when I noticed that one of the male birds was missing, and was told that he had been killed by a blow from the butt of a sjambok (a heavy, short whip, made from raw hippopotamus skin) across the neck. This procedure was followed until the three male birds of the flock had been killed, when the pursuit ceased and the females were allowed to escape.

In one of my trips I purchased a Basuto pony, which I used under the saddle for short hunting excursions from my wagons while passing along the route. He finally learned to follow the wagons, and when the oxen were turned loose to graze he would always accompany them. If game came in sight while we were traveling along I would saddle him, canter off, and endeavor to replenish our larder. He became so accustomed to his calling that, on approaching game, he would allow me to dismount and use him as a screen, so as to get within shot of my quarry. We had stopped one day for the oxen to take their usual noontide graze, and, as usual, the pony accompanied them. They had reached the top of a rise but a short distance away when the pony stopped, gazed over the crest beyond him, turned and trotted back to the wagons. Instantly divining that something unusual had caused this singular behavior, I grabbed my Winchester from out of the cart, threw on the saddle, mounted and cantered toward the grazing oxen. On reaching the crest of the hill, and gazing over the backs of the grazing cattle, I was startled at the sight of a herd of haartebeestes. Finding that the game were too far away to use the oxen for a blind, I dismounted and walked alongside the pony until we had passed through the herd of oxen, when I used him for a blind until we came within shot of the bucks, when I dropped three before they got out of the range of my Winchester. For several succeeding

days there was a feast of fresh meat with our party, accompanied by extravagant praise for the pony.

In one of my trips I secured a pair of haartebeestes which had been reared by an old Boer frau, who secured for me a number of living specimens of South African fauna. They were very tame and would allow themselves to be handled without showing the slightest fear. I kept them in Durban for several months before shipping them, and it was my habit to go into their pen daily and fondle them. I took particular pains in having their shipping cages properly made, and large enough to give them ample room. They were safely shifted into their cages the afternoon previous to shipment, and at night I turned in congratulating myself on the safe accomplishment of a task which had caused me some uneasiness. During

the night I was suddenly awakened by a crash, and, hastily getting out of doors, I discovered that the male had completely smashed the front of his cage and was missing. Calling the keepers and kaffirs, we began a search for the escaped animal. Hearing the barking of some dogs at a neighbor's, I started the help in that direction, while I turned my attention to a thorough search of my premises. While thus engaged I detected a slight noise in a coffee patch just across the road in front of my house. Stealthily passing through the hedge which enclosed the patch I discovered the animal standing in about its centre. Advancing gently and speaking kindly, as had been my habit, I was soon in front of him and scratching his nose. Suddenly I was so silly as to seize him by both horns, when he snorted, backed, and began

to whirl with such rapidity that my feet flew off the ground, and it was with the greatest difficulty that I maintained my hold of the horns. Impulsively I yelled for the keepers, which naturally rendered the animal more frantic, and it was with the greatest difficulty that I kept my grip, in spite of the powerful, centrifugal force. Just as I was about to yield help arrived and the animal was secured, while I fell down completely exhausted, and it required a deal of rubbing by my men to bring my arms again into service. My hands were so badly cut by the corrugations of the horns that some time elapsed before I could use them without pain. The next morning, from tracks which were discovered, it was found that the escapade had been caused by a dog loafing about my premises.

FRANK J. THOMPSON.

Snuffing the Candle.

Editor *Forest and Stream*:

Manhattan, in the current number, August 13, asks if anyone has ever seen the candle snuffed without putting out the light. I am afraid he will not find anyone who has done it or seen it done. I think it cannot be done, but am willing to stand corrected if it can. I can't do it, and I have often tried it, and have seen others try it; the light always went out.

It stands to reason, I think, that if a ball goes close enough to cut off the wick, the air of the ball is going to put the candle out every time. I have tried the trick with the old muzzleloader and with breechloaders of both large and small caliber. I could cut the wick, but the light always went out.

A favorite trick with us out on the frontier (I learned my share of it from cowboys), was to set a beer bottle up on a fence post, then at thirty paces shoot the neck off it; and then slinging the pistol around in a circle, shoot again, mashing the bottle this time, if it still remained on the post.

These same cowboys could, and did, snuff the candle with their Colt's pistol, but they put the candle out. There are tricks in shooting, but some things cannot be done by practicing a trick on the audience, and this is one of them.

A few years ago it used to be a trick of fancy shooters (I have seen a woman do it) to mash any number of glass balls with a Winchester rifle as they were thrown from the trap. After witnessing one of these performances a man who was with me at the time said: "You can go to the rear now and find the doctor [an order that is given a man who is wounded in action]; that is shooting you can't do."

"Yes," I told him, "you can if we use the trick balls that were used in that rifle—paper capsules filled with bird shot. But the man or woman does not live that can break ball after ball with the regular ammunition."

What some of those old cowboys could not do with a single-action Colt's pistol I or no one else need try to do. When the double-action first came out, no cowboy would use one. They said that the pull necessary to raise the hammer destroyed their aim, and I found that it did. None of us who were handling the Colt's pistol every day needed a double-action; we could bring that hammer up quick enough with the thumb.

CABIA BLANCO.

FOUNTAIN CITY, Ind., Aug. 8.—*Editor Forest and Stream*: Some twenty years ago a party of boys, of whom the writer was one, got into a discussion about snuffing a candle with a rifle ball, and to test the matter set up and lighted one of the old-fashioned molded tallow candles that were to be found in every farmhouse at that time. The wick was made of a doubled and twisted candle wicking, which, if not snuffed, would stand several inches high before breaking off after the tallow had burned away from it, provided there was no wind. The burned part of the wick was brittle, and we used to snuff it by thumping the burned wick off, and a puff of air would sometimes blow it off, but it took a puff strong enough to blow the light out. An old-fashioned squirrel rifle, "running about 80 round balls to the pound" was used at a distance of about thirty yards. A board was set up three or four feet back of the candle to catch the balls, and from it could be seen how close to the candle the ball had passed in its flight. At almost every shot the light was blown out, and it was seen that a ball passing within four inches of the flame and at about the same height as the flame would blow it out. If the ball went directly over the flame it had to come perhaps an inch nearer to blow it out. The candle was snuffed by several of the shots, but the flame was blown out every time, except one or two times when there was a long "snuff," and the bullet went near enough to blow the brittle snuff off, but not near enough to blow the flame out. I doubt whether a candle has ever been actually snuffed by a bullet without blowing the flame out.

The writer has also barked a few squirrels: sent them

spinning away from the side of the tree, but they always hit the ground running, and made for the nearest tree. One squirrel I remember was killed by the bullet grazing the top of his head, shaving a clean furrow in the hair, but not cutting the skin. I also remember one that was killed by a small bullet shattering its foreleg, between the foot and "elbow." Others were shot through the body and had to have another shot to bring them down. No doubt every sportsman who has hunted four-footed game has noticed that sometimes an apparently trifling wound kills, and others will run away with a shot that ought to have finished them at once.

O. H. HAMPTON.

SYRACUSE, N. Y.—*Editor Forest and Stream*: I think 'tis my turn to say something about barking and snuffing, but I am not an expert in doing either. I merely want to ask the knowing ones how it is that if a rifle projectile can kill a squirrel by barking, it can be expected to snuff a candle without extinguishing the light? But if the light need not be affected, what would kill the squirrel? Or would the conditions giving death to the squirrel vary when applied to the candle? I am not a scientist; the problem leads me beyond my depth.

Another query: Those old Boone riflemen used flintlocks, of course, which went with a click, phiz, bang; that is, flint, pan, and explosion. How many marksmen were there who could hold one of those rifles steady enough after he pulled the trigger for the flint and pan and contents of the rifle to operate and just graze the stomach of the squirrel and the limb he stood on?

But there were giants in those days. In these days we have philosophers who do not philosophize.

SKEPTIC.

Skeptical after Forty-five Years.

BRIDGEPORT, CONN., Aug. 9.—*Editor Forest and Stream*: After carefully reading your admirable publication for many years, I am induced by the discussion as to squirrel "barking" and squirrel shooting "through the head every time" to send this communication. For not less than forty-five years I have heard these two questions discussed, and during this period have killed some squirrels and incidentally handled smooth-bores and rifles ranging from "percussion altered from flint-lock" to "hammerless ejector." From my experience, observation and reading, you may put me down as one of the elderly men who do not believe that squirrels can be "barked" with any regularity or certainty, and also as believing that the young man of the present day, with his modern shooting tools, is much superior to the "crack shot" of my time. I have nothing to say regarding those accidental, and almost miraculous, occurrences, which all of us occasionally see in the field. The original "barking" story is that which appears in your "Kentucky's Sports" article of 6th inst. Suppose we assume that occasionally a rifle ball, striking scaly dry bark at a certain position under a squirrel, will produce the result stated in the article. This being so, will any practical hunter deny that the slightest change in projectile, tree bark, or position of either hunter or game, would prevent the accomplishment of such result? Out of the hundreds of shots missed by me, where the ball has "touched the edges" of the squirrel, I have never seen the slightest evidence of injury to the little animal from the "shock." On the other hand, we have all repeatedly seen squirrels, more or less injured, grab the twigs below them, or fall distances of from twenty to fifty feet, and then escape. How many of us would trust an unconscious, "unmarked," but full-toothed squirrel in our game pouches? Our old-fashioned, muzzle-loading guns were usually in fearful condition, as they could be cleaned (outside of the gunsmith shop) only through muzzle or cap-tube; they were usually worn at the muzzle point of rifling; our powder was often poor; our patches and wads very irregular; the weapons miserably balanced and shaped, and the loads were seldom twice alike. Everything considered, I will join the minority, and "stand up and be counted" with Mr. Allen Kelly. L. K. GOULD.

The Old Flintlock.

Editor *Forest and Stream*:

The last issue of *FOREST AND STREAM* (August 13) is a particularly interesting one, and you are to be congratulated upon the high class of literary ability and the selection of artistic and fascinating narratives which you are able to produce. Mr. Babson's concluding chapter on Newfoundland is particularly interesting, and it is to be hoped that he will continue to give us his experiences through your columns. Might I suggest that something descriptive of the country to be traversed by the proposed new Canadian railways would be in order for future entertainment by some of your contributors?

Referring to Cabia Blanco's remarks under "Some Old Guns," I presume that he knows that there was a breech-loading flintlock used by the British Major Fergusson and his scouts in the Revolutionary War. The mechanism consisted of a lever (the trigger guard) which turned aside and operated a large bolt with 12 threads. A quarter-turn dropped this bolt below the bore of the rifle, exposing the opening from the top. A ball was dropped in and rolled forward into the chamber. Then a charge of powder was poured in and the lever brought back into position. As soon as the piece was primed, it was ready to fire. There is said to be one of them in the Tower of London collection. Could not a photograph of it be secured?

I have seen some breechloading flintlocks in which the last four inches or so of the barrel were pivoted in such a way that the forward part of the chamber was raised up to receive the charge. It was then pressed down in line with the barrel, and was ready to shoot as soon as primed.

WM. M. ELLICOTT.

SYRACUSE, N. Y.—Who will rise up now and tell us all about the old flintlock? One of them, an old musket, once nearly sent me to kingdom come—but I killed the skunk.

D. H. B.

Quail Thinning Out Theory.

ROME, N. Y.—*Editor Forest and Stream*: I have had an intention to write you, some time past, concerning a communication, under the above caption, by R. L. E., in *FOREST AND STREAM* of July 30. The subject was the breaking up and thinning out of a brood of quail before the breeding season, on the presumption that they will breed better by so doing.

Perhaps I may be pardoned if I offer as evidence my own personal experience in quail shooting, and such information also as I have gathered from the experiences of others.

There is no occasion for any breeding reasons to attempt the breaking up of a bevy of quail in the spring-time, for they will do that naturally and certainly from natural impulse, whether they are disturbed or not.

During the breeding season, the quail does not live in bevs. In all my experience, I never saw a bevy of quail in the nesting season. They are mated and separated then.

But I firmly believe that "shooting up" a bevy of quail in the fall or winter is directly beneficial as an assistant to a more prolific quail crop the season following. Such is the general belief of nearly all practical shooters. The reasons for it are that after being "shot up" a few times, a bevy becomes more alert, much wilder, and exercises to the utmost degree all the instincts of self-preservation; hence the weaklings, thereafter, are the ones most likely to be destroyed by predatory animals, such as foxes, cats, etc. The most vigorous live.

But when shot at, after being pointed by a dog, or when flushed by the wing shot, the old cocks are the first to rise to lead the flight of the flock, and, as a consequence, they are the first to be shot and the first to be killed.

Many of the old cocks, while retaining their fierce pugnacity and destructiveness in respect to their younger rivals, are infertile, hence their destruction makes way for the younger cocks which are sexually perfect. The elimination of the old cocks, therefore, has a direct and material bearing on the question at issue. A redundancy of male birds also encroaches harmfully on the food supply, which in turn has its harmful effects on the pro-

liveness of the hens and the best growth and certainty of life of the young birds.

There is one alleged trait, however, concerning the habits of quail—that is to say their migration in the fall of which I am a total disbeliever. If quail migrate, leaving one section and travelling to another, the influx at their place of destination should add materially and visibly to the supply of birds of that section, as the migrations of ducks and geese and snipe and woodcock correspondingly add to the visible supply in the south during the migratory season. There also should be a corresponding diminution in the numbers of the section whence the quail migrate, and during migration there should be evidence that the birds are journeying, as shown by a general movement of all quail toward the southland in the fall, and the return flight northward in the spring.

That quail do shift about in the fall is a fact, but, in my opinion, it is merely a readjustment to the conditions of the same habitat, enforced by the change of season affecting the cover and food supply. The sum total of birds in any given locality remains precisely the same, just as the sum total of cattle, sheep and horses on a given farm remain the same summer and winter, though in summer they live in the woods and fields, while in winter they live in the barn.

DARBY.

The Redeeming Shot.

THE season of woodchuck hunting for 1904 is tapering to its close, I have killed a 'chuck as late in the year as October 18, and have heard of one being killed October 27, but at any time in autumn so many of them have gone into their half year sleep that it is not worth while to hunt them. No doubt, many readers of FOREST AND STREAM could make interesting report of woodchuck hunts enjoyed this season, and probably some would have done so if this sport were in as good repute as it deserves to be.

One incident of this humble but enjoyable pursuit stands out among the memories of my more recent hunting. I had scoured the country in vain all the afternoon, and placed as many miles between me and town as I could retrace by supper time. As I faced homeward, my eye turned naturally toward a big knoll in a pasture, a quarter of a mile away, already inspected on the way out. Smooth and close-cropped, it was always worth a glance, for woodchucks lived in it and could not forage over its rounded summit unseen. Sure enough, there was one feeding in plain sight, and I started for him. A large brook required a detour to a bridge, but once across I made straight for the knoll and sneaked carefully up its steep slope. I had lost sight of the game as I put the crown of the hill between us, and, on getting to a point of observation, found that he had gone into his burrow. Going as far down the hill as I could, and keeping the spot in sight, I watched for his reappearance with the

usual uncertainty as to the time of that event, which grows more annoying every minute with supper nearly due, but miles away. I could not stand it long, and proceeded down through the hollow and up a neighboring ridge. Of course, a parting glance was cast toward the knoll to see if anything had happened.

Something had. A small, round object apparently lay on the smooth turf, evidently the head of a woodchuck watching me from his "peek-hole." Back I went into the hollow, not too directly at first, but more and more so, pondering the interesting problem how many more steps could be taken without sending the 'chuck down for good. Sixty or seventy yards from him I felt bound to stop, and took my best aim at the little dark ball that seemed to lie up there on the short grass. At the crack of the rifle it vanished, but that was a matter of course with a woodchuck in the mouth of his "peek-hole," whether dead or alive, and I hastened up the hill to investigate. Down in the darkness of the burrow something looked like hair, and I pulled up the victim and found he had "got it in the neck." A farm hand driving a team in the next field had stopped at some stage of the campaign to see the result—what farm hand would not jump at such a chance for such a pause? I waved the defunct woodchuck toward him, he waved his congratulations to me, and I set out for home in better humor with myself. The difference between two small numbers cannot be great, but the difference between a petty victory and a petty defeat is considerable to the feelings of a hunter who has started homeward without a mark to his credit.

The incident makes one of the pleasing brain-negatives that the gun-bearing rambler brings in from the fields to develop at will, whether or not he brings anything else—the long stalk, the varying prospect of results, the expectant laborer with his eye fixed as sharply as mine upon the mark, the gentle excitement of the shot, the satisfaction of the retriever, and the charm of the summer evening setting upon the quiet hills.

BRISTOL HILL.

Dove Shooting in Hawaii.

In the news items appearing in this morning's paper, it is stated that the "dove shooters" drove over to Mokuleia three mornings and took back 1080 doves in all as a result of their shoot. The birds are fat and plentiful.

Without knowing the exact number of "shooters" (it is, in passing, pleasing to notice that you distinguish between "shooters" and "sportsmen") who participated in this slaughter, it may be that the writer is hasty in calling attention to this wanton waste. However, the gentlemen who shot nearly 1,200 doves in less than three days may reconcile their sportsmen's consciences, if the same have not already been submerged in the lust for slaughter, with the killing of so many birds and the sure extinction of all sport in this line in the near future, it is not for me to say; but the result of this

indiscriminate shooting is what I desire to call your attention to.

The beginning of this dove hunting season does not mark any new departure in the obtaining of enormous bags exceeding one hundred birds per man. Last season, reports were freely circulated, and boasts made, of record shoots where the bags were so large as to lead one to the conclusion that the "shooters" were either market hunters, under the guise of sportsmen, or were seeking to outdo themselves, and in this effort had gone beyond the point where a true sportsman should take down his gun.

Hunting in these islands has its limitations. Other than doves, pheasants, a few ducks and plover, there is nothing. The pheasant is not in large numbers, and but barely holds its own against the mongoose, and a good shot with a good dog can obtain but a very few birds in a day's hunt, and only in favorable spots and after much hard tramping. The plover are becoming scarcer every year and duck shooting is practically only for those who support the preserves.

Dove hunting, however, is easily accessible and open to all. The flights of the birds occur principally over the rice fields after the rice has been harvested, and in this island the fields are readily reached along the line of the railroad. There is absolutely no protection for the birds, no limitations as to the size of the bag to be obtained except as may be dictated by the conscience of the man behind the gun; and while there is a statute requiring a license fee for hunting, it is not enforced, and any person of whatever nationality has a free hand during the hunting season.

Within the few days following the second of July there has probably been killed on this island at least 2,500 doves at a low estimate. We know, of course, that the birds are now present in large numbers, and no appreciable reduction will be noticed this season even if this average is kept up while the opportunity offers, which will continue until the new crop of rice is planted. But it is patent to all that this cannot go on without a serious diminution of the number of birds, resulting finally, and within a few years, in the practical extinction of this sport, when "the birds will be neither fat nor plentiful."

The experience of localities on the mainland amply supports the above statement. In nearly all the States and Territories there are now stringent laws, which are rigidly enforced, not only in reference to hunting in season, but limiting the bag to a reasonable number. In all such places they have realized that they were too late in appreciating the situation, and that the protection was afforded when there was but little left to protect.

As we have no laws here to protect the sport, and as the laws requiring a hunting license is not enforced, the only recourse is an appeal to all true lovers of sport to remember that they are gentlemen and sportsmen.—Honolulu Advertiser.

Sea Trout and Salmon.

Editor Forest and Stream:

In common with all your readers who appreciate intelligent writing on fish and angling, I enjoy the "Fish Chat," which Mr. Edward A. Samuels contributes to your columns. I was especially interested in that which appeared in issue of Aug. 6, for it treated of two subjects in which I have been intensely occupied for the last forty years—I mean salmon culture and the so-called sea trout.

After all the ignorance that has been written about sea trout it is refreshing to the Old Angler to find a man of such large experience as the author of "With Fly-Rod and Camera" recording his conviction "that they are undeniably our dear old friend the spotted brook trout, which has gladdened the hearts of thousands of anglers." As Mr. Samuels' researches of over thirty years in the New England States and Eastern Canada have led him to the conclusions which I have placed on record in your columns. I commend this instalment of his fish chat to the careful consideration of those who still think we have in Canada waters a species of trout distinct from *fontinalis*, which is "spawned and brought up in the sea."

On the other subject which, for forty years, has engaged my anxious attention—that of artificial salmon culture as a means of restoring exhausted rivers and keeping up the supply of salmon in spite of the excessive fishing that is now pursued in all our best salmon rivers on the Atlantic and Pacific Coasts—I regret that I must differ entirely from the opinions which Mr. Samuels expresses in his last contribution to your columns. I dislike, as much as Mr. Samuels does, all newspaper controversy, and will confine my present remarks to a few matters of fact within my own knowledge, which knowledge is within the reach of Mr. Samuels, and of any one who will take the small trouble to obtain it. But when an inquirer approaches the subject with the declaration, that he "regards the arti-

ficial reproduction of fish as one of the greatest achievements of the nineteenth century, and nothing that can be said will ever cause him to believe otherwise," it will avail little to inform him that, so far from fishculture being an achievement of the nineteenth century, it is but the resuscitation of a very old art practiced by the Chinese, the ancient Romans and the mediæval monks, with better results than the modern practice has shown. I wonder if Mr. Samuels was serious when he pointed to the hatching of chickens in an incubator as analogous to the modern process of fishculture. If he was serious I can only regret that he so entirely ignores the conformity to nature in the one process, and the series of unnatural processes necessarily followed in the other.

Be this as it may, I have great faith in "facts and figures," and if Mr. Samuels will produce some that will bear out his assertions regarding the Merrimack and the Penobscot Rivers, I will give them due consideration. Meantime, I repeat, advisedly, what I stated in your issue of July 16: "That there is not, so far as I can discover, a particle of evidence to show that the increased number of salmon in these rivers came from the fry planted." As to the Liverpool, Port Medway and Port Mouton Rivers, in Queens county, Nova Scotia, which Mr. Samuels cited as showing "visible results" from the fry planted in them, he now says, in answer to my statement of facts made from my own personal knowledge, that every one he interviewed agreed that great benefits had resulted. The boatmen, the guides, the Indians, all agreed with the statements of the residents in the neighborhood. Mr. L. S. Ford, the fishery overseer of the county, assured him, "that all the rivers that came under his supervision had greatly benefited." Thus much for hearsay! Now let us see what the "facts and figures" say. The Bedford hatchery, from which all the fry that ever went into these rivers came, was started in 1876. I have before me the Report of the Commission of Fisheries for that year, from which it appears that the catch of

salmon in Queens county was 40,000 pounds. The report for 1902 is also before me, and it shows that, after twenty-six years of fry-planting in Port Medway, Port Mouton, Liverpool and other rivers, the catch of salmon in Queens county was 20,200 pounds—just one-half that of 1876; which shows that even the overseer of the county was ignorant of the "fact and figures!" As to his distinguishing the progeny of the planted fry from the progeny of the native fish, I can only envy him his great perspicacity. The ova hatched in the Bedford house in my time, came from River Philip, in Cumberland county, Sackville and Musquodoboit, in Halifax county, East, Middle and West Rivers, in Pictou county. Of late years the reports say they come principally from St. John Harbor. Perhaps Overseer Ford can distinguish the progeny of each river, where the fish vary in weight from fifteen pounds to thirty pounds!

Mr. Samuels admits that a large portion of his information has been gathered from hearsay. What information I have on the subject is derived from my own experience among the hatching houses during twenty-two years of official life, and since from the reports of the commissioners of the New England States, and from those of the Fisheries Department of Canada. If any more authentic sources of information exist, I would be glad to be informed how I can get access to them.

In your issue of the 6th inst. Mr. W. B. Merston tells of the poor fishing he had in the Grand Cascapedia. I have beside me a letter from an angling friend, which says: "I was away five weeks fishing the Grand Cascapedia. In all this time four rods killed only eleven fish. Such a poor season was never known." From the Nepissiquit and Restigouche come similar reports of poor fishing, both on the coast and in the rivers. Yet all these streams have had the assistance of fry from the hatching houses. In the Restigouche and its tributaries the fishery reports of the department at Ottawa tell us that in the last thirty years 37,434,000

fry have been planted—over a million a year—and yet the catch of 1903 was less than that of 1874, before the hatching house was started. Had Mr. Samuels not declared that nothing that can be said will cause him to change his opinion, I might hope that facts and figures would outweigh such mere hearsay stories as he has retailed in his last letter. THE OLD ANGLER.

SUSSEX, N. B.

Fish and Fishing.

Vice-Regal Sport in Canada.

NEARLY all the Governors-General of Canada for many years past have been ardent sportsmen. Salmon fishing in the Dominion has had few warmer adherents than Lords Dufferin, Lorne, Stanley, Aberdeen, and Minto. His Excellency the Earl of Minto, the present Governor-General, is not only himself a well-known sportsman, but belongs to a family of anglers, one member of which, who bore the title now carried by the Governor-General, was the author of an interesting work entitled, "Game, Salmon and Poachers," which was printed for private circulation in London in 1863. Like most other salmon fishermen in Canada during the present summer, the Earl of Minto had rather poor sport on the Cascapedia. Since his return, however, His Excellency has more than made up for the disappointment attending his salmon fishing by the excellent sport which he has enjoyed along the line of the Quebec and Lake St. John Railway. Upon this trip His Excellency was accompanied by the Countess of Minto and family, and also by the members of the vice-regal staff, making a party of eleven, all of whom were accomplished anglers. The party accepted the hospitality of the club house and preserved waters of the Tourilli Fish and Game Club, intending to remain upon the territory for a fortnight. The stay was limited to six days, however, in consequence of His Excellency being recalled to Ottawa for the closing of Parliament. During their stay the total catch of the party was 22 dozen of trout, some of them of very respectable size. The flies that were found most successful were the Jock-Scot, Parmachenee-belle, coachman, professor, and Coch-y-bonndhu. The members fished quite a wide expanse of water, both in the Ste. Anne River and in the series of lakes drained into it, and intend to pay another visit to the territory in the month of September.

Ouananiche in August.

I can fully corroborate the statement made by Mr. Babson, that the ouananiche in Lake St. John will strike at a spoon or spinner in the month of August, even more readily than at a fly, and have already had occasion to point out, as he does, the absurdity of expecting any fish to do himself full justice as a fighter with a gang of hooks widely distending his open jaws. And besides, there is seldom the slightest necessity for the use of so murderous a device by those who desire to kill ouananiche. It is true that in August, as, in fact, in almost every other month of the season, these fish will rise more freely at a spoon or spinner in Lake St. John than to a fly. But the same is true of trout when fished for not only in large bodies like Lake St. John, but also in lakes of very much smaller size. The angler has only to follow the ouananiche out of the lake into the lower portions of the Grand Discharge to meet with success in his fly-fishing for the fresh-water salmon, just as trout which refuse to take the fly in midsummer in the middle of large lakes, will often afford the finest sport in the month of August when found in the rivers which form the discharges of large bodies of fresh water.

Both the editorial remarks upon the first page of the number of FOREST AND STREAM for the 6th of August, and the letter of Mr. W. B. Mershon, on another page of the same issue, have to do with the scarcity of salmon during the present season, which has already formed the burden of portions of my own contributions to this column. There have been so many complaints upon this score that I have been at some pains to collect all possible information on the subject. I am sorry to have to report that there appear to have been scarcely any exceptions to the rule. The usual report from salmon rivers is that the catch of fish has been only one-third to one-half of the average, while in some instances it has been even smaller. I have heard of very many anglers who fared just as badly as Mr. Mershon and his friends did. The chief exceptions occurred upon the Moisie and the Godbout rivers on the north shore and on the Grand River, which enters into the Baie des Chaleurs, and even these favored streams yielded far less fish than usual. I have reports from every tributary of the Saguenay, and find a large falling off, not only in the catch by rod and line, but also in the number of fish taken in the nets of the Government hatchery at Tadoussac at the mouth of the Saguenay. In the St. Jean, which was fished by its proprietor, Mr. William Price, and also by Sir George Carrington, Mr. Dwight and Canon Evans, not more than two or three fish fell to each rod. Even less success was obtained upon the Mars River. The Little Saguenay yielded a single fish. The illness of a friend having prevented me from fishing on the south shore this summer, I spent the first four days of August upon Eternity River, a third tributary of the Saguenay. Only one salmon fell to my rod, though a brother who accompanied me was fortunate enough to kill three. Notwithstanding the lateness of the season, we should probably have done better had we been able to visit the river a week or even a fortnight earlier. The river is a short one, and because of the late date at which the fish entered it this year, they lost but little time in ascending to its upper waters, and were consequently not in a rising humor when found by us. It was well on in July before any fish were seen in the river, and by the middle of the month they had only run six miles up the stream.

The Ste. Marguerite, which is the best and the largest of the Saguenay rivers, has proved a dismal failure this year. The members of the Ste. Marguerite Salmon Club who visited the preserve had about the worst season on record, and Mr. W. M. Brackett, of Boston, who fished his branch of the river from the opening of the season to the last of July, only killed seven fish in all.

Some weeks ago, in this column, I expressed the belief that there would be a later run of salmon this year

than usual, and so far as the Eternity and some other rivers are concerned, this has already proved to be the case. Out of the four hundred salmon taken in the nets at the mouth of the Saguenay for the Government hatchery at Tadoussac up to the 6th of August, less than half of the number had been taken during the first two months of the netting. It was necessary to obtain special authority from Ottawa to permit the nets to be set for a longer period than usual, and yet the number of parent fish taken is much less than usual. Mr. Catellier, the superintendent of the hatchery, has a theory of his own respecting the scarcity of the fish. He believes that the absence of easterly wind has had much to do with the failure of the fish to reach their rivers, there having been only one day of easterly wind in the St. Lawrence since the month of May. He says that the fish are even now running up into their spawning rivers, and that many more will still run up and deposit their spawn. The entire Canadian season has undoubtedly been an exceedingly backward one, and the lowness of the water in many of the salmon rivers during the early summer may well have tended toward keeping the fish out. But if, indeed, there has not been any very great diminution in the supply of spawning fish, there is no doubt that the requirements of nature and the force of natural instinct will compel the salmon to yet overcome all obstacles to their entrance and ascent of the rivers. It may well be that they may in some cases be prevented from entering their parent streams, but those upon whom the instinct of procreation is strong, will eventually ascend some stream in which the ripening and subsequent deposit of the spawn will follow.

There are some people who seem thoroughly convinced that the falling off in the take of salmon is entirely due to the enormous destruction of the fish, both young and adult, owing to the large increase in the number of its natural foes in salt water. Porpoises, seals, and dogfish—more especially the latter, have multiplied amazingly of late years, and while the dogfish have scarcely created much havoc among the mature fish, they have probably destroyed immense quantities of smolt and grilse, while the dangers which attend the return of the adult salmon to its parent stream are materially greater in consequence of the vastly increased number of porpoises and seals now reported in the Gulf and Lower St. Lawrence, and upon the Atlantic seaboard of the Canadian Provinces.

In connection with the dogfish scourge, it is interesting to note that the Hon. Mr. Prefontaine, Dominion Minister of Fisheries, has changed his mind in regard to the proposed bounty upon this fish, and has decided instead to erect three reduction works on the American plan. These will be placed at various points along the Atlantic Coast. One will be in Cape Breton, one in New Brunswick, and the other on the coast of Gloucester county. They are to cost \$9,000 each, and the Government will itself operate the plants, paying the fishermen a good price for their fish offal and for all the dogfish they can bring in, converting them into fertilizer and glue. The Government is satisfied that the venture can be made to yield a satisfactory profit, and believes that the price to be paid for dogfish and the desire of the fishermen themselves to be rid of the nuisance, will be incentive enough to them to keep the reduction works supplied with all the material they require.

It remains to be seen whether the destruction of the dogfish will make much difference in the supply of salmon. There is something that the Canadian Government might do, however, that most certainly would have an important bearing upon the supply of this fish, and that is to very materially decrease the amount of netting employed in the taking of salmon in the Gulf and Lower St. Lawrence and the Baie des Chaleurs, and in the estuaries of the different salmon rivers.

E. T. D. CHAMBERS.

Colorado Streams.

DENVER, Colo., Aug. 12.—W. C. Thomas, assistant cashier of the First National Bank, and Alfred Williams, a local wholesale cigar man, both expert anglers, elected to spend their vacation among the trout of Lake San Cristobal, in Hinsdale county. This is a little jog of 350 miles from Denver, and is reached by the Rio Grande road. The lake is of seismic origin, nestling in the crater of an extinct volcano. It is encompassed by peaks several hundred feet high; numerous sharp-pointed islands dot the bosom of its deep waters. Being away up in the clouds, it is an ideal place for recreation, and the two brain workers made the most of their leisure. The lake is three by one mile in dimension, and is said to be bottomless. A sound 750 feet long failed to touch bottom. Native, rainbow, and eastern brook trout abound, and they do not mind how big they grow. Fly-fishing from a boat is the proper caper; it costs \$1.50 a day for a good oarsman and boat. Good day board was obtained for \$1 a day, with the privilege of bunking in the miners' bunk-house without charge. Both gentlemen had a splendid time, and brought home numerous fine specimens of three and four-pound rainbow, native, and eastern brook trout. They are particular, however, to convey the information that the run of trout in these cold, almost glacial, waters is about one pound. These trout are great fighters; there are plenty of them, too, as the place is hardly ever visited, there being no accommodations for the effete brand of angler. But for him who is looking for sport and roughing it, this is an ideal spot. Catches of the limit and even more may be made daily.

At Sapinero, on the big waters of the Gunnison, the place where Judge McDougal, of Gunnison, loves best to draw big minnows for ten-pounders, I get a report of a catch of a 6½ and a 7-pound rainbow by a gentleman and wife from Delta. Mr. Thomas, above referred to, saw the catch, but failed to get the name of the anglers.

Fishing in glacial waters must be great sport. J. C. Miles, a Denver taxidermist, and a party of residents of Sunset, last week pushed their way to the crystal sheet of water at the top of Arapahoe Peak in Grand county, and made out to stop there several days. The lake is fed by the greatest glacier of the entire Rocky Mountain system, and is just at timber line, 13,000 feet high. The glacier lies just above the lake in plain sight. The water is full of trout, but on account of the prevalence of storms of one sort or another, it is difficult to make a

large catch. The run is about one pound; rainbows, natives, and German browns. Mr. Miles brought home several and mounted them for display. Few, if any, trout in the whole State are so beautifully and distinctly marked as these. He says a one-pounder in this cold water fights like an average three-pounder of the lower altitudes. Although a hardened mountain climber and seasoned hunter, Mr. Miles got enough of this trip in less than a week. He had snow and sleet storms and tornadoes and hurricanes every hour of the day. One afternoon when the wind was propitious he killed nineteen pounds, consisting of eighteen trout, in less than one hour.

R. D. Sanborn, of Greeley, went to North Park to look at some coal lands last week. At Candrey, on the Laramie River, he stopped "for half a day and angled with great success." His catch for six hours rounded out the century mark. As the trout in this stream average better than half a pound each, Mr. Sanborn might feel embarrassed to tell what his catch weighed. Game wardens are looking for such as he. It is such vandalism as this that wrecks fine fishing streams like the Big Laramie. When I was there three years ago it was easy to fill a 20-pound creel with one and two-pounders in an hour.

A friend encamped at Iola on the Gunnison writes me to "come down right away quick and bring nothing but midge flies. Trout are plentiful and fly-fishing is getting better every day. Just landed one that measured 23 inches in length, another 17 inches long and several over 15." This gentleman is a member of a prospecting party who are outfitted for a trip as far south as Chihuahua, Mexico; there are half a dozen of them and they have a whole year of outing before them.

Natives and guides of the entire Gunnison country—and that's almost as big as New York State—are lying awake nights making plans to get next to G. Cleveland and a party alleged to be on their way thither to tackle some of the "big ones." It is also alleged, with much detail, that a special representative of an eastern newspaper is to accompany the ponderous angler and chronicle his every act. Fishing on the Gunnison is entirely different from the Buzzard's Bay brand. On the Gunnison one is either tumbling, rolling, catching and slipping over roundly-eroded stones, or up to his neck in icy cold water. The supply of clinker-built boats is mighty limited, but Mr. Cleveland will find a big welcome awaiting him, and will be shown the sport of his life. 'Twould be great fun to see Grover and Judge McDougal—they are of a size and erected on the same keel with a displacement pretty nearly equal—up to their armpits in the dark cold pools of and about Sapinero. Judge McDougal "strings" his catch in a sugar sack, but he has never explained to me how he keeps on such good terms with the game wardens—and himself, a true-blue sportsman. Maybe he doesn't believe everything he tells.

Fifty thousand trout fry were placed in the Big Thompson near Loveland last week. Colorado is doing great work in keeping up the supply of trout in all her streams and the expense is large. It is estimated that a revenue of \$15,000 will be netted from the sale of hunting licenses this year, and it will be expended in planting young fry in the streams. In addition to this other funds are required to meet the heavy expenditures made in sustaining the hatcheries. J. D. C.

The Golden Trout.

WASHINGTON, D. C., Aug. 13.—*Editor Forest and Stream:* What promises an unexplored field to the fish-culturist and a new delight to the angler, has been discovered in the golden trout of Southern California. Dr. Barton W. Evermann, assistant in charge of the Division of Scientific Inquiry of the Bureau of Fisheries, with a corps of scientists, has just returned from an investigation concerning this famous trout. Dr. Evermann is very enthusiastic over the results of the expedition, and believes he has found a fish that so far is unequalled in beauty and one that will, when introduced into eastern waters, attract the angling fraternity more than any other game fish known.

The attention of the Commissioner of the Bureau of Fisheries was called to this beautiful species by the President. Stewart Edward White, author of "The Blazed Trail," etc., in traveling through Southern California, was impressed by the beauty and gameness of the golden trout, and called it to the President's attention, suggesting that some steps be taken for its preservation, as it was liable to extermination on account of its extremely restricted habitat. The President sent a letter to the Commissioner of the Bureau of Fisheries asking that an investigation be made to determine what steps should be taken for its preservation. Commissioner Bowers immediately sent a party of scientists with Dr. Evermann at the head to study the waters of the Mt. Whitney region, and report on the habits and distribution of this trout, and to suggest steps which might be taken toward introducing the species in other waters with a view to its cultivation and artificial propagation.

The fish is allied to the common rainbow trout, but is distinctly different in many respects, particularly in size of scales and color. The general color is a light yellow, with a rich cadmium band along the belly and a similar one on each side. It differs also from the common trout in the absence of spots except at the tail. It is a decidedly gamy fish, and of delicious flavor, qualities that enhance its value both as a food fish and its interest to the sportsman. The adult fish attains a length of 12 to 14 inches, and on an average weighs something less than a pond.

The investigating party traveled three weeks in the vicinity of Mt. Whitney exploring the streams of that region, and were further rewarded by the discovery of three or four new species, one of them approximating the beauty of the golden trout of Volcano Creek. The golden trout, the primary object of the expedition, was found to exist originally only in Volcano Creek, a tributary of Kern River. A few years ago it was introduced into Cottonwood Creek, tributary to Owen Lake on the east side of the mountains.

The problem of introducing this fish in other waters and its artificial propagation is at present occupying the attention of the Bureau of Fisheries, and every effort will be made for its successful cultivation. The Bureau will

recommend that the California State Fish Commission attempt its introduction into other waters during the present season. It has already been decided by the Division of Fishculture of the Bureau of Fisheries to establish a station in the Mt. Whitney region in the early part of the coming year for its artificial propagation. Many difficulties present themselves for their introduction into other waters, as they would have to be transported on pack mules down the eastern slope of the Sierras through a semi-desert region to Lone Pine, which would take from one to two days. Every endeavor, however, will be made toward the cultivation of this beautiful fish, as its introduction into other waters will be of keen interest to the professional angler and to the public at large.

E. D. CHADSEY.

English Fly-Casting Tournament.

From the London Fishing Gazette, July 30.

In lovely weather the tenth international fly and bait-casting tournament was held last Friday and Saturday on the Intermediate Lake and on the old Archery Ground at the Crystal Palace. We hope to give with the following report some photographs of the affair which will interest those who were present, as well as those who were not. Although the attendance was not at any time very large it was pretty evident that those

MR. D. C. E. MUIR IN AMATEUR SALMON FLY-CASTING.

who came were keenly interested. It was hoped that three American anglers would be present, but one of the Messrs. Hewitt was unfortunately not well enough to attend. Mr. E. J. Mills, son of Mr. Wm. Mills, of New York, made a very favorable impression by the modest but plucky manner in which he cast in no less than seven competitions. Mr. Mills is visiting Europe on account of his health; we heard from a friend of his that most of the time he was suffering greatly from facial neuralgia. He won several prizes.

Results of Friday's Competitions, July 22, 1904.

A—Salmon fly-casting. Any style.—Professionals. Rule—The gut cast must be either single, double, or treble gut, separately or in combination, but must not be more than three or less than two yards in length. The fly attached must be a light colored fly, not smaller than 1/4 inches from bend of hook to end of shank. The rod must not exceed 18 feet in length, or 52 ounces in weight. The time allowed to each competitor for

MISS NEWHAM IN SALMON FLY-CASTING.

casting, five minutes after being called upon to cast by the judges.

	Distance in		Aggregate of
	Yards and Feet.	Three Best Casts.	
A. Newham	28 29 30	88	
E. J. Mills	37 37-0 37	111-1 1/2	
J. Enright	48-2 48-1 49	146	
G. Hoyle	34-0 35 35	104-1 1/2	
J. J. Hardy	43 43 44	130	

J. Enright, first; J. J. Hardy, second; E. J. Mills, third. (Mr. Mills will have cup in place of money for the prizes he won.)

B—Salmon fly-casting. Any style.—Amateurs. Rule—same as competition A.

	Distance in		Aggregate of
	Yards and Feet.	Three Best Casts.	
D. C. E. Muir	40 41 40	121	
H. W. Little	37 38 40	115	
F. Hodder Bass	33 35 36	104	
J. Paterson	26 27 28	81	
Miss R. A. Newham	33 33 34	100	
L. H. Bennett	27 28 29	84	
F. G. Shaw	38 37 37	112	

D. C. E. Muir, first; H. W. Little, second.

C—Trout fly-casting.—Professional. Rule—the gut cast must be of single gut, not more than 3 or less than 2 yards in length. The rod must not be more than 1 1/4 ounces per foot in weight, and not more than 11 feet 6 inches extreme length. The rod must be held in one hand, and no spear must be mounted. The fly used, to be a coachman of moderate size. The time allowed to each competitor for casting, five minutes after being called upon to cast by the judges.

	Distance in		Aggregate of
	Yards and Feet.	Three Best Casts.	
E. J. Mills	28 28-1 1/2 29	85-1 1/2	
J. Enright	33 33 34-2	100-2	
(rod disqualified.)			
A. Newham	28 28 28	84	
(rod disqualified.)			
J. J. Hardy	33 34 34	101	
E. F. Goodwin	26 26 27	79	
G. Hoyle	23 23-1 1/2 24-1 1/2	71	
L. Hardy	29 29-1 30	88-1	
A. McCutcheon	27 28 29	84	

J. J. Hardy, first; L. Hardy, second; E. J. Mills (New York), third.

D—Light Bait-casting. Any style.—Professionals. Rule—the bait (including lead on trace) will be 1 3/4 ounces in weight, and the line must lift a weight of 6 pounds to a height of 2 feet, held 4 feet from the weight. The weight of rod is unrestricted, but it must not exceed 14 feet in length. Competitors will not be allowed to extend their line in front of the base line before starting. The time allowed to each competitor

MR. F. G. SHAW IN AMBIDEXTROUS COMPETITION.

for casting, five minutes after being called upon to cast by the judges.

	Distance in		Aggregate of
	Feet & Inches.	Three Best Casts—Feet.	
James Andrews	122 86 94	302	
A. Newham	134 118 112	364	
E. J. Mills	151 167 141	459	
G. Hoyle	60	60	
J. J. Hardy	140 154 144	438	
J. Bailey	171 155 173	499	
E. Andrews	150 172 163	491	

J. Bailey, first (casting from Nottingham reel); E. Andrews, second (using Thames style—line coiled on ground); E. J. Mills, third (casting from American multiplier reel controlled with thumb on line on barrel of reel, reel being fixed above rod).

E—Light bait-casting. Any style.—Amateurs. Rule—The bait (including lead on trace) will be 1 3/4 ounces in weight, and the line must lift a weight of 6 pounds to a height of 2 feet, held 4 feet from the weight. The weight of the rod is unrestricted, but it must not exceed 14 feet in length. Competitors will not be allowed to extend their line in front of the base line before casting. The time allowed to each competitor for casting, five minutes after being called upon to cast by the judges. (The bait, trace, and lead provided by the committee.)

K—Special light bait-casting. From the reel.—All comers. Rule—The bait to be cast will be a half-ounce artificial bait, provided by the committee, and must be cast direct from the reel, holding the rod in one hand. No limit to weight of rod or line, but the rod must not exceed 11 feet 6 inches in length. The time allowed to each competitor for casting, five minutes after being called upon to cast by the judges.

	Distance in Feet & Inches.	Aggregate of Three Best Casts—Feet.

J. J. Hardy.....	130 130 146	406
James Morris.....	102½ 102 102	306½

Mr. J. J. Hardy (with "Silex" reel), first; Mr. E. J. Mills (with American multiplying reel), second; Mr. C. H. Wheeley (with "Silex" reel), third.

L—Light bait-casting (any style) for accuracy.—Amateurs. Rule—The bait (including lead on trace) will be 1¾ ounces in weight, and the line must lift a weight of 6 pounds to a height of 2 feet, held 4 feet from the weight. Weight of rod is unrestricted, but it must not exceed 14 feet in length. Competitors will not be allowed to extend their line in front of the base line before casting. The time allowed to each competitor for casting will be five minutes after being called upon to cast by the judges. Three casts will be made to a mark fixed at a distance to be decided by the judges. The distance from the mark at which the bait rests (of each cast) will be added together by the judges, and the aggregate deducted from 100. The resultant figure will be the competitor's score. (The bait, trace, and lead provided by the committee.)

	Distance from Mark to be deducted from 100.	Nett Aggregate of Points.

Mr. J. J. Hardy, first; Mr. F. G. Shaw, second; Mr. E. J. Mills, of New York, third. Mr. Shaw also won the special prize given by Messrs. Wm. Mills, of New York (see above).

P—Dry fly-casting for accuracy.—Amateurs. Rule—The fly in this competition will be a "white-winged dry fly" of moderate size, approved by the judges. The rod must be held in one hand, and must not exceed 11 feet 6 inches in length, or weigh more than 1¼ ounces per foot. No spear to be mounted. The gut cast must be of a single gut not more than 3 yards or less than 2 yards in length. The casting line must not be marked in any way whatever. The time allowed to each competitor for casting, five minutes after being called upon to cast by the judges. The casts will be made at buoys, fixed respectively at 30, 40, 50 and 60 feet distant from the platform. The competitor will start by taking aim at the nearest buoy, and a reasonable number of false casts will be allowed. When he has determined his distance he must say, "Count," and the cast following that signal will be scored. The fly must be allowed to float until the judges have made their record and signal for him to recover his line. He will then in a similar manner cast at the second, third and fourth buoy in succession, and the one cast at each buoy will be recorded, as in the first instance. If the fly falls within one foot of the buoy accuracy will be considered perfect; for each foot, or fraction of a foot, in excess of one foot, a demerit of "one" shall be counted; and if the fly fails to float while on the water, a demerit of "one" shall be counted. The sum total of such demerits shall be deducted from 100, and the resultant figures will give the points scored.

	Style.	Demerits of each Casts to be deducted from 100.	No. of Points after Demerits from 100 have been deducted.

F. W. Wallis, first; H. W. Little, second; C. H. Wheeley, third.

S—Float casting. Any style.—Professionals. Rule—The rod must not exceed 14 feet in length, but the weight is unrestricted. Weight of shot on gut cast will be 1½ drachms. Float fixed 5 feet from hook. Competitors will not be allowed to extend their line in front of the base line before casting. The time allowed to each competitor for casting will be five minutes after being called upon to cast by the judges. (The float and gut cast provided by the committee.)

First prize, £3, three best casts; second prize, £2, second three best.

	Distance in Feet & Inches.	Aggregate of Three Best Casts.
A. Newham.....	77 81 81	242
J. J. Hardy.....	82-6 85 84	246
James Morris.....	80 85 84	249
J. Bailey.....	73 73-6 79	225-6

James Morris, first; J. J. Hardy, second.

The last competition was finished about 7:30 P. M., and soon after 8 P. M. the prizes were presented by Mrs. R. B. Marston. Mr. Phillip Geen, one of the committee and a judge of many of the bait-casting competitions, in a few pleasant words proposed a vote of thanks to Mrs. Marston. In replying, Mr. Marston expressed the indebtedness of all to the Crystal Palace Company and other prize-givers, to the judges, time-keepers, and scorers, and especially to Mr. J. T. Emery for the hearty way in which they had all co-operated to make the affair a success.

Other illustrations of the casting will be given in our next issue.

Mr. Anspaugh's Adventure.

CINCINNATI, Aug. 13.—James Anspaugh, of Cincinnati, is reported to have narrowly escaped drowning while fishing in Crooked Lake, northern Michigan, a place noted for its bass, maskinongé, and pike. Mr. Anspaugh is spending some time at his cottage on the shores of the lake, and, being an ardent angler, was naturally anxious to make a record catch. On the 9th he joined Mr. Stephen P. Sands, of the Custom House, at Cincinnati, for a cruise in the latter's yacht. They had been trolling from the stern of the yacht for some time, when Anspaugh received a strong jerk on his line, which was fastened with a half-hitch around his wrist. In his efforts to make the line fast to a cleat he tripped over a rope and went overboard, and was towed away from the yacht by the fish he had hooked, as soon as he struck the water. Being unable to get clear of the line, he was several times drawn under water. A boat was lowered from the yacht and manned by Mr. Sands and the crew, but every time it approached the drowning man the fish would dart off in another direction, pulling him out of their reach. Finally a rope was thrown to him, which he caught, and was pulled to the boat with the fish still fast. He was taken aboard the yacht and released from the trolling line. After he had been revived, an old fisherman among the crew took charge of the battle with the muskie, which had nearly proved the death of Anspaugh. For over an hour the struggle lasted before the fish was brought near enough to the yacht to dispatch. It was four feet seven inches long and weighed 64 pounds. Twenty-four fish hooks were found imbedded in its jaws, showing that it had been the victor in many a previous battle.

Peruvian Camp is located on the Little Miami River, between Epworth Heights and Branch Hill. The members of the club are all prominent Cincinnati men, among them being James Foraker, Joseph Heintzmann, and Edward and Charles Hoffner, attorneys; Joseph Sagemeister, Harry Alexander, Albert Muehlhauser, and Walter Sohn. Arrangements have been completed by the club to restock the river with fish, and then to protect them so that the locality may once more be famous as a fishing ground. The club will place in the river 1,000 black bass received from the Government Fish Commissioners, and 1,000 newlights from the Ohio Commissioners. Mr. Heintzmann says: "The game laws have been ruthlessly violated on the Little Miami. Seines, trot lines, and nets have been used in this stream in such a manner as to practically clear it of fish in many places. We propose to protect the fish in the stream and restore the river to its former attractiveness as a fishing ground. The game wardens will be encouraged to get after violators much more vigorously than heretofore." The only legal way of fishing is with hook, line, and rod, and the club proposes to make it unpleasant for all who try any other method. Five men were arrested a few days ago by the game warden, and fined for using a trot line, and further arrests will be made if necessary.

Fishing at Charleston Lake.

NEW YORK.—I have returned from my annual fishing trip to Canada. This year I visited Red Horse, Charleston lakes, and Highley Pond, Ontario. I did some successful fly-fishing in June in Charleston Lake for small-mouth bass, taking a number that would go 2¾ pounds; fish larger than this were scarce. The fishing in Charleston with a fly was not so good as in Red Horse, the objection to this kind of fishing in that lake being a constant pulling in of rockfish, or more properly rock bass. To get rid of these small fish which wore out the flies and one's hands, I tried a Harris green frog and had some great sport taking large-mouth bass and pike and no rockfish. This is a very good locality for lake trout fishing, and I had very good success, taking one or more salmon trout every day I was there. I trolled two rods at once, one 8 foot and the other 8 foot 6 inches; the shorter rod of 8½ ounces and the other of proportional weight. I used two 200-yard reels of special type and make, with interchangeable spools. I had three extra spools to each reel and used two of the copper color braided metal lines, and found them to answer every purpose, both as to flexibility and strength. I used the same two lines for the entire two weeks' fishing every day from 9 A. M. to 7 P. M., and they landed one 14-pounder, one 10½-pound fish, one 7 pounds, and about five fish weighing from 5 to 6½ pounds, and a large number of smaller fish. The lines were 300 feet each, and were used absolutely without sinkers, these lines being made specially for this purpose. They reached a depth of 70 to 80 feet. The light rod without any sinkers makes this fishing very good sport. If any of your readers wish to know further particulars, I should be pleased to furnish same.

W. T. MORRISON.

An Odd Experience.

NEW YORK, Aug. 6.—Editor Forest and Stream: I thought it might be of interest to you to hear of an experience we had Wednesday at Cape Vincent.

While black bass fishing with live bait Mrs. Myers struck a small fish, and, when reeling it in, felt the pull on the rod suddenly become very much heavier, the fish swimming away from the boat in spite of all she could do. Finally she succeeded in turning it, and after five minutes' play we saw, to our great surprise, the brown back and fins and tail of the maskinongé through the top of a wave some twenty feet from the boat. We had no gaff and no pistol, so it soon pulled away. The bass was badly cut by its teeth, and had been swallowed tail first.

The Kennel.

The Wild Dog of Ennerdale.

THOUGH the wolves and other ravening beasts have long been exterminated out of Britain, the sheep-farmer has still to contend with the killing and maiming of his flock by foes from within his own household. Speaking as President of the Board of Agriculture, Lord Onslow recently declared that the slaughter of sheep by savage dogs has become so serious that it would justify the enactment of a canine curfew bell, after the ringing of which no dog must be out of doors. A bill to this end has since been introduced in the present session of Parliament. In Perthshire, for instance, hundreds of sheep were killed last year by prowling dogs, as many as twenty sheep being worried to death in one flock in a single night. Circumstances, rather than innate vice, account for a dog's decivilization and sudden return to the slaughtering and hunting trait of its wild ancestors. In severe weather, either snow or long-continued rain, sheep lose themselves and die on the upper fells and in mountain hollows. The dog finds them and makes a hearty meal. The taste of raw flesh rouses the dog's slumbering blood-lust, and it seeks for more. After it has once been "blooded," the dog does not hesitate to attack stray sheep, and to make midnight forays on a flock.

Any dog may thus turn sheep-worrier, and each pursues its victim after its kind. The bulldog is a rare offender, for it lacks speed; but, taking a sheep unawares, it flies at its nose and throat. The greyhound runs down a sheep as it does a hare, grabbing it by the loin or tossing it over into the air. Pointers or setters are the most destructive dogs among sheep by reason of their speed and strength; but they usually attack in the daytime, so that detection is more easy. They run down a sheep, and springing on its flank, bite into its flesh until the quarry is brought to a standstill, and the defenseless victim is speedily despatched. Foxhounds rarely worry sheep; mongrels are frequent offenders; but the most dangerous of all is the sheep-dog. It is too clever and cunning to go hunting in its own flock, but at midnight sneaks away two or three miles to a neighboring farm. With never a bark or faintest yelp, it flies at the sheep's throat, overturns it, and throttles it. In its mad lust for slaughter the dog often leaves its victim mortally struggling and dashes off to kill another sheep, for the dog seeks pleasure merely, and not food. Sometimes the sheep-dog takes a younger dog with him and initiates him into the sport of slaughter. After a lively hour or two spent in this midnight destruction, the dog rolls itself well in the grass and returns home clean and tidy, to be found in its kennel ready for breakfast and work. By such malicious cunning the dog may escape detection for months, and the unsuspecting farmer is at his wits' end to discover the ravager of his flock, which is reduced sometimes by forty lambs in a single night.

Once detected in sheep-worrying, a dog has short shrift. Whatever its value or its master's affection for it, death is the penalty, for the vice is ineradicable. On the Cumbrian fells a series of such cases brings the shepherds together on a dog-hunting expedition. It is a grimly serious business. The dogs—they nearly always worry in couples—become alive to the danger of their situation, and with rare cunning select the weakest point of the inclosing cord to break away, so that the hunt often extends into days before a lucky shot bowls over the marauders. The fame of the wild dog of Ennerdale still exists in Cumberland, and it is indeed a story of remarkable interest. Once a tiger has been marked down in India it rarely escapes to be hunted another day, and even in the great Russian forests a wolf can barely hope to escape its pursuers. But for five months, less than a century ago, a dog defied the organized attempts at its death of the entire county of Cumberland, and continued unchecked its ravages among the sheep and lambs. It was a large smooth-coated dog, of tawny color, with tigerish stripes, most probably a cross between a mastiff and a greyhound. Whence it came was never known; but suddenly in May, 1810, it appeared in Lower Ennerdale, and commenced its destruction among the flocks. Thenceforward it fed on living mutton, pulling down a sheep and tearing the flesh from its quivering body. Often it killed seven or eight sheep in

a night, for it seldom fed during the day. With instinctive cunning, it never attacked the same flock on successive nights, but went further a-field, to return to its first hunting ground when the alarm had subsided. Not a single bark or growl broke the silence of its ravaging. It invariably attacked the plumpest sheep, and over-throwing it, bit into the jugular vein and drank the hot blood.

Many and furious were the dalesmen's chases after this dog. The farmers and their employees divided themselves into two bands, which watched the fells alternate nights with hounds and guns to hand. A shot or a shout was the signal of the dog's discovery; but this was seldom heard, for it did its work in the least-suspected district, and with diabolical stealthiness and silence. Now and again it was seen in the daytime, and all took up the chase. Plowmen unyoked their horses and farmers left their cart by the roadside to ride bare-backed in pursuit. When their horses failed, the riders left them and continued the chase on foot, throwing aside hats and coats which hindered progress. With its long galloping stride, the "girt dog" led its pursuers ten or fifteen miles across country, and, finally shaking them off, left them to a weary homeward journey in the darkness. That very night or the next day the dog resumed its deadly work on its old ground. So easily did it outdistance its hunters that it would even turn and wait for the leading hound of the pack. Then its powerful jaws closed on the forelegs of its pursuer, so that no hound would attack it twice.

Poison and traps were laid in vain, and the slaughter of sheep went on unchecked for weeks. Hired men were called in to recruit the ranks of watchers, for the male folk of Ennerdale were exhausted with their constant vigils and chases. Field labor was almost entirely neglected, crops wasted, cows were sometimes left unmilked, horses unfed, and hay uncut, because the men were hunting the sheep-killing dog, and their womenkind were worn out with doing the men's work on the farm. Children were terrified, and feared to go to school or into the fields, though the dog always fled hastily from the sight of man. Once it slunk out of a corn-field thirty yards ahead of a farmer; but at the critical moment the rustic's gun missed fire.

In July, two months after the dog's first appearance, a fund was raised for the hire of a good pack of foxhounds. The runs which ensued surpassed any ever afforded by reynard. Once the dog led two hundred men and the hounds from Kinniside by Wastwater to the coast at Seascale, and eluded them. Two or three times a week the dog was thus hunted out of Ennerdale; but any hope that it would not return was shattered by the speedy discovery of more carcasses of sheep. One Sunday morning the watchers returning from their nightly vigil espied the lurking tawny form of the marauder. In full chase the hounds and men swept by Ennerdale Church, and out came the men of the congregation and joined the pursuit. Even the vicar left his sermon, and flinging aside his surplice, followed hot on the trail. That day's stern chase ended fruitlessly at Cockermouth. Another day it was a twenty-mile run to the Derwent; as long a chase o'er fell and fen to St. Bees ended in the surrounding of the dog; but through the very legs of one of the hunters it got clear away to safety and more slaughter. As the harvest approached, the standing corn afforded good shelter for the beast, and the pursuit was slackened until the fields were cut. But before this was done the end came. The "girt dog" was seen to enter a corn-field, and armed men were quickly summoned to surround it. Hounds drove out the beast; but in the fusillade it was only wounded. Away it went, hounds and men pell-mell after it. The foremost pursuer found the dog coolly bathing its bleeding paw in the Eden River, while the hounds fearfully splashed around it, not daring to attack. Again the dog got away for the moment; but running into the path of a pursuer, it was bowled over by a shot at close quarters. It was now the 12th of September, exactly five months after the dog's first appearance, during which time it had defied the attack of the entire population, and had destroyed hundreds of sheep. Its name as "t'girt dog" was well justified, for its carcass was found to weigh eight stones. Stuffed and exhibited in the Keswick Museum, it was long an object of wonder, and to this day its demoniac career is quoted round Cumbrian firesides.—Chambers's Journal.

The next day, about the same place, I had exactly the same experience, but, after playing the maskinongé for fifteen minutes, being very careful not to exert a severe strain at any time, I got him within reach, and George Blake, my oarsman, very neatly gaffed and pulled him into the boat. The bass, which weighed about three-quarters of a pound, had been swallowed head first, and its tail was just visible four inches behind the teeth of the maskinongé. The bass was still on my hook (No. 20 Cincinnati bass), and its erect dorsal fin prevented the traction on my line from pulling it out of the throat of the maskinongé, and also probably prevented the latter from closing his jaws tightly enough to cut the cat gut snell of my small bass hook.

The oarsmen here said that maskinongé occasionally rush at captive bass in this way, but always break away themselves, and they thought my experience was unique.

The maskinongé was forty-five inches long and weighed twenty pounds, which made good sport on a No. 13 Bristol rod.

T. HALSTED MYERS.

Cape Cod Fishermen Lucky.

Because two fishermen seeking quahogs lost their bearings in a fog, the towns of Orleans, Wellfleet, and Eastham are made richer each year to the extent of more than \$30,000. For years the fishermen sought quahogs only when there was nothing else to do. Two brothers pushed off the Orleans shore bent on getting as many quahogs as possible, seeing in this the only way to avoid disappointment to the loved ones at home. The men became lost in the fog, and in despair threw over the anchor. They knew by the depth that they were far from where they usually fished. In desperation one threw over his rake, and when it came up it contained more than the men had ever taken in by one raking. Time and again this was repeated until before night the boat was filled. As the fog cleared they made for home, having first taken their bearings. When the men landed they told their fellow fishermen of their luck, and to-day 100 boats, carrying nearly 300 men, are daily employed on these grounds, which seem to have an inexhaustible supply.—Boston Globe.

Angling and Long Life.

Two old anglers have just passed away—David Webster, a noted Lanarkshire angler, who died on his way home from the fishing, at the age of seventy-nine years, and now George Thomson, Cupar, Fife, who died the other day at the great age of ninety-seven years. Both these anglers we knew well, with Mr. Robert Veich, who died at the age of eighty-three.

I enter into my eighty-sixth birthday to-morrow, having been born in the year 1819. I caught the first trout when a little over five years of age. It was over 1 pound in weight, and that gave me fishing on the brain all the rest of my life. These are but proofs of the benefit of angling to long life. There is no exercise so beneficial to health and so congenial to the feelings or for the exercise of skill than angling; it brings every muscle of the body into play, and especially the muscles of the chest. A day or two's sport at the riverside gives the angler for weeks, aye, for months, afterward a feeling of perfect health.—London Fishing Gazette.

It is told of Oliver Wendell Holmes that all his life he was haunted by an ardent wish to hear the skylark sing. In old age this wish seemed to have found fulfilment. He came to pay England a visit, and, driving on Hampstead Heath, saw the lark soar on high and pour down a flood of song. But, alas! the keen hearing had grown too dulled to catch the sounds from such a height. His desire had been granted too late; the song was gushing forth in liquid melody, but he could not hear it!

YACHTING

THE RACES FOR THE SEAWANHAKA CUP.

THE races for the Seawanhaka cup, recently completed, were very close, and stirred up very general interest, partly because this was the only international event for a challenge trophy in which an American sailing yacht has competed this season, but mainly because the White Bear Y. C. had made such a supreme effort to secure a really fast boat that would be worth while to send to Canada as a challenger.

No American yachtsmen are more familiar with the conditions to be met with on Lake St. Louis, where the races are sailed, than the White Bear men, and they knew full well what type of boat was necessary to make a proper fight for the cup. With all the conditions and requirements well in mind, a competent committee composed of picked men started as soon as their club's challenge was accepted to secure plans from American designers who had had experience in turning out boats of the type built under the existing rules. Numerous plans were submitted, suggestions were offered, and changes made. When the plans were finally accepted, the boats were carefully built under the supervision of those interested. The best spars, sails and rigging possible were procured, and the several contenders were put in the finest condition for racing. No expense had been spared, no detail overlooked; in fact, everything that money, brains,

energy, and experience could do was accomplished.

The same systematic methods prevailed in the management of the trial races between the boats. The trials on White Bear Lake were more conclusive and satisfactory than those that took place at Oshkosh, but these events were helpful. The boat selected was picked because the committee believed her to be the best all-around craft, and the most suitable one to meet the Canadian defender on Lake St. Louis.

The accounts of the race tell what a strong bid the American craft made for the trophy, and yet the deciding race went to the Canadian representative. When each boat had two races to her credit, the situation was very much the same as last year in the Canada cup races, when Strathcona had won two races and Irondequoit had won two also. The day was saved for the Americans by Addison Hanan, a redoubtable amateur, who had been sent for, and who arrived in time to sail the American boat to victory, and take the cup back to the States.

The White Bear men had done all they could beforehand, however, and their best men were with them, and when they took their boat to the line for the fifth time, they lost after a memorable struggle, and the cup remains in Canada.

The Royal St. Lawrence men have developed this type of boat to such perfection that it is doubtful if they can ever be beaten, and it looks as if the trophy would repose

in Canadian territory for some time at least. The White Bear men exhausted every possible resource, and did everything that money and brains could accomplish, yet could not win. No club could show a finer spirit than that of the White Bear Y. C., nor can any club undertake the winning of the cup with more careful regard to detail and more thoroughness of preparation. But that others will be found to try anew for the prize is not for a moment to be doubted. Another season, let us hope, will find Americans and Canadians fighting it out in the same generous spirit on the historic expanse of Lake St. Louis.

An American yacht builder in a letter to a New York paper, claims to have originated the type of boat now so successfully designed by the able Canadian engineer, G. Herrick Duggan. Whether this is so or not, to Mr. Duggan alone belong the credit of having brought the type to such a high standard of perfection. As a matter of fact, Mr. Duggan has been well out of the game for the past two years, but his associates, whom he has coached, have been able to design, build, and sail boats that reflect upon them great credit.

The Royal St. Lawrence men are fine, clean sportsmen, but in the White Bear men they met "foemen worthy of their steel." That is why the races were so satisfactory, and unless we mistake not, the Canadians would not have been sorry to have lost the cup to the White Bear club.

Seawanhaka Cup Races.

BY WILLIAM Q. PHILLIPS.

Monday, August 8.

The course this day was two miles to windward and return, the wind being moderate to fresh from the W. It was by no means steady, either in force or direction, and the judges spent some time in taking observations from the anchored committee boat before starting the steamer to log the course. Just as the log was going overboard, a gust came out of the N.W., and had this held it would have meant a change of position for the line. In a few minutes, however, the wind was back in the old quarter, and the logging of the course began with the preliminary gun at 1:40. The start was made at 1:50, White Bear getting off with a lead of 10s. over Noorna. After a little jockeying they broke tacks, and soon it was clear that Noorna was making the better weather. She carried full sail without difficulty, while White Bear, with a half-reef in her mainsail, was knocked down frequently in the puffs. Curiously enough she appeared more tender than on Saturday, when both boats were close-reefed; still she pointed well and seemed to hang on, so that Noorna's advantage was a matter of footing. In a few minutes Noorna came about and sailed squarely along her opponent's weather, continuing to gain until she showed a lead of 2m. 45s. at the weather mark. On the run back, White Bear lost four seconds, and from this to the end of the race Noorna managed to make trifling gains, finally winning by 3m. 45s. The race was devoid of incident after the first round, and can only be described as a fair, clean race, well sailed on both sides. The water was no more than choppy and the wind, although puffy, probably served both boats pretty much alike. The course to windward held good, and there was no reaching; considering this, the elapsed times are remarkable, the average speeds being Noorna 7.20 knots and White Bear 6.92 knots per hour. The official times were:

Start, 1:50. White Bear crossed 1:50:48; Noorna, 1:50:58.		
Noorna	Weather Mark	1st Round.
White Bear	2 14 47	2 25 42
	2 17 32	2 28 31
Noorna	Weather Mark	2d Round.
White Bear	2 47 33	2 59 12
	2 50 48	3 02 53
Noorna	Weather Mark	Finish.
White Bear	3 20 05	3 31 07
	3 24 16	3 34 52
Noorna	Elapsed.	1 40 09
White Bear		1 44 04

Tuesday, August 9.

The triangular course was used and the weather was all that could be desired. The wind still hung in the W., and at the time of starting it did not exceed 10 knots, while at times during the race it was 18. The water was smooth, and if the general conditions did not actually favor White Bear, they certainly gave her a fair chance. All marks to starboard gave windward work on the first leg, the other two being plain reaching, spinnakers being tried from time to time as the wind veered, especially on the second leg, but the main reliance was on balloon jibs.

The start was made at 1:45, both boats going over very promptly, White Bear leading and Noorna well on her weather quarter, both on port tack. Noorna tried to break tacks, but White Bear spun around on top of her, and this maneuver was repeated several times, somewhat to the advantage of White Bear, which finally pulled out a clear lead of 38s. at the weather mark. It was expected that she would show a greater gain on the reaching, both wind and water being ideal for the scow type, but the advantage was trifling, White Bear leading at the second mark by 50s., and at the end of the round by 49s.

Working to windward on the second round, Noorna gained, a favorable slant having something to do with it, and at the weather mark White Bear's lead was reduced to 11s., and at the next mark to 8s. This was the most exciting moment of the race, for it amounted to a fresh start on almost even terms. Here Noorna's luck ended, however, for White Bear led by 21s. at the end of the round. The wind was now lighter than at the start; White Bear could be trimmed and heeled to a nicety, and on the final beat to windward she fairly outsailed Noorna, leading at the weather mark by 1m. 50s. From this point the race was conceded to White Bear, although, as expected, Noorna cut down the lead of the challenger considerably on the reaching, White Bear finally winning by 62s.

This race was in every way the best that had been sailed, the weather conditions and the handling being perfect, and the interest keen from start to finish. The air was unusually clear, so that the work of following the boats was easy and pleasant. The following times show the close character of the race better than any written description:

	First Round—Start, 1:45.		
	1st Mark.	2d Mark.	3d Mark.
White Bear	2 06 05	2 15 25	2 23 45
Noorna	2 06 43	2 16 15	2 24 34
	Second Round.		
White Bear	2 47 44	2 58 30	3 07 36
Noorna	2 47 55	2 58 38	3 07 57
	Third Round.		
White Bear	3 29 48	3 40 05	3 48 32
Noorna	3 31 38	3 41 09	3 49 34

The boats were now on even terms, each having won two races, and it is needless to say that all hands looked forward to the final race with unusual interest. Those who had carefully studied the work of the boats for the four days, could only say that they were far more evenly matched than had been supposed, and many original theories regarding the superiority of one or the other under certain conditions were greatly modified or wisely abandoned. It simply came to this, that skippers, crews, and judges when pressed for a forecast of the issue of the final race, honestly admitted that they had no idea what might happen. The weather was actively canvassed, and as the west wind blew itself out softly on Tuesday night, seasoned yachtsmen looked inquiringly to the east and south, and they were not far wrong.

Wednesday, August 10.

The morning was cloudy, threatening rain, with a light south wind, which improved at noon, and backed to the S.E., blowing fairly across the lake at about 7 or 8

knots. The course being to windward and return, some care was necessary to get the requisite two miles in good water. The committee boat first steamed to the Beaconsfield mark, but was finally taken well into Beaconsfield Bay, where a special starting line was laid, from which the Wild Rose started with the log. This brought the weather end of the course over a shoal, but, thanks to high water, there was nowhere less than 12 feet. The start was made at 2 P. M., both boats going over together, with every prospect of a stirring struggle for the weather mark, when Noorna's peak dropped, owing to the slipping of the pawl of the hoisting gear. The sail was quickly reset, only to drop a second and a third time, indicating that something was seriously wrong. The gear of the hoisting device is not very accessible when under way, and as it was out of the question to attempt repairs, one of the crew had to keep a strain on the wire hauled by hand for the whole of the work to the weather mark. These little mishaps had cost some precious half minutes, and it had not been possible to reset the mainsail to the best advantage. Meanwhile, White Bear found the wind and water to her liking, and in ten minutes had worked well out to windward of Noorna. Of course it is easy to out sail a half-crippled boat, but White Bear was really making fine weather of it, and would probably have won the leg in any case. Her lead at the weather mark was 2m. 24s., but she was slow with her spinnaker on the run back, and as Noorna was smartly handled, this lead was reduced to 1m. 24s. at the end of the round. Meanwhile Mr. Routh and his crew had taken advantage of the run to set the mainsail properly, and to secure the hoisting gear, so that Noorna began the second round in better trim. But the stern chase looked almost hopeless, and in the minds of most people the White Bears were already in possession of the cup, some of the most energetic of the Royal St. Lawrence people going so far as to discuss the best way of getting it back. Meanwhile the boats pegged away at the windward work, the wind freshening generally, and particularly at the weather end of the course. White Bear worked her longest boards up the lake, Noorna working down, so that when they finally converged they were near the mark. It was evident that Noorna had improved her position, and when the boats were not more than half a mile apart it was faintly suggested that she might still have a fighting chance. What happened after that is difficult to describe. White Bear seemed to be hobbling up and down, although holding on well with her lee-board. Noorna was footing at a great rate, and from vague speculations careful observers advanced to the belief that she would cross White Bear close astern. What actually happened was that she crossed clear ahead by at least thirty feet, and the thing was so unexpected that many could not believe their eyes. It is only right to say that the attendant fleet was well to leeward; some people were over a mile away from the boats. Anyway, Noorna led at the weather mark by 36s., and although she lost most of this on the run back, she clearly had the race in hand. The last round brought a freshening breeze that put White Bear at a disadvantage, and she lost heavily on the windward work; she was sailed gamely to the finish, however, and picked up on the final run, reducing Noorna's lead to 2m. 48s. The times were as follows, start 2 P. M.:

White Bear	Weather Mark	1st Round.
Noorna	2 23 58	2 41 12
	2 26 22	2 42 38
Noorna	Weather Mark	2d Round.
White Bear	3 06 27	3 21 05
	3 07 03	3 21 14
Noorna	Weather Mark	Finish.
White Bear	3 44 53	2 57 58
	3 47 57	3 00 46

On returning to the club house there was an informal celebration, the principals on both sides being tossed in the air after the fashion peculiar to Montreal. Then followed a song or two, a little something to drink, and the Seawanhaka cup match was over for another year. It was certainly the most interesting that has occurred since the Crane challenge, and, unlike some matches which were perfunctory performances after the second race, the interest steadily increased as the series progressed, the climax coming with dramatic effect when Noorna crossed the bow of White Bear in the last race. The best of feeling prevailed on both sides; there were no petty disputes, and the Corinthianism of both crews was above suspicion.

New York Y. C. Cruise.

ON Thursday, August 11, the New York Y. C. fleet rendezvoused at Glen Cove for their annual cruise to the eastward. With the exception of one or two years, the yachts of this club have made this annual marine pilgrimage to New London and Newport for the past fifty-nine years, and while in former years sailing yachts predominated, of late steam yachts seem to have the call, and the fleets of sailing yachts seem to be growing smaller and smaller.

Hard times, too, had its effect on this year's squadron, so that not over seventy-five yachts were assembled in the harbor when the usual meeting of fleet captains took place on Commodore Bourne's flagship Delaware on Thursday afternoon.

At this meeting it was announced that the fleet would proceed to Morris Cove, New Haven Harbor, on Friday, New London on Saturday, remaining at anchor there over Sunday; sailing for Newport on Monday, Vineyard Haven on Tuesday, returning to Newport on Wednesday, which was to be followed by a race for the Hauli cups for steam yachts off Brenton's Reef Lightship on Thursday, preceded by power boat races and rowing races for the Owl and Gamecock colors in the morning. On Friday, August 19, the big event of the cruise—the race for the Astor cups—will be sailed, and on Saturday, August 20, a race for the Brenton's Reef cup will be started off Brenton's Reef Lightship, when the fleet will probably disband.

The Regatta Committee of the club, which consists of Messrs. S. Nicholson Kane, Newberry D. Lawton, and Oliver S. Cromwell, also announced to the yachtsmen that as it had been found impossible to measure the boats, that all of the yachts would race in special classes, and that the excess in draft would be multiplied by two instead of five, and that no certificate of measurement need

be filed. This led to a lot of confusion during the cruise, as the schooners and auxiliaries and single stickers were all bunched indiscriminately in the official summary, and the yachtsmen spent all the rest of the week trying to figure out who was racing who and where they were at. At the last minute, Mr. Lawton left the regatta committee, and during the cruise assisted Mr. Pynchon in sailing Neola, leaving Messrs. Kane and Cromwell to wrestle with the problem alone.

While the feature of the opening day was supposed to be the power boat races and contest for the Rendezvous cups for yachts too small for enrollment owned by members of the club or their sons, the real feature of the day was the formal opening of the club's old club house, now used as a club station at Glen Cove. This club house, which is a little Swiss tent-like cottage, was originally built in 1845 on the Elysian Fields on the Hoboken shore. Thanks to the generosity of Commodore Bourne, who found it falling into decay, it was rebuilt and moved to Glen Cove, where it rests on land presented by Mr. Edward R. Ladew, another member of the club. The re-opening of the old club house was made the occasion for a big celebration by the flag officers and members, and at a signal from the flagship Delaware at 8 o'clock on Thursday night, the entire fleet was illuminated, and scores of searchlights from the assembled steam yachts concentrated their rays on the little house, which was handsomely decorated with plants, flowers, and bunting. There was a beautiful display of fireworks, music by the Seventh Regiment band, and a punch that will only be spoken of in whispers in future years.

Commodore Bourne made a short speech to the members, in which he said that he hoped the old house would be utilized in developing Corinthian sailing among the sons of the members, and held out the hope that at some future time the club might erect a permanent summer home at this place. Ex-Commodore Ledyard, in replying to Commodore Bourne, accepted the house on behalf of the members and told how the historic old club house was saved from the scrap heap through the generosity of their commodore, and that his patriotic action should not be forgotten.

So far as the power and small boat races were concerned, they were in charge of a special committee, consisting of F. Browne Jones and H. de B. Parsons.

As usual, very few motor boats showed up, and those that did were of varying size and power, so that no one really knew who won after the race was over. The starters were Robert Jacob's Miss Swift, a Seabury 12 horse-power Speedway launch from Commodore Bourne's Delaware; Aletes III., a Ferris-designed cabin launch, fitted with twin Standard motors, and a little 15ft. 4½ horse-power boat called Neon, built by two young sons of Nat Herreshoff, the famous Bristol designer, who are evidently chips of the old block. The boats were sent over an 11¾-knot course, and Miss Swift made the best time, covering the distance in 57m. 10s., with Delaware 2m. astern, while Aletes was beaten by 8m., and the Neon 36m. While nothing official is known, Neon will probably win on corrected time. Summary:

	H.P.	Finish.	Elapsed.	Corrected.
Miss Swift, Robt. Jacobs	56.7	12 05 00	1 02 10	0 57 10
*Delaware, F. G. Bourne	51.3	12 05 00	1 04 09	0 59 09
Neon, N. G. Herreshoff	...	12 05 00	1 38 27	1 33 27
Aletes III., R. C. Fisher	...	12 05 00	1 10 00	1 05 00

The small sail boats were started at 2:30 in a light breeze from the W.-N.W. They included Alert and Mimosa III. in the 30ft. class, Una and Kenosha in a special class, and the raceabouts Hobo, Rena, Busy Bee, Tomboy, and Idler.

The yachts were sent the reverse way of the power boat course, and at 2:40 when the starting signal sounded, all crossed the line on the port tack with balloon jib top-sails. Hobo and Rena got in a mix up at the start, and the former boat was disqualified, although she finished first. Alert led Mimosa III. all around the course, and won by 39s. elapsed time. In the raceabout, the Hobo finished first, but was disqualified and the race given to the Busy Bee. In the special class, Kenosha won, as Una withdrew. Summary:

	Small Boat Races—35ft. Class—Start, 2:50—Course 11½ Miles.	Finish.	Elapsed.
Alert, A. H. Alker	6 20 45	3 30 45	
Mimosa III., T. L. Park	6 21 24	3 31 24	
	27ft. Class Special—Start, 2:40.		
Una, W. B. Duncan, Jr.	Withdrawn.		
Kenosha, Robt. Mallory	6 44 02	4 04 02	
	Raceabouts—Start, 2:40.		
*Hobo, T. L. Park	6 25 18	3 45 18	
Rena, Howard Willits	6 28 29	3 48 29	
Busy Bee, R. T. Wainwright	6 26 36	3 46 36	
Tomboy, H. L. Maxwell	6 28 18	3 48 18	
Idler, O'Donnell Iselin	6 29 13	3 49 13	

*Disqualified.
Busy Bee, first prize; Tomboy, second prize; Alert and Kenosha the other winners.

Friday, August 12—Glen Cove to Morris Cove.

The yachtsmen were awake bright and early on Friday morning, ready and anxious for the first squadron run from Glen Cove to Morris Cove, a distance of 39½ miles, and when Commodore Bourne signaled an eight o'clock harbor start, the answering pennants fluttered from a fairly representative fleet of 75 yachts, which included the goft. British yawl Sybarita, recently imported by Mr. W. Gould Brokaw; the three 70-footers, Yankee, Rainbow, and Virginia; the 60-footers, Weetamoc, Neola, and Queen Mab; the 46-footer Altair; Aspirant, Irolita, and Spasm.

The big two-stickers embraced the Corona, Endymion, Emerald, and Constellation, to say nothing of Loyal, Latona, Valmore, Crusader II., Chanticleer, and Katrina. There was also a magnificent fleet of auxiliaries, which included Mr. Wilson Marshall's big three-sticker Atlantic, which was credited with a speed of 15 knots on her trial trip in a reaching breeze; Lloyd Phoenix's new Intrepid, a Beaver-Webb production; Mr. A. C. Bostwick's Cary Smith design Vergemere; H. W. Putnam, Jr.'s Ariadne, and G. Montgomery Tuttle's Idler. The complete list of boats in the fleet included:

Steam yachts—Delaware, F. G. Bourne; Lorena, Amzi L. Barber; Coranto, Alfred E. Austin; Florence, A. H. Alker; Scout, August Belmont; Narada, Henry Walters; Elsa, Miss Elise L. Breeze; Stellar, Trueman Beckwith; Hauli, F. M. Smith; May, A. Van Rensselaer; Alert, W. D. Hoxey; Alvina, A. de Witt Cochrane; Surf, C. P. Alexander; Embala, J. T. Williams; Arcturus, Frederic Gallatin; Celt, J. Rogers Maxwell; Rambler, L. Cass Ledyard; Arden, Clarkson Cowl; Surf, C. K. G. Billings; Roamer, N. G. Herreshoff; Katrina, G. E. Kissell; Levanter, Alfred Marshall; Llewellyn, H. H. Hogan; Giralda,

A. L. English; Tarantula, W. K. Vanderbilt, Jr.; Sayonara, W. Lanman Bull; Duchess, L. J. Busby; Adrienne, Adrian Iselin. Schooners—Corona, A. F. Luke; Thistle, Robert E. Todd; Viking, James D. Smith; Constellation, Francis Skinner, Jr.; Chanticleer, George W. Weld; Amorita, Richard Mansfield; Palestine, Henry C. Tinker; Loyal, R. P. Doremus; Vesta, Stewart Shileit; Valmore, John M. Richmond; Marjorie, F. L. St. John; Cara II., George E. Ide; Quickstep, E. Pearson; Emerald, W. E. Iselin; Crusader II., Seymour L. Husted; Katrina, J. B. Ford; Agatha, W. S. Eaton; Alert, John O. Shaw; Endymion, George Lander, Jr.; Miladi, S. H. & C. B. Mason. Auxiliaries—Vergemere, A. C. Bostwick; Atlantic, Wilson Marshall; Intrepid, Lloyd Phoenix; Venecdor, A. V. de Goicouria; Idler, G. M. Tuttle; Ariadne, H. W. Putnam, Jr.; Onward, John T. Lee; Cacique, F. W. Paramore. Sloops and yawls—Sybarita, W. Gould Brokaw; Irolita, E. W. Clark, Jr.; Rainbow, C. Vanderbilt, Jr.; Yankee, J. Rogers Maxwell; Virginia, W. K. Vanderbilt, Jr.; Althea, Cord Meyer, Jr.; Weetamoe, H. F. Lippitt; Neola, G. M. Pynchon; Uvira, John B. Rhodes; Isolde, F. M. Hoyt; Aspirant, Hana Brothers; Lotowana, John M. Knapp.

The wind was fresh from the N.-N.E. when the regatta committee, who were on the steam yacht Alvina, arrived at the starting line off Weeks' Point at 8:45 A. M., and the racing yachts flew out of the harbor with lee rails awash. As the wind was dead ahead and the tide flood, the yachtsmen were prepared for a long hard windward race.

The preparatory signal was sounded at 9 o'clock, and ten minutes later, or at 9:10, the small sloops were started, with Spasm leading, closely followed by Aspirant, Altair, Pohtatuck, Pellegrina, and Irolita, in the order named. The larger sloops and yawls were sent away at 9:15. Neola was the first across on the port tack, with Virginia in second place followed closely by the Yankee and Sybarita. Rainbow, with Rear-Commodore Cornelius Vanderbilt at the wheel, came next, and as he swung Rainbow on the starboard tack he was able to force Sybarita and Yankee about. Rainbow then took the port tack once more, and headed in toward the Long Island shore after Neola. Weetamoe was handicapped 36s. and Queen Mab over 6m.

The small schooners were sent off at 9:20, with Valmore in the lead. Then came Loyal, Katrina, Chanticleer, Latona, and Crusader. Corona led the big two-stickers across at 9:25, with Emerald and Constellation in close attendance. The auxiliaries were sent away on the same signal; Cacique was first, followed by Vergemere, Atlantic, Intrepid, Ariadne, and Idler. After crossing the line, the boats made a few short hitches and then split up into two divisions as the wind got lighter, one going over to the New York or Connecticut shore and the other keeping close to the Long Island side to keep out of the tide. The schooners Loyal, Katrina, Valmore, and Latona were well out in the Sound, while Atlantic, which had worked right across Vergemere's bow, was leading the auxiliaries on the north shore. Off Centre Island at 10 o'clock the Yankee was leading, but her owner, thinking there was a better breeze on the north shore, stood across the Sound, followed by Sybarita. These two boats were making a pretty fight, and Yankee seemed to be more than holding her own in the light breeze.

Rainbow and Neola were having a nip and tuck race for the honor of leading the south shore division, while the Weetamoe dropped further and further behind, so that Mr. Lippitt finally decided to try his luck with Yankee, and took Weetamoe over to the north shore. When off Stamford, Yankee crossed the Sybarita's bow, while Virginia was third, nearly a mile astern, and then came Weetamoe and the schooners.

The south shore boats got a better breeze off the Long Island shore, and were soon leading the fleet. Neola, which was sailed very cleverly, finally weathered Rainbow off Huntington Harbor, where they caught quite a nice little breeze and left the other boats far astern. In Smithtown Bay Rainbow regained her lead, after a hot fight. The wind was very light in the middle and north side of the Sound, and off Oldfield Point Sybarita and Yankee recrossed the Sound and were nearly two miles astern of the leaders.

The yachts then worked the Long Island shore, and Mr. Maxwell, who took advantage of every puff, succeeded finally in pulling up within hailing distance with Yankee. At 2:30 the leaders stood over toward the Connecticut shore when off Stratford Shoal Light. Yankee stood inshore about this time, and as Rainbow followed her in, Neola took the lead once more, with the Sybarita in close attendance. At 3 o'clock Neola stood inshore again, while Sybarita took the offshore tack, and at 3:15 was rewarded by running into a fresh breeze, which had hauled more to the E. As a result, Sybarita was able to lay her course to the finish line off the outer breakwater at New Haven, and the Brokaw yawl led the entire fleet into Morris Cove, finishing at 3:33:25. Rainbow, Neola, and Yankee got the shift a few moments later, but they were so far to the northward that they had to make a hitch out before they could fetch. Rainbow was the second boat to finish a winner in her class at 3:45:56, twelve minutes after Sybarita, while Neola was timed at 3:46:58, and Yankee at 3:47:24; Queen Mab was timed at 4:09:21; Virginia, 5:25:19; Loyal, 5:39:45; Weetamoe, 5:42:06; Atlantic, 5:43:58; Spasm, 5:45:42; Corona, 5:55:41; Chanticleer, 5:56:08; Katrina, 6:05:22; Constellation, 6:09:25; Aspirant, 6:24:30; Altair, 6:29:26. While no official results are given out by the regatta committee, the winners are probably Spasm, Aspirant, Neola, Rainbow, Loyal, Chanticleer, Corona, Atlantic, and Constellation. Summary

Sloops—Class L.			
	Start.	Finish.	Elapsed.

Idler, H. T. Sloane.....	Did not finish.		

The navy challenge cups for sloops and schooners sailing in one class are probably won by the Neola and Loyal.

Saturday, August 13—Morris Cove to New London, 39 Miles.

The wind was light from the E.-S.E. when the yachts slowly made their way out of New Haven harbor on Saturday morning, which meant another hard 39-mile beat if the weather conditions did not change. The preparatory signal barked out at 9:10 o'clock, and the small sloops were sent away at 9:20. Mr. Addison Hanan, as usual, had berthed Aspirant in a good position, and the 43-footer led the fleet over the line, with Altair just under her lee. Then came Spasm, Pohtatuck, and Irolita, with Pellegrina handicapped over 6m. The larger sloops came next at 9:25, Weetamoe and Neola crossing almost with the gun, with the Lippitt boat to windward, while Sybarita and Yankee were handicapped 3m., Virginia 3m. 30s., Rainbow 4m., and Queen Mab 6m. The small schooners followed at 9:30, and all were handicapped. Chanticleer was the first away, and then came Crusader II., Katrina, Valmore, and Latona, while Loyal, which had to tack on the line, was fully 15m. after the handicap gun. Emerald was the only one of the big schooners not handicapped at 9:35, and then came the Constellation, Corona, Intrepid, Endymion, Atlantic, Idler, and Vergemere, the two last named having to make an extra hitch in the light air before they could clear the committee boat.

Virginia, when Yankee was blanketed by Sybarita, got the lead momentarily, but she only held command for a few moments before Yankee drew by her again. As on Friday, the fleet divided into two divisions, one hugging close to the Connecticut shore and the other crossing over toward the Long Island or south shore in search of a breeze.

On the north shore off Branford Beacon at 10:45, Aspirant still held her lead, with Altair, Weetamoe, Sybarita, Neola, Rainbow, Yankee, Queen Mab, Virginia, Spasm, Pohtatuck, Atlantic, and Endymion following in the order named, while offshore were the Constellation, Chanticleer, Corona, Latona, Intrepid, Valmore, Katrina, Emerald, and Loyal. Off the Thimble Islands at 11 o'clock, Weetamoe passed Aspirant, with Altair in third place; then came Yankee, Sybarita, Rainbow, Virginia, and Neola. Sybarita, taking the port tack offshore, crossed Rainbow's bows; Virginia and Neola also tacked away from the shore. All three ran into the full strength of the westerly tide and lost considerable ground. At 11:20 Yankee, tacking out, crossed Altair and Aspirant, the latter having hit a rock while close under the shore. Off Sachem's Head, Yankee had come up on Weetamoe's weather quarter, and by the time they reached Faulkner's Island they were very nearly abeam, with Yankee to windward. After passing this point, both ran into a soft spot. Yankee, furthest out, suffered more from the tide. Weetamoe took a little better breeze further inshore and

was soon out far ahead. Aspirant to leeward of Altair was favored in like manner, and passed the latter. Rainbow had passed both of these yachts and was now in third position. About 2 o'clock the wind increased a little, and as it freshened it hauled a little more to the S., until it settled steady from the S.E. Weetamoe caught the strength of this breeze first, and she drew further ahead. She passed Cornfield Lightship at 2:09. Yankee rounded the lightship rom. later, while behind her came Rainbow. Altair, which had passed Aspirant, came next at 2:32; then Aspirant at 2:33. These five yachts were far in advance of the rest of the Connecticut shore division. The positions of Virginia and Sybarita were uncertain, as both had tacked across to the south side of the Sound, hunting for flukes. The yachts could now lay their course to Bartlett's Reef Lightship, and then, with the wind almost abeam, the yachts made fast time to the finish line off Sarah's Ledge. Virginia and Sybarita, which had stood far to the southwest, now came across the Sound with started sheets. Weetamoe held her lead to the finish, with Yankee second and Rainbow third. Next came Corona, leading the schooner classes, while Valmore led the small two-stickers, and Atlantic the auxiliaries. Summary:

Sloops—Class L.			
	Start.	Finish.	Elapsed.
Spasm	9 20 57	4 47 05	7 26 08
Pohtatuck	9 21 30	4 54 54	7 33 24

Intrepid	9 37 00	5 02 42	7 25 42
Idler	9 37 00	4 55 46	7 18 46

The winners are probably Spasm, Aspirant, Weetamoe, Yankee, Valmore, Latona, Corona, Constellation, and Idler. The Navy Alumni Annapolis Association cups were probably won by Valmore and Aspirant on time allowance.

Sunday, Aug. 14, at New London.

When the New York Y. C. fleet arrived at New London yesterday afternoon they found the North Atlantic Squadron, consisting of battleship Texas, the monitors Florida, Arkansas, and Nevada; the gunboat Chesapeake, and the torpedo boat Standish at anchor in the outer harbor. The grim, white-walled war ships and the dainty fleet of pleasure craft formed quite a contrast as they lay side by side, and the yachtsmen were made welcome by Uncle Sam's officers when they visited the war ships,

which were thrown open for their inspection. There was a magnificent display of fireworks and a dance at the Pequot House on Saturday evening, and on Sunday the New York Y. C. fleet dressed ship at noon, and in the evening the entire fleet was brilliantly illuminated. In the afternoon Commodore Bourne, accompanied by Fleet Captain J. D. Jerrold Kelley, paid their respects to Rear-Admiral Sands on the Texas, and the Admiral returned the visit later in the day. Among the yachts which joined the New York Y. C. fleet at New London were John Jacob Astor's Nourmahal; H. Clay Pierce's Yacona; P. A. B. Widener's Josephine; H. H. Rogers' Kanawha, and Isaac Emerson's Margaret. The fleet left for Newport at 9 o'clock on Monday morning. DUNCAN CURRY.

Lipton Cup Races.

First Race—Saturday, August 13.

BY E. G. B. HAYMON.

AFTER an exciting and eventful race on Lake Michigan, just off the Chicago harbor, twice around a triangular course of two miles to the leg, during which all kinds of weather were experienced, including squalls of sixty miles an hour, Dr. C. P. Pinckard's Sprite lobbied over the finishing line winner by only fifteen seconds of last Saturday's race—the first of a series of three for Sir Thomas Lipton's cup for 21ft. cabin sloops.

The winner is a third season fin-keel boat designed and built at South Chicago by A. G. Cuthbert, of the Chicago Y. C., of which Dr. Pinckard also is a member. Cuthbert, formerly a Canadian, also is Sprite's racing skipper, and much of the credit for the boat's victory is due to his skillful seamanship, ably seconded by a crew of three other Corinthians from the Chicago Y. C., Dr. Pinckard, "Teddy" Webber, and Arthur Fletcher, and one professional sailor.

Mendota, a new boat from Lawley's yard in Boston, and owned by Commodore E. P. Vilas, of the Milwaukee Y. C., was the one that gave Sprite such a hot argument, and was beaten by such a small margin after Capt. R. B. Brown had sailed a plucky race, in which he had a smart Corinthian crew composed of Alex. Mather, O. L. Curtis, William Sanger, and John Mason, all of the Milwaukee Y. C.

A fleet of nine boats, representing five of the best known yacht clubs of the Middle West, made the race. The Chicago Y. C. had two entries, the winner and La Rita, the holder of the Lipton cup; the Detroit Y. C. had one, and the Milwaukee Y. C., the Country Club of Detroit, and the Columbia Y. C., of Chicago, had two each.

It was a spectacular race, hard fought, full of incident and work, and the varying wind and sudden squalls brought out admirable seamanship.

From a starting buoy two miles off the harbor entrance, the first leg of the round was a spinnaker run; the second a broad reach, two boats, La Rita and Sainte Claire, carrying balloon jibs effectively, and the third a beat to windward. A whole-sail breeze of from 12 to 16 miles an hour prevailed the first time around. It was off-shore, and there was no sea to speak of.

Either a mistake had been made in logging the course, or else the first buoy drifted. After some delay it was agreed the judges' boat should steam ahead and act as stake boat for the first turn. The result was somewhat unfavorable to the leading yachts. Following this, orders for the second leg were megaphoned. Again with rather unsatisfactory results.

At 3 P. M. an excellent start was effected, with little advantage for anyone. For some reason few of the skippers seemed to have made up their minds to carry their light canvas. Ste. Claire was the first to break out a spinnaker, but almost half the leg had been sailed before all had done so.

In the run down the first leg there was little to choose between them, but Sprite appeared to gain the lead because Capt. Cuthbert held the straightest course, his rivals veering off a little, probably because of their uncertainty as to the first turn.

Sprite made the run in twenty minutes, one minute ahead of Ste. Claire. Spray and La Rita rounded the official boat next a minute later. They were having a hot fight for third place. Another minute elapsed, and Hoosier, Yo San, and Mendota finished the run almost abreast. Ventura was a minute behind this trio, and as much ahead of the last boat, Pilot.

As soon as Capt. George R. Peare had laid La Rita on the course for the second leg, he broke out his balloon jib, and the holder of the cup showed them how to reach. Spray was shaken off and the two leaders were overhauled steadily. Sidney Russell, skipper of the Detroit boat, lost no time in sending up his balloon in stops, but it did not break out quite readily. When the big sail bellied to the breeze it lifted Ste. Claire splendidly, and the pursuit of the leader, Sprite, by Ste. Claire and La Rita was the prettiest bit of sailing on this leg. La Rita bowled along at a rare clip, and pretty soon Capt. Peare was looking over his shoulder at Capt. Russell and getting within hailing distance of Capt. Cuthbert. However, it is only fair to the latter and his boat to say that being in the lead was a distinct disadvantage on this leg, owing to the uncertainty as to the location of the buoy, which was a wretched little affair of bamboo stick with a bit of rag on it. Ste. Claire also sailed over more water on this leg than was necessary. Spray was out-reached on this leg, which it barely finished ahead of Hoosier, Yo San, and Mendota. It still was a pretty struggle between these three, but Hoosier reached the fastest, making the leg in 13:48, and rounding the buoy nearly a quarter of a minute ahead of Yo San and Mendota. La Rita's time for this reach was 14:01.

The third leg brought the real test—a beat almost dead in the eye of the wind, which had freshened a little—and now Mendota's fine sailing qualities were revealed. At that, the Milwaukee boat could not outpoint and outfoot Sprite, which covered the two miles to weather in 13:24 to Mendota's 13:59. These two beat the fleet decisively at windward work in Saturday's race. The next best times for the weather leg on the first round were Ste. Claire's 15:12 and Yo San's 15:24.

La Rita, which had finished the reach on the second leg only 24s. astern of Sprite, did not sail nearly so well on

the wind, the cup-holder's time for the two-mile beat being 16:00. Hoosier was another that lost all the advantage gained by fast reaching on the second leg. When close-hauled this boat could not foot with the leaders, and its time for the leg was 18:22. On the second tack its bows were crossed by Mendota, which had shaken off Yo San. Mendota soon worked up to weather of Spray, and gained fourth place.

Meanwhile Ste. Claire, by outpointing La Rita, had moved up to second place, but neither was footing with the high-pointing Sprite.

It was not long before Mendota had La Rita down to weather and plainly was creeping up on Ste. Claire. As they came together nearing the buoy, Mendota had the best of the struggle, and finished the leg and round with a lead of 24s. from the Detroit yacht, which was 36s. ahead of La Rita. The centerboarder, Yo San, was a close fifth.

Sprite finished the round with a clear lead of 2m. and looked a sure winner, barring accidents. Having beaten Mendota 3m. on the spinnaker run the first time around, Sprite was expected by the critics to draw away again. But yachts are as "kittle" as anything ashore or afloat. Mendota and Ste. Claire developed amazing speed before the wind, and with every strip of canvas and silk drawing perfectly, they ran fast enough to gain considerably on the leader, which finished this leg—the fourth—with only a minute's lead. Mendota and Ste. Claire were but a few seconds apart. A minute behind these two came Yo San, having beaten La Rita 49s. on the run.

The fifth leg, which should have been a reach again, brought shifts of wind and all kinds of dirty weather. Squall followed squall, the wind shifted this way and that, a choppy sea was kicked up for the moment, and rain fell in torrents. It was a busy time for the crews, but Capt. Brown and his men held on in hot pursuit of Sprite, and they succeeded in gaining another half minute on this leg. Both boats were exceptionally well handled through the squalls.

The final beat home began in half a gale of wind and ended in a gentle zephyr—so gentle that Sprite almost lost steerage-way in a calm pocket, and thereby nearly was caught at the line by Mendota, which was more favored by the breeze at the finish after Sprite had again had a little the better of the windward work.

The official times for the race were:

	1st turn.	2d turn.	1st round.	4th round.	5th round.	Finish.	Pnts.
Sprite	3 20 00	3 35 36	4 09 00	4 24 30	4 40 50	5 14 00	100.0
Mendota	3 23 04	3 37 01	4 11 00	4 25 30	4 41 20	5 14 15	88.9
Yo San	3 23 02	3 37 00	4 12 24	4 26 33	4 44 05	5 17 15	77.8
Ste. Claire	3 21 01	3 36 12	4 11 24	4 25 35	4 42 26	5 19 15	66.7
La Rita	3 22 01	3 36 00	4 12 00	4 26 58	4 46 30	5 31 30	55.6
Ventura	3 24 00	3 37 00	4 14 52	5 39 00	44.4
Spray	3 22 00	3 36 36	4 13 12	4 47 30	5 43 10	33.3
Hoosier	3 23 00	3 36 48	4 15 10	5 52 10	22.2
Pilot	3 25 00	3 39 00	Withdrew	at finish of first round.			

The judges were Thomas Fleming Day, of New York; Frederick Pabst, of Milwaukee; and Dr. C. G. Jennings, of Detroit. The timekeeper was Charles J. Zeller, of the Columbia Y. C. The regatta committee of the Columbia Y. C. in charge of the races is composed of Vice-Commodore C. E. Soule, Jr.; E. S. Osborn, H. J. Furber, Jr., A. V. Konsberg, and H. Boyd-Brydon.

The entries for the race, together with the racing numbers and their crews, are as follows:

No. 1—Ste. Claire, County Club, Detroit—Commodore F. H. Walker, owner; Sydney Russell, skipper; Mason Rumney, Clarence Davock, Henry Moran; Arthur Pettie, professional.

No. 2—Mendota, Milwaukee Y. C.—Commodore E. P. Vilas, owner; R. B. Brown, skipper; Alex. Mather, William Sanger, O. L. Curtis, John Mason.

No. 3—Pilot, Milwaukee Y. C.—John R. Ball, owner and skipper; John M. Julien, E. Haase, Dr. C. E. Enos; Sanford Rugee, professional.

No. 4—Ventura, Detroit Y. C.—John H. Smedley, Jr., and Northam Warren, owners; John H. Smedley, Jr., skipper; Northam Warren, Alfred Bennett, Dr. Aldrich; Ed. Rooney professional.

No. 5—Spray, Country Club, Detroit—H. F. Schmidt, owner and skipper; Joe Pingree, John Barth, Ed. Greening; Frank Senter, professional.

No. 6—La Rita, Columbia Y. C.—George R. Peare, owner and skipper; W. L. Shepard, D. A. N. Dickinson; Frank Keogh, professional.

No. 7—Hoosier, Columbia Y. C.—J. F. McGuire, owner; G. B. McCullough, skipper; W. D. G. Wilcox, L. W. Cowen; Steve, professional.

No. 8—Sprite, Chicago Y. C.—Dr. C. P. Pinckard, owner; A. G. Cuthbert, skipper; C. P. Pinckard, Teddy Webber, Arthur Fletcher, and a professional.

No. 9—Yo San, Columbia Y. C.—Fred A. Price, owner; William Avery, skipper; Fred A. Price, Nat Cook, William Cothroll; Abe Burrell, professional.

CHICAGO, Aug. 15.—[Special to FOREST AND STREAM]—Saint Claire won second race sailed on Monday by 2½m. from Spray, which boat beat Mendota 1½m. Sprite was 3m. late at start on account of an official error, and she finished a close fourth. Yo San was fifth. La Rita was delayed twelve minutes at the start by the committee, but she sailed a splendid race and finished sixth. Then Pilot, Ventura, and Hoosier finished in the order named. Written protests were filed and allowed. Both Saturday and Monday races were decided void. Decision was reconsidered, and both races were finally declared official. E. G. B. HAYMOND.

Chicago Y. C.

Chicago—Mackinac Cruising Race.

August 3 and 4.

IMAGINE two sloops always within sight of each other for 240 miles carrying spinnakers all but ten miles of the course, crossing the line 4m. and 40s. apart, and covering the distance in less than thirty-eight hours, and you have some idea of the exciting features of the Chicago Y. C.'s cruising race from Chicago to Mackinac, which was sailed August 3 and 4. The boats left at 5 o'clock on the afternoon of the former date, the starters being: Sloops—Vencedor, Vanenna, and Siren. Schooners—Hawthorne, Alice, and Mistral. Yawls—Naiad, Nahma, and Tannis.

The sloop Neva was in dry dock, and by mutual con-

sent of the owners of the other sloops was permitted to start three hours later, her time being taken from the time she crossed the line. The wind being fair, the boats were able to sail on the regular steamer course from Chicago to Point Betsy, and all the craft lost no time in breaking out balloon jibs soon after passing the Chicago lighthouse.

The principal interest centered in the duel between the rivals, Vanenna, owned by Mr. William F. Caneron, and Vencedor, owned by Mr. F. A. Price. Vanenna measures 64ft. over all, 45ft. waterline, 13ft. beam, and 9ft. 5in. draft. The boats were both built in Racine, Wisconsin, in 1896, but Vencedor, having a slightly less waterline than her rival, was allowed 28m. on the race from Chicago to Mackinac. Vanenna led at the start, but was overhauled by Vencedor about 18 miles on the course, and kept a lead throughout the night. At 10 o'clock, the wind hauling more to the southward, both boats broke out spinnakers and carried them throughout the night.

Alice, owned by Mr. Ogden McClurg, had shown a clean pair of heels to the other schooners, and when dawn broke on August 4, she was leading the fleet, but well in sight, Vencedor following, Vanenna two miles astern, and, as far as could be judged, Mistral three miles to the south, the rest of the boats not being in sight.

The skipper of Hawthorne had elected to follow the coast, evidently anticipating the wind would haul around to the S.W. and give him an advantage, but abreast of Waukegan he changed his mind and stood on the course to Point Betsy, and while abreast Ludington, possibly 22 miles from that port, his steering gear became disabled and he ran into Ludington for repairs, which delayed his boat seven hours.

In the meantime, Vencedor and Vanenna (on which boat it was my privilege to be one of the crew) kept up the fight for first place, and 10 o'clock Alice and Vanenna were abreast, Vencedor still in the lead.

The wind was blowing all of 40 miles an hour, and the strain on the afterguy of the spinnaker was terrific. Twice did Vencedor carry away her spinnaker, owing to some damage to their sheets or halliards, but they very promptly made repairs and held the lead. The distance between the two boats was gradually being lessened, and at noon, off Big Point Sable, Vanenna passed her rival, and at last took the lead. Forty miles further on, while off Frankfort, Mich., leading her rival by 5 miles, Vanenna had the misfortune to lose her topmast during a gybe. Every precaution had been taken, but in casting off the topmast runner the sheet did not render freely, and the lowered gaff whipped over instantly, struck the backstay, and the mast let go. This deprived us of the use of our balloon jib and full spinnaker, but by rigging the block at our masthead and tying about fifteen feet of the head of our spinnaker in a bunt, we were able to hoist what we had left and still make good time.

At sundown the wind moderated, which enabled Vencedor to pick up on us, and she passed us in the Manitou Passage during the night. Owing to the close proximity of the two boats, the watch below both nights had an acute and prolonged attack of insomnia. We overtook her, however, abreast of the Fox Islands, and kept the lead as far as the Waugashance Light, and abreast of that light, at 4:15 in the morning, we were side by side within talking distance, with 21 miles to go, and both boats still carrying spinnakers. The wind, which had hauled around as we changed our course to pass the island, again swung around to the E. as we rounded the light, so that spinnakers were still in order and drawing well. Unfortunately for us, the wind, which promised to be as fresh as the day before, lessened, giving Vencedor, able as she was to carry all her light canvas, the advantage over us. She gradually drew away, and crossed the line at six minutes past seven in the morning, 4m. 40s. ahead of her crippled rival.

The actual course covered we estimate to be 340 miles, and the actual time for Vencedor was 37h. 46m., and for Vanenna, 37h. 50m. 40s., which, we think, will stand as a record for many years to come for a cruising race of this character. All the boats arrived at different times during the day (as will be seen from the official result below), with the exception of Tannis, a yawl 40ft. over all, which had the misfortune to lose her mainmast off the Beaver Islands in a sudden squall. She arrived at Mackinac Island at seven Saturday morning. Nahma reported the breaking of her spinnaker boom.

The success of the race has led the Chicago Y. C. to make this an annual feature. The Mackinac Island Y. C. will put up prizes for a local regatta, and will invite the Detroit clubs to have a similar cruising race from Port Huron to Mackinac simultaneously with the one from Chicago. The official figures are as follows:

	Finish.	Elapsed.	Corrected.
Vencedor, sloop	7 06 00 a. m.	37 46 00	37 46 00
Vanenna, sloop	7 10 40 a. m.	37 50 40	38 18 58
Naiad, yawl	2 42 00 p. m.	45 42 00	38 59 04
Alice, schooner	8 42 00 a. m.	39 32 00	39 44 12
Mistral, schooner	10 41 30 a. m.	41 31 30	41 43 37
Siren, sloop	11 04 00 a. m.	41 45 00	42 04 37
Neva, sloop	1 15 30 p. m.	41 05 00	42 44 00
Nahma, yawl	2 09 20 p. m.	45 09 20	41 08 18
Hawthorne, schooner	3 13 30 p. m.	46 03 30	46 15 37
Tannis, yawl	7 00 00 a. m.	62 00 00	54 15 00

G. H. ATKIN.

Rhode Island Letter.

PROVIDENCE, R. I., Aug. 13.—The Herreshoff shops at Bristol, which have been closed several weeks, are to be started up again in full operation next Monday, and it is learned that orders for a number of new boats of small size are to be filled. A full set of drawings for a new schooner yacht on the model of Ingomar were forwarded to the German Emperor several weeks ago for his inspection and approval.

The fast sloop, Little Rhody, winner of the Lipton cup in the Brooklyn Y. C. ocean race from New York to Marblehead, has been out on the ways at Bristol the past week for cleaning and painting, preparatory for the N. B. Y. R. A. race week.

The steam launch Swiftsfoot, owned by Designer Herreshoff, has had her machinery overhauled at Bristol, and tests of speed have been given the craft with a view of improving her pace for other races of the season. Mr. Herreshoff started from Bristol last Wednesday in his steam yacht Roamer to join the New York Y. C. fleet for the annual cruise, and Mr. Joseph E. Fletcher, of

the Bristol Y. C., is also, on the cruise with his power yacht Coronet II. Mr. John M. Richmond's schooner Valmore, and Mr. Henry F. Lippitt's fast sloop Weetamoo are other Rhode Island yachts participating in the cruise. F. H. YOUNG.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

SEA CLIFF Y. C. OFFICERS.—The annual meeting of the Sea Cliff Y. C. was held on the evening of August 11. There were some fifty members present, and the following officers were elected: Com., Theodore W. Sheridan; Vice-Com., Charles E. Silkworth; Treas., C. S. Dunne; Secy., C. S. Chellborg; Trustees for three years—Samuel Stenson and R. Walter Levy; Trustee for two years—John J. Graham; Trustees for one year—Wilbur H. Rogers and Rupert Ryley.

A yacht which is attracting more than usual interest was in the harbor of Greenport, L. I., a few days ago. She is a long, narrow craft, carrying one sail. But the peculiarity which attracted the attention was the name, which was painted in a scroll on the bow, Transmagnificanduality. As none of the boatmen who saw her were scholars with a classical education, they could but hold their chins in their hands and contemplate the freak. There are many strange names given to yachts these days, but this one stands at the top of the list, and from an etymological standpoint is beyond comparison. One old salt noticed that the yacht was a trifle by the head, and said the size of the name was the cause of it.—Brooklyn Eagle.

Annisquam Y. C.

Annisquam, Mass.—Friday, Aug. 12.

The first of a series of two Y. R. A. open races of the Annisquam Y. C. was sailed in Ipswich Bay, on Friday, Aug. 12, in fresh breezes to calm. In the 30-footers Chewink IV. had another sailover, Sauquoit withdrawing after the start. Urchin got the start in the 22ft. class. Clotho took the lead on the windward leg, however, and held it to the finish. In the 18ft. class it was all Arrow after the weather mark was passed. Seeboomook won in the first handicap and Owaisa in the second handicap. The summary:

30-footers.		Elapsed.
Chewink IV., F. G. Macomber, Jr.	3 03 27	
Sauquoit, T. K. Lothrop.	Withdraw.

Saturday, Aug. 13.

The second race of the Annisquam series was sailed on Saturday, Aug. 13, in a fresh S. breeze. Chewink IV. took another in the 30-footers, and Clotho in the 22-footers. Sheboomook beat out Early Dawn III. Hayseed and Dorehen finished first and second in the 18-footers, and were protested by Arrow. Vera II. had another win in the 15ft. class. Al Kyris and Ousakis were the winners in the handicap classes. The summary:

30-footers.		Elapsed.
Chewink IV., F. G. Macomber, Jr.	1 40 00	
Sauquoit, T. H. Lothrop, Jr.	1 45 00

Brooklyn Y. C.

Bensonhurst, L. I.—Saturday, Aug. 13.

THE Brooklyn Y. C. gave an open regatta on the afternoon of Saturday, Aug. 13, over courses in Gravesend Bay. Twenty boats started. The winners were Vivian II., Era, Bonito, Ogeemah, Wee Wean, Kelpie and Rascal. An E. breeze of whole sail strength held steady throughout the event, sending the starters over the regular Association courses in spirited manner. The appearance of the Seawanhaka 15-footer Wee Wean, brought around from the Sound to measure strength with the new one-design class of the Marine and Field Club, enlivened interest to a noticeable degree. None of Marine and Field craft entered the race. Wee Wean competed against the Herreshoff creation Sandpiper. The latter, besides starting long after her signal, was inwrenched trim for racing, and so proved no match for the craft from Oyster Bay.

Boats in Classes M and N had a run with spinnakers set from the start of the Brooklyn Y. C. anchorage to the Marine and Field Club buoy. A close reach brought them to the Fort Hamilton mark, and another led out to the Craven Shoal buoys. From there it was a close-hauled board to the Atlantic Y. C. stakeboat and a broad reach home. All marks were left to port, and the journey was covered twice, aggregating about 10 nautical miles. The other boats sailed the same course, excepting that the Craven Shoal marks were left out. This made a long leg of windward work across the Bay from Fort Hamilton to the Atlantic Y. C. at Sea Gate. The small yachts went twice around, sailing about 8 miles on the journey.

Maydic was the first boat to end the race. Vivian II. followed and won on corrected time by 1m. and 43s. Era scored a clever victory over Bagheera, and Bobtail beat the former on corrected time by 25s. The finish in Class Q between Ogeemah and Mary was a close one, the first-named crossing the line only 1s. ahead. On corrected time she won by a large margin. Cicada fouled the Marine and Field Club mark on the first round, and Karma withdrew. The summary follows:

Sloops—Class M—Start, 3:05.		Finish.	Elapsed.	Corrected.
Vivian II., S. E. Vernon.	4 15 18	1 10 18	1 08 23	
Red Wing, J. B. O'Donohue.	4 15 59	1 10 59	1 08 57	
Maydic, W. H. Childs.	4 15 06	1 10 06	1 10 06	
Sloops—Class N—Start, 3:05.		Finish.	Elapsed.	Corrected.
Era, E. H. M. Roehr.	4 16 37	1 11 37	1 11 30	
Bagheera, Hendon Chubb.	4 17 37	1 12 37	1 11 55	
Bobtail, E. F. Luckenbach.	4 18 35	1 13 35	1 13 35	
Sloops—Class P—Start, 3:10.		Finish.	Elapsed.	Corrected.

Martha M., Richard Moore.	4 40 22	1 15 22	1 15 22	

Beverly Y. C.

Wing's Neck, Buzzard's Bay—Saturday, Aug. 6.

THE Beverly Y. C. sailed its 357th regatta off the club house, on Wing's Neck, last Saturday. This was the sixth Corinthian race of the season. The morning was most discouraging, as the atmosphere was thick, and rain fell occasionally. Toward noon, however, a breeze sprang up from the S. and gradually worked into the S.W., and developed into a good racing breeze, that averaged probably about 8 knots per hour. Mr. F. A. Eustis acted as judge.

There were three starters in the 30ft. class, and Praxilla, in her eagerness to get over the line ahead of her rivals, crossed before gun-fire and was obliged to return and re-cross the line, thus losing 1m. 10s. In spite of this, she beat both her rivals, winning by 2m. 41s.

In the 21ft. class Hybrid, which Mr. Crane has widened 28in. on deck, started for the first time since she was altered. She got a good start, but appeared to sag off to leeward, and she gradually fell behind the other two boats a considerable distance. Terrapin and Quakeress, as usual, had a very close race, Quakeress leading over most of the course. Terrapin, however, passed her on the reach across the Bay and maintained her lead to the finish line. Just at the last minute Quakeress began to gain rapidly, and finished within 15s. of her rival.

In the 18ft. class Jap, which was sailed by Mr. R. W. Emmons 2d, won. Thus Mr. Emmons continued his practice of winning in whatever boat he sails. Maori won in the cat class, and Ranzo in the 15ft. one-design class. The times in detail follow:

30ft. Class.		Elapsed.
Praxilla, John Parkinson, Jr.	2 51 41	
Young Miss, D. D. Whittemore.	2 54 22	
Pontiac, J. A. Beebe.	2 54 30	
21ft. Class.		Elapsed.
Terrapin, L. S. Dabney.	2 22 25	
Quakeress, W. W. Harrison.	2 22 40	
Hybrid, J. Crane, Jr.	2 36 36	
18ft. Class.		Elapsed.
Jap, Geo. P. Gardner, Jr.	1 06 33	
Margaret, W. O. Taylor.	1 07 49	
Wizzard, F. W. Sargent.	1 07 54	
Hindoo, N. F. Emmons.	1 11 04	
Catboats.		Elapsed.
Maori, A. S. Whiting.	1 13 51	
Allison II., Steward B. McLeod.	1 14 51	
Krieker, W. S. Jameson.	1 11 44	
15ft. One-Design Class.		Elapsed.
Ranzo, M. H. Richardson, Jr.	1 15 08	
Fiddler, Miss C. M. Dabney.	1 17 05	
Teazer, Mrs. R. W. Emmons, 2d.	1 17 24	
Fly, Miss C. M. Williams.	1 17 28	
Jub Jub, Howard Stockton.	1 18 17	
Flickamaroo, Miss E. B. Emmons.	1 20 17	
Vim, F. W. Sargent, Jr., crossed line before time and withdrew.		

Boston Y. C.

Boston, Mass.—Wednesday, Aug. 10.

A CLUB race of the Boston Y. C. was sailed off the Marblehead station on Wednesday, Aug. 10, in a fresh S.E. wind, with rain and a heavy sea. In the 30ft. class Chewink IV. was away first, and led all over the course. In the 22ft. class Clotho and Warrior were away first, at the windward end of the line. Clotho held a slight lead out to the windward mark, and off the wind she ran away from the other boats. In the 18-footers Mirage II. got the start and led to the first mark, but on the windward leg Hayseed took the lead and held it to the finish. Vera II. won easily in the 15-footers. The handicap class was bunched at the start. Jingo going out ahead and holding a slight lead to the finish. The summary:

30-footers.		Elapsed.
Chewink IV., F. G. Macomber, Jr.	1 22 21	
Waska, S. Reed Anthony.	1 24 11	
Sauquoit, T. K. Lothrop, Jr.	1 28 11	
22-footers.		Elapsed.
Clotho, Cheney & Lanning.	1 27 22	
Medric, H. H. White.	1 30 34	
Warrior, S. C. Winsor.	1 31 49	
Opitsah V., S. H. & H. J. Foster.	1 32 00	
18-footers.		Elapsed.
Hayseed, H. L. Bowden.	1 36 03	
Boo Hoo, R. Boardman.	1 37 29	
Dorchen, A. W. Finlay.	1 39 31	
*Otter, A. D. Irving.	1 42 07	
Privateer II., Alden & Carlton.	1 42 13	
Mirage II., J. W. Olmstead.	1 42 36	
15-footers.		Elapsed.

Tobasco, Jr., H. H. Wiggins.	1 47 16	
Nibelung, E. G. Loring.	1 56 43	
Little Misery, A. P. Loring.	1 58 54	
Cigarette, Morton Prince.	2 02 10	
First Class Handicap.		Elapsed.
Jingo, G. B. Doane.	1 32 50	1 32 50
Kit, H. B. Whittier.	1 33 12	1 33 12
L'Aiglon, E. W. Hodgson.	1 33 16	1 33 16
Gringo, W. H. Brown.	1 38 11	1 33 31
Opitsah III., W. F. Whitney.	1 41 25	1 36 45

Bridgeport Y. C.

Black Rock, L. I. Sound—Saturday, Aug. 13.

THE annual regatta of the Bridgeport Y. C. was held on Saturday, Aug. 13, in a fresh S.E. breeze. There were only a small number of starters, twelve boats coming to the line. Most of the racing craft are owned at the western end of the Sound, and Bridgeport is apparently too far eastward to tempt many boats to make the trip there to race. Commodore T. L. Park was on hand with two starters.

The 30-footers and 25-footers covered a 15-mile triangle, while the raceabouts and 18-footers went over a 10-mile triangle.

The 30-footers were started at 2:45. Sassacus and Mimosa III. were the only starters. The former withdrew soon after the start, and Mimosa was left to cover the course alone.

Firefly and Ojibway were the next to start in the 25-foot class. Firefly won by over 7m.

Hobo won in the raceabout class and Cricket finished second, beating Roma by 8s.

There were three starters in the 18ft. class, and Miss Modesty won. Mirage and Fiji had a close race for second place, the former winning by 3s. Answer was disabled before the start, and Question did not finish. The summary:

30ft. Class—Start, 2:45—Course, 15 Miles.		
Mimosa III., T. L. Park.....	first prize.
Sassacus, T. Silliman.....	Withdraw.
25ft. Class—Start, 2:50—Course, 15 Miles.		
Firefly, G. P. Granberry.....	5 57 30	
Ojibway, H. A. Morse.....	6 05 54	
Raceabout Class—Start, 2:55—Course, 10 Miles.		
Hobo, T. L. Park.....	5 58 15	
Cricket, H. Willets.....	5 59 47	
Roma, F. W. Sherman.....	5 59 55	
The Kid, W. Harriman.....	6 02 38	
Busy Bee, R. Wainwright.....	6 03 47	
Houdy, P. Maynard.....	6 06 04	
18ft. Class—Start, 3:05—Course 10 Miles.		
Miss Modesty, C. B. Seelye.....	5 26 20	
Mirage, J. P. Bartram.....	5 32 32	
Fiji, L. T. Warner.....	5 32 35	
Question, N. W. Bishop.....	Withdraw.

Horseshoe Harbor Y. C.

Larchmont, L. I. Sound—Saturday, Aug. 13.

THE annual regatta of the Horseshoe Harbor Y. C. was sailed on Saturday, Aug. 13. Although the Horseshoe Harbor Y. C. is one of the smallest of the Long Island Sound organizations, its races are always of the best. The events are invariably attended by a good list of entries, and the prizes are of a substantial character.

The breeze was S.E. at the start, but after this had lost its strength, a nice sailing breeze struck in from the S.W.

The course was triangular, $4\frac{1}{2}$ knots, from a mark off Horseshoe Harbor to Whortleberry Island, to Execution Rocks and back to the starting line. On the first round it was a run for the first leg and a reach for each of the other legs, but on the second round the first leg was a beat, the second a reach, and the last leg a run.

The 30-footers were sent away at 1:10. Nike led over the line, with Alert just astern. At the end of the first round Alert had moved into first place, and from that time on was never headed. She won by over 3m.

The next boats to start were Nymph and Nautilus, two large catboats. Nymph had way the best of it, and finished far ahead of her competitors.

Rogue was the first of the four raceabouts over the starting line, but she was passed by both Tartan and Rascal II. Tartan won and Rascal II. was second.

In the Larchmont one-design class Dorothy was first away, but on the first round she was passed by Hourii. Dorothy regained her lead on the second round, and finished a winner. Hourii was second.

Snapper had no competitor in the 25-ft. class, and she went over the course alone.

Jeebi had no trouble trimming her competitors in the 21ft. sloop class. Ethel was a poor second. Gazabo did not finish.

Flim Flam won handily in the 18ft. sloop class, and Plover was second.

In the New Rochelle one-design class Caper won and Ace was second.

Chickioker won for the first time in the Manhasset Bay one-design class.

Anawanda and Shoshone had a hot fight for first place in the Indian Harbor one-design class. Anawanda won by 4s.

The other winners were: Scud, Gloomy, Gus Miriam, Louis Belle, and Jake. The summary:

30ft. Class—Start, 1:10—Course, $9\frac{1}{2}$ Knots.	Finish.	Elapsed.

Southern Gulf Coast Y. A. Racing Circuit.

Southern Y. C.—Lake Pontchartrain, Saturday, Aug. 6.

THE sixth and concluding regatta in the series of the Southern Gulf Coast Yachting Association for the season took place over the fine course of the Southern Y. C., at West End, New Orleans, La., Saturday, Aug. 6. The events held by the smaller clubs enrolled in the Association had been very successful affairs, indeed, and the yachtsmen and the yachts, after racing and cruising out along the gulf coast all during the month of July, turn to Lake Pontchartrain and to the mother club for an appropriate winding up the first week in August.

The day on the lake was anything but a satisfactory one, the weather being in turn stormy, calm and fluky. The course was 10 miles—twice over a 5-mile triangle—and the wind girated from S.E. to S.W. For the first 5 miles there was a drifting match, a rain squall haze shutting out from view the greater part of the fleet for some time; while the last two legs of the course were sailed in an 8-knot breeze.

The main interest in the races centered in the third meeting in the South of the Northern racers Chewink III. and Calypso, this being the rubber event of the series between the two, Chewink having won at Biloxi, and Calypso at Gulfport; the latter was, however, the only fair test, Calypso being out of tune at Biloxi. Chewink won a grand race on this third attempt, and a little more than evened things up. She sailed with what would be considered a considerable advantage in live ballast, carrying a crew of fourteen big men. She had in addition to the 700lbs. on the board, 1,000lbs. of lead inside on her frames, this weight of about half a ton being about what she was believed to have wanted in the breezy race at Gulfport. Calypso sailed with seven men, and reduced her usual 2,000lbs. of lead by something like one-fourth its weight. Under this condition of trim this celebrated twain seemed very well matched on nearly every point of sailing, and both were excellently well handled. Calypso held on astonishingly well in the light airs, considering that her rival had much advantage in being able to place the large crew to leeward, so as to heel her to her lines. The friendly rivalry between these craft has engendered more interest in yachting in the South than has ever before been known, the time never being in memory when two yachts were so evenly matched in racing. It is expected that the battles will keep on for some time.

Nydia won a good race in the second class of cabin sloops, while Kayoshk, in the Association cup class, appears to have learned the light weather trick, and she now seems able to win in any and all conditions. In the model catboat class Chiliktah won by 3s. on time allowance from Augusta M. Sinner won as usual in the one design knockabout class. The summary:

	Elapsed.	Corrected.
Chewink III.	2 57 45	2 56 21
Calypso	2 59 32	2 58 03
Susie B.	3 06 17	3 06 17

L. D. SAMPELL.

Riverton Y. C.

Riverton, Delaware River—Saturday, Aug. 6.

SIXTEEN boats started in the regatta of the Riverton Y. C., held on Saturday, Aug. 6, and all but two boats finished. There was a nice whole sail breeze from the W.

The catboats were sent away at 3:05. Carolyn II. led over the line, followed by Fiona and Sea Gull. Fiona soon took the lead, and won out, beating Carolyn II. by 5m.

In the one-design class No. 1 was first away, followed by No. 6 and No. 7. No. 7 moved into first place, and won the race, beating No. 6, second. No. 2 and No. 6 withdrew.

Dorothea won in the jib and mainsail class and No. 15 got first in the mosquito class. The summary follows:

Catboats—Start, 3:05.		
	Finish.	Elapsed.
Fiona, John Perkins.....	5 14 24	2 09 24
Carolyn II., C. C. Rianhard.....	5 19 40	2 14 40
Sea Gull, L. C. Cook.....	5 20 28	2 15 28
One-Design Class—Start, 3:10.		
No. 7, E. W. Crittenden.....	5 37 38	2 27 38
No. 1, A. G. Cook.....	5 39 00	2 29 00
No. 3, McIlvain Biddle.....	5 40 46	2 30 46
No. 4, J. W. Hamer.....	5 48 45	2 38 45
No. 2, Dr. C. S. Mills.....	Withdrew.	
No. 6, J. H. Reese.....	Withdrew.	
Jib and Mainsail Class—Start, 3:10.		
Dorothea, S. Solomon.....	5 38 25	2 28 25
Tadpole, E. W. Crittenden.....	5 49 59	2 39 59
Pumpkin, J. Frismuth, Jr.....	5 53 30	2 43 30
Mosquito Boats—Start, 3:15.		
No. 15, E. B. Showell.....	5 51 00	2 36 00
No. 14, T. H. Walnut.....	5 52 00	2 37 00
No. 2, Charles M. Biddle, Jr.....	5 55 00	2 40 00
No. 10, H. H. Cooke.....	5 59 00	2 44 00

Rifle Range and Gallery.

Short Range Rifle League of Chicago.

The first series of matches of this Association has just been concluded, with the following result:

	Won.	Lost.	Per Cent.
Willow Rifle and Gun Club.....	8	1	.889
Brazilian Rifle Team.....	7	2	.778
Turnverein Lincoln Sharpshooters.....	4	4	.500
William Tell Sharpshooters' Club.....	2	6	.250
Chicago Turn Gemeinde Sharpshooters.....	1	7	.125

The Willow Rifle and Gun Club wins the series, and the championship pennant donated to the league by the Peters Cartridge Company.

The principal interest in the matches centered in the contests between the Willows and the Brazilians, who are very evenly matched. In their first meeting the Willows won the match by 3 points only. At their next meeting there was a dispute over a "double" (two bullets in one hole). With the doubtful shot, the Willows would have won the match; without it, they would lose by ten points. The match was called off and another shot, when the Willows had an off day, and were beaten by 43 points. This made a tie, which was shot off on June 21, the Willows winning by 15 points. Ten-man teams, 20 shots per man, on $\frac{1}{4}$ in. ring target, 75ft.

The annual meeting of the executive board of the league was held on June 25, when the following were re-elected: Frank M. Garden, President and Secretary; C. Sentf, Vice-President; A. Sorenson, Shooting Master; C. Stierlen, Treasurer.

It has been decided to hold our annual prize shoot on Sept. 4 and 5, at World's Fair Park, 67th and Stony Island avenue, Chicago. There will be re-entry matches on the $\frac{1}{4}$ in. ring target, and a 100-shot championship match. There will be seven gold medals and a lot of merchandise prizes, all provided by the league, out of its own funds.

The match for the Peters challenge cup will be shot soon after the prize shoot, probably at Palos Park. Under the deed of gift, this cup must be shot for annually by teams of five men each representing existing short range (gallery) clubs, and the cup must be won three times to become the property of any club. It has been won once each by the Brazilians and the Willows.

There is a prospect of getting at least two more clubs to join the league in the near future. Another series of matches will be started immediately.

The Palma Trophy Again.

MR. CASPAR WHITNEY devotes two pages of the August Outing to a discussion of the Palma Trophy scandal. They are two pages of darkening of counsel, and remind one of the book which was described as the best work ever written on the wrong side of a subject by one who knew absolutely nothing about it. Mr. Whitney's ignorance is not specially amazing, but it is somewhat surprising that any one should be willing to print such a series of misstatements and foolish deductions drawn from them, when he must know that the true character of his deliverance would be recognized by those familiar with the facts.

For example, Mr. Whitney says: "Both the English and the American teams violated the spirit as well as the literal letter of the law governing the Palma Trophy match, because the rules of record do not permit the use of barrels made by private makers."

There could not be a more complete misstatement of the facts than is this, that "the rules of record do not permit the use of barrels made by private makers." The rule as to the pattern of rifles used in the Palma competition reads:

"RIFLES.—The national military arm of the country the team represents, being in all respects of the pattern adopted and issued to the troops for service. Rifles of private manufacture may be used, but they must conform to the regulation pattern and bear the official view marks."

Mr. Whitney says "the trophy really belongs and should be sent to the highest score team in the competition of 1903, which used the bona fide service rifle of its country as turned out by its Government Arsenal."

The rules nowhere prescribe that a "rifle of its country as turned out by its Government Arsenal" must be employed. On the contrary, they expressly declare that "rifles of private manufacture may be used."

Again Mr. Whitney says: "That critical attitude by Englishmen, officially or unofficially, is despicable, considering that the American riflemen, in using barrels made by a private maker, were simply beating the Englishmen at their own game. Viewed or unviewed, is a trivial detail beside the broad question of competition between militia teams and service arms."

It was not a case of "their own game," inasmuch as the Englishmen used rifles according to the rule, i. e., that they must "conform to the regulation pattern," while the Americans used rifles

which were not according to the rule, i. e., which did not "conform to the regulation pattern."

"Viewed or unviewed" was not "a trivial detail." What the British view mark means Col. Crosse wrote in his letter which we printed Aug. 6:

"This mark is a certificate that a rifle has been examined and gauged by an official of the Small Arms Inspection Department, and that it conforms strictly to the service pattern, both as regards the interior of the barrel and in other respects."

Mr. Whitney writes oracularly: "As between England and America, the Palma trophy belongs to the latter," and that the American Association made a mistake in returning the trophy without stipulating that it should be awarded to the team which made the best score last year with real service rifles."

By "real service rifles," Mr. Whitney presumably means what he has defined as those "turned out by its Government Arsenal." But inasmuch as the rules did not provide that such a rifle must be used, the American Rifle Association could not have stipulated any such condition when it returned the trophy. No such stipulation would have prevailed against the rule under which the match had been shot and to which all the contestants assented before the shooting of the match.

Again Mr. Whitney writes: "The viewed business at once opens the door to no end of sharp work." This is to say that the officers of the British Army, who are the official viewers of arms submitted for their inspection, would lend themselves to petty trickery and affix the service condition stamp to a rifle which did not actually conform to service conditions. If an English writer were to express a similar opinion of American Army officers we should know in what contempt to hold him.

Mr. Whitney's contribution to the discussion of the unfortunate Palma Trophy affair is not intelligent, nor enlightening, nor honest nor frank. It is, on the contrary, a purely arbitrary and dogmatic dictum, contrary to the facts and based upon a complete misstatement of them.

Ohio Rifle Notes.

THE popular organization of skilled woodsmen and big-game hunters known as the Shelby County Deer Hunters' Association, held their annual reunion and picnic in Davis' Grove, south of Jackson Center, O., on Aug. 11. There was a large attendance, and it was one of the most enjoyable occasions in the history of the club. The following members won the prizes on the different targets: Bear heart target: First, J. C. Steinkle; second, J. S. Laughlin; third, J. C. Steinkle. Bear head target: First, J. M. Carter; second, D. W. Longbreak; third, J. S. Wilson. Deer heart target: First, J. F. Howard; second, D. W. Longbreak; third, John E. Bush. There were many fine single shots made by those who have killed bear and deer in the woods, and who are planning for another hunting expedition this fall.

The Twin Valley Association of Deer Hunters will meet in Lewisburg, in September, and perfect their plans for their annual fall hunt. Among the members are J. Wilson, J. F. Beaver and Daniel Francis.

The Preble County Association will meet at Eaton on the day of the regular monthly shoot of the Preble County Rifle Club in September. Several parties will be organized at that time for deer hunting.

The new 200yd. range of the Dayton Sharpshooters, on the grounds of the Dayton Gun Club is about ready for use. The concrete pit for the target tenders has been completed, and heavy target frames put up. The regular shoot will be held on Aug. 24 or 25, but it has not yet been decided whether it will be on the new or old range.

The shoot for the August medal of the Gratis Township, O., Rifle Club was held in Johnson's Grove, Gratis, O., on Aug. 6, eleven members taking part. The weather conditions were not good, as a high wind was blowing, which had a bad effect on the scores. Jacob W. Leshner and Moses Pence tied for first on 41, and in the shoot-off, one shot, 12 possible, the former won, 11 to 9. The regular medal shoots of the club are held on the first Saturday in each month. Conditions, 100yds., offhand, 4 shots, 43 possible.

BONASA.

Presque Isle Rifle Club.

ERIE, Pa., Aug. 6.—After the club had held their semi-annual election of officers to-day, they held their weekly shoot in a high wind, almost half a gale, that blew from the west. This wind came in handy for the yacht races, but was not needed for target practice.

Capt. Bacon was missing to-day. He was up at Bradford shooting with the National Guard team there. Scores:

W. Parker.....	78 78 76—232	A. Mount.....	68 66 60—194
J. Almeda.....	79 75 72—226	J. Hunter.....	52 50 46—148

G. C. Rahn.....	77 71 67—215	T. Sullivan.....	48
J. G. Germann.....	72 68 66—206	W. Wheeler.....	—131

CABIA BLANCO.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Aug. 23-24.—Chattanooga, Tenn.—Target tournament of the Mountaineer Gun Club; \$200 added. S. B. Lowe, Sec'y.

Aug. 23-24.—Raleigh, N. C.—North Carolina Trapshooters' Association tournament.

Aug. 23-24.—Birmingham, N. Y., Gun Club second annual tournament. Vernon Perry, Sec'y.

Aug. 23-24.—Renovo, Pa.—Recreation Gun Club two-day target tournament. Geo. B. Dechant, Sec'y.

Aug. 24-25.—Hot Springs, S. D.—The Interstate Association's tournament, under the auspices of the Hot Springs Gun Club. H. A. Gayhart, Sec'y.

*Aug. 25-26.—Tarentum, Pa., Rod and Gun Club.

Aug. 24-26.—Grand Rapids, Mich.—Consolidated Sportsmen's Association tournament. A. B. Richmond, Sec'y.

Aug. 27.—Tottenville, S. I.—Match between teams of the White Plains, Castleton and Acquahonga gun clubs. L. N. Scofield, Port Richmond, S. I., Sec'y.

Aug. 30-31.—Traverse City, Mich., Rod and Gun Club tournament. W. A. Murrel, Sec'y.

Aug. 31.—Hampton Beach, N. H.—Powow Shooting Club tournament. Joseph Ainsworth, Sec'y, Amesbury, Mass.

Sept. 5.—Lowell, Mass., Rod and Gun Club Labor Day tournament. E. J. Burns, Sec'y.

Sept. 5.—Auburn, N. Y.—Labor Day tournament. Knox and Knapp, Mgrs.

Sept. 5.—Ossining, N. Y., Gun Club fourth annual Labor Day tournament. C. G. Blandford, Capt.

Sept. 5.—Dover, N. H., Sportsmen's Association annual Labor Day tournament. D. W. Hallam, Sec'y.

Sept. 5.—Washington, D. C.—Analostan Gun Club Labor Day Shoot.

Sept. 5.—Maine State championship tournament, given by the Portland Gun Club.

Sept. 5.—Muncie, Ind.—Annual Labor Day shoot of the Magic City Gun Club. F. L. Wachtell, Sec'y.

Sept. 5.—Utica, N. Y.—Riverside Gun Club tournament. E. J. Loughlin, Sec'y.

Sept. 5.—Springfield, Mass.—Fall tournament on Labor Day; \$25 added. C. L. Kites, Sec'y.

Sept. 5-7.—Richmond, Va.—Tournament of Virginia Trapshooters' Association. W. A. Hammond, Sec'y.

*Sept. 6-7.—Irwin, Pa., Rod and Gun Club tournament.

Sept. 6-7.—Litchfield, Ill.—Consolidated Trapshooters' Congress tournament. L. A. Cummings, Sec'y, Bunker Hill, Ill.

Sept. 7-8.—Huntington, W. Va.—The Interstate Association tournament, under the auspices of the Huntington Gun Club. L. H. Merrick, Pres.

Sept. 9-11.—Chicago, Ill., Trapshooters' tournament. E. B. Shogren, Sec'y.

*Sept. 14-15.—Ruffsdale, Pa., Rod and Gun Club.

Sept. 14-15.—St. Louis.—Afro-American Handicap. T. H. Cohron, Sec'y, Pleasant Hill, Mo.

Sept. 20-21.—Lincoln, Ill.—Lincoln City Gun Club tournament.

Sept. 22.—Moberly, Mo.—Missouri League of Trapshooters.

*Sept. 27-28.—Monessen, Pa., Gun Club.

Sept. 28-29.—Concordia, Kans.—The Interstate Association's tournament, under the auspices of the Concordia Gun Club. L. S. Myers, Sec'y. Elmer E. Shaner, Mgr.

Sept. 28-29.—Homer, Ill.—Homer-Ogden Gun Club tournament.
Oct. 4-5.—Crawfordsville, Ind., Gun Club tournament.
Oct. 4-5.—Allegheny, Pa.—North Side Gun Club.
Oct. 6-7.—Dalton, O., Gun sixth annual tournament. Ernest F. Scott, Capt.
Oct. 6-7.—St. Marys, Pa.—Two-day shoot.
Oct. 18-19.—Litchfield, Ill.—Consolidated Trapshooters' Congress.
Oct. 18-20.—New London, Ia., Gun Club tournament. Dr. E. C. Cook, Sec'y.
Nov. 1-3.—St. Louis Mo.—World's Fair shoot; live birds and targets. Alec D. Mermod, Mgr., 620 Locust street.
Western Pennsylvania Trapshooters' League tournaments. C. G. Grubb, Sec'y, Pittsburg.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM goes to press on TUESDAY OF EACH WEEK.

Arrangements have been made to hold a two-day shoot Oct. 6-7 at St. Marys, Pa.

Mr. Harold Money at the Indian tournament last week made a run of 128 targets without a miss.

The Riverside Gun Club, of Utica, N. Y., announce a tournament to be held on Sept. 5. Mr. E. J. Loughlin, is the secretary.

Ernest F. Scott, captain, informs us that the Dalton, O., Gun Club, has fixed upon Oct. 6 and 7 for their sixth annual tournament.

The difference between the New Jersey State Sportsmen's Association and Rip Van Winkle is that Winkle, after a long time, did wake up.

Mr. F. L. Wachtell, secretary, informs us that the Magic City Gun Club of Muncie, Ind., will hold their annual Labor Day shoot on Sept. 5.

At the shoot of the S. S. White Gun Club, Aug. 13, Mr. Fred Coleman broke 111 out of 120 targets. Mr. Frank E. Butler was close up with 109.

The Chicago Trapshooters' Association contemplate the holding of another tournament in a few weeks, the particulars of which will be announced later.

We are informed that the renowned marksmen, Messrs. J. A. R. Elliott and Fred Gilbert, will be visitors at the Labor Day shoot of the Springfield, Mass., Shooting Club.

Dr. J. B. Pardoe, secretary, writes us that the Bound Brook, N. J., Gun Club has arranged a programme, offering prizes, for the club shoot to be held on Aug. 20. Visitors are welcome.

Mr. L. N. Scofield, secretary of the Castleton Gun Club, writes us that the third match between the White Plains, Castleton and Acquahonga gun clubs will be held at Tottenland, Staten Island, on Aug. 27.

The Analostan Gun Club, of Washington, D. C., has decided to hold a shoot on Labor Day. There is a possibility of a match or a series of matches between that club and the Annapolis Gun Club, at some time in the near future.

The Maine State championship tournament is announced to be held on the grounds of the Portland Gun Club, Sept. 5. Guns and ammunition shipped care Mr. S. B. Adams, the P. G. C. treasurer, will be delivered at the grounds free.

There were forty-eight entries for the Mallory cup, though the three Mallory brothers, who entered, did not contest for it. It was a contest at 50 targets, distance handicap. Mr. Lem Willard, of Chicago, from the 19yd. mark, scored 48 and won at the Indian tournament.

The Labor Day shoot at Auburn, N. Y., Sept. 5, Messrs. Knox & Knapp managers, has ten events on its programme, alternately 15 and 20 targets. Class shooting and jack rabbit system govern the money. Event 7 is a merchandise contest. Event 10 is for a Baker hammerless. Totals 175 targets, \$12.50 entrance.

Mr. John S. Wright, famous as the most active promoter of trapshooting about New York, informs us that he will manage a 50-target handicap for a handsome prize, Aug. 20, at 2 o'clock, on the grounds of the Brooklyn Gun Club, to reach which take Kings County Elevated to Crescent street station, thence by hack to grounds on Kaiser's Farm.

The first of a series of team contests between the Independent Gun Club and the Allentown Gun Club was held at Easton, Pa., on Aug. 13. The Allentown team won by a score of 213 to 204. There were ten men on a side, 25 targets per man. The performance was excellent for both teams, the winner scoring over 93 per cent the loser about 90 per cent.

High averages at the Olean, N. Y., Gun Club tournament, Aug. 11 and 12, were as follows: Professional, first day, shooting at 200 targets: First, Mr. Neaf Apgar, 187; second, Mr. E. D. Fulford, 181; third, Mr. C. O. Le Compte. Second day, Mr. Apgar 188, Mr. Fulford second, 187; Mr. Le Compte, third, 182. Of the amateurs, first day, Mr. Beach, first, 184, second, Mr. Elliott, of Wellsville, N. Y., 182; Messrs. Nobles and Mason third, 180. Second day, Mr. King, 188; Mr. Fleming, 187; Mr. Bozard, 186.

Mr. J. S. Coggeshall, of Newport, R. I., writes us that "the Aquidneck Gun Club will hold a tournament on Wednesday, Aug. 31, commencing at 11:30 A. M. The programme will be one of 150 targets, one event at 10, two at 20, five at 15 and one at 25; total entrance \$9.75, including targets at 1½ cent each. Rose system, sweeps optional. Fifteen dollars in cash will be divided 7, 5, 3, among the three high amateurs shooting the programme. This shoot will be given special prominence by the presence of Mr. Fred Gilbert, now on a tour of New England."

A correspondent writes us as follows: "On Saturday of this week the Fairview, N. J., Gun Club will shoot for a silver cup donated by Mr. Hermann von Lengerke, to be shot for once a month for twelve months. Handicap, 50 targets, eight best scores to count. As Aug. 20 will be the first day this cup is contested for, some thirty shooters are expected, and a good time is anticipated. Visitors are always welcome."

The third annual tournament of the Goderich, Ont., shooting Association, Sept. 5-6, has a total of eighteen events, at 10, 15 and 20 targets, entrance \$1, \$1.50 and \$2, and on the second day one event at 100 targets, \$5 entrance, for the Robin Hood trophy. The thirteenth event is a two-man team race at 15 targets. Targets 2 cents. Sliding handicap, 16 to 22yds. Class shooting and jack rabbit system. Mr. T. MacDermott is the secretary.

The second annual target tournament of the Binghamton, N. Y., Gun Club, Aug. 23-24, provides a programme of twelve events each day, at 15 and 20 targets, \$1.30 and \$1.40 entrance, \$5 added. The totals each day are 200 targets, \$16 entrance, and \$60 added. Shooting begins at 9 o'clock. Two lowest guns of both days will receive \$5 each. The club reserves the right not to add in excess of one-third the net purse of any event. Lunch will be served upon the grounds. Mr. Vernon Perry is the secretary.

The secretary, Mr. Joseph Ainsworth, writes us that "the Powow Shooting Club, of Amesbury, Mass., will hold a tournament at Hampton Beach, N. H., Aug. 31. Fifty dollars in cash will be given in prizes; \$15 to first, \$12 to second, \$8 to third, \$5 to fourth, \$5 to fifth, \$4 to sixth, to shooters shooting the entire programme. The programme will consist of nine 20-target events, at 16yds.; Sergeant system, high guns, to win. Interstate rules to govern. Only amateurs are eligible to prizes."

The Field, London, concerning "a lock-up cartridge bag" states as follows: "The correspondence which took place in our columns last year on the subject of pilfering cartridges has evidently set some folks thinking, the desideratum being a bag which can be securely, yet unostentatiously fastened, enabling a shooter to control the removal of cartridges without hurting the feelings of others by too marked an intimation that such protection is needful." It is possible that, in that country, some shooter of playful moods, might take lock, bag and cartridges as a composite souvenir.

The programme of the Springfield, Mass., Shooting Club's Labor Day shoot consists of twelve events, at 10, 15, 20 and 25 targets, a total of 200 targets, \$16 entrance, \$25 added. Rose system will govern. Sweepstakes optional. Targets, 2 cents. Loaded shells and lunch obtained on the grounds. Professionals for targets only. Merchandise prizes for amateur high average. Shooting commences at 9 o'clock. Guns and ammunition shipped to the secretary, C. L. Kites, 499 Main street, will be delivered on the grounds free, if received by him before Sept. 4.

The secretary-manager, Mr. Elmer E. Shaner, has sent us advance sheets of the programme of the Interstate Association tournament to be given for the Huntington, W. Va., Gun Club, Sept. 7-8. It provides ten events each day, each at 20 targets, \$2 entrance. Each day, added money, \$15. First day, Rose system, 5, 4, 3, 2. Second day, class shooting, 40, 30, 20, 10. Targets, 2 cents. Practice Day, Aug. 23. Guns and ammunition, prepaid, and marked in owner's name, care of the Union Transfer Company, Huntington, W. Va., will be delivered to the shooting grounds free of charge. The Huntington Gun Club will give \$5 to the amateur making the lowest average, and \$5 to the amateur making the second lowest average, shooting through the entire programme for the two days. Shooting will commence at 9 o'clock.

We are informed that Mr. J. L. Head, of Peru, Ind., has been promoted from the position of shooting representative and occasional salesman for the U. M. C. Co., to that of salesman for the M. Hartley Co., of New York. He will sell U. M. C., Remington and B. G. I. goods. This promotion withdraws Mr. Head from the professional ranks of shooters, and will leave a vacancy in professional ranks difficult to fill. As a trapshooter Mr. Head was distinguished as a contestant of nerve and skill. He won the diamond badge, emblematic of the Indiana target championship in 1897, the International Peters Cartridge trophy in 1898, at Detroit, and the Grand Central Handicap at live birds, Indianapolis. In the past five years, he has held the Indiana live bird championship five times, and defended it four times successfully in individual matches against Indiana's best shots. Recently his made a general average of 93.71 per cent. for 895 targets shot at average has been up to expert class. In one week's shooting, he in open competition.

Mr. James T. Skelly, of the Dupont Powder Co., Wilmington, Del., has reached California, after leisurely tarrying at towns of importance while en route, adding to his multitude of friends and showing the trapshooters how to shoot properly. At Hercules, Cal., a shoot was gotten up in his honor on July 27, and it is in evidence that they do not extend their courtesies in a flip-pant manner, for the invitations were printed on fine linen paper, in the highest style of the printer's art, as follows:

Hercules, Pinole, P. O., Cal., July 27, 1900.

Mr. Dear Sir:
A Blue Rock Shoot will be held at the Hercules Club grounds on Sunday, July 31st, complimentary to Mr. T. J. Skelley, of Wilmington, Delaware.

You are cordially invited to attend and make Mr. Skelley's acquaintance.

A game of baseball will be held in the afternoon between the famous Hercules Team and the undefeated Gorhams, of San Francisco.

A good time is assured.

Take 7 o'clock S. P. or 7:20 Santa Fe.

Pool Shooting.

Birds trapped at 2c.

Mr. W. T. Nash, since his resignation from the presidency of the Indianapolis Gun Club, an office which he filled with signal success and ability, arranged to leave for a long sojourn in north-western Idaho, on a big-game and trout fishing expedition. He and his party will probably enjoy the hunting and fishing there till Oct. 1. The trip has been planned during the past six months, and purposes to be strenuously active. The expedition goes first to Lewiston, Idaho; thence via Spokane, Wash., where they will start for the Bitter Root country. Besides Mr. Nash, the party consists of Mr. Albert Lieber, Mr. Richard Lieber, and

these gentlemen will be joined at Lewiston by Mr. W. F. Kettenbach, president of the Lewiston National Bank. Dr. Pfafflin was to have been a member, but business intervened and prevented him doing so. Cooks and guides have been engaged, and fifty horses will be required to pack the equipage. The party will seek grouse, mountain trout, bear, mountain lion, deer, elk and mountain sheep. They will be absent from railroad facilities during a month.

BERNARD WATERS.

Olean Tournament.

OLEAN, N. Y.—At the tournament of the Olean Gun Club, held Aug. 11 and 12, shooters were present from Pittsburg, Sabinsville, Shingle House, Pa., and Buffalo, Wellsville, Bolivar, Cohocton and Syracuse, N. Y. The trade was represented by Messrs. C. O. Le Compte, E. D. Fulford, Geo. R. Ginn, Neaf Apgar and Sim Glover.

The weather was very fine, the attendance large, and some high scores were made.

Of the professionals, Mr. Apgar won high average, Mr. Fulford second, Mr. Le Compte third.

Of the amateurs, Mr. Beach, of Sabinsville, Pa., won high average the first day, breaking 184 out of 200 targets. Mr. Elliott, of Wellsville, N. Y., won second average, breaking 182 out of 200. Messrs. Nobles and Mason, of Olean, N. Y., third average, breaking 180 out of 200 targets.

The second day Mr. King, of Pittsburg, Pa., won high average, breaking 188 out of 200. Mr. Fleming, of Pittsburg, Pa., won second average, breaking 187 out of 200. Mr. Bozard, of Allegheny, N. Y., won third average, breaking 186 out of 200.

For general amateur average, Mr. Hart, of Buffalo, N. Y., won first, breaking 364 out of 400 targets, and Mr. Nobles, of Olean, won second average, breaking 361 out of 400. Mr. King, of Pittsburg, and Mr. Mason, of Olean, third, breaking 360 out of 400.

The following scores were made:

Ohio Trap.

Cincinnati Gun Club.

Aug. 13 was a hot, sultry day, the glass standing at over 90 in the shade on the Cincinnati Gun Club house veranda. The sun was partially obscured by light clouds and there was little wind. The light was poor.

Sixteen shooters entered in the cash prize event, Herman heading the list with 45. Medico, shooting from 20yds., accounted for 42, and Peters and Falk tied for third place on 41.

Williams did some good shooting making the only straight score of the day in a 15-target event, and shooting at doubles from 24yds., he broke 11 out of 6 pairs.

In the cup race, twenty-three entries. Gambell and Medico tied on 23 for high score: Medico (18) 18, 23; Williams (18) 22 19; Peters (19) 18, 16; Herman (16) 19.

Leonard Shepard, of Indianapolis, was at the grounds and took charge of things in the absence of Supt. Gambell, who did not get back from the Indian shoot at West Baden until 5 o'clock, owing to a freight wreck on the road, which delayed his train several hours. Mr. Shepard has resigned his position as Superintendent of the Indianapolis Gun Club, and is visiting friends in Glendale, O. Several miss-and-out events were shot.

Harold Money came back from West Baden with Gambell. He was not feeling well, as he had not fully recovered from effects of illness which he had in common with a number of other shooters, at the Indian shoot. Yet it did not take much banter to induce him to shoot a match with Williams at 25 targets, he to shoot with one hand behind his back and Williams to have use of both hands. Result: Money 19, Williams 15.

Maynard's poor showing was due to the fact that his gun got out of order.

Tuttle and Keplinger, officers of the Peters Cartridge Co., are stayers. They did some very good work and kept together closely, the latter leading at the close of the day by 1 target, 94 to 93.

Practice shooting was kept up by one squad of shooters until it became too dark to see the targets, and they didn't want to stop then.

Cash prize shoot, 50 targets: Herman (16yds.) 45, Medico (20) 42, Falk (17) 41, Peters (19) 41, Maynard (20) 39, Williams (18) 38, Pfeiffer (16) 37, Norris (16) 36, Holladay (16) 36; Don Minto (16) 35, Tuttle (16) 30, Smith (16) 34, Campbell (16) 31, Keplinger (16) 30, Meyers (16) 18, Andrews (16) 15.

Dayton Gun Club.

THE shoot at the grounds of the Dayton, O., Gun Club, on Aug. 5 was well attended. Seventeen members took part in the various events. There were five 25-target events, and in the first of these Diehl led with 24. He also made the longest run of the day, 30 straight. D. Tibbals made the next longest run, 28. Brady was high man with 94 out of 100; Diehl second with 91, and Tibbals third with 88. The shoot was kept up until approaching darkness forced the shooters to stop.

The attendance Aug. 6 was larger than on Friday, twenty-one shooters taking part. The first event of the afternoon was the heavy-weight championship match at 50 targets between Ed Rike, 340lbs., and Chas. Wyseng, 312lbs. Rike won this match with 49; Wyseng scored 42.

Following this was a five-man team shoot, 25 targets per man, in which Rike's team was victorious by a score of 91 to 88.

Then followed four 25-target events, shoot for the Gem City City medal, the day's sport winding up with a 25-target event, in which eleven members took part.

Rike broke 142 out of 150 shot at, 96 out of his first 100; 98 out of 100 in events 2, 3, 4 and the medal event. D. Tibbals made two straights and broke 96 out of 100. Z. A. Craig 92. Rolla O. Heikes is getting back to his old form once more, and scored 91.

The medal event had eleven entries, and was won by D. Tibbals with a straight score of 25. Z. A. Craig and E. Rike second with 24 each. R. O. Heikes third 23.

The club will hold a tournament on Aug. 23, shooting to begin at 9:30 A. M.

Other Shoots.

The weather on Aug. 10 was all that could be desired, and twelve men entered in the regular medal shoot of the Rohrer's Island Gun Club, of Dayton, O. Five members tied for first: H. Engle (32) 30, W. E. Kette (33) 27, Wm. Oldt (35) 27, C. F. Miller (26) 26, C. Hanauer (31) 26. The first shoot-off was at 10 targets, Engle having a handicap of one extra target to shoot at; Hanauer 2, Oldt 4, and Kette and Miller 0. Engle and Kette tied on 10 each, the others scoring 9 and dropping out. In the second shoot-off Engle and Kette each shot at 6 targets, the former winning with a score of 5 to 1. Of the other shooters H. Lockwood (26) and F. Oswald (32) were second with 24 each; Hanauer (26) 23, E. Stoecklein (35) 22, J. Holmes (30) 21, F. Chambers (35) 20, J. Schaerf (30) 19.

Eight members took part in the eleventh trophy shoot of the Hamilton, O., Gun Club, held on Aug. 11. The weather conditions were nice, and some good work was done. Parker was tied with E. D. C. for first on 45, and in the shoot-off the former won. Link and Stickels second with 42 each; Smith and Shumaker third with 41 each; Steinman fourth, 39; Wesley 32.

The last shoot in the series of twenty handicap events of the Greenville, O., Gun Club was held on Aug. 8, six members taking part. Eidsen, Westerfield and Baker tied for first on 25 or better, the former winning the shoot-off. Fouts was second with 24, McCaughey third with 20, each shooting at 30 targets; Kirby fourth with 19 out of 25. W. Kirby and H. A. McCaughey having tied for first in the series, shot off, and the race proved to be the closest and most interesting which has ever taken place on these grounds. McCaughey is entitled to praise for his fine display of nerve and skill, as he is comparatively a new hand at the game. During the contest Kirby made a run of 41, and McCaughey one of 31. The first shoot-off was at 10 targets, each shooter having a handicap of 3 extra targets to shoot at, if they found it necessary; but each broke 10 straight. The remaining ten shoot-offs were at 5 each, with a handicap of 1 extra target to shoot at in each event. Kirby won the shoot-off by 1 target, breaking 60 out of 61 shot at to McCaughey's 59 out of 65 shot at. Baker and Westerfield, who tied with Eidsen to-day, wanted another try for the medal; so he put it up, and Baker won. Then he put it up to please Westerfield; the latter won, and in his turn put it up, and Eidsen proved his superiority by winning it for the second time in one day, and absolutely refused to take any more chances before the next club shoot. First prize, Parker gun, W. Kirby; second, corduroy hunting coat and vest, H. A. McCaughey; third, leather gun case presented by Peters Arms and Sporting Goods Co., B. G. Eidsen; fourth, shell case, W. F. Baker; fifth, woolen shooting jacket, Marion Westerfield; sixth, Jersey shooting jacket, Ed. Fouts.

Not a breath of wind, thermometer registering 98, and targets thrown from magautrap, high and the right distance, were the conditions, on Aug. 12, under which record scores were made at the Dayton Gun Club's grounds. F. C. Dial, of Franklin, was the one who set the pace, and made a record for the new grounds of 98 out of 100. He missed his 36th and 39th targets, and made a straight run of 61. Lindemuth also shot in fine form, although he made a bad start, missing 3 out of the first 7. He then made a run of 74, missed his 82d, and finished second with 96. Pedro was third with 80, Jay T. fourth with 78, and Cord broke 67 out of 75 shot at. The trap pits are said to be the best in the country. Mr. Ryan, of Troy, is quoted as expressing this opinion, and he has certainly seen a lot of them, and ought to know.

BONASA.

WESTERN TRAP.

Litchfield Tournament.

ITCHFIELD, Ill.—On Aug. 9 the fourth tournament of the season of 1904 was held, and it seems strange that there was a slim attendance, as there is everything at Litchfield to make a tournament a success. It is very probable that the Indian shoot was mostly responsible for the falling off.

On the second day the regular programme was abandoned, and a 100-target race was the amusement. In this Cummings won with 95. Vietmeyer was high professional and Cummings high amateur. Ward Burton second and Snell and Stoner a tie.

Mr. Cummings seems to be honest in his opinion, and he states that this club has really the best-equipped shooting grounds in several states. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	Shot
Targets:	15	15	20	15	20	15	20	15	20	15	at. Broke.

In Other Places.

The Panama, Mo., Gun Club will hold a tournament at Rich Hill, Mo., Sept. 1. At same time the County Fair will be in session, and will offer an opportunity to bet your money on the bay horse after the shooting becomes monotonous.

When a programme comes into the office, and an inspection reveals that the secretary has printed therein "bluerock," "dickie birds," "blackbirds," "white flyers," "coast pigeons," etc., how well we may excuse the reporter for the daily and weekly papers when they refer to the sport as cruel, and as they print from the programme the word "bird" will naturally arouse the goody people when they note that at a shoot extending over four days the slaughter was 10,000 per day.

The Indiana League of Trapshooters will hold a tournament at Lafayette, Sept. 8 and 9. The well-known Joe Blistain is secretary.

A handicap shoot was pulled off at Midland, Tex., Aug. 8. A handsome loving cup was the prize, and the winner is very proud of same. Shooting from 21yds., at 100 targets, J. S. Day made 90 and won.

Rather a lengthy shoot will be held at Paducah, Ky., that is four days, Sept. 13, 14, 15 and 16. The first two days will be devoted to target shooting under the Paducah Club, while the last two will be under the rules of the Kentucky League of Trapshooters. The last day will see the championship of Kentucky disposed of, the shoot being that of live birds.

Shooting in Manitoba at the traps is quite a pastime. At the town of Portage La Prairie, Aug. 8, there was a shoot for a gold medal. A tournament will be held there about Aug. 20.

Programmes are being sent out, announcing a target shoot Aug. 16 and 17 at Wabash, Minn.

The Magic City Gun Club, Muncie, Ind., will hold a tournament sanctioned by the Trapshooters' League of Indiana.

O. H. Bailey, Secretary of the Dayton, O., Gun Club has sent out a programme for a shoot on Aug. 23. One half the events will be divided on the Jack rabbit system, and the other on the per cent. plant. Those who attend may expect a good time.

Randall, Ia., Gun Club will hold a tournament Aug. 24. John Peterson is secretary.

The fourth series of shoots was held on the Lemars, Ia., Gun Club grounds, Aug. 11.

At St. Joe, Tex., Aug. 8, there was a tournament at which W. E. Scott helped the boys have a good time. J. L. Bellah was high man with 183 out of 200. Scores: Crawford shot at 200, broke 171; Barton 200, 162; Cone 95, 62; Moch 200, 177; Bailey 165, 131; Scott 200, 150; Ballah 200, 132.

The Rainmakers, of Ottawa, Ill., Aug. 11, at their shooting park, which is equal to the best, held a little impromptu shoot, arranged for the day, and without any outsiders being the wiser, the shoot was pulled off. Those who participated were Victor Meyer and Leslie Standish. "Vict" won the high average for professionals. This club has many representative business men for members, and they are entertainers and whole-souled fellows.

Garfield Gun Club.

CHICAGO, Aug. 13.—The appended scores were made on our grounds to-day on the occasion of the second trophy of the third series. McKinnon, Eaton and Goetter tied for Class A trophy on 21, and McKinnon won in shoot-off. Keck and Ford tied for Class B on 20, and Keck won on shoot-off. Birkland, Sr., won Class C on 15.

Owing to a heavy rainstorm coming on and delaying the shooting for about two hours, the cup shoot was dispensed with. Attendance was good, thirty-one shooters participating in the events of the afternoon.

Trophy shoot, 25 targets:

Dr. J. W. MEEK, Sec'y.

Asheville Gun Club.

ASHEVILLE, N. C., Aug. 8.—Our first handicap for a cup presented by Mr. R. W. Bingham, brought out twenty-one of our members for the first time this season, and considering the small grounds upon which the committee had to work, the result shows how well the handicaps were arranged and how difficult the task, as both birds and distance were necessary to give each a showing. Some of them have never shot at the trap before, and some not for many years, until a few weeks ago. Mr. Lemcke and Capt. Guderger were guests. Scores inclosed herewith. Tie to be shot off on 10th:

	Yards.	Added.	Broke.	Total.
R W Bingham	20	0	37	37
J D Carrier	20	0	45	45
H F Adickes, Jr.	18	2	39	41
T C Cox	18	2	39	41
N S Lusk	18	2	43	45
G H Lambert	18	2	39	41

H B Lemcke	18	0	30	30
Capt Guderger	16	0	29	29

Aug. 11.—Inclosed scores made in the second handicap for the Bingham cup, which was landed without a fight by Dr. S. W. Battle, 14yds., 10 birds added.

The tie for the cup, Aug. 6, was won by J. D. Carrier, with 24 out of 25 from the 20yd. mark. The general shooting was better, although a puffy wind from behind caused the targets to duck completely out of the load very frequently, and before the finish it rained, so that for an hour we had nothing to do but bear the tales that were told, and "drown our sorrows."

Bingham cup scores, distance handicap, allowance, scores and totals follow:

	Yards.	Added.	25	25	Total.
R W Bingham	20	0	14	24	38
J D Carrier	21	0	15	27	42

Sixth Indian Tournament.

WEST BADEN SPRINGS, Ind., Aug. 12.—As the sun went down behind the lovely hills that surround the valley in which the great health resort is situated, so passed into history the annual "pow-wow" and tournament of the Indian tribe of the scatter gun. During the past four days, under cloudless skies, the "braves" have fought the good fight, while the squaws and papooses have looked on, each hoping that their own might achieve some mighty deed that would endear them still more to their hearts. In so far as the supremacy was concerned, while each one at times bid fair to go to the front as a "bluerock" destroyer, all fell by the wayside save that long-to-be remembered one, who in the end distanced them all, viz., Chief Kinnekenick. The second raters were bunched, save the "Much-talked" Chief, the wizard of Okoboji, who kept slightly in the lead until near the close, when another chief waylaid him and camped on his trail.

The coming together at this lovely spot was brought about through some arrangements between the Chiefs Much Talk, Long Talk and Bald Eagle, whereby the enterprising manager of the West Baden Hotel Co., Col. Lee St. Clair, offered inducements which caused his grounds to be selected for the 1904 meet.

Here were gathered for a week over fifty of the best amateur and professional shots of the country; and a lovely time they had. The hotel accommodations are the very best, and besides the healthful water, the opportunities for rest and enjoying a vacation could not be improved upon. The squaws and papooses here assembled could not have been better entertained at any other spot in this world of ours.

The whole week was one round of pleasure. The visiting ladies, not squaws, were well cared for by those of the squaws who were present. All the time, and especially the evenings, were one round of dances, card games and a season of enjoyment, socially, which will for all time remain the one bright lovely remembrance.

Those present were: Squaws—Mesdames Heikes, Head, Marshall, Eugene Mallory, J. F. Mallory, S. Mallory, Tripp, Riehl, Burmister, Voris and Johnstone. The papooses were Master Roy Mallory, Mamie Voris, Miss Maud Marshall, Ethel Mallory, Miss Ethel Rike. The visiting shooters' wives were: Mrs. G. T. Durham, Mrs. H. J. Anderson, Mrs. Joe Barton, Mrs. J. Craig, Mrs. Albert Tripp, Mrs. C. Manzy and Mrs. St. Clair Parry.

The invitation to this sixth annual tournament was "cheery" and inviting. It read thus: "The Indians hereby extend to all sportsmen a most cordial invitation to be present with wives and children. The squaws and papooses of the Indians will be there in a body in charge of the tepees, and will furnish entertainment to wives and children of visiting sportsmen."

What more could a shooter want? Excursion rates on all roads, finest hotel accommodations, together with all manner of entertainment that fancy could conjecture, not a minute of idle time. To the shooter the chance to play even was found in the further announcement that \$1,000 in cash and trophies would be added. This, then, was not to be a cold-blooded affair; not a shoot for cold cash; but more than that, a sociable gathering, where friend meets friend, all trying for personal pleasure, all on an equality; no professional, no amateur—all shooting from 16yds.; nobody barred.

Not a kick was registered; no occasion for same. Some needed some one to kick them now and then for poor scores made. Of course, the shells were all right, so were the guns. There was plenty of sulphur in the air at times, and it almost caught fire. Like when Gilbert lost four out of five right angles, Chief Long Talk lost a few slight angles also, but he dare not say a word—before the ladies.

Mr. Paul North was present with his son Kent and his brother Charles. They took charge of the two traps, and for the whole time attended faithfully and impartially to the refereeing and scoring. It was said that some of Paul's score cards looked very much like a Chinese puzzle when they went into the cashier's desk, yet when Fred Whitney paid off at night all were fully satisfied that the totals had been sent in correctly.

Interstate Association rules were used. Money divided per cent., viz., 40, 30, 20, 10 in 15-target events, and 30, 25, 20, 15 and 10 in 20-target events.

For the three days there was a steady grind of two 15 and a 20-target event, until 200 shots had been fired; then at the close of the third day the Mallory brothers' cup was up for disposal. This was to be shot for annually at 50 targets, with distance handicap, open to all participants in the annual tournament.

There were forty-eight entries, including the three Mallory brothers, who entered, but did not shoot. No extreme distances were given, only Crosby, and Gilbert, getting the 20yd., while eleven were on the 19 peg line. No 2 trap was used, which was the faster of the two. The first round of 25 developed some surprises, as only Heer and Parker went straight, and Money, Willard and Barto got 24. Some of the best shots made low scores.

Starting the second strong, there was much interest displayed, and Heer and Parker were the ones most closely matched, while Money was not to be overlooked. The sun was getting low, and the shadows cast by the western hills were not conducive to a uniform light. Yet some shot better, while the leaders fell away. Crosby, Gilbert and Klein improved, while Money fell off, for the first squad. Gilbert got 24 and tied with Money on 46; Klein on 47, but a single miss and made 47. Then it was a race on with but a single miss and beat it. Don't forget that these good ones all had shot for three days at 16yds. The second squad did not get on to the money. Yet Riehl developed a winning gait and broke 24 straight, losing his last target—same as the lot which befel Money in the first string. The third squad had the winner, and a second man. Though Willard, the Chicago giant, was on the back 19yd. mark, he duplicated his first score of 24, and as Heer lost 3, as did Parker when his turn came, he was returned the winner of the cup and first money. Heer had three escape him, though he was surely centering each one. Ed O'Brien and Rhodes improved, and with a 24 each, got into third money. Parker came on with the evening shades increasing, and though he smashed them hard right and left, a center, a left and a right angle were scored with a mark like unto a doughnut center, and he just missed a tie by one. There would undoubtedly have been a tie or a win in better light, as two of his last targets seemed hard lit.

As the shoot had run so late, the 16yd. men shot from the No. 1 trap, and several showed improvement, as Ballard with 25 reached the second money with 47, and Cook, Taylor and McKay

made straight scores, and Gambell, Voris, Kinney and John Burmister accounted for 24 each.

After the evening feast had been discussed, the annual dance and business meeting of the tribe took place. Several of the braves were fitted out with red Indian costumes, feathers and all the toggery, and they proceeded to give an Indian dance in the great rotunda of the hotel. Their yell and beating of the gong was the signal for all about the house to assemble and witness the dance, which was very interesting, as it was imitative. At the conclusion the whole tribe followed the High Chief into a spacious room, where the proceedings were open only to good Indians.

The proceedings were reported by the scribe as follows: "The officers reports were accepted without amendment, and all former officers were re-elected, viz.: Tom Marshall, High Chief; W. B. Crosby, Vice Chief; Frank C. Riehl, Chief Scribe; C. W. Budd, Chief of Wampum. Five new members were chosen into the tribe, and a limit of sixty-five was established for next year, this providing for a minimum of seven vacancies to be filled at the next annual meeting. The newly elected Indians were Hugh Clark, Wabash, Ind.; Geo. Roll, Blue Island, Ill.; Lem Willard, South Chicago; J. D. L. Morrison, Minneapolis; Ed Brady, Newbern, Tenn. Some steps were taken with a view of looking to a broader scope of fraternal feeling, and work within the tribe and the proper committees were named to formulate plans. The thanks of the tribe were voted to the press, and West Baden Hotel Co., as well as the North family, for the many courtesies extended; to Mallory brothers and to Mrs. Johnstone for the splendid prizes that they donated, and to officers and committee for services rendered in successfully conducting the work."

The last day was a repetition of the first as to weather. There was some excitement as to how the averages would result, and it was almost a dead heat between Gilbert, Money and Heer for the second place. Money made a great run of 128 straight, and with a loss of but 6, made high score for the day, as the only "T. Bill" lost 7. Heer, being somewhat handicapped with a sore finger and his gun not fitting him, lost 11, the same number he missed on the first two days. Gilbert went him one better, and thus did the champions finish. Ed O'Brien and George Roll did a little stunt of 95 per cent.

When the smoke of the great battle had cleared away, as 10,000 bluerocks had "bit the dust" each day, the roll was made out and the cup shooting started. Whether by chance or by selection, I did not note, at the time, but when Crosby, Gilbert, Riehl and Hirschy got on the team, there was "something doing." They started out to give an exhibition, and they did. On the 24th round, Hirschy alone missed one little saucer, and the score board registered 124 out of 125. Passing to the next, there was a determination to repeat if possible. The pressure was intense, and only Gilbert and Crosby stood the test, while Hirschy made 49, Powers 49, Riehl 48, and missed his last to do that.

Then came the shoot-off between Crosby and Gilbert; and all eyes were on them. The first 25 all were shattered; then another round was tried, and here Gilbert fell down, and Crosby went straight. A grand score of 100 for Crosby and 99 for Gilbert.

In the 80 per cent. class Wm. Clayton made 49 and won out.

In the 70 per cent. class Thorpe, of Nebraska, made 43 and won. The Indians present, with their titles, were: Fred Gilbert, Chief Long Talk; C. W. Budd, Chief Dago; Fred Gilbert, Chief Heap Talk; C. M. Powers, Chief Wipe Stick; R. O. Heikes, Chief Bald Eagle; Harvey McMurchy, Chief High Ball; E. H. Tripp, Chief Ride in Wagon; W. R. Crosby, Chief Kinnekenick; F. C. Riehl, Chief Piazza; Guy Burnside, Chief Spoon River; S. S. Johnson, Chief All Aboard; H. C. Hirschy, Chief Little Hatchet; Ed Voris, Chief Ben Hur; A. R. S. Rhodes, Chief Pipe Stone; Chris Gottlieb, Chief Slob; J. L. Head, Chief High Temper; C. A. Young, Chief Sparrow; Frank Harrison, Chief Battle Ax; Harold Money, Chief Wampum; Russell Klein, Chief Toboggan; W. H. Heer, Chief Drinkwater; F. C. Whitney, Chief Quick Figure; John Burmister, Chief Back to the Woods; E. D. Rike, Chief Sleepy Eye; E. B. Coe, Chief Decoy; F. E. Mallory, Chief Tell 'em How; S. T. Mallory, Chief Life Saver; J. F. Mallory, Chief Hole Digger; C. B. Adams, Chief Three Scalps. Scores:

Shoot-off of tie for 90 per cent. cup, at 50 targets: Rhodes 47, Clark 31, Powers 49, Hirschy 48, Riehl 49, Gilbert 50, Heikes 46, Brady 49, Crosby 50, Heer 46, Young 49, Klein 42, Boa 46, Ballard 45, Parker 49, Roll 48, Willard 49.

Eighty per cent. class: Head 47, Marshall 46, O'Brien 47, Clayton 49, Taylor 48, Budd 48, Voris 42, Coe 42, Barto 42, Johnstone 46, Crisman 44, F. E. Mallory 42, J. F. Mallory 48, Tripp 47, Rike 48, Adams 41, McKay 46, Verbar 42, Kinney 42, Apple 39.

Seventy per cent. class: Mrs. Johnstone 33, S. T. Mallory 28, John Burmister 42, Thorpe 43.

St. Paul Rod and Gun Club.

ST. PAUL, Minn.—The regular club shoot, held Aug. 6, had good weather conditions. The scores follow: Arthur shot at 100, broke 87; Allgauer 100, 83; Schulstad 115, 90; Breen 85, 62; Mac 85, 56; Low 85, 75; Beals 65, 40; Bentz 55, 50; Lindgren 90, 59; Betz 100, 78; Pleiss 80, 67; Trux 100, 85; Bazille 100, 73; Robertson 70, 36; Bakeman 55, 50; Shilbach 70, 24; Fish 85, 58; Ferguson 180, 103; George 40, 34; Henton 45, 17.

On Aug. 7, the scores were as follows: Perry, 100, 82; Bush 100, 78; Bakeman 95, 89; Jackson 75, 48; Smith 50, 34; Daly 25, 18; Loucks 50, 31; Novotny 75, 60; Huber 50, 40; Kohn 65, 52; Dries 80, 60; Hedlund 20, 15.

Bakeman won the Holmes trophy, breaking 25 straight, in shoot-off with Bush and Novotny.

English Proof Tests.

UNDER the system which prevails in the English Proof Houses there are, generally speaking, two proof tests and proof marks, namely: the provisional proof for barrels, "liable in any subsequent stage of manufacture to be reduced in strength," and the definitive proof for barrels not liable to such reduction. The gun trade consists of three interdependent parts; gun barrel makers comprising (1) the manufacturers of gun barrels from the raw materials into the "tube" state, which are provisionally proved and sold to the other two sections of the trade; (2) breechloading action makers, whose work consists of fitting the breech and lock mechanism to the barrels and preparing the gun for stocking and completion, including preparation for definitive proof; the joining of the barrels and various other processes may be included in the work of either of these sections as may be required by circumstances; (3) gun makers who undertake the manufacture of the whole gun from the raw materials, provisionally proved or breechloading action supplied to them, generally in the definitively proved state.

The English proof marks came to be regarded as official indications of British origin; but unfortunately it is the practice of the English proof houses to proof mark imported barrels, actions, and firearms in precisely the same manner as those of British make, and importers and foreign manufacturers took advantage of these facts to make use of English proof houses for proving foreign barrels and foreign revolvers; and this has now developed to such an extent that Continental manufacturers send barrels to this country for provisional proof, the barrels being returned to them to have the breech actions fitted, and after that has been done, they are sent here for definitive proof, and again returned to be made up into complete arms to be exported to the United Kingdom, the Colonies or elsewhere to dealers, who are able by means of the English proof marks to sell them as, and in competition with, British made arms. The gun trade say that the guardians of the proof houses are empowered to alter the system under the approval of the Secretary of State for War, but "there has grown into the management an element more or less interested in importing rather than manufacturing, and this element is now in a majority on the board." The objects of the barrel makers and operatives is not to interfere with the sale of foreign barrels and firearms, but to prevent English proof marks from being exploited by importers and foreign manufacturers for the purpose of obtaining our trade; and they respectfully appeal to the members of both Houses of Parliament generally, and to the Board of Trade in particular, to support them. Two and a half years have elapsed since the attention of the Board of Trade was directed to this subject, and during that time the board has been requested upon many occasions to take the necessary steps to provide a remedy.—Shooting Times.

Audubon Gun Club.

BUFFALO, N. Y.—A semi-monthly shoot for August, held by the Audubon Gun Club, on Aug. 6, resulted in a tie for the badge between C. S. Burkhardt and Henry Burgwardt for Class A. In the shoot-off, C. S. Burkhardt won with 22.

Class B was won by C. T. Bargar with 24. Class C was won by Manson Fiske with 21. The scores:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	25	10	15	10	15	10
Dr. W. C. Woolton	7	10	19	7	9	7	13	9

Chicago Trapshooters' Association.

CHICAGO, Aug. 7.—The Chicago Trapshooters' Association tournament, held at Watson's Park, Burnside, Aug. 7, was lightly attended. The shoot began at 1 P. M., and was short. Eight events of 15 targets each, was the programme.

Owing to some of the surrounding clubs having special events on, the attendance was smaller than any similar event held at these grounds this year, and some of the regulars having gone to attend the Indian shoot, the crowd was no larger than could be expected.

The wind blew almost a gale all afternoon, first blowing from the west and then shifting to the northeast, it made conditions as difficult as possible to make good scores.

First average was won by Winesberg, Shogren getting second average, and A. E. Rupel third. Rupel, not having shot for some time, was not in his old-time form.

Another shoot like this will be held again in a few weeks, as a short programme seems to be popular with many of the shooters.

Events:	1	2	3	4	5	6	7	8	Shot

THE WONDERFUL ORLOFF HANS.

THE silly season, by more or less common or uncommon consent, is loosely conceded to have its proper time and place in the uneasy days of midsummer. Then is the fortuitous juncture of insectivorous nights, sweltering temperatures, and perfervid thirst, which seem to vivify and bewray the harmless mental idiosyncrasies of a large part of mankind. Then is the season when the marvelous and the sensational are cherished. Then the peripatetic canards, the fatherless marvels of fakeland, the fancies opposed to facts, effects without causes, have their rampant innings. In the silly season, marvels exist without antecedents. The mind then of that standard of measurement, "the average person," seems to become more buoyant, more expansive, more receptive, more credulous, so that after all the silly season may denote a change of supply and demand in new channels.

The silly season may be considered as well begun with the advent of the sea serpent from the vague and shadowy places of the submarine depths; and following close, with the quickened step and jostling of a circus procession, follows the silly season parade in endless and brilliant variety.

The present silly season may be said to eclipse its predecessors. It has been better sustained, and the climaxes are strong in force and pertinency. The most recent contributions bear the hallmark of originality and facial imperturbability. Our staid and steady contemporary, the Brooklyn Eagle, in its issue of August 22, gravely recounts that the editor of the Cazenovia Republican states that there is a canine suburban resident of his town—meaning thereby a dog fancier—who owns a beautiful and intelligent dog. In some inexplicable way the owner sallied forth without the dog. When the dog missed him, he hastily scurried from place to place in the town, which, according to his best judgment, his master was likely to frequent on a hot day. The story naïvely continues thus: "In the meantime, the gentleman had reached home, and, missing the dog, telephoned back to the house where the dog was patiently awaiting him. On being informed that the dog was there, he requested that the receiver be placed to the dog's ear." The owner thereupon whistled, and the dog forthwith hurried to his home in the suburbs in response to his master's whistle.

But as an exhibition of canine intelligence, this is completely eclipsed by the equine intelligence exhibited by Hans, a German horse of Berlin, whose marvelous intellect has won him many scare heads in the daily press. Hans, as to proper designation, is an Orloff stallion. He is alleged (by cablegram specials) to be "the cause of amazement among scientific men and psychologists." The distinction between a scientific man and a psychologist is not quite clear, but presumably the distinction is a nice one. Hans, the Orloff stallion, is credited with a knowledge of music and arithmetic, a knowledge of rhetoric, an ability to distinguish twelve colors, and "to restore harmony in musical discord." Among those who have surveyed the equine prodigy and tested his mentality, the accounts state there were Dr. Studt, the Prussian Minister of Education; Prof. Georg Schweinfurth, the famous African traveler; Prof. Karl Stumpf, of the Berlin University; Herr Schillings, the naturalist, and Ludwig Heck, Director of the Berlin Zoological Garden. The stupefied Studt, by the way, says Herr von Osten would have been burned as a wizard in the earlier ages of the world. This is what Hans does:

"The horse communicates by a system of hoof-beats, representing the alphabet. Besides adding, subtracting, multiplying, and dividing sums, he does examples involving several of these operations, finds square numbers, and not only simply repeats what is taught, but solves fresh problems put to him by examiners in the absence of his master, showing a grasp of the principles of arithmetic.

"The stallion also forms little sentences, remembers them next day, and discriminates twelve colors and shades, giving their corresponding names. Moreover, he distinguishes musical tones, indicating where they are situated on the chromatic scale, and picks out discords, designating which tone to omit in order to restore harmony.

"When the exercises are prolonged, the horse becomes nervous and inattentive, and mistakes become more frequent."

It is not to be inferred that when a horse, which is not

an Orloff stallion, paws the earth, he is performing stunts in the higher calculus. And yet what Orloff Hans has done, is doing, or may do, is no more than what many horses and dogs have done in like manner; that is to say, in obedience to the commands of their masters. They perform certain acts in response to certain commands without any conception of a significance beyond the simple act itself.

But all these fakes are essential to the silly season's success.

GETTING IT ALL.

IN the homely colloquialism of the day, one who receives full measure of good or ill is said to "get all that is coming to him." If some of us do not get our share of the good things, it may be that we do not take the simple steps which would insure their "coming to us." We overlook the enjoyment of our privileges near to hand because our eyes are set, perhaps enviously, on the good fortune of other people whose opportunities are greater. Many of us may not go to Canada for salmon or moose, nor to the Rockies for elk or bear; nor sail our big yachts. But there is yet abundant recreation of a quiet sort, perfectly practicable of our enjoyment if only we will make the most of it, and "get all that is coming to us." How one person does it is told in the paper on another page on "Camping Out." The reading of it ought to be an incitement to a whole navy of small river craft, a whole army of dwellers in tents on the banks of home rivers and the shores of near-by bays. The simple story of quiet vacations by "One of the Joneses" deserves to be put into tract form and distributed broadcast over the land, bearing its message of sane and profitable vacation making. Such outings, whether on the water, amid the hills, or just in the woods, are needed breaks in the routine of the year; and even though they may be devoid of exciting episodes, have their abiding influence on body, brain, and spirit.

PRESIDENT ROOSEVELT AND THE PARK.

THERE is much to be learned from the admirable article by President Roosevelt which we print this week. The paper is from "American Big Game in Its Haunts," the recently issued and fourth volume of the Book of the Boone and Crockett Club. The concluding part will follow in our next issue.

The President's account of what he saw in the Yellowstone Park in April, 1903, and in the other Wilderness Reserves visited a little later, is extremely interesting, and is told with that charming freshness that always characterizes his writings on outdoor topics; but there is more in it than merely the charm of a delightful story of outdoor life among the wild creatures. Many descriptions of the natural conditions and of the wild life existing in the Yellowstone National Park have been written before, but such an account written by the Chief Magistrate of the Nation will be more widely read and will carry far more weight than one by a less conspicuous personage. It is surely well that we should have the testimony of so eminent an observer as to the conditions in the Park. These conditions have been brought about by absolute protection of the wild life in the Park for the last ten years. This absolute protection followed the enactment of an efficient law for the government of the reservation, and the detailing of wise and efficient officers of the Army as superintendents of the Park. In the last analysis it is to Congress that we must look for game protection over much of the still sparsely populated West, and though Congress is often slow to act—as in the case of the Yellowstone National Park it did not act until the Park herd of buffalo had been exterminated by poachers—it did move at last, and Mr. Roosevelt tells us of the results of this action.

If the benefits of complete protection in the Yellowstone Park have been such as they are, similar absolute protection in other sections of the western mountains would be followed by similar results. If Congress should enact a law authorizing the establishment of game refuges in forest reserves, as we have so often urged, we might in a few years have a number of tracts of country where wild game would be as abundant and as tame as Mr. Roosevelt found it in the Yellowstone Park. Of one thing, however, we may be sure: that is that until Congress understands that there is some general demand for

the establishment of game refuges, it will be slow to act in the matter.

It is time that all persons interested in the preservation of the natural things of this country should take an active interest in this matter. In the preface of the volume from which this article is taken, it is well said: "The Park is an object lesson showing very clearly what complete game protection will do to perpetuate species, and Mr. Roosevelt's account of what may be seen there is so convincing that all who read it and appreciate the importance of preserving our large mammals, must become advocates of the forest reserve game refuge system."

CAMP-FIRE RULES.

THE camper should everywhere exercise the same extreme caution about camp-fires he would employ if he were building the fire in his own woods or his own fields. The more experienced the camper, the more careful he is. Only the foolish tyro makes light of caution here.

These rules, which we have printed before, are repeated as an injunction anew on a subject which should have repeated attention as the camping season rolls around. The observance of these rules will prevent disaster from camp-fires. They are extremely simple and easy of observance, though often disregarded.

Never build a fire where its flame can communicate to grass or bush or branches of trees.

Never build a fire where the sparks can be carried to brush or trees, or leaves or grass.

Never build a fire without first noting the lay of the land with respect to controlling it after it is kindled.

Never leave camp for the day with the fire to burn unattended. Extinguish it thoroughly.

Under no circumstances, when moving camp, leave the fire to burn or smoulder. Put it out.

To extinguish a fire built upon the ground where there is turf, the roots of trees or other vegetable matter in the soil, pour water upon it until the ground is thoroughly soaked; then dig around about and well outside the circumference, throwing the earth in toward the center, and then wet it down again.

SENATOR PATTERSON, of Colorado, has been to see the Southern Utes, to discuss the purchase by the Government of the Mesa Verde cliff-dwellers' ruins, which are on their reservation. He reports that the Indians refuse to negotiate. Having been cheated, swindled, buncoed, and robbed by his white brother for several centuries, the red man has at last become shy of land deals. The Utes absolutely refuse to treat with the Government for a surrender of the cliff dwellings. They give as a reason that the Government has not kept its word nor fulfilled its promises made at the time of the last treaties, and until these promises are made good the tribe will enter into no new negotiations for parting with any of their land. It is humiliating for a nation of light and leading to be talked to in this blunt way by a lot of savages, but the cold facts of history, remote and recent, show the wisdom of the Utes in their hesitation to enter into new treaties with a people which does not regard its obligations. For the sake of fair play; not less than that the interesting Mesa Verde ruins may come into our care and keeping as a national park, the Government should carry out the promises it has made to these Indians, and by fair and honest treating with them, create the confidence essential to their willingness to make the deal for the cliff ruins.

A MAN was scared by a snake, which another man killed. The snake was perfectly harmless, and could not have hurt the man; but because the man happened to be an artist at the Parker home, the circumstance became an event and was wired over the country. The snake was very likely a garter, but it went over the wires in special dispatches as a "big adder," from whose fangs the artist was saved only by the rare presence of mind and prompt action of the bystanders. The press dispatch always paints the adder in vivid colors as an alarming creature. This is because the average reporter gets his notion of the snake from his assiduous study of the Scriptures, wherein of wine it is said that it "at last stingeth like an adder," and of evil and violent men that "adder's poison is under their lips. If our contemporaries would study the Psalms and the Proverbs less and some simple natural history more, we should not so often read of the deadly adder.

THE SPORTSMAN TOURIST

Wilderness Reserves.*

BY THEODORE ROOSEVELT.

THE practical common sense of the American people has been in no way made more evident during the last few years than by the creation and use of a series of large land reserves—situated for the most part on the great plains and among the mountains of the West—intended to keep the forests from destruction, and therefore to conserve the water supply. These reserves are created purely for economic purposes. The semi-arid regions can only support a reasonable population under conditions of the strictest economy and wisdom in the use of the water supply, and in addition to their other economic uses the forests are indispensably necessary for the preservation of the water supply and for rendering possible its useful distribution throughout the proper seasons. In addition, however, to the economic use of the wilderness by preserving it for such purposes where it is unsuited for agricultural uses, it is wise here and there to keep selected portions of it—of course only those portions unfit for settlement—in a state of nature, not merely for the sake of preserving the forests and the water, but for the sake of preserving all its beauties and wonders unspoiled by greedy and shortsighted vandalism. These beauties and wonders include animate as well as inanimate objects.

The wild creatures of the wilderness add to it by their presence a charm which it can acquire in no other way. On every ground it is well for our nation to preserve, not only for the sake of this generation, but above all for the sake of those who come after us, representatives of the stately and beautiful haunts of the wilds which were once found throughout our great forests, over the vast lonely plains, and on the high mountain ranges, but which are now on the point of vanishing save where they are protected in natural breeding grounds and nurseries. The work of preservation must be carried on in such a way as to make it evident that we are working in the interest of the people as a whole, not in the interest of any particular class; and that the people benefited beyond all others are those who dwell nearest to the regions in which the reserves are placed. The movement for the preservation by the nation of sections of the wilderness as national playgrounds is essentially a democratic movement in the interest of all our people.

On April 8, 1903, John Burroughs and I reached the Yellowstone Park, and were met by Major John Pitcher of the Regular Army, the Superintendent of the Park. The Major and I forthwith took horses; he telling me that he could show me a good deal of game while riding up to his house at the Mammoth Hot Springs. Hardly had we left the little town of Gardiner and gotten within the limits of the Park before we saw prong-buck. There was a band of at least a hundred feeding some distance from the road. We rode leisurely toward them. They were tame compared to their kindred in unprotected places; that is, it was easy to ride within fair rifle range of them; but they were not familiar in the sense that we afterwards found the bighorn and the deer to be familiar. During the two hours following my entry into the Park we rode around the plains and lower slopes of the foothills in the neighborhood of the mouth of the Gardiner, and we saw several hundred—probably a thousand all told—of these antelope. Major Pitcher informed me that all the pronghorns in the Park wintered in this neighborhood. Toward the end of April or the first of May they migrate back to their summering homes in the open valleys along the Yellowstone and in the plains south of the Golden Gate. While migrating they go over the mountains and through forests if occasion demands. Although there are plenty of coyotes in the Park, there are no big wolves, and save for very infrequent poachers the only enemy of the antelope, as indeed the only enemy of all the game, is the cougar.

Cougars, known in the Park as elsewhere through the West as "mountain lions," are plentiful, having increased in numbers of recent years. Except in the neighborhood of the Gardiner River, that is within a few miles of Mammoth Hot Springs, I found them feeding on elk, which in the Park far outnumber all other game put together, being so numerous that the ravages of the cougars are of no real damage to the herds. But in the neighborhood of the Mammoth Hot Springs the cougars are noxious because of the antelope, mountain sheep and deer which they kill; and the Superintendent has imported some hounds with which to hunt them. These hounds are managed by Buffalo Jones, a famous old plainsman, who is now in the Park taking care of the buffalo. On this first day of my visit to the Park, I came across the carcasses of a deer and of an antelope which the cougars had killed. On the great plains cougars rarely get antelope, but here the country is broken so that the big cats can make their stalks under favorable circumstances. To deer and mountain sheep the cougar is a most dangerous enemy—much more so than the wolf.

The antelope we saw were usually in bands of from twenty to one hundred and fifty, and they traveled strung out almost in single file, though those in the rear would sometimes bunch up. I did not try to stalk them, but got as near them as I could on horseback. The

closest approach I was able to make was to within about eighty yards of two which were by themselves—I think a doe and a last year's fawn. As I was riding up to them, although they looked suspiciously at me, one actually lay down. When I was passing them at about eighty yards distance, the big one became nervous, gave a sudden jump, and away the two went at full speed.

Why the prong-bucks were so comparatively shy I do not know, for right on the ground with them we came upon deer, and, in the immediate neighborhood, mountain sheep, which were absurdly tame. The mountain sheep were nineteen in number, for the most part does and yearlings with a couple of three-year-old rams, but not a single big fellow—for the big fellows at this season are off by themselves, singly or in little bunches, high up in the mountains. The band I saw was tame to a degree matched by but few domestic animals.

They were feeding on the brink of a steep wash-out at the upper edge of one of the benches on the mountain side just below where the abrupt slope began. They were alongside a little gully with sheer walls. I rode my horse to within forty yards of them, one of them occasionally looking up and at once continuing to feed. Then they moved slowly off and leisurely crossed the gully to the other side. I dismounted, walked around the head of the gully, and moving cautiously, but in plain sight, came closer and closer until I was within twenty yards, where I sat down on a stone and spent certainly twenty minutes looking at them. They paid hardly any attention whatever to my presence—certainly no more than well-treated domestic creatures would pay. One of the rams rose on his hind legs, leaning his fore-hoofs against a little pine tree, and browsed the ends of the budding branches. The others grazed on the short grass and herbage or lay down and rested—two of the yearlings sometimes playfully butting at one another. Now and then one would glance in my direction without the slightest sign of fear—barely even of curiosity. I have no question whatever but that with a little patience this particular band could be made to feed out of a man's hand. Major Pitcher intends during the coming winter to feed them alfalfa—for game animals of several kinds have become so plentiful in the neighborhood of the Hot Springs, and the Major has grown so interested in them, that he wishes to do something toward feeding them during the severe winter. After I had looked at the sheep to my heart's content, I walked back to my horse, my departure arousing as little interest as my advent.

Soon after leaving them, we began to come across black-tail deer, singly, in twos and threes, and in small bunches of a dozen or so. They were almost as tame as the mountain sheep, but not quite. That is, they always looked alertly at me, and though if I stayed still they would graze, they kept a watch over my movements, and usually moved slowly off when I got within less than forty yards of them. Up to that distance, whether on foot or on horseback, they paid but little heed to me, and on several occasions they allowed me to come much closer. Like the bighorn, the black-tails at this time were grazing, not browsing, but I occasionally saw them nibble some willow buds. During the winter they had been browsing. As we got close to the Hot Springs we came across several white-tail in an open, marshy meadow. They were not quite as tame as the black-tail, although without any difficulty I walked up to within fifty yards of them. Handsome though the black-tail is, the white-tail is the most beautiful of all deer when in motion, because of the springy, bounding grace of its trot and canter, and the way it carries its head and white flag aloft.

Before reaching the Mammoth Hot Springs we also saw a number of ducks in the little pools and on the Gardiner. Some of them were rather shy. Others—probably those which, as Major Pitcher informed me, had spent the winter there—were as tame as barnyard fowls.

Just before reaching the post, the Major took me into the big field where Buffalo Jones had some Texas and Flat Head Lake buffalo—bulls and cows—which he was tending with solicitous care. The original stock of buffalo in the Park have now been reduced to fifteen or twenty individuals, and the intention is to try to mix them with the score of buffalo which have been purchased out of the Flat Head Lake and Texas Panhandle herds. The buffalo were put within a wire fence, which, when it was built, was found to have included both black-tail and white-tail deer. A bull elk was also put in with them at one time—he having met with some accident which made the Major and Buffalo Jones bring him in to doctor him. When he recovered his health he became very cross. Not only would he attack men, but also buffalo, even the old and surly master bull, thumping them savagely with his antlers if they did anything to which he objected.

When I reached the post and dismounted at the Major's house, I supposed my experiences with wild beasts for the day were ended; but this was an error. The quarters of the officers and men and the various hotel buildings, stables, residences of the civilian officials, etc., almost completely surround the big parade ground at the post, near the middle of which stands the flag-pole, while the gun used for morning and evening salutes is well off to one side. There are large gaps between some of the buildings, and Major Pitcher informed me that throughout the winter he had been leaving

alfalfa on the parade ground, and that numbers of black-tail deer had been in the habit of visiting it every day, sometimes as many as seventy being on the parade ground at once. As springtime came on the numbers diminished. However, in mid-afternoon, while I was writing in my room in Major Pitcher's house, on looking out of the window I saw five deer on the parade ground. They were as tame as so many Alderney cows, and when I walked out I got up to within twenty yards of them without any difficulty. It was most amusing to see them as the time approached for the sunset gun to be fired. The notes of the trumpeter attracted their attention at once. They all looked at him eagerly. One then resumed feeding, and paid no attention whatever either to the bugle, the gun or the flag. The other four, however, watched the preparations for firing the gun with an intent gaze, and at the sound of the report gave two or three jumps; then instantly wheeling, looked up at the flag as it came down. This they seemed to regard as something rather more suspicious than the gun, and they remained very much on the alert until the ceremony was over. Once it was finished, they resumed feeding; as if nothing had happened. Before it was dark they trotted away from the parade ground back to the mountains.

The next day we rode off to the Yellowstone River, camping some miles below Cottonwood Creek. It was a very pleasant camp. Major Pitcher, an old friend, had a first-class pack train, so that we were as comfortable as possible, and on such a trip there could be no pleasanter or more interesting companion than John Burroughs—"Oom John," as we soon grew to call him. Where our tents were pitched the bottom of the valley was narrow, the mountains rising steep and cliff-broken on either side. There were quite a number of black-tail in the valley, which were tame and unsuspicious, although not nearly as much so as those in the immediate neighborhood of the Mammoth Hot Springs. One mid-afternoon three of them swam across the river a hundred yards above our camp. But the characteristic animals of the region were the elk—the wapiti. They were certainly more numerous than when I was last through the Park twelve years before.

In the summer the elk spread all over the interior of the Park. As winter approaches they divide, some going north and others south. The southern bands, which, at a guess, may possibly include ten thousand individuals, winter out of the Park, for the most part in Jackson's Hole—though of course here and there within the limits of the Park a few elk may spend both winter and summer in an unusually favorable location. It was the members of the northern band that I met. During the winter time they are very stationary, each band staying within a very few miles of the same place, and from their size and the open nature of their habitat it is almost as easy to count them as if they were cattle. From a spur of Bison Peak one day, Major Pitcher, the guide Elwood Hofer, John Burroughs and I spent about four hours with the glasses counting and estimating the different herds within sight. After most careful work and cautious reduction of estimates in each case to the minimum the truth would permit, we reckoned three thousand head of elk, all lying or feeding, and all in sight at the same time. An estimate of some fifteen thousand for the number of elk in these northern bands cannot be far wrong. These bands do not go out of the Park at all, but winter just within its northern boundary. At the time when we saw them, the snow had vanished from the bottom of the valleys and the lower slopes of the mountains, but grew into continuous sheets further up their sides. The elk were for the most part found up on the snow slopes, occasionally singly or in small gangs—more often in bands of from fifty to a couple of hundred. The larger bulls were highest up the mountains and generally in small troops by themselves, although occasionally one or two would be found associating with a big herd of cows, yearlings, and two-year-olds. Many of the bulls had shed their antlers; many had not. During the winter the elk had evidently done much browsing, but at this time they were grazing almost exclusively, and seemed by preference to seek out the patches of old grass which were last left bare by the retreating snow. The bands moved about very little, and if one were seen one day it was generally possible to find it within a few hundred yards of the same spot the next day, and certainly not more than a mile or two off. There were severe frosts at night, and occasionally light flurries of snow; but the hardy beasts evidently cared nothing for any but heavy storms, and seemed to prefer to lie in the snow rather than upon the open ground. They fed at irregular hours throughout the day, just like cattle; one band might be lying down while another was feeding. While traveling they usually went almost in single file. Evidently the winter had weakened them, and they were not in condition for running; for on the one or two occasions when I wanted to see them close up I ran right into them on horseback, both on level plains and going up hill along the sides of rather steep mountains. One band in particular I practically rounded up for John Burroughs—finally getting them to stand in a huddle while he and I sat on our horses less than fifty yards off. After they had run a little distance they opened their mouths wide and showed evident signs of distress.

We came across a good many carcasses. Two, a bull

*This is one of the chapters in the new volume of the Boone and Crockett Club Book, "American Big Game in its Haunts."

and a cow, had died from scab. Over half the remainder had evidently perished from cold or starvation. The others, including a bull, three cows and a score of yearlings, had been killed by cougars. In the Park the cougar is at present their only animal foe. The cougars were preying on nothing but elk in the Yellowstone Valley, and kept hanging about the neighborhood of the big bands. Evidently they usually selected some outlying yearling, stalked it as it lay or as it fed, and seized it by the head and throat. The bull which they killed was in a little open valley by himself, many miles from any other elk. The cougar which killed it, judging from its tracks, was a very large male. As the elk were evidently rather too numerous for the feed, I do not think the cougars were doing any damage.

Coyotes are plentiful, but the elk evidently have no dread of them. One day I crawled up to within fifty yards of a band of elk lying down. A coyote was walking about among them, and beyond an occasional look they paid no heed to him. He did not venture to go within fifteen or twenty paces of any one of them. In fact, except the cougar, I saw but one living thing attempt to molest the elk. This was a golden eagle. We saw several of these great birds. On one occasion we had ridden out to the foot of a great sloping mountain side, dotted over with bands and strings of elk amounting in the aggregate probably to a thousand head. Most of the bands were above the snow line—some appearing away back toward the ridge crests, and looking as small as mice. There was one band well below the snow line, and toward this we rode. While the elk were not shy or wary, in the sense that a hunter would use the words, they were by no means as familiar as the deer; and this particular band of elk, some twenty or thirty in all, watched us with interest as we approached. When we were still half a mile off they suddenly started to run toward us, evidently frightened by something. They ran quartering, and when about four hundred yards away we saw that an eagle was after them. Soon it swooped, and a yearling in the rear, weakly, and probably frightened by the swoop, turned a complete somersault, and when it recovered its feet, stood still. The great bird followed the rest of the band across a little ridge, beyond which they disappeared. Then it returned, soaring high in the heavens, and after two or three wide circles, swooped down at the solitary yearling, its legs hanging down. We halted at two hundred yards to see the end. But the eagle could not quite make up its mind to attack. Twice it hovered within a foot or two of the yearling's head—again flew off and again returned. Finally the yearling trotted off after the rest of the band, and the eagle returned to the upper air. Later we found the carcass of a yearling, with two eagles, not to mention ravens and magpies, feeding on it; but I could not tell whether they had themselves killed the yearling or not.

Here and there in the region where the elk were abundant we came upon horses which for some reason had been left out through the winter. They were much wilder than the elk. Evidently the Yellowstone Park is a natural nursery and breeding ground of the elk, which here, as said above, far outnumber all the other game put together. In the winter, if they cannot get to open water, they eat snow; but in several places where there had been springs which kept open all winter, we could see by the tracks they had been regularly used by bands of elk. The men working at the new road along the face of the cliffs beside the Yellowstone River near Tower Falls informed me that in October enormous droves of elk coming from the interior of the Park and traveling northward to the lower lands had crossed the Yellowstone just above Tower Falls. Judging by their description the elk had crossed by thousands in an uninterrupted stream, the passage taking many hours. In fact nowadays these Yellowstone elk are, with the exception of the Arctic caribou, the only American game which at times travel in immense droves like the buffalo of the old days.

A couple of days after leaving Cottonwood Creek—where we had spent several days—we camped at the Yellowstone Cañon below Tower Falls. Here we saw a second band of mountain sheep, numbering only eight—none of them old rams. We were camped on the west side of the cañon; the sheep had their abode on the opposite side, where they had spent the winter. It has recently been customary among some authorities, especially the English hunters and naturalists who have written of the Asiatic sheep, to speak as if sheep were naturally creatures of the plains rather than mountain climbers. I know nothing of old world sheep, but the Rocky Mountain bighorn is to the full as characteristic a mountain animal, in every sense of the word, as the chamois, and, I think, as the ibex. These sheep were well known to the road builders, who had spent the winter in the locality. They told me they never went back on the plains, but throughout the winter had spent their days and nights on the top of the cliff and along its face. This cliff was an alternation of sheer precipices and very steep inclines. When coated with ice it would be difficult to imagine an uglier bit of climbing; but throughout the winter, and even in the wildest storms, the sheep had habitually gone down it to drink at the water below. When we first saw them they were lying sunning themselves on the edge of the cañon, where the rolling grassy country behind it broke off into the sheer descent. It was mid-afternoon, and they were under some pines. After a while they got up and began to graze, and soon hopped unconcernedly down the side of the cliff until they were half way to the bottom. They then grazed along the sides, and spent some time licking at a place where there was evidently a mineral deposit. Before dark they all lay down again on a steeply inclined jutting spur midway between the top and bottom of the cañon.

Next morning I thought I would like to see them close up, so I walked down three or four miles below where the cañon ended, crossed the stream, and came up the other side until I got on what was literally the stamping ground of the sheep. Their tracks showed that they had spent their time for many weeks, and probably for all the winter, within a very narrow radius. For perhaps a mile and a half, or two miles at the very outside, they had wandered to and fro on the summit of the cañon, making what was almost a well-beaten path; always very near and usually on the edge of the cliff, and hardly ever going more than a few yards back into the

grassy plain-and-hill country. Their tracks and dung covered the ground. They had also evidently descended into the depths of the cañon wherever there was the slightest break or even lowering in the upper line of basalt cliffs. Although mountain sheep often browse in winter, I saw but few traces of browsing here; probably on the sheer cliff side they always got some grazing.

When I spied the band they were lying not far from the spot in which they had lain the day before, and in the same position on the brink of the cañon. They saw me and watched me with interest when I was two hundred yards off, but they let me get up within forty yards and sit down on a large stone to look at them, without running off. Most of them were lying down, but a couple were feeding steadily throughout the time I watched them. Suddenly one took alarm and dashed straight over the cliff, the others all following at once. I ran after them to the edge in time to see the last yearling drop off the edge of the basalt cliff and stop short on the sheer slope below, while the stones dislodged by his hoofs rattled down the cañon. They all looked up at me with great interest, and then strolled off to the edge of a jutting spur and lay down almost directly underneath me and some fifty yards off. That evening on my return to camp we watched the band make its way right down to the river bed, going over places where it did not seem possible a four-footed creature could pass. They halted to graze here and there, and down the worst places they went very fast with great bounds. It was a marvelous exhibition of climbing.

[TO BE CONCLUDED.]

Captain Pike.

Editor Forest and Stream:

I was greatly interested in Mr. Grinnell's account of Captain Pike's first expedition, and hope he will give us, as he no doubt will, the expedition made by him when he discovered the mountain that now bears his name—Pike's Peak.

I had read all I could find about the Captain, but could not find out as much about him as I could about Lewis and Clark, but Mr. Grinnell has given us a condensed account of their explorations, leaving out all that is not absolutely necessary to the proper understanding of them.

In the summer of 1880 I paid a visit to the post from which Captain Pike started on the expedition that took him finally to Pike's Peak, and this post has been the starting point of many other expeditions also.

There cannot be much of the older part of the post left now; there probably is none of it, as when I was there the river had begun to make serious inroads through the bottom on which the old post stood. It is Fort Bellefontaine. The original post was built on the river bottom, but after we had taken possession of the country, a new one was built just above the old one on the bluff, and still stands there. It is on the Chicago, Burlington & Quincy Railroad, only an hour's ride out from St. Louis. The road has a station on the grounds, and there are many places that the tourist from the East to the World's Fair will visit that have not half the interest that this place has.

By the way, the cement that was used in the World's Fair buildings at St. Louis was made out of rock quarried right here. About the time that the French first settled at St. Louis, Captain Rois, with a small party of men, came up here and built the first post, the one down on the river bank. He named it Fort Prince Charles, but it was only a small cluster of log houses to shelter his men. Their site is now in the bed of the Missouri River. After the country had been turned over to us in 1805, General Wilkinson used this place as a trading post in carrying out the treaty that had been made between General Harrison and the Sac and Fox Indians at St. Louis the year before, and it was about this time that the new post was built up on the bluff, and a garrison of about 500 men were always kept there. This was a large number of men for a frontier post at that time, but they seem to have been needed; the records of the post give a succession of Indian attacks on the settlers. Captain—afterwards Major—Pike had a command here from its first occupation, and it was from here that he departed on his different expeditions.

One of his daughters—a child seven years old—lies buried here in the small cemetery. I do not remember the date of her death, but think it was 1806. She died when the Captain was away on one of his expeditions. A number of officers and the members of their families are buried here. The most pretentious monument is the one erected to Captain or Major Bissell, of the First Infantry, who died here in 1807. Fort Bellefontaine was finally abandoned as a military post about 1826. In 1826 St. Louis county gave the Government the land on which Jefferson Barracks is now built, and the post of Bellefontaine was moved there. The land on which Bellefontaine stood was finally sold, and is now cut up into farms, most of which are in possession of the descendants of the original French settlers.

Jefferson Barracks is another post that will repay a visit. It adjoins the city on the south, and can be reached over the Iron Mountain Railroad, and the street cars run near. It is a fine place. First comes the National Cemetery, a large one, then the barracks that are used as a depot for cavalry recruits, and next the powder depot. The reservation extends nearly two miles along the river, and a mile or more back from it, and is covered with its original growth of forest trees.

This powder depot is a curious affair. A number of small magazines are built down in ravines apart from each other on account of their liability to go off. There is not much danger of any of them going off, though, unless they are struck by lightning. The men who have charge of them won't set any of them off—their officers watch them too closely. No one can go into a magazine wearing any kind of shoes except felt slippers.

When I paid them a visit, as I often did (I was here a year engaged in drilling recruits), I had to leave my shoes outside and go in in my stocking feet.

St. Louis has changed some since I first saw it in 1855. The ground where the big Union Depot now stands in the middle of the city was then a frog pond out in the country; and Arsenal Island, in the middle of the river at the lower end of town, has moved at least a mile

down stream since then. I boarded a Pittsburg steamboat one day to ride up to town, and when passing the island said to the captain, "This island has moved down stream a mile or more some time. Do you know it?"

"Yes," he said, "we all know it. How do you know it?"

I told him that I had done some steamboating here when a boy, and would often "relieve the wheel" for the pilot when the captain was not around to throw me out of the pilot-house. It was then that I had taken the island bearings and still remembered them.

Then he told me how the island had been moved. The river would wear off the upper end of it, then deposit the soil and trees just below in the still water, and keep this up until the whole of the island had been moved down stream.

CABIA BLANCO.

Camping Out.

HAVERHILL, Mass.—Having been a reader of *FOREST AND STREAM* for twenty-five years, and for the last twenty in the situation of the man "chained to business," whose picture appears now and then in this paper, I have thought that perhaps the story of my brief outings might interest some reader in like circumstances—those who have a short summer vacation and a not-over-full pocket-book.

I am a few years on the shady side of sixty, and my first camping-out was in the Civil War. I was raised on a farm in New Hampshire, about seven miles from the coast, and went to the marshes and flats more or less every summer to get a few clams or lobsters and help get the salt hay, and so I came to have a great liking for the salt creeks and tide water. My wife did not care for the beach, much less for boating or camping, so I had to paddle my own canoe when I had an outing. In 1876 I took my first trip down the Merrimack with a friend in his dory, and have missed only two years since.

At that time I owned a flat-bottomed skiff with centerboard and small sprit sail, and the next year found us each in his own boat and three more in the party, with a hired A tent, bound for Ipswich Bluffs, near the south end of Plum Island and about twenty-eight miles from Haverhill. Since that time until last year my vacation camp has been at Plum Island, usually at the Bluffs, but sometimes by the mouth of the Merrimack and nearer home, as the island is about ten miles long from the Merrimack to Ipswich River. For fifteen years or more I extended my sailing trip to Essex, some five miles beyond the Bluffs, to visit my sister, usually spending the night there and coming back to the Bluffs the next day.

After two or three years I bought a 7x7 A tent, and that served for several years, when I had a chance to buy a 9x9 wall tent and sold the other. The skiff, which might have cost a matter of \$3, beside my labor, served me well for several years, sailing well and rowing easily. About eighteen years ago, *FOREST AND STREAM* published the lines of a "FOREST AND STREAM" cruiser, and about that time "Canoe and Boat Building" was running in the paper, so I read up a little on boat building and started in to build a new boat.

I was then working in an office, as I have been since, and could only work on the boat evenings in comfortable weather, as the stable loft where I set it up did not allow a fire. In due time I had a boat 14ft. long, 4½ft. wide, 12in. deep midships and 16in. at the bow, decked over except a cockpit, 2½ by 5ft., with a low coaming. The centerboard was hung in the usual manner, and came up through the deck. A pole mast and balance lug sail of 100 square feet with two reefing battens, high rowlocks with sockets screwed to blocks on the deck, and three 8ft. oars completed the sailing and rowing outfit. The spare oar came in handy more than once. The boat is still in commission and apparently as tight and seaworthy as when new. For sailing and cruising only, a deeper boat with more sheer might be better, but I am well satisfied with it as it is. The boat would hardly be rated a beauty, but we remember the old adage, "Handsome is as handsome does," and call it "good enough for the Joneses," as Kingfisher used to say.

When the boat was new, I was sailing through Squam River down in Gloucester, and a cottager on the shore wanted to know what kind of a boat I called it. I told him the Nonesuch. He laughed and said, "I guess that is about right." So I named her the Nonesuch.

In the days of the open skiff and the A tent, sleeping on salt hay on the ground was the usual practice, but sometimes we failed to get hay, and a rubber blanket had to do duty. With the larger boat and wall tent, and the owner getting older, though still feeling pretty young, we added some luxuries for the camp, the chief one being a cot bed. To carry provisions, spare clothing, cooking utensils, etc., I had two boxes about 2 feet long, as large as would slide under the deck to forward end of centerboard, and two others of the same length, but larger, to push under against them and project into the cockpit to take the rowing seat. A square box going partly under the stern deck made the skipper's seat, and with tent, blankets, and overcoats folded and piled on them, we had two very comfortable seats, each wide enough for two. When making a temporary camp we could set up the cot bed on the long boxes, two under each end, and one rainy night when I camped alone on the salt marsh, I found it about the proper thing, and as quiet a "night before the Fourth" as I ever experienced.

In the permanent camp we set a wide board edgewise under each end of the bed, keeping them upright with tent pins driven on each side, and could then slide all the boxes under the bed out of the way. The cot was made by tacking a stout piece of canvas about 42in. wide on 3 by 3 spruce pieces with slots or mortises cut in the ends to take ¾in. spreaders, 6in. wide, with shoulders to keep the sides in place. A slat lengthwise under the canvas, the ends resting on the spreaders, kept the canvas from sagging in the middle, and a tick filled with salt hay made a good bed for two. Knocking out the spreaders, the bed and extra slat could be rolled up and carried under the side deck. The stove was a sheet-iron affair made to fit one of the boxes, bottom up, or top down, as it had no bottom, and the box could then be filled with cooking utensils, funnel, etc. Cooking utensils were picked up at home, and a detachable handle on the frying-pan and coffee-kettle made them nest together

better. For a tent fly in wet weather I hung the old sprit sail from the clothes line, between the tent poles inside, and fastened the bottom edge to the tent pins behind the bed, and with rubber blanket at head of the bed to keep out the wind and rain, we always had a dry and comfortable bed. Of course a good wide outside fly would be better in all kinds of weather.

An old gun and some fishing tackle were always taken along, and a companion or two, if I could find one having a vacation when I had mine. Almost every year some of my friends would tell me they wanted to go the next time I went, but very few were ready to go when I sent an invitation, although I gave them all plenty of time to get ready. However, I seldom went alone, for some young fellow home from school or out of work would be ready to go at short notice. Sometimes there were three of us and a few times four. I usually made the trip just before the August full moon, and never struck any very bad weather, though a few times I escaped it by a day or two, and once I had to go a day later than I intended on account of a heavy rainstorm. At that season the flies and mosquitoes are less troublesome than they are in July. I was seldom gone more than eight days. I would plan to leave Haverhill about daylight at high water, and go down with the tide to Newburyport harbor. When we had to row all the way to Newburyport, it was worth while to have the tide with us. Generally we rowed four or five miles, down past Groveland and under the iron bridge, before getting a breeze, but three times out of four we would get a light breeze to take us the rest of the way. The scenery from the river is said nearly to equal that of the Hudson for beauty, and always had a charm for us. Below Groveland the hills of West Newbury on one hand and Haverhill on the other, and the old "Rocks" bridge with its rushing current, were in evidence, and below that were the villages of Merrimackport, Pleasant Valley, and Salisbury Point. Just below the point we go under the old chain bridge, a suspension bridge probably a hundred years old. Then the suburbs of Newburyport and the city itself on the right.

Two bridges at the city cause us to lower the sail and take down the mast if we have sailed down. If it has been a row, we almost always found a breeze in Newburyport harbor, and would set the sail below the bridges. Three miles from the bridges to the lighthouse on Plum Island, and there we turn southward into Plum Island River. If we have made a quick trip, it will not be low water yet, and we can dig a few clams and have a dinner of steamed clams while we wait for the tide.

When the tide has run for two hours it is time to be moving, and a sail of nearly two miles over flats and through the creek between salt meadows takes us to Plum Island bridge, where the sail and mast must come down again, unless by good fortune a yacht is going through, and the draw is open. About a mile beyond the bridge we meet the tide from Ipswich River, and unless we have a good breeze or want to work our passage we might as well tie up to the bank and go gunning, if there are any birds or go in swimming and wait with patience while the tide turns. As a matter of fact I have sailed down so many times against tide that I have almost forgotten the few times we waited. The river through here is narrow and crooked, so that most any old wind will be fair part of the way. Three miles from the bridge, Parker River runs in, and below that the river is a mile wide when the flats are covered.

From Parker River down is a pretty sail with marshes on either hand and Grape Island and the Ipswich hills ahead. With a good breeze we would reach the Bluffs about high water, and once with a norwester I reached the Essex creeks at high water. It was just a bit choppy in spots that day, with the wind blowing against the tide; but with a reef tied in and the forward deck under water at times, I kept going, and was in Essex soon after high water. Usually we camped at Grape Island or the Bluffs over night, and went over to Essex in the morning, starting so we could go up Ipswich River and through Fox Creek on the tide and get under the low bridge into Essex creeks before high water and to Essex before the tide was running out much.

The trip could be made in good weather over Ipswich bar, across the bay to Essex River, and up that river to Essex, but it was further and somewhat uncertain for a small boat. I remember one morning getting to Ipswich River with a light southwest wind. I was tempted to try the outside passage for variety, but, being alone, I kept on up the river and through the creeks as usual.

I had not gone far in Fox Creek before the wind had changed to northwest, and was soon blowing so fresh that I found it more comfortable to row than to sail under a double reef. This part of the trip was always interesting. Up Ipswich River less than a mile, with beach on one hand and "Little Neck" hill with its summer cottages on the other, into Fox Creek, through marshes a short distance and past Sagamore Hill, with more cottages, then through between the hills under a low bridge into Essex creeks, and down back of Ipswich beach into Essex River.

Essex is divided by the small river into two villages, and is quite a lively place when shipbuilding is good. Many a fine fishing schooner has been launched there. Leaving the boat and putting boxes, blankets, etc., in a shed on the bank, we could take a train—and in later years an electric car—to Wenham, some five miles, to my sister's house. Returning usually the next day, we made the trip to the Bluffs with a favorable tide part of the way, and proceeded to establish the camp.

Before the days of bicycles and trolley cars, the Bluff was a favorite camping place, sometimes fifty tents being pitched there at one time. Now very few camps are allowed there. It is a little peninsula, scarce a hundred yards wide, on the west side of Plum Island, projecting into the river. There is a steamer wharf, with steamer twice a day, a small hotel, and a half dozen cottages belonging to the hotel and to the owners of the lower end of the island.

The visitors by steamer mostly go up to the hotel or over on the beach, so it is quiet enough in camp, and not quite out of the world. One can get to the ocean by a walk down the river beach to Ipswich bar, and down the bar to the ocean beach, or through the pasture and field back of the hotel, across a foot bridge over the creek and marsh by a shorter cut. The clams on the flats, on either side, are very fine; lobsters are caught in nets just

off the point; plenty of eels run up the creek with the tide, fish are caught from the wharf or from boats, and bay birds used to be plenty enough to afford some shooting on the flats and marshes. Plenty of driftwood can be picked up on the beach, and the water from the well back of the hotel is good. Altogether it was a fine camping place, and there is plenty of room for camps now back of the hotel or on the beach near-by.

Getting settled in camp, we managed to find a variety of things to do during the short stay. We could always pick up enough small driftwood on the river bank to cook the first breakfast and after that a boat load or two from the beach kept us in fire-wood. The clam flats yielded a dinner or two; a few trips after sea perch supplied other dinners, and the gun generally got us at least one dinner. If we wanted eels we could catch a mess by bobbing for them from the boat tied to the wharf or up the creek in the night. Some neighboring campers used to put a reflector light on the bow of their boat and drift up a creek with the tide, spearing them from the boat.

There were sailing trips to Ipswich, Parker River, Eagle Hill, Rowley River or just anywhere on the river or outside in pleasant weather.

We always—almost always—had good neighbors; the only exception being some Sunday school boys who came down for a day and put in part of it breaking up a charcoal furnace which we carried in the early days.

First and last we made many pleasant acquaintances there. In 1879 we camped near two brothers named Currier from Boston, both veterans in the Civil War, and veteran campers, for they had camped there then for thirty-one years, except while in the army. They continued to come while they both lived, and the survivor was there at the hotel last year. A man named Bruce from Lowell camped over on the beach "where he could see the waves roll in," for thirty years, till he went to camp on the other shore. Some of the boarders at the hotel came to be old acquaintances, and the same cottagers were there for several recent years.

Once in my boat and headed down river, I left Haverhill and all its business behind and gave myself up to the vacation and the different life it brought with it.

When I was ready to break camp, I always had a good coat of tan, sometimes too good. My muscles were hardened up, my appetite improved, and I felt like a new man, and the good I got helped me through the year. Undoubtedly I owe my present good health to those annual outings, and the remembrance of them is always a delight.

Two years ago my better half decided that she really liked the beach, the reason for this change of heart being the fact that electricians left the next corner every half hour direct to the beach. So last summer she also decided that a small beach house would be the proper thing. When a woman decides, it is no use to argue the case, and beach house it was. When we went down the river last summer, instead of turning south into Plum Island River, we kept on out to sea, and sailed north to Hampton River, where we found the wife housekeeping in the small house on the beach. The boat is kept under the house when not in use, and the only change is from tent to cabin. We hope to enjoy many more vacations at the sea side under the new conditions.

The fact that the new location is the one I was familiar with in my boyhood days does not in the least detract from the enjoyment of it.

ONE OF THE JONESES.

Natural History.

Some Animals I Have Studied.

IV.—Malty, The Trick Dog.

THE little slate-colored terrier mentioned in "Some Knowing Dogs" was a very remarkable creature, indeed, with many contradictory characteristics—gentle and affectionate, fierce and resentful; brave and imperious, timid and nervous; always ready for any danger or hardship, yet delicate and dainty. She could simulate the most terrible anger "just for fun." If a man swore or uttered vile words, or was guilty of ungentlemanly conduct in her presence, especially indoors, she would instantly "call him down," showing (apparently) intense indignation, and continuing to growl and bark at him until he apologized or left the room. She had learned to recognize the objectionable words and conduct chiefly by observing what offended her master. I say her master, because few fellows were rude or forgetful enough to be offensive in the presence of her other dearest friends—my invalid uncle and his daughter Kate. I obtained her before she was weaned of "Grandma" Sisson, in Illinois (and I thus publicly mention her name because I believe any of her family—as some of them probably read *FOREST AND STREAM*—will be interested in the notable career of the pup whose mother they owned). That was about seventeen years ago. I taught the puppy to hunt squirrels along the Little Wabash when she was much less than a year old, then left her with my uncle and cousin while I went to "spy out the Promised Land" in the mountains of Arkansas. In a short time my relatives came down and brought the dog safely with them. I'll never forget our meeting. I found her, alone, in the parlor of a modest hotel in Hot Springs, uncle and cousin having gone down to dinner. She looked as sad and lonely as a girl waiting for her lover never to come again; there were actually tears in her blue-black eyes; and they must have been tears of grief, for, as I afterwards learned, she had refused to eat. But she recognized me at sound of my voice, and with a cry of joy leaped up into my arms. Then she ate all right enough at first offer.

When we had settled down in the woods, living at first in a very small box house with but one room and a porch (Malty and I slept on the porch winter and summer), the tiny dog rapidly acquired character and fame. In the house, when she desired to be noticed, especially at meals, she would rattle the bootjack, as we called the act, a trick she taught herself, which consisted in putting one paw on the notched or upper end and tilting it rapidly so as to cause the other end to knock several times on

the floor. The trick needed to be seen to be appreciated; for instead of looking at the bootjack, she always glanced coquettishly sidewise at her audience; that is, after first touch. She generally found the correct position at once. If we pretended not to see, she would knock faster and harder. On one occasion, her efforts to arrest our attention seeming in vain, she turned the bootjack around, then gave it a sudden jerk down on her other forepaw, whereat she bounded back with a little exclamation (I can't say yelp, for it didn't sound a bit doggyish; 'twas almost exactly like the sound a pretty, silly girl utters when surprised by a mouse or spider). But when we laughed at her, she immediately pounced upon it again and rattled it furiously.

Another and very astonishing trick she took up by accident. Her name for it was "jump down;" that is, if she heard anybody say that, even in a mild whisper, she at once went through the performance, and would repeat it every time the words were uttered until exhausted and dizzy. It was a sort of war-dance—a spinning round and round while chewing at her tail and barking and growling as if fighting another dog. I've seen other dogs—and even cats, calves and pigs—whirling playfully, but never saw any living animal spin so rapidly, so continuously and so furiously. After whirling at the astounding rate of twice per second for a minute or a minute and a half, she would slow up (or down), and stagger pitifully, sometimes falling, or determinedly bracing herself like a drunken man; then, if she saw a single wondering look or heard a laugh, she would instantly reverse, or as the children say, "unwind," by spinning more furiously than before in the opposite direction. So long as any person in the crowd of onlookers was cruel or thoughtless enough to repeat the exciting command, she would continue, until worked to a frenzy, unless I snatched her up and soothed her by some crafty compliment. If any other man took her up she would try to keep on whirling in his arms, or, if hindered entirely, to cast herself to the floor again. Often she continued until it seemed she would go mad, with thumping sides and eyes green as arsenic; yet in ten seconds I could have her calm and smiling and wagging her tail. Once she began to "jump down" on the edge of a porch about four feet high, and kept whirling nearer and nearer the edge, when, in the most emphatic portion of the dance—the *forzando*, so to speak—she went overboard. But the dance went on, forward and backward, so uninterruptedly that we could not see if she lighted on her feet or on her back! A cur pup, twice her size, wondering if she was shaking up a rat or fighting a raccoon, ran to her and bumped against her, trying to seize her and pull her away; but even that only delayed the dance five seconds, for she caught and whipped him, and then whirled on again.

Although she never became a mother, she was very motherly all the days of her life (she lived about seven years), could not be induced to kill young mice, baby rabbits, nor to tease very small kittens. Often she adopted young of one sort or another, and strove earnestly to rear them. She would lie down just like a mother dog, and with her forepaws draw them up against her dry teats, whining to them coaxingly, and evincing great anxiety and grief if they failed to understand her benevolent intentions. Young rabbits would seem to take to her kindly enough until their little noses actually found the teats, when they would recoil screaming with terror, causing her to show every possible sign of disappointment and grief. She would excitedly rake them together again, and again push them up to her breast. After three or four distressing failures, she would carry them, one by one, to some other nest, there to make another trial. After three or four days they would die, and her grief, if possible, increased. If she saw us bury them she would dig them up and return them to their nest, or to her nest, rather, and continue fretting until convinced that death had elaimed them. It must not be supposed that she remained constantly with any litter as long as life lasted; she was always ready to leave them, day or night, for an hour or two, to hunt, or attend to her usual duties; but returned to them as eagerly as a real mother impelled, as cold scientists aver, by the pressure of her milk, and not by the higher maternal affection. Adopting rabbits was a trick of her own initiation, so far as I know. But Kate gave her an unweaned kitten to care for, and encouraged her in the scheme on two occasions I happen to recollect. The first was not a success; the second soon overcame its inborn repugnance to the doggy odor, and the at first useless tugging at a milkless teat, and actually lived two or three months. Strange to say, that teat it exercised enlarged, and really gave milk at last, as Kate proved to me one day by squeezing it. But I am convinced that Kate's own attentions, in the form of dainty soft foods, often and delicately supplied, had more to do with keeping the foundling alive, especially at the beginning, than Malty's milk.

Malty was a greater all-round hunter than any hound I ever knew; good for all sorts of game found here excepting deer,* which she regarded as domestic animals. Though she would chase one out of the field—just as she would eject a horse or cow—she never seemed to consider the possibility of continuing the pursuit. But she knew all about hunting and "fighting" rabbits, squirrels, raccoons, opossums, minks, rats, mice, skunks, water-snakes, moles, turkeys, etc.

During her periods of grief (though I do not assert that was the cause), Malty often absolutely refused to eat anything for several days; and once, at least, she fasted more than a week, if we were not deceived, and I think we were not, for she remained in the house then almost the whole time, apparently sick with a sort of ague. We did not doctor her, for she showed an intense desire to be left alone.

She was passionately fond of boating, as well as swimming and wading, and would balance on the gunwale of a thin-sided skiff, standing as boldly upright as a rope-dancer, especially when nearing an island. Of course I loved that little dog. So did Mrs. Kemp and all who intimately knew her. After I have finished describing my list of queer animals, I desire to relate some of her adventures. Next week I want to tell of "Coalie the Snake Dog."

L. R. MORPHEW.

HOT SPRINGS, ARK.

*Mrs. John Kemp, a neighbor, had a pet deer, which often visited us with her mistress, and frequently came without her.

Among the Shore Birds.

BY EDWARD A. SAMUELS.

"COME," exclaimed one of my friends, as he entered my office hurriedly one day, "pack up and join me for a week or two among the shore birds. It is almost time for the first flight of plover from the north and I like to be early on hand to receive them!"

"Plover!" I replied in dismay, "bless your soul, man, it's no use to look for those birds in our old hunting grounds; they fight shy of Provincetown, Nantucket, and Martha's Vineyard nowadays, and to get a decent bag one has to go far to the north, and I have no time for a long journey, and I have a lot of work that must be done."

"Nonsense!" was the response that came from my friend, "let your old work go; 'twill make no difference a hundred years hence, and neither of us may expect to get many more outings among the plover, and the 15th of August, the date that is usually agreed upon by the birds for their coming from the wilds of Labrador, is near at hand. So come on, get your traps ready, and we'll start day after to-morrow, sure. I want to be on the ground by the 10th, and be ready for the first flocks, which often make their appearance in advance of the main body of them as early as that date."

"But where do you propose to go, provided I can get away?" I answered, dropping my pen in bewilderment at my friend's impetuous way of extending an invitation. "Really, you had better count me out this time. I want to finish this piece of work as soon as possible; and besides that I don't know where my decoys are packed, nor what the condition of my ammunition box is. I'll have to give it up this time."

"Give up nothing," was his hasty rejoinder. "I want you for this trip, and you may as well, without any more palaver, make up your mind to come. You have fifty weeks to write in, but only one or two in the whole year for plover shooting; so pack up and join me. I won't take 'No' for an answer; the trip will do you no end of good. So come along. I'll meet you at the Grand Central Station Thursday evening in time for the Boston train, which leaves at 9 o'clock," and as he spoke he hurried to the door and was about to leave, when I exclaimed, "But, my dear fellow, I cannot get ready on such short notice. I can't go, anyway!"—but my protestations fell on deaf ears, for my friend had gone.

For a short time I sat in perplexed meditation. I wanted to join him and I knew the trip would benefit me, for I had had a long spell of hard work and was feeling rather seedy. But to get ready for a lengthy journey, procure ammunition, and hunt up my decoys, without which the trip would prove unprofitable, seemed to me to require more than a two days' notice, for it was then Tuesday. But the more I thought about the matter, the less insuperable seemed the obstacles to my going; and finally I arose from my desk somewhat excitedly, and exclaimed: "Hang it! I'll go; the work can wait as well as not!"

My decision to take the outing, when once formed, called for speedy action, and the intervening time was fully occupied in procuring ammunition, loading shells, overhauling my guns, and doing the thousand and one other things required for an outing such as was proposed to be taken.

"I knew you would decide to come," exclaimed my friend, heartily, grasping my hand at the entrance of the station, where he was awaiting my coming, "and I'm mighty glad of it. We'll have a glorious time, even if we don't get many birds."

After seeing my baggage checked for St. John, N. B., we entered the sleeping car and were soon started on our long journey to the northern shore of Prince Edward Island, where the finest plover shooting in the north is to be obtained.

We reached our point of destination on the evening of the fourth day, having been obliged to remain at Shediac, near Point du Chene, over Sunday on account of there being no steamer on Saturday when the train reached that point.

On Monday we crossed Northumberland Strait to Summerside, and from that place we journeyed by rail and wagon to the shore. Our headquarters were in a comfortable farmhouse a few miles from Tracadie, the proprietor, a thrifty Scotchman, had entertained us once or twice before on similar outings, and the welcome he gave us was hearty in the highest degree.

Early on the morning succeeding our arrival our host drove us behind a pair of well kept horses to a point about six miles from the house, where, after assisting us to dig our trenches and to put out our decoys, he left us for the day.

The surrounding country was a nearly flat or slightly undulating plateau, consisting of great stretches of pasture lands and old stubble fields, which extended as far as the eye could reach.

The plover, on leaving their nesting places in far away Labrador, gather in immense flocks before starting on their long journey to the south. In what manner the individuals of the flock become associated with the others, no man can tell. I have been told that they breed by pairs in detached communities, a half dozen or more

pairs in each, and probably each family unites with its immediate neighbors soon after the young are able to fly, and thus, no doubt, these small detachments continually unite with others until the aggregation of all in any given locality is completed—just as we see the swallows come together before their southern migration. For many days they seem to be assembling in open stretches of country, particularly where meadows and marshes abound, many hundreds of them sometimes being seen circling around or perching on telegraph wires. If we watch them day by day, we will see their numbers increase and finally, as if by a preconcerted agreement, no one can say how or when the signal is given, they disappear. We know there must be some unanimity of thought, or instinctive motive, if you prefer, which prompts them to leave simultaneously for their winter homes on both shores, northern and southern, of the Gulf of Mexico. So with the plovers; we cannot say what prompts them to begin their southern migration together and at a certain time of the year, the first flight leaving Labrador about the tenth of August. These large flocks, which often number many thousands of birds, sweep down over the barren wastes of Labrador to the shore which they follow by way of the Strait of Belle Isle, skim along the southern shore, cross the Gulf of St. Lawrence, and make their first halting place on Prince Edward Island. I have not been able to ascertain whether or not many of them ever cross to Newfoundland, but know that quite a number do make a brief stop on Anticosti. The northern shore of Prince Edward Island, whether or not from long habit, I cannot say, is the first resting place they choose; possibly because it abounds with extensive tracts of open country, such as those birds delight to forage in. For miles upon miles one may see great stretches of oat stubble fields and pastures, in which the birds find myriads of grasshoppers and other insects and seeds upon which they feed. I have seen immense flocks flying about those open stretches of country, rising and falling in the air, their myriads of wings beating in a shimmering cadence, if I may use the term, as if actuated by one impulse. One can hardly imagine a more beautiful sight than that presented by a flock of these birds in motion. Sometimes they are high up among the clouds, and anon they skim along the earth, barely above its surface. Occasionally, as if by a sudden impulse, the flock drops wings and alights upon the ground, where the birds immediately busy themselves in search of food.

This is more particularly true of the golden plover than of the black-breast or "beetle-head," which seems to prefer to forage upon the strand in pursuit of small molluscs and crustaceans, although it associates in greater or less numbers with the other species in quest of insects, seeds, etc.

The success of sportsmen among these plover depends on the location of his trenches, the manner in which his decoys are put out, and his clever imitation of the call note of the birds. The plover will rarely turn from their course at every whistle, as will some of the other shore birds, for although it is gregarious, it does not seem eager to associate with other species.

I have time and again had curlew, yellowlegs, and various other species, come to my plover call, and even have had the Wilson's snipe fall to my yellowlegs whistle, but I cannot remember the time when a flock of golden plover turned from their course to come to me when I blew a whistle not their own.

The note of the plover is a short, melodious, piping one, unlike that of any other shore bird, and when a large flock is in motion it is only now and then a cheerful little twitter is heard from among them.

The trenches that were occupied by my friend and myself were about fifteen rods apart; they were dug lengthwise with the side of a slight acclivity, and were long and deep enough to give us ample room to move about comfortably; the bottom of each was covered with hay and at one end was a raised shelf to be used for a seat, and at the other end another upon which our ammunition bags, etc., were placed. Behind us was the great stretch of pasture land I have spoken of, and in front of the trenches the land descended gradually to the shore, which was about a mile distant, and beyond that the blue waters of the great gulf glistened in the rays of the morning sun.

Our decoys, which were about fifty in number, were put out in front of our trenches, and in several scattered groups at favorable points between us. These decoys were of my own invention, and I have always found them to be very successful. They were made in the following manner: A block of wood was modeled of exactly the same shape and a trifle larger than the body of a plover. This was sawed in two lengthwise and from the two halves iron castings were made which served as matrices or molds for stamping or embossing from thin tin the two sides of the decoy. These were fastened together at the back by a hinge and at the belly by a wooden stake, which was thrust through two holes in the tin that overlapped each other, the lower extremity of the stake being pushed into the ground to support the bird; the stake being longer than are the legs of the plover naturally, so that the decoys might be plainly seen above the surrounding herbage. These decoys were

painted in the colors of the bird, and they so closely resembled them that even an experienced eye would, at a short distance, be deceived by them. The advantage of these over the ordinary wooden or rubber decoys, aside from their close resemblance to the bird they counterfeited, no matter from which direction they were viewed, laid in the compactness with which they could be stored away; for when the wooden supports were removed and the sides opened out flat, the number of decoys might be laid upon each other in very small compass, the height of the pile being increased only by the thickness of the tin of each successive layer.

The warm rays of the August sun before noon had arrived beat down upon us relentlessly, and the heat seemed to have had a somnolent effect upon bird life, for there was not only an absolute dearth of those shore birds, but even the smaller species—sparrows, swallows, etc.—seemed to have abandoned that almost treeless waste. The only feathered visitors we had before the sun reached its meridian was a pair of impudently inquisitive crows, which, contrary to the usual nature of the bird, were as unsuspicious as barnyard fowls.

They alighted among the decoys and scrutinized them in a comical way, and finally approached the trench in which I was lying so closely I could have tapped one of them with a salmon-rod if I had it. Even when I showed my head and shoulders above the edge of the pit they manifested no fear, and I silenced their noisy cries only by pelting them with a handful of gravel, which volley drove them away. I did not care to waste a cartridge on them; if I had, their clamor would have been silenced forever.

"This is pretty dull music," exclaimed my friend, who had, a little later, left his trench and joined me. "We are evidently a day or two ahead of the plover, and there is hardly a bird moving. I've kept a sharp lookout, and, excepting a few small bunches of 'peeps' and now and then a yellowleg, I've seen nothing. I move that we take our lunch and a bottle of 'Bass' over yonder," pointing to a little clump of stunted pines a quarter of a mile away, "and take our snack in what little shade there is. The sun is hot, hot, hot."

I gladly acceded to this proposition, and we repaired to the spot he had indicated, carrying with us not only our edibles, but a couple of guns and a few cartridges. We have always found it a good plan to provide for birds coming even when none are in sight, for one never knows when a flock may appear.

Our noonday meal having been disposed of, we lighted our pipes and enjoyed a brief siesta, which, however, was abruptly broken by the shrill whistle of a curlew high in the air. Glancing skyward, we discerned a small flock circling around, apparently scrutinizing our decoys, which stood in expectant attitude two or three gunshots below us.

"There's a bunch of doe birds," exclaimed my companion, and they are going to our stools. What a lovely time we'd had with them if we were where we ought to be in the trenches. We can't get down there now without being seen, but if we hide in the scrub here perhaps we can call them. We may get a long shot at 'em, and possibly drop one or two, and thus save getting 'skunked'."

As he spoke he put his bird call to his mouth and gave the peculiar whistle which every shore-bird gunner knows so well.

The doe bird, or Esquimaux curlew, like the sickle-bill and Jack, or Hudsonian curlews, is a very sociable bird; it quickly answers to the gunner's whistle, and stools in the freest manner possible.

Like the others, it is also very sympathetic, and responds to the cries of a wounded comrade, the flock hovering around the spot where it lies until the last bird is dropped. In its love of company, it associates with many of the other species, little bunches of three or four often being seen in the midst of a flock of plover.

In its flight it is one of the most graceful of the shore birds, its long wings beating the air with a rhythm peculiarly their own. Like the golden plover it subsists on insects, seeds etc., and as a table bird is a great favorite with epicures, far exceeding in that respect our other two species.

My companion's whistle was repeated again and again, but without any apparent effect on the birds, for they hung away persistently, and seemed determined to settle among our decoys, and we were just at the point of leaving our cover with a view of getting within shot of them, when, by one of those inexplicable whims which birds often manifest, they wheeled and advanced in our direction, uttering at the same time a whistling twitter such as this species often emits when foraging in the marshes.

"We'll get a shot at them after all," exclaimed my friend. "It may be a long one, however."

"Yes," I replied, "they're coming, and to make sure of reaching them, I'll slip a wire cartridge in my left barrel," and as I spoke I removed one of my ordinary shells, replacing it with one of Ely's green cartridges loaded with No. 6 shot, such as I always carry with me when out for birds; they are valuable in an emergency.

In leaving our decoys the curlews came a short distance in our direction and then swung away to the right,

returning before us, but higher in the air, thus giving us an excellent opportunity for passing and quartering shots. There were eight birds in all and their V-shaped flock showed like a bunch of gray and white against the deep blue of the sky. As they darted by us the discharge of my friend's gun and that of my own rang with one report, and the leaden hail did its work effectually, for four of the birds came to earth with a resounding thump, three of them being killed outright, the fourth being merely wing-tipped. As it fell upon the greensward it uttered its cry of distress, which my friend and I repeated until the remaining birds turned and circled above their fallen companions. The report of our guns again rang out, and the last bird fell, it dropping to my wire cartridge, which reached it after it had passed beyond ordinary gunshot.

"Bravo!" exclaimed my companion, as we gathered up our prizes, "that's a magnificent beginning of our sport; eight doe birds, and the whole flock saved! We had better get back to our trenches now, for we never can tell when something will come along."

We spent the remainder of the day under cover; but, save a small bunch of yellowlegs, out of which we secured five birds and a brace of Jack curlew, nothing showed up worth the powder and shot that would be required to bring them down. The following day was absolutely blank, not a bird being secured, and the next two were not much more profitable, a few yellowlegs and a single curlew only falling to our guns. On the morning of the fourth day, however, we went into our trenches with the expectation of getting some birds; a lively breeze was blowing from the northwest, and great masses of clouds were sweeping across the sky above us and down to the horizon on every side.

"You'll have something to show for to-day, sure," said our host, as he left us on his return to the house. "There's a storm coming, and I can hear plover whistling now," and he glanced upward as he spoke.

The old farmer's prediction proved true, for before we had fairly disappeared from sight, a great cloud of birds could be seen skirting along the shore that stretched out below us; back and forth they moved in one great mass, their gray and white wings beating the air in one long, shimmering flutter.

The flight of a large flock of golden plover is exhilarating in the highest degree to the sportsman. The sensation he feels as he holds his gun in readiness to pour its deadly fusillade in that swiftly-moving cloud is indescribable. He repeats his whistling call until he turns them in his direction, and when they approach his stools his nerves tingle and his heart almost ceases to beat. The mighty rush of wings before him seems to give him a vertigo, but when his finger is on the trigger and the discharge of his gun ensues, his tremor and excitement pass and the discharge of the second gun is done almost mechanically into the mass of fluttering birds which pile up in the air above his decoys and over his lurking place.

That day was an ever memorable one; great flocks succeeded each other as the hours rolled by, and nearly all of them paid tribute to our guns. They were the first birds of the season, and sportsmen had never before seen them.

To our calls they responded freely, and to the enticing notes they sometimes returned and swung over our treacherous decoys. Unfortunately, our supply of ammunition gave out before the day had ended. I had brought to the field but fifty or sixty cartridges, and my friend was not much more abundantly supplied, but our score for the day was the best we had ever made, over sixty brace having fallen to my friend's gun, and nearly as many to mine.

"Yes, I knew you'd have luck to-day," exclaimed our host, as the birds were loaded into the wagon and we mounted to our seats, "but you'll not get as many to-morrow, and I doubt very much if you come out at all."

He was right, for on the following three days the rain fell in torrents and the wind blew a gale, and when we returned to our trenches on Monday we did so with the conviction that the first flight had passed, and our premonition proved well founded, for save a few small lots of yellowlegs, straggling beetle-heads, and grass birds, nothing was to be seen worth the shooting, and nothing remained for us to do but to spend a week or more as best we could while waiting for the second flight of plover, which would probably come along about that time.

On the southern migration the plovers sometimes make but one stage from Prince Edward Island to the Southern States. In former times they used to pause at intervening points in considerable numbers. I have seen them by thousands in the "Canton Fowl Meadows," a few miles from Boston, on the hilly pastures and fields in Hingham, Mass.; have had magnificent shooting on the great stretches of waste land on Nantucket and at various points on Cape Cod, but nowadays they seem to move *en masse*, some times far out at sea, their flight having been witnessed from vessels, and unless a severe northwest storm drives them shoreward, where their flocks become broken up, gunners have poor success with them. In its migrations, according to C. J. Maynard, the ornithologist, golden plover have been known to pass from Newfoundland to the West Indies in a single flight, and that it travels over the whole continent of South America, wintering chiefly in Patagonia.

In speaking of the velocity of flight of migrating birds, he says that geese, swans, and other large species, move at upward of 100 miles an hour, and thus can readily accomplish a distance of 1,000 miles between meals. Ducks, especially the smaller species like teal, scaup, etc., move more rapidly than this, the average being probably as high as 150 miles per hour.

Shore birds move even more rapidly, averaging 180 miles per hour, and some species exceed even this, flying at the great speed of 200 miles an hour. The distance from Newfoundland to the West Indies is about 3200 miles and to traverse this the plover would be on the wing sixteen hours if they traveled only at the rate of 200 miles per hour.

Our visit on the island was prolonged until there was no likelihood of our seeing the second flight, which must have passed without a pause, perhaps at night or by way of Nova Scotia, and we were obliged to return home with the greater portion of our first great bag packed in ice, to be distributed among our friends who were so unfortunate as to be unable to leave their work as we had done.

Guns and Gun Feats.

Editor Forest and Stream:

It seems a pity to disappoint so amiable a person as M. D. of Milford, and I trust that nothing may be said to impair his confident belief that he has accomplished his laudable purpose of adding to my presumed discomfiture. I think he ought to acquaint the War Department with the fact that it is not necessary to hit a man with a rifle ball in order to kill him. The casualty lists of an enemy might be augmented materially by marksmen trained to miss scientifically. It seems strange that Daniel Boone never learned that squirrels could be killed without hitting either them or the bark under them.

If I didn't know about "wind contusions" before, I do now, since M. D. has given a practical demonstration, using me as a target.

ALLEN KELLY.

Editor Forest and Stream:

Manhattan, Cabia Blanco, O. H. Hampton, Skeptic, and M. D. have got me all mixed up. There is an old proverb or saying that a "draught that will put out a candle will blow out a man's life." Now, why won't the wind of a bullet that kills a squirrel or breaks a man's bones, blow out a candle? M. D. says the medical books treat of the lethal properties of "wind contusion," and avers that a bullet passing close to a squirrel's head without touching it causes instant death. Yet we have most respectable authority for the truth of the legend that old-time riflemen snuffed candles with the same weapons with which they "wind-contused" squirrels. Where are we at?

QUIEN SABE.

Editor Forest and Stream:

Cabia Blanco has called the turn in the candle-snuffing game. I've ridden the range a few myself, and have seen and tried all kinds of plain and fancy shooting, but I never saw bad man or cowboy, frow Wild Bill down or up, who could shoot the snuff from a candle without dousing the glim. As a matter of fact, just about 95 per cent. of the cowboy's alleged skill with the gun is hot air, but I have seen a few punchers able to hit the wick of a candle at five yards once out of three shots. I'm not bragging when I say I've done it myself many times, and that I could shoot straighter in the fancy game than any other man in every outfit I was with, although lots of them could draw quicker and hit a telegraph pole sooner than I could. Tenderfoot yarns about keeping a tomato can rolling with bullets, putting two or three shots through a can tossed in the air, whipping out a gun and shooting a running jack rabbit all in one motion and no time at all; picking the spots out of a playing card at twenty yards, "fanning the hammer" and hitting anything smaller than the smiling face of nature, are all pipe dreams. There's a heap of cow punchers and deputy sheriffs out West who say they can do these things, and they think they can, but when they try to make good there's always something the matter with the gun.

When I see a man bite the bottom out of a frying-pan without smutting his nose, I'll allow he can snuff a candle without putting out the light. Meanwhile, more power to the myth busters.

LATIGO JOE.

Editor Forest and Stream:

I cannot plead ignorance of that gun of Major Fergusson's which Mr. Ellicott calls my attention to in the current number. My best excuse must be carelessness. I had forgotten all about that gun, though the breech-loading muskets that he describes are new to me. It is hardly possible that men would carry guns of different types, all of them muzzleloaders, year after year for several centuries, without many different men trying to invent some plan to load more guns quicker than by the tedious process of loading at the muzzle. No doubt many breechloaders have been invented of which no history now remains.

An inquirer in one of our local papers the other day wanted to know when and by whom gunpowder had been first invented. The editor told him it had been invented by an English monk early in the eleventh century. He may have forgotten, as I did about the gun, or he may never have been told, that the Chinese claim to have invented gunpowder 2,000 years ago, and they may have done so. They were civilized then, or as nearly civilized as they are now, in spite of the efforts made by some of us who cannot find anything better to do, to civilize them some more.

CABIA BLANCO.

Editor Forest and Stream:

When in reply to Rifleman's question whether any of the readers of FOREST AND STREAM had barked squirrels with a rifle, I stated that I had done it many a time; that to do it I shot into the bark of the limb directly under the squirrel's throat, I did not say it could not be done by shooting under the heart. I made no comments on Mr. Kelly's experience and opinions, and am not a little surprised that he seems to doubt the truthfulness of my statement. I have never had time nor inclination to deal in fiction, and very seldom assumed the role of critic. What others have done in the way of barking squirrels I know not, but I have barked them; that is a settled fact. I have also shot them with a revolver, and with a shotgun. My best squirrel rifle was a long octagonal, full stocked, percussion cap muzzleloader. My best shotgun for squirrels was one of the same style, but running about 60 balls to the pound, with the rifles bored out, making what we called a smoothbore. With my rifle I shot the head off many a wild pigeon and quail. This pattern of gun followed the flintlock, and was followed by a half stocked shorter barreled rifle, and these by the repeater.

I want to say to my doubting friend that when at the age of 13 to 18 I spent my leisure hours in the woods, I seldom missed a squirrel's head if I shot at it. If I saw the squirrel's ear or eye, it was my squirrel, minus the head. A wild pigeon's head up among the branches of a pin oak tree was a more difficult target to hit, but I have killed more than one pigeon in that manner. Some years ago I told in these columns of shooting the heads off two grouse in a thicket on the north side of Witch Lake, Michigan. I was standing on a log near where I had heard a grouse. I had a .32-20 Winchester. Presently I saw one of the birds on a small log that lay at right

angles to the one on which I stood. To have shot the bird through the body would have been no trick, but the point was to shoot its head off before it got behind a clump of brush. Anyone who has hunted grouse knows how they move when they walk. They move slowly, but their head is still scarcely longer than two seconds. I shot the head off that grouse, then swung part way around to the left and shot the head off another one before the first one had quit fluttering. The distance was 19 steps to the first and 21 steps to the second one.

My friend, Geo. Hedrick, of Ft. Recovery, Ohio, was near me when with my old .38 Winchester I shot the head off a grouse, then stepped the distance. The bird was standing still on a log, and the distance was 39 steps, equivalent to 39 yards.

I never killed deer at over 250 yards, but I have killed them lying, standing, walking, loping, and flying. But the finest rifle shot I ever made was at a buck's eye. Our party had gone over 500 miles to hunt deer, and were desirous of making a success of the trip. I was trailing a deer I had wounded, and had come to the point of a ridge where it had doubled on its track and probably laid down. I had trailed it fully a mile by an occasional drop of blood and its hoof-prints on the dry leaves. Then as I stepped on top of a pine stump on the end of the ridge, I found myself looking into the eye of a large buck. To hit an eye in that buck's head looked improbable. But I shot at his right eye just as deliberately as I would shoot at the center of a target, and I hit his right eyeball so near the center that the skin around the eye was not broken, as men will testify who helped carry him to camp. The distance was 45 steps.

There are so many things that contribute to good or bad rifle shooting, the wonder is more self-styled sportsmen of to-day do not fail to comprehend its possibilities. A gun may be of poor material, indifferently sighted, or have flaws or rust in it. There are certain facts, however, patent to all intelligent men. One cannot hope with any certainty to hit a mark beyond the range of the gun he is shooting. A long range gun should be sighted finer, or the aim should be lower down on the mark, at short range. One cannot hope to do good shooting with a poor gun.

There are expert marksmen just the same as there are expert mechanics, and what they have done should be accepted as a fact. On my hunting trips in the deer country I carry a .38 Winchester, '73 model. My first shot at a deer with this gun was a disappointment, though I had not tested it at long range. When I fired, the deer sprang into the air and dodged behind some bushes. Evidently the ball struck under him. I went to camp and tried the gun on a spot on a tree. It shot too low. Then I got a file and went to work on the bead; also filed the prongs off the sight, and when I went into the woods again with that gun I hit what I shot at. But while I have shot the heads off grouse, squirrels and rabbits with it, I would not think of trying to bark squirrels with it. My old squirrel rifle is in the possession of a farmer near this town, and he molds bullets for it just as I did thirty-seven years ago. He says "it shoots where it is held."

The best plan I ever found for molding bullets, was to get a piece of linden wood and make a ladle of it, leaving the bowl shallow, and cutting a groove out to the edge. Then I made a fire in it of live coals and small chips or dead coals, laid pieces of lead on top and by blowing set the inside of the ladle to burning. This melted the lead and kept it melted while I molded the bullets one by one. I usually chose a spot on a bare floor, turning the bright, shining bullets out on the floor, then, before they were cool, cut their necks off where they lay with my knife, returning the necks to the ladle to be molded again until there was nothing left but possibly a squib.

G. W. CUNNINGHAM.

CHARLESTOWN, N. H., Aug. 17.—*Editor Forest and Stream:* The discussion on squirrel barking and the old Kentucky rifle has recalled many reminiscences of my boyhood days. Seventy years ago the old long barreled, small bore rifle was still a favorite weapon in New England, as well as in Kentucky, and the "turkey shoot" was the common accompaniment and amusement of Thanksgiving time. My own experiences with gunpowder began with the rifle, and as a boy I was a pretty fair marksman at a target, and have shot squirrels with the rifle, though my eyesight was never strong enough to make me a very "crack shot." The letter of Cabia Blanco, however, recalls the fact that some time in the early '30s, when I was ten or twelve years old, the late Governor of New Hampshire, then a member of Congress, brought home from Washington one of those Hall rifles, with one of which each member had been supplied, and being no sportsman himself, turned it over to my father to keep for him. I practiced with that more or less, and soon got so I could beat my father at a target, but it was too clumsy and coarse sighted for a sporting weapon, and carried too big a ball. I mention it now to fix the date for Cabia Blanco. The other rifle he speaks of, with the revolving wheel, was, I think, the "Henry" and this was a Kentucky invention.

One of my school mates had an 8-inch pistol barrel, made by Robbins & Lawrence, at Windsor, Vt., which he had got mounted on a short stock like a gun, and which was "sure death" for chipmunks and red squirrels, though I never tried it on any larger game. Another gun which I used a good deal belonged to a distant relative, and was a short English rifle, made for use in moist or tropical climates, with a brass barrel, about 16 to 18 inches long, but it had been a good deal worn, and was not very accurate, though I have killed squirrels with it. My next-door neighbor in those days was an old blacksmith who was not only a good shot himself, but a gunsmith, too, like many of the old New England blacksmiths of those days, and he had a long rifle of his own make which was the subject of my boyish admiration.

Somewhat later a young gentleman from Boston came up here to read law, with the late Chief Justice Cushing, and brought with him a rifle and fowling piece made by one Pratt, of Roxbury, which were, without exception, two of the best guns I ever shot. One of my shooting cronies, a young shoemaker, like Nessmuk, could put a ball through a squirrel's head with that rifle with great certainty, and I well remember the string of gray squirrels which he and Mr. Tirrell, the owner of the two guns, brought down the evening of the day on which the first

General Harrison was elected President. One of them was a non-resident, and the other not quite of age, so they both went off after squirrels. What has become of my old comrade in the woods I do not know; Nessmuk like, he did not stick to the old proverb of "*ne sutor ultra crepidam*," but left home soon after I did, and the last time I saw him I met him on Broadway some thirty years ago, resplendent in blue cloth and gilt buttons, as one of the officers of "Admiral" Jem Fisk's Fall River Navy.

As these notes show, my father trained me early to the use of firearms, and gave me a "shotgun," as we boys called a fowling piece, when I was twelve years old, and I followed his example with my own sons as soon as they were able to hold up a gun.

Speaking of barking squirrels, although I never tried to accomplish the feat with a rifle, I once made a somewhat similar shot with a 12-gauge gun, which I shall never forget. It was many years ago, I think in '68 or '69, that I had been out squirrel shooting with my two oldest boys, and having got several squirrels in the morning, we had sat down by a little woodland brook to eat our luncheon. The boys sat down close to the water, while I was on the bank, a little above them. We had just finished our lunch, when a gray squirrel started to run up a tree on the other side of the brook, about twenty yards distant, saw us, and stopped to inspect. My right side was toward him, and my gun lay by my right hand. I was afraid to turn round so as to bring the gun to my shoulder, so quietly cocking one barrel, I picked up the gun, pistol fashion, in my right hand, and fired, right over the boys' heads, who were facing me, and could not think what I was up to. As the squirrel had disappeared, one of them went to look and found him dead, eight feet from the tree, in a line exactly at right angles with my line of fire. The bulk of the charge had struck the tree, glanced, and with the bits of torn bark, struck the squirrel fair in the belly, killing him instantly, and throwing him away from the tree. Those boys have killed many squirrels on their own account since that day, but neither of them has forgotten that lunch at the brookside, and that apparently random pistol shot, with that heavy gun.

I have pleasant personal recollections of Audubon, and never thought of doubting his stories of Daniel Boone and squirrel barking, though I must confess to a good deal of skepticism about the Leather Stocking tales of piercing two potatoes with one bullet, for it must be a very rare chance that would bring two objects thrown into the air by one person in the same line of sight to another man holding a rifle. It is too much like the old archery myths sung by Sir Walter Scott:

And when in turn he shot again
The second cleft the first in twain.

The question of "Cat Appetite" seems to be settled, and to have given place to "Frog Provender," but I want to thank Mr. Morphew for his contribution to it, and to say that my "Thomas," having enjoyed asparagus in its season, as well as the cat mentioned by M. de Varigny, is now reveling in string beans and sweet corn to his heart's content, besides doing a fair amount of foraging among the mice in the barn.

It was pleasant to find in the last FOREST AND STREAM the familiar signatures of Kelpie, Coahoma, and Didymus, and equally so, some months since, to read the delightful account of the visit to Crater Lake by Forked Deer, whose name has long been among the missing.

I have caught no trout for two years, and the fishing has been very poor in this part of New Hampshire. Nearly all the brooks practically dried up last year from the lack of rain and the loss of the forests.

VON W.

Do Ducks Smell?

NEW YORK.—*Editor Forest and Stream:* Now that the duck-smelling theme has been broadened to include buzzards and other fowl of the air, I venture to refer your unconvinced controversialist Coahoma to the kiwi and its smelling apparatus. The kiwi, a grotesque bird of New Zealand, is possessed of a long beak with the nostrils placed at the end. It is a night feeder, and its food is the earthworm, which it procures somewhat after the manner of our woodcock. Dr. Buller, a naturalist of repute, whom the books quote as an authority on the kiwi, says of its feeding habits:

"While hunting for its food the bird makes a continual sniffing sound through the nostrils. Whether it is guided as much by touch as by smell, I cannot safely say; but it appears to me that both senses are called into action. It is probable that in addition to a highly developed olfactory power, there is a delicate nervous sensitiveness in the terminal enlargement of the upper mandible. It is interesting to watch the bird, in a state of freedom, foraging for worms, which constitute its principal food; it moves about with a slow action of the body, and the long, flexible bill is driven into the soft ground, generally home to the very root, and is either immediately withdrawn with a worm held at the extreme tip of the mandibles, or it is gently moved to and fro by an action of the head and neck, the body of the bird being perfectly steady. On getting the worm fairly out of the ground, it throws up its head with a jerk, and swallows it whole."

With Buller of New Zealand as my authority, I stand up to be counted with Cristadoro of Minnesota as against Coahoma of Mississippi, as a believer that (some) birds do smell.

J. D. ADAMS.

NEW ORLEANS, Aug. 16.—*Editor Forest and Stream:* In your issue of July 9, I read "More Anon's" article, "Do Ducks Smell?" and would like to have space to recount a bit of my experience while shooting ducks the past thirty years in southern waters over decoys.

I am of the opinion that ducks do not smell a human being any more than a wild turkey does. Our hunters down here, both professional and amateur, when setting out decoys, place them to leeward of their blinds, taking the wind on their backs. I have always understood that ducks preferred the still side of a lagoon to the windy or rough side, and naturally came to the smoother water. Nearly every flock comes to decoys up wind, and the ducks frequently light among them and remain until the sight of the wooden floaters creates suspicion that some-

thing is wrong. Those Currituck ducks have more sense (of smell) than have those that come "way down South in Dixie."

Ducks soon recognize decoys after coming to them several times to be shot at, and it is the sense of sight, not smell, that deflects them from the anxious shooter.

T. K. RENAUD.

[Ever since the controversy as to the smelling powers of ducks began, we have been wondering why the obvious bit of evidence brought forward by Mr. Renaud was not called attention to. It is of course perfectly well known that the duck shooter, whether on the Gulf of Mexico or on Currituck Sound, puts out his decoys to leeward. He wishes to have the ducks come up in front of him and alight in the wind; in fact, they will not alight in any other way. He wishes to see them as they are coming, and is seriously handicapped if they come from behind him. The birds which come are ducks of all sorts; mallards and black ducks as well as canvasbacks and blackheads. The decoys are commonly set from 20 to 30 yards from the gunner, and his scent is necessarily constantly carried over them. Perhaps the reason that this bit of evidence has not been earlier adduced is because duck shooters over decoys are not very many. Works on duck shooting usually explain more or less fully the manner of setting out decoys, and the reader who wishes to look it up is referred to "American Duck Shooting," where it is mentioned in several places, but especially in connection with point shooting in Currituck Sound—on page 386—and again in the chapter on battery shooting.]

The Sora.

THE season is at hand for the opening of the sora shooting—the first shooting of the fall. This little bird, known also as Carolina rail, ortolan, rice bird, and soore in various localities, is now about to begin its migratory flight all over the country. It is one of the earliest birds to move, and a slight frost seems to start it on its journeyings. In every fresh-water marsh along the coast and inland, from Virginia north almost to Hudson's Bay, the sora breeds in some numbers, and when the autumnal flight begins the birds stop at different points where grow the wild rice or other plants whose seeds they like, and rest and feed.

The sora is not a large bird, measuring only about 9 inches in length. Above he is olive brown, varied with black and gray, and the under parts are lighter, the breast and flanks being sometimes marked with white. Except during the migratory flight, the sora takes to wing unwillingly, and spends most of its time on the ground, running here and there through the close set stems of the grass or weeds in its marshy home, and feeding on the seeds which fall from above. If the water rises, they still run about on the floating vegetation, or climb up the stems of the weeds, seldom flying unless forced to do so.

The sora's migrations take place at night, and a marsh which one afternoon had no birds in it may be full of them the next morning. In the same way they may all vanish in a night. These sudden and mysterious appearances and disappearances have given rise to many superstitions about the rail. People have declared that, with their short wings, it was impossible for them to fly great distances, and have thought that they have descended to the bottom of the streams at the approach of winter and remained there in the mud until spring. Other people have believed that they change to frogs when the cold weather comes, and some of the western Indians think that they perform their migrations on the backs of wild geese or cranes, which carry the little birds from south to north, and back again.

From New England to Virginia, sora shooting is a favorite sport. It does not last long—only two or three hours a day for four or five weeks in each year. But it comes at a delightful season, is very easy shooting, and entails little or no exertion. It is one of the best and most encouraging forms of shooting for the beginner.

Each boat is propelled by a "shover," who, standing in the stern, by means of a long pole shoves the boat through the high grass or reeds where the rails have their home. The shooter stands in the bow of the boat, and the rail rise singly in front of the bow. They usually take wing quite close to the boat and fly slowly and straight and should be easily killed. It is the business of the shover to watch the bird as it falls and mark the spot, and to pick it up as the boat goes by.

In old times when rails were more plenty than they are now, bags of one or two hundred were sometimes made in New England, and it is said that on certain marshes in Virginia, which are favorite resting places for the birds during migrations, such bags are still made.

The sora is recognized as one of the most toothsome of game birds, and in the estimation of many ranks with the woodcock and the English snipe. During the early autumn, when they are feeding on the wild rice, they become very fat and are most delicious eating.

Requisitions for Game Law Violators.

HARRISBURG, Pa., Aug. 19.—*Editor Forest and Stream:* Last week one of the game protectors of West Virginia came to Harrisburg with a requisition for a resident of one of our western counties, charged with killing game out of season in West Virginia. The offender and his friends felt very confident that our Governor would not honor such a requisition, the offense being classed as a misdemeanor and of a trivial character. The opposite was the result, the requisition was honored, upon the ground that the offense was against the Commonwealth of West Virginia, and not against an individual. The gentleman was taken back and made to suffer the penalties imposed by the law. I state this as it may be a matter of interest to some of your readers who are in the habit of coming into this State to hunt in violation of our law requiring non-residents to secure a license before hunting in this State, much unpleasantness and trouble will, beyond doubt, be saved to many of these people and to the game protectors of this State if those from the outside can be made to understand that this law means just what it says, and that there is danger in attempting to violate it.

JOSEPH KALBFUS,

Secretary of the Game Commission.

Life in the Woods.—XV.

Last Night in Camp.

(Continued from page 152.)

OUR hunt was now fast drawing to a close. In two days more Henry and Lewis were to go out, and Henry had not killed a deer. He was extremely anxious to get one. He had had a number of shots, but had been unfortunate, for his shower gun, with all its buckshot, did not seem to have done much damage. When morning dawned, he was the first one out, and he hunted hard and faithfully until long after the dinner hour, but his efforts were not crowned with success, and he looked pretty "blue" as he sat down in camp to take a rest. He never had been "skunked" on a hunt of this kind, and he did not want to break his record. To think of having been in the woods three weeks with several good chances and then not kill a deer was too much for him.

We had some fanciful names for the lakes around us, which we had christened ourselves, as the town maps of the Government survey did not bear any designation for them. There was Echo Lake, because of its famous echoes; Beaver Lake, because at some time in the past the beaver had a large dam there, and evidently a large colony of the industrious animals had thrived there for many years; Trout Lake, because in its outlet we had frequently seen speckled trout; Crescent Lake, because it was shaped like the half circle of the moon; Sand Lake, because it was the center of a sandy plain, and Otter Lake, because along its shores could now and then be seen signs of that animal. Near Otter Lake there was a famous runway which led up over a high ledge, and which really was the only exit to the north from a large area of well wooded country. We had frequently driven deer over it, and had been quite often successful in getting shots there, and so we proposed to put Henry on the best stand, and give him another chance, if possible, for a shot. Tired as he was, he was only too glad to accept the offer, and though it was rather late in the afternoon when he started around by the old logging road to reach the stand, we all felt hopeful. Louis, myself, and our little spaniel, Sport, were to make the drive.

We gave Henry twenty minutes start before we moved, and Louis and myself had hardly separated when, with a "yip, yip, yip," Sport jumped up three deer, and away they went, right toward Henry's stand. I banged away to put him on his guard, and hurried on as fast as I could, expecting every moment to hear the "boom" of his old shotgun, but it did not "boom." I began to get anxious, especially as Sport in a few minutes came back to me, and to think that the deer had turned off and we would not see them again. I was almost certain of this, when up they started again, with the little dog following as best he could through the brush and over the logs. This time I halted, and in a few minutes "boom, boom" went the shotgun, and then I started on the run. Soon there was another "boom," and then I saw a large doe vainly trying to run, and just able to raise up and lunge forward, falling to the ground each time with a crash. I finished her with a ball through the neck, just as Henry came up ready with another charge of buckshot. There was a happy man. We were both happy, and made the woods ring and echo with our shouts, until Louis, far off to the right, knew that something had happened, and answered with his own glad call. By the time we had the doe dressed it was dark, but we hitched a rope to her and dragged her out to the roadside, where we concealed her behind a big tree to await the team which was to take the boys out. It was a happy camp that night, for everyone rejoiced as much as Henry did over his good fortune. "It never rains but it pours," and so it seemed in this case, for the next morning, while still hunting, Henry jumped up another big doe, and killed her in her tracks with the first shot, so that when he went out he had the satisfaction of taking two as nice, fat deer with him as any hunter ever took from the woods, and instead of a long face and a gloomy look, he wore one of the happiest smiles that ever shone on any man's countenance.

The rest of us did not remain in camp much longer, for soon winter began to set in, and the heavy snow and intense cold served to make us all ready to return home. About the only exciting chase experience we had after that, was a long chase after a three-legged deer which evidently had had one foreleg shot off at some time. In spite of the snow and its crippled condition, it succeeded in getting away from us, and though we frequently caught sight of it in a chase of an hour or more, we never got even one shot. Finally we had but one more day left, and so began to quit.

As the end of the hunt draws near, its effect on the party is plainly to be observed. There is an apparent lack of interest, and the same ambition is not displayed. There is a gathering together of traps that must be packed. There is a general cleaning and scrubbing going on, and if there is a razor in camp it is kept busy the last day or two. Each one, after the deer are all in readiness to load, begins to tend to his own affairs. The Old Trapper started out and made a long turn, bringing in all of his traps; then he cleaned and dried them and sewed them up in a heavy bag he had provided for the purpose. He then went outside and gathered together the ax, saw, hatchets, rope and straps hanging in the trees, and all the pots and pans and cooking utensils and dishes of every name and nature, and then a big "washee washee" followed, for everything must be cleaned and dried before put away for a year of rest. Some of us turned to and helped him, and before long everything was in proper shape, piled up ready to be put in the chests, with just enough left to suffice for the next morning's meal. Then each individual member began prowling around to get their own effects in order. The hunting clothes are laid aside with the compass, the heavy hunting knife, the old watch chain, the drinking cup, match-box, short brier pipe. Store clothes are resurrected from the trunks, the broom brush put in operation, and then they are hung up over night that some of the wrinkles may be stretched out before morning. Derby hats take the place of the caps, and shoes and boots are substituted for the heavy socks and rubbers, packs or moccasins. Then the chests and trunks are

brought in, and one by one they are packed with everything that is not needed the next morning, and finally, late at night, we all take our last sleep in camp.

The alarm clock turns us out an hour earlier or so the next morning, for the team is to come early in order that we may catch a day train and not be obliged to wait at the station until night. A hasty breakfast follows, and then the last of the dishes and the cooking utensils are packed. Then all the bedding and clothes, excepting those that are to be rolled in the tents, are stored away, and the chests all securely roped and carried outside. Finally the stove-pipe is disconnected, and with the aid of two sticks thrust through the holes on top, the little sheet-iron stove is carried outside, emptied of its contents, and rolled around in the snow until cool enough to be handled. Soon it goes into a box, and with it most of the cooking outfit and the stove-pipe, which is made to telescope, then on goes the cover. While this has been going on, others have stripped the canvas roof from the camp, and it, with the supply tent, which was struck the night before, are rolled up with some clothing and blankets. An old carpet is wrapped around the bundle, and then all is ready to load. Some of the surplus wood is used to build a fire, and so we wait until the team comes. Now comes the tug of war, for our chests are heavy, but soon all is aboard with the deer that have not been sent out tied on top, and away we go, bidding good-by to our hunting ground until another season.

The road is bad. It is hilly and rough, and the sleds slide and slew in a way that is almost as bad as a ship at sea. Once we experience a sudden fright, for without warning the bobs, while on the edge of a hill, slide quickly to one side, and in an instant, striking the trunk

of a tree, tip over. The Old Trapper, sitting on the back of a big buck to hold him on, is thrown several feet, and goes rolling over and over himself down the hill, but the Colonel is caught between the load and the tree, and we catch our breath as we hurry forward, thinking he has been crushed between the heavy chests and the tree. It is a great relief for us to find him sitting there laughing, not hurt in the least, as two high boxes, one each side of him, each struck the tree and left him in between, not even pinched. The Old Trapper, too, escaped with a bruised shoulder, and after righting things up, we reach the station without further accident, in season to catch the desired train. Then we enjoy for the first time in three weeks a civilized meal, and that we all do justice to it goes without saying. The victuals suffer, and the landlord suffers, for he says he never makes a cent out of a gang of hunters, and we do not believe he does. Then we enjoy a good cigar, something we have not had for two weeks, and we con all the old papers to see what has been going on in the outside world while we have been away, and are astonished at things which have ceased to be talked about on account of being old and crowded out of notice by some more recent occurrence.

After a time the train rolls in, and we board it to find the cars filled with hunting parties from all parts of that section of the State and upper Michigan returning home after a fall outing. Then we have to exchange experiences and swap yarns, and if the average hunter cannot keep up with the average fisherman in telling a big story, he is, at the worst, a very close second. As midnight draws on, one by one they curl up and drop off to sleep, and in the wee sma' hours we are landed in our native burg. Then one must become acquainted with his family

once more, learn all that has been going on since he has been away, and find that he has a thousand and one things that must be attended to and at once. Then there are the threads of business life to be taken up once more—"working into the harness" some call it; old friends to see, and everyone you meet must know just how the hunt resulted, just what you did personally, and of course you "bought the deer," or someone else shot them for you, or you didn't get a one, and so on. Finally we find that we have come home with a ravenous appetite and that we are not nearly as fastidious about the cooking and the selection for the table as we used to be, it having been reduced more to a question of quantity than quality than formerly. We find—though at first we are a little homesick for the old life, the trails in the woods, the boon companions, and all the surroundings of camp life—after all it is good to be home again. Everything tastes better than it did before; the opera and the theatre have improved wonderfully; the dance, the reception, and the card party have become more attractive; business seems to slip along a good deal easier than it did before. There seems to be more ozone in the air; it is a pleasure to get up early and breathe deep draughts of it. In short, "life seems more happy and hope more bright," and we all feel as we settle back into the old grooves that we have been greatly benefited.

During the following months we meet occasionally, and when we do it is in the nature of a reunion to talk over the hunts of the past; to live over the scenes of camp life once more; to plan for the next hunt, and to kill more deer—in our minds—than were ever shot before by our party, or ever will be bagged.

CAROLUS.

[TO BE CONCLUDED.]

Colorado Streams.

DENVER, Colo., Aug. 18.—I am often asked by tourists how far from Denver one must go to find good fishing in Colorado. "Only a matter of 275 to 350 miles," is the reply. Then the inquirer elevates his eyebrow, whistles softly, and proceeds to make up his mind that the distance is too great. But it is a fact that the good fishing streams of Colorado are the distance named above from Denver, and sometimes even more remote. However, this is a country of great things; great distances, great wealth, great railroads, and magnificent scenery, not to speak of the size of the trout. One contemplating a trip from Denver to the western slope where good angling abounds need have no anxiety on the score of cost of the trip. Three railroads reach the principal points for anglers, and either of them will set you down at almost any spot designated at a cost of less than \$10 for the round trip. And the time consumed in going is less than a day. Furthermore, there is no less than \$1,000 worth of scenery scattered along every mile of the inspiring trip.

G. Gordon Pickett, who has the reputation of "getting 'em" when he goes out, came back from Billy Welch's lodge near Lyons—which is only 55 miles from Denver on the Burlington, and a most charming place to put in a day at angling and studying nature—after a two days' stay with 57 rainbow, native, and eastern brook trout to his credit. This is a phenomenal catch—far better than may be hoped for by the average angler—and Gordon 'fessed up that he came pretty close to climbing over the legal limit in his enthusiasm. He is solidly arrayed in the forefront of those who counsel moderation in all lines of outdoor life.

The Eagle and Frying-pan rivers on the western slope are now at their best. It is no trick at all to kill forty or fifty good sized trout in either of these streams in a day's casting. I regret to say that trout are so plentiful that oftentimes more are taken than the angler is entitled to; it is also regrettable that such achievements are heralded by the local papers as though something to be proud of. But—in line with the suggestion of FOREST AND STREAM's not inapt little editorial in last week's issue—I read an item in a country exchange a day or two ago which announced that some "game hogs" had boasted of killing 100 trout in a few hours' time. The game hog was named by name, and his achievement was rated just as it deserved to be. Unfortunately the office cat mislaid this article, which I had intended using as "copy" this week. From which it is to be seen that the heaven of moderation is working in more places than one.

But to return to the Frying-pan and Eagle rivers. There is excellent fishing along a great stretch from Thomasville to Basalt on the Frying-pan, and I saw several good fish, running from 2 to 4½ pounds, dressed, which were shipped to friends in Denver. As the gentleman who caught them went on a business, not an angling, trip, but fell into temptation, because of that peculiar itching that comes to one when he gets close to a good trout stream, I withhold his name. From Rudi down to Hopkins' Spur, the river is all that the most picknicky angler could desire—just a succession of long riffles and deep pools, with here and there broken waters that tempt the big old chaps to guzzle on the flies that hover in the spray.

Homestake Creek—a tributary of the Eagle—is a beauty spot of nature, and a lurking place for the most provoking of good sized fellows. It has not yet been fished a great deal, and those who have taken the trouble to trail its course to its origin are enthusiastic. The stream is simply ideal for trout; the beauty of it is, the trout are there, too. This creek is offspring to the Mount of the Holy Cross—or rather that range—and the waters are almost frappé. It flows past the old town of Gold Park, and empties into Eagle River a few yards below the Rio Grande depot. Gold Park is a deserted town of 500 "ghosts," and the angler will find all kinds of accommodation from a two-story plastered mansion, rent free, to an unpretentious blacksmith shop, or a grocery perdu. The place is reached by teaming fifteen miles from Leadville or from Pando. Start in about a mile and a quarter below the deserted town, and he who fishes down will find a number of little parks—natural gems—where the stream widens and deep pools are found. Then he wades into little cañons, deep pools, and some rough waters. From the pools an expert, nay, one not so expert as might be, even, will pick out from the recurrent pools nice little chaps that will stretch his pocket scales to the pound, and even the two-pound notch.

The Eagle River below Wolcott is noted for its big ones, and the water is now low enough for the big pools and long riffles that there abound to be reached. This particular stretch of water is from Sherwood's to Bill Livingstone's, on the D. & R. G. R. R., and it takes a pretty good angler to come back with scales, because the old fellows are on to all the wiles of the best casters in the country. It is all a matter of patience and skill. If the fish are rising there is likely to be "something doing," and there is plenty of broad and deep water to "do it in." In rainy weather this ideal spot for the fisherman should be avoided, for the reason that Milk Creek which comes in at Sherwood's partakes of the color of its name and renders the river opaque also. If one carefully covers this stretch of perfect water for a day, he should return with a basket filled with lunkers.

The writer and two friends are leaving to-night for the Green River in Utah. There are stories of fresh water salmon of forty pounds and under—with the emphasis on the "under," probably—who simply lie in water to grab any old sort of bait cast at them. These fish are also known as giant minnow, whitefish, and squaw fish. The object of this trip is to capture a few specimens of these old hummers and send a photo or two to FOREST AND STREAM. The result of the expedition will be made known at a later date.

J. D. C.

A Potomac Shark.

WASHINGTON, Aug. 19.—A shark 9 feet 4 inches long was captured in the Potomac last week, four miles below Alexandria. F. A. Tyler, a farmer, and his hired man, in a trap net set for the common run of catfish in the river, found the shark. The big fellow, who had gorged himself on catfish, did not make much resistance, and the fishermen succeeded in getting a cable around him, towed him ashore, and held him there until he died. He weighed 328 pounds, and was 6 feet 7 inches around the girth. The shark will be stuffed and placed in the National Museum.

My First Attempt at Fly-Fishing

IT WAS back in—well never mind, I was a lad at the time, born as all healthy country boys should be, with innate love for nature and all things pertaining thereto. In company with my father and grandfather, I had acquitted myself with honor among the hordes of school weakfish and striped bass; and one day at the mouth of a small estuary that ran through my native village, I made fast to a big yellow-finned tide-runners—but, as Kipling says, "that is another story."

At that early age I was a constant reader of FOREST AND STREAM—that was when the outer covers were of pale green paper—and each week I saved my pin-money and purchased it from my newsdealer; also another paper, edited by the renowned Wm. C. Harris, entitled, "The American Angler, Hook and Line." A slight digression will make it necessary to crave the reader's indulgence—it is strange what a creature of habit man becomes—somewhere I have read "the childhood shows the man, as morning shows the day"—and so after the lapse of all these years, I still cling to the old habit of purchasing my periodicals weekly from the newsdealer, instead of subscribing to them annually; and first and foremost among them all comes my childhood's friend, FOREST AND STREAM, breathing its soothing influence into my ears when I am warmly ensconced in gown and slippers, away from the city's broiling, festering streets. Each week I renew my acquaintance with my boyhood days, and so I hope, providence willing, gradually to grow a young old-man. I feel stronger and better after reading it, and find a partial answer to Eugene's Field's little poem:

"O trees and hills, and brooks and lanes, and meadows, do you know

Where I shall find my little friends of forty years ago?
You see, I'm old and weary, and I've traveled long and far;
I'm looking for my playmates; I wonder where they are!"

And then I take up FOREST AND STREAM, and life seems less lonely as I indulge in retrospection. But, enough, I renew my acquaintance weekly with my former friends, and now to the point of my story.

An old fellow's mind is apt to dwell on past events. In the columns of the mentors of my youth I read of a mode of fishing, different from any I had ever seen—it was the art of fishing with the artificial fly. It appealed to me more and more as I read and reread the article, and so I determined to master this new mode of fishing. My mother's duster suffered accordingly, as well as old Buck, the cat, and the old rooster, whose hackle feathers assumed a new importance. My first attempts resulted in a combination of hook, tinsel, feathers and silk that instilled anything but confidence in my youthful breast—but blessed childhood, how hopeful and trusting they are! I persevered and took old flies apart and retied them until my eyes and fingers ached; but perseverance has its own reward, and mine came in time. I gradually became able to cut down the size of the feathered "wabs," until finally the flies resembled somewhat the patterns of those I had seen. My first cast consisted of a red-bib, a blue-bottle and a red-hackle. I tied my own leader—a six foot, single gut, with one loop for the hand-fly.

The next problem was the rod. So one day, with my father's indulgence, I purchased, on Vesey street, New York, a split bamboo (?) for the phenomenal sum of \$1.98. When I reached my native village and alighted from the train, behind the shelter of out-going freight, I removed the rod from its paper cover, and, there she lay, resplendent with varnish and silk. A good-natured freight-hand looked back and smiled indulgently. I often think of him now; I guess he had been there himself when he was a little boy—when he was a little boy, remember. (After all, we are, all of us, little boys, even if we are gray-bearded.) The makers of that rod were sound on the varnish, that I can testify to. It mattered not that there were two flaws in the second joint. I had the rod, actually my own. A fondness sprang up in my heart for that rod so prettily decked with silk, that I forgot the flaws, and was accordingly proud of the varnish. I am not quite certain but that the paper was not nearly off in the train. I do recollect, however, that the cord fastenings were cut, long before the train pulled out of Jersey City and, also, that that ride was the longest, seemingly, that I ever made. I recollect that I was the "first man off" that train. Enthusiasm! I'd have tried that rod if it were mid-winter and I had had to wear skates to do it.

The next episode was practicing the cast in the orchard. After lassoing myself with the line, a num-

have done, and after a little playing—a little playing, mark you; for I might as well play a lily-pad, but I had to convince the jury on the bank who held my reputation in his hands, that I knew a thing or two—I reeled in and landed with my hat (I could have lifted him out, but it was the effect I sought), not a bass, but a good-sized red-finned shinner. I was a trifle disappointed at its not being a bass; but I had taken a fish in the new way and had proven myself to my chum, who stood open-eyed with astonishment on the bank. I took nine more that day, all save one on the "red-hackle;" the other took the "blue-bottle."

I smile as I gaze back at the picture of the country lad with his cheap fly-rod and a heavy brass salt-water multiplying reel. I cannot tell how proud I felt. I was pretty well pleased with myself, I remember. I cannot blame the lad for feeling proud of himself, though his fish was a shiner. Even at this late day, I feel proud of the lad; he had foisted a new departure upon his skeptical neighbors, and consequently stood or fell with their decision, and it was up to the boy to prove the truth of his assertions. It was a risky move but successful.

I have said that I had felt proud of the boy; but, I have a sneaking suspicion that perhaps the boy might not feel proud of the man, seeing how at times when the fish would not rise to the fly, I have used worms—yes, gentle reader, I must confess, I occasionally

results as those on the other side of the Gulf, and keen disappointment was the lot of the anglers on the Restigouche, the Cascapedia, the Bonaventure, the St. John's, the York, the Miramichi, and the Nepisiguit.

The Salmon Nets.

Reference has already been made in this column to the complaints of the net fishermen. I have very good reasons for believing that in many instances these complaints were not justified. Many of the nets undoubtedly turned out badly in the early part of the season, but those along the easterly part of the north shore, in particular, yielded better than average results, and this proved to be the case as far west as Trinity Bay. The net fishing improved very much toward the latter part of the season, and this is not surprising, when it is considered that the fish hovered about the mouths of the rivers so long without entering them.

Into some of the smaller rivers there has been, just as anticipated, a very late run of fish, of which the Eternity furnished a fair example. This was only after the July rains had somewhat raised and cooled the water, and in some instances was only after the anglers had left the streams. If carefully preserved from poachers, there ought to be as many spawning fish as usual in these lesser rivers, for notwithstanding that a larger proportion of them were probably netted while lingering for so long

MR. J. ENRIGHT USING THE TROUT ROD.

MR. J. ENRIGHT, WINNER PROFESSIONAL SALMON FLY-CASTING.

ber of days in succession, I finally got the hang of things and succeeded pretty well for a youngster. I now decided to try the creek.

Before going farther, let me introduce my friend and companion. Ed was one of a pair of twins and bragged that he was older than his brother Phil, especially when the elder should have precedence. I found afterward that it was true he was older—about seven minutes. They were two direct opposites; Phil a big good-natured, fat boy of the "hail fellows well met" sort; Ed, diminutive, nick-named "Mouse" by the other boys, a secretive, chicken-breasted, consuming-his-own-smoke sort of boy, but a true lover of streams and wood and all that appertained thereto. In our earlier adventures we used to tote Phil along, but experience taught us the rashness of such proceedings. Phil enjoyed it as much as we did, but everything seemed too much exertion—he liked good things if others obtained them for him, or if they came easily; in fact, he didn't like work, resembling nothing so much as Long-fellow's lazy Shas-won-dah-see. With Ed it was different, no sun was too hot, no seat too hard, no trouble too much, if there was the slightest chance of success.

The elaborate maneuvers through which we passed to circumvent the game were amusing. We could both steal along like Indians; in fact, we made moccasins for the occasion. We had been severe with Phil of late; but relenting one day, we took him along, after his promising to behave himself. We were out after English (Wilson) snipe, and I thought I saw Phil's finish. I marked one down and proceeded to stalk it. Phil being less nimble, stumbled and flushed it out of range. It ended there. Ed was invisible, but judging from what issued from behind a neighboring tree, he wasn't far away. I felt sorry for Phil, but that was no affair of mine. Ed emerged looking like a score of red-hot asterisks chained together. Somehow after that Phil drifted away from us. He always did seem to have a few grains of horse sense in his make-up.

After learning to lay out my line a sufficient distance, I began explaining the *modus operandi* to Ed; but, like the proverbial healthy dog, his nose was cold; he did not enthuse worth a cent—"durned 'f he cu'd see how any durn fool fish 'ud take holt o' them fethers 'n think they was bugs!" You see Ed was a confirmed bait-fisher from way-back. But I was determined and persuaded him to accompany me, which he consented to do, first depositing a can of worms in his pocket.

Arrived at the creek which contained bass, "sun-bass," the boys called them; but from dead specimens and the aid of the American Angler, I was enabled to identify my later day friend, *Micropterus salmoides*. I made a cast up-stream at a bend where the depth was from two to four feet. The result was that my flies had a tendency to come toward me too rapid. I reeled in, got my line under control and began over again. It was exceedingly embarrassing; and Ed knew it, judging from the face he wore. But I had made up my mind and intended to prove myself right and maintain my reputation at all cost. I remember, I made six casts without any result, with Ed eyeing me closer than a kingfisher which sat perched on a nearby willow. The seventh cast went up-stream; and as I elevated the tip of my rod, the tail fly landed in the center of the pool ahead, where the current was less rapid. There was a lazy ripple in the pool right where my fly fell and a pluck at the line. I turned my wrist rather more sharply than an experienced hand would

use worms. I think it was Jerome who said: "Try to live, so that the boy of fourteen will not be ashamed of the man of forty. I think we all of us try, more or less, but a healthy boy's thoughts, aims and impulses at that age are pure, truthful and lofty, and, I regret to say, 'till the world creeps in.'" So with me, not only the world, but the earth with its worms has crept in. I wonder what the boy would say, who decided then ever afterward to be a fly-fisher. Since I was fourteen, I have tackled and killed some lordly fish, and accomplished a few other stunts; but, with it all, even at the crucial moment, I cannot recollect having experienced keener pleasure, or being filled with more genuine satisfaction than on the day I proved to Ed, that "fish 'ud bite on fethers en think they was bugs!"

G. W. BEATTY, M.D.

Fish and Fishing.

More Salmon Reports.

NOW THAT the salmon fishing season has entirely closed, and all the anglers have returned from the rivers, it is less difficult than heretofore to sum up the net result of the season's experience. Comparing all the reports that have been received to date, I am far from sharing all the pessimistic views which have been expressed as to the rapid decrease in the supply of fish during the present summer. The anglers' catches, as a rule, have certainly fallen much below the experience of most former years, but I am not nearly so sure, as many seem to be, that this necessarily indicates any large diminution in the stock of spawning fish. In the first place, it must be remembered that the weather conditions have been very peculiar during the season just ended. This season opened late, and up to within the last few weeks was exceptionally hot and dry. The early part of the summer was virtually rainless, and as the fish were late in running in, owing to the backwardness of the season, they found some of the smaller streams so low that they failed to enter them. As the season wore on, the temperature of these little rivers, owing to the extreme heat and the want of rain, became unendurable for the salmon, except where deep pools abounded at the foot of waterfalls or heavy rapids, and such of the fish as ventured their ascent declined to stir from the bottom of the pools. This undoubtedly accounted for the unfortunate condition of affairs which resulted in many of these smaller streams being abandoned as useless for fishing before the season was many weeks old. Meanwhile, into many of the larger ones, especially into those on the north shore of the St. Lawrence, familiarly known as high water rivers, there was not a sufficient scarcity of water in the early part of the summer to deter the salmon from running into them. But the early heat and the lack of the usual rains soon raised the temperature of the water, even in very high latitudes, to the point at which the fish become lazy and depressed, and then the fishing quickly fell off. In the meantime, however, there were a few weeks of very good sport upon some of the larger northeasterly rivers, as was noted at the time in the case of the Moisie. One of the party who fished the Natashquan this summer told me the other day, in speaking of the excellence of the sport which that river gave in the early part of the season, that he had this year, strangely enough, one or two of the best days' sport ever enjoyed by him on a salmon stream. Even the larger rivers on the south shore failed, however, to give as good

about the points of the coast before entering the fresh water, and despite the probability, too, that many of them tired of long exclusion from it and ascended other and larger rivers, it has to be borne in mind that against these apparent losses sustained by the smaller streams, must be set the fact that few fish fell, in them, to the rods of the anglers. Only those of the little rivers which were fished late in the season yielded anything like reasonable results to the fly-fishermen. Thus the comparatively small ones flowing into the Saguenay did better than those of the same character further east, the St. Jean and the Mars giving 56 fish between them for only a comparatively few days' fishing. The fishing in most of the larger rivers, on the other hand, did not improve toward the end of the season, but no complaints, so far as I have heard, have been received from these as to the scarcity of fish, the apparent fact being that though there, the fish refused to rise to the fly, on account of the peculiar conditions of weather and water already described.

I trust that I have succeeded in making it tolerably clear why I am now disinclined, after learning all the facts concerning the salmon season cited above, to share the belief that these conditions prove any very serious diminution in the supply of the fish, notwithstanding that both personal observation and information that I believe to be perfectly reliable have convinced me of the rapid increase of late in the number of such destroyers of it as dogfish, porpoises, and seals.

Incidentally it may be mentioned that the largest salmon which I have heard reported as having been killed during the past season on rod and line, was one weighing 44 pounds, which was taken on the Magdalen, a river noted for the large size of its fish, rivaling, in this respect, at least, the Moisie, the Cascapedia, and the Restigouche.

E. T. D. CHAMBERS.

Superior Fishing Club.

THE Superior Fishing Club, an organization of Cincinnati sportsmen, whose favorite recreation is angling, dedicated their new club house a few days ago, and had a most enjoyable time. The club bought a tract of land, at Camp Dennison, on the banks of the Little Miami River. Low hills rise on two sides of their grounds, which are plentifully supplied with large trees, furnishing an abundance of shade. Close at hand is the river where the members can wet their lines at any time during the season, with good prospects of quickly getting into an argument with some hungry bass.

A convenient club house has been erected, the ground floor having two large rooms for use of the members, and the second floor furnishing sleeping accommodations. A wide veranda extends along one side and one end of the building. The kitchen is in a separate building, and a large tent has been erected for use as a store room for supplies during the summer.

The camp is about sixteen miles from the city, easily reached, and is a favorite resort for those members who are unable to get away for more than a day or two at a time.

A large number of guests were present at the dedication, refreshments were served and music rendered by a brass band, altogether an occasion which will be long remembered.

Following are the officers and members of the club: G. Schenck, President; J. Gardner, Vice-President; D.

McCarthy, Financial Secretary; C. Haefner, Recording Secretary; Wm. Uhl, Treasurer. Trustees—E. Kotte, A. Brietenbuecher, Gus Kemmel, H. Wuebben. Members—Wm. Fiedler, L. Daner, Wm. Parker, F. Kotte, L. Pfeiffer, J. Stadtmiller, J. Wiegand, C. Lockwood, J. Mueller, F. Schorr, J. Diether, A. Wuester, W. Witte, D. Burnett. The guests who enjoyed the hospitality of the club's opening day were: Bud Lally, C. Backey, J. Jones, W. Meyers, J. Schweninger, A. Schmidt, L. Kelly, G. Kappner, J. Manderer, W. Crawford, D. Bross, H. Guepenhoff, G. Lorentz, W. Schedel, B. Pennekamp, C. Fischer, C. Kuehnle, R. Birgler, J. Rowerkamp, E. Rowerkamp, C. Bock, H. Goodhall, G. Peggy, C. Meyers, H. Greptke, E. Ulm, P. Toman, D. Pohlar, A. Gambell, C. Knorr, W. Rowerkamp, P. T. Barnum, G. Pouter, H. Bone, A. Kresing, R. Klauke, H. Brunne, F. C. Smith, J. Ulm, F. Menke, A. Schatts, F. Kancher, E. Losacker, H. Fette, T. Tibbits, T. Carrol, J. Wenning, A. Pfeiffer, H. Fette, W. Miller, L. Bowers, R. Schweminger, E. Moonest, D. Barrer, W. Puehl, C. Merkel, J. Beckenhoff, H. Smith, B. Rowekamp, R. Zemme, O. Lowery, G. Clark, D. Hendey, W. Witz, A. Duffy, C. Miller, J. Falk, J. Coyle, L. Riederman, G. Smith, G. Kamp, H. Goodman, W. Bohwenkamp, G. Garnetz, S. Wolsinski, H. Gardner, G. Deller, C. Brown, V. Harding, O. Court, A. Erbs, M. O'Connor.

BONASA.

Kentucky Hunting and Fishing Club.

THE club, which was recently organized, is rapidly putting their grounds at Rylands, Ky., in first-class shape, and by another year will have the best club preserve in the middle west. The tract comprises 160 acres of hill and vale well wooded, and is one of the most beautiful spots in the Licking River valley. It is within a few miles of Cincinnati, on the Kentucky Central railroad, the club house being only a short walk from the station.

The club has increased the size of the lake, and now has over seventy acres of water, forming several lakes and affording fine fishing. Wild rice has been planted, and there is no reason why it should not become a favorite resort for wild ducks in the season.

The club planted 30,000 black bass and 3,000 new-lights on June 5. The bass were about an inch long when put in the water. Several were caught on August 14 which were six to seven inches long, and next year the members should have the best sport to be found within several hundred miles of Cincinnati. Besides the bass there are plenty of channel cat and sunfish in the lakes. Hereafter the club proposes to raise its own fish for restocking purposes and has several breeding ponds for bass, so that the young fish may be kept by themselves until large enough to fight their own battles, when they may be put in the larger lakes.

Fifteen or twenty cottages have been completed, or are in process of construction this summer. Traps for live

bird and target shooting will be put in and, before the snow flies, the trapshooting members of the club will be able to indulge in their favorite sport.

The officers of the club are: G. F. Ahlers, President; Col. Robt. H. West, Vice-President; Dr. A. B. Heyl, Secretary; Joseph Coyle, Treasurer. Members of the board of directors, in addition to the officers, are: Richard McGraw, Otto Steinwedel, W. A. Stewart, S. Ullman and H. F. Jergens.

Salt-Water Fishing Tackle.

SOMEBODY has estimated that 200,000 people will have been added to the population of New York city this year, and presumably a larger number each future year. Tens of thousands of these will be persons coming from inland localities, and many of them will be anglers. These men naturally will persist in their sport so far as they have a chance, and will want to know how to adapt themselves to salt-water angling. Many other inlanders will from time to time go to the shore, partly for the fishing. All these men will be made wiser, and more successful, by some information as to the special requirements of salt-water fishing as compared with angling in the lakes and streams. They need to know how far their fresh-water outfit will answer, and what to get additional. Most of them want to spend as little as will do, and to make their expenditure go as far as possible. If there is anything like an all-round outfit for catching most of the kinds of fish that are angled for along the shores of New York and adjacent States, that is what the newcomers want. They do not expect any one set of tackle that will handle to the best advantage everything from a porgy to a halibut; but they need the rod, reel, line, hooks, etc., that will cover the most ground—or water.

This is to suggest that two or three experienced salt-water anglers contribute their views on these points for the benefit of the inexperienced. INLANDER.

Massachusetts Fish and Game.

BOSTON, Aug. 19.—*Editor Forest and Stream:* This has been a lively week in our city, and among the thousands of Grand Army men I had the pleasure of meeting Hon. Henry G. Thomas, of Stowe, Vt., the chairman of the Vermont Fish and Game Commission. He spoke of some recommendations to be made in his forthcoming report. He says there is now in reality no protection for the fish in Lake Champlain. Under the law he is compelled to issue seining permits on payment of the fee of \$20. By securing this permit in some cases the fishermen will realize many hundreds of dollars from seining. In the waters contiguous to Canada on the north and New York State on the west nothing is done by the authorities to prevent the wholesale capture of fish, although his deputies have caused the prosecution of a few of the offenders on the west shore. The situation at present is

one of great embarrassment to his commission, and he is anxious to find some way to secure proper and effective protection for the entire lake.

As regards deer killing, he says the men who come there from other States during the ten days of open time go into camp, get one or more deer, and depart with them, leaving no money to speak of, and he is strongly inclined to recommend a law establishing a non-resident license fee, as he finds something like thirty-three States have such a law. As an officer of the North American Fish and Game Association, he has given much attention to the subject of securing uniform laws in the various States and contiguous Provinces. Another matter which he is studying is the finding of some way to stock Vermont covers with quail. He informs me that his commission, together with that of the United States, has been instrumental in planting 26,000,000 pike-perch fry in Lake Champlain this year.

Col. E. B. Parker, of Boston, returned from a recent trip to his fishing waters to participate in the parade of the ex-prisoners of war, he having been incarcerated for nine months and three days in Libby. On his recent trip to West Waterford he saw several deer. CENTRAL.

Spoonfish Trouble.

LEWIS PETERS and Jesse Haffley, of Lewistown, Pa., came into town late one afternoon six weeks ago, swinging a 17-pound spoonfish between them on a pole. To the first inquirer they replied that they had shot the fish in the riffles of the Juniata River. The second tale they told was that it had been thrown from a car to the road, and they had found it. Yet a third version was that as they were going over their outlines in the river they struck the spoonfish. The fish warden brought suit against Peters and Haffley for fishing with an outline, contrary to the laws of Pennsylvania. They were convicted and fined \$25 each. Peters was arrested later and held to answer to the charge of having shot the spoonfish in the Juniata River. When he was brought before the local justice the sordid truth came out. He confessed that they had found the dead fish in the road, where it had been thrown from a car, and that he had shot it in the head before stringing it on the pole and helping to lug it to Lewistown.—New York Evening Post.

Mr. James G. Cooper, of Cincinnati, is credited with having made the record catch of the season in Wisconsin. This was a maskinongé, weighing forty-six pounds, and said to be only one pound less than the largest fish caught in the State last year. It was caught in a small lake in the vicinity of Eagle River. Mr. Cooper had good luck during his trip, making many fine catches besides his record breaker. At Echo Lake he caught nine big "muskie" in one day, the largest weighing thirty-two pounds. He reports the fishing in Wisconsin this year as being better than for many seasons.

YACHTING

Lipton Cup Races.

BY E. G. B. HAYMON.

THE Detroit Country Club's yacht, *Sainte Claire*, admirably sailed by Sydney Russel and a smart Corinthian crew, is the 1904 winner of the Lipton cup donated to the Columbia Y. C., of Chicago, by Sir Thomas as a perpetual trophy to be raced for annually on Lake Michigan, off Chicago, by boats of what is called the 21ft. cabin class.

In 1902 and 1903 the Lipton cup, which is a magnificent example of the silversmith's art, was won by George R. Peare's *La Rita*, a competitor again this year; and possibly a dangerous one if she had not been unreasonably delayed by the officials until it was nearly a quarter of an hour late for Monday's race, when she undoubtedly made the fastest time over the leeward and windward course of 12 miles.

Three races decided the Lipton cup contest, and in view of the number and high quality of the yachts engaged and the public interest aroused, it might not be amiss if a more thorough test were given by adding two more trials before any one boat is declared the winner. The three races also counted in the contest for the Webb cup, a very handsome trophy that also was won absolutely by *Sainte Claire*, which on Wednesday, in exactly the same kind of weather, won its third straight race. However, *Mendota* and *Pilot*, the two Milwaukee Y. C. boats, did not wait for this race, leaving Tuesday evening for their home port; and the two Chicago Y. C. boats, *Sprite* and *La Rita*, did not enter.

That these fine trophies have built up an excellent class was evidenced by the fleet of nine smart craft competing in this year's races. And it is only fair to say that the cream of this fleet came from Detroit and Milwaukee, which between them had eight new boats, built for the Lipton cup contest, and raced five of the eight.

Not a single new boat was built by Chicago's three yacht clubs, and the departure of the Lipton and Webb trophies ought to stir local yachtsmen to activity.

Detroit richly deserved to win. Five new boats were built by its sailors, who must have expended all of \$25,000 this year in their efforts to take home the Lipton cup. They went after it so strongly that their yachts finished first and second in two of the three races, and it is safe to say these same yachts will be hard to beat next year again if they are not knocked out of shape meanwhile by hard racing.

It is a far cry to next year's races, but there is one thing the Columbia Y. C., as perpetual curator of the cup, should make up its mind upon right now, and that is to appoint annually a special committee composed of yachtsmen rich in actual racing experience, commanding the respect of their fellows from every port and at home, competent to handle irreproachably a big event, willing to give all the time needed to make it a thorough success, and capable of handling all matters connected with it in a broad-gauge manner.

The faults of commission and omission in connection with the races were marked. At the start for the first race the officials' boat was placed on the wrong side of the stake boat, making it impossible for the racing skippers to start according to instructions. In addition, the first leg of the triangle was logged off a mile too long, which caused great confusion. For the second race there was no starting line at all, the official boat, which had been changed, being on its way out from the harbor when the final gun was fired, the preparatory gun having been fired in the harbor and not having been heard out on the lake. As a consequence numerous protests were filed and affairs got into an awful tangle. Both the first and second races were declared void by the officials Monday evening, whereupon Commodore Vilas, of Milwaukee, disgusted at the whole thing, announced he would return home with the two yachts from his club. This brought a reconsideration, and both races were again declared official.

The evening after the first race the committee made the remarkable announcement that the holder and defender of the Lipton cup, *La Rita*, was barred from defending it in the two remaining races, because its owner, George R. Peare, a member and former vice-commodore of the Chicago Y. C., from which the boat was entered, and Commodore Price, of the Columbia Y. C., had engaged in a personal encounter on account of what was considered a slight to the Chicago club. On Monday the committee rescinded this ruling, Mr. Peare having apologized for his part in the affair, but he was not notified *La Rita* could make the second race until all the other boats had cleared the harbor for the starting line.

Capt. Peare and W. L. Shepard, one of his crew, each state he was given assurance by the committee that the start should be delayed to give *La Rita* time to make canvas and get out to the line. If such was the case, the committee did not stand by its promise.

Through the fault of the committee, *Sprite* also was made two or three minutes late at the start for the

same race, which was especially unfortunate, because this was the Chicago Y. C.'s other entry, and it gave people the opportunity to make uncharitable remarks. However, I feel sure Charlie Soule, chairman of the committee, would not be a party to purposely spoiling any boat's start, and the sooner all the talk following this unfortunate contretemps dies out the better it will be for Chicago yachting.

Let the unpleasant features and errors connected with this year's Lipton cup regatta be forgotten, except as a warning against their repetition; and let it only be remembered that the first squally race of the series afforded many instances of fine seamanship, while the two others thoroughly tested the boats on every point of sailing in fair weather.

Sainte Claire, the winner, is an excellent model, designed by Crane, of Tams, Lemoine & Crane, and built by Wood at City Island. *Spray*, the boat that apparently would have won the cup in *Sainte Claire's* absence, was designed by Small Bros., of Boston, and built at Wyandotte, about twenty miles from Detroit.

Second Race, Monday August 15.

Sainte Claire's win in the leeward and windward race, sailed Monday, and the second of the series of three for the Lipton cup, was clean-cut, because after being beaten a few seconds by the Milwaukee champion, *Mendota*, in the first 3-mile run down wind, a fine lead of 2½ m. was secured by merit on the beat back to the starting stake boat.

The course lay N.E. by N., starting again from the stake boat a mile or more E. of the yacht harbor entrance. A steady S.W. breeze, coming offshore from the heel of Lake Michigan, had no chance to kick up a sea along the west shore, and the race was sailed on a long, low swell. The turning mark was a steam launch lying at anchor 3 miles away, and skippers were instructed to cover the course twice out and back. The race therefore was three miles to leeward, three to windward, three to leeward again, and three to weather again—providing the wind did not shift, which it did not until the race was about over.

It was on the beat back the first time over the course that *Sainte Claire*, after finishing the leeward leg second in a close bunch of five, established a winning lead, which the fleet never could reduce materially. The windward work of this combination keel and center-board boat was excellent. With a No. 2 jib and a reef in mainsail, *Sainte Claire* outfooted its rivals, while pointing as high as any. In truth, the Detroit boat seemed to out-point all except the two Chicago Y.

C. boats, Sprite and La Rita, which, delayed at the start—by the fault of the officials, their respective skippers and crews claim—made up lost time in amazing fashion.

Without wishing to detract in any way from Sainte Claire's handsome win, it is only fair to point out that Sprite, starting nearly 3 m. late, caught and beat six of the seven boats ahead of her the first time over the course, finishing the weather leg second, and within 2m. 38s. of Sainte Claire. Had they crossed the line together, they might have finished the first round together—their respective elapsed times were practically the same—and there is no telling how the race would have been fought out.

La Rita's time over the course must have been quite a bit the fastest of them all. It is no exaggeration to say the holder of the cup was 10m., and possibly 12m. late at the start, yet caught and finished well ahead of three of the fleet, was steadily wearing down Yo San, was only 3m. behind Sprite, and was not beaten more than 8m. by the winner, Sainte Claire. Under the circumstances it is no wonder protests were lodged by the respective owners of La Rita and Sprite.

The official orders to the skippers included the announcement that three guns would be fired from the judges' boat; the first gun in the harbor at 2 o'clock, to warn those boats not already cleared and at sea that they should get out to the starting boat, moored a long mile off the harbor entrance; the second, or preparatory gun was set for 2:20 o'clock, and as the judges' boat was to mark one end of the starting line it should have been in position at the firing of this preparatory gun. The starting gun was to go at 2:30.

Sprite, which eventually was left at the start, was the first of the nine competing yachts to clear the harbor, leaving its mooring about 1:45 and reaching out to the stake boat. One by one the fleet followed, except La Rita, which boat had been detained by the Regatta Committee. At 2:20, eight of the rivals were maneuvering around the press boat, which was lying to near the stake boat and under orders to show the way over the course. The judges' boat, which had been changed without any official notice to the competing skippers, had not yet left the harbor, where, it is claimed, the preparatory gun was fired at 2:20. Doubtless it was, but with a reefing breeze blowing down the lake the gun was neither heard nor seen by the yachtsmen over a mile away. Pretty soon Sprite came alongside the press boat—which had been the judges' boat the previous race—and megaphoned to know if any change in the starting time had been made. They were referred to the new judges' boat, the steam yacht Winyah, which was emerging from the harbor just then. Putting down his helm, Capt. Cuthbert came about and headed for the dilatory official craft.

It should be stated that the skippers' orders included the official instruction to leave to port all stake boats, also that the starting line would be marked by the stake boat off the harbor entrance at one end and by the judges' boat at the other. As the stake boat lay over a mile E. of the harbor, and as the course lay N., it is a self-evident proposition that the judges' boat had to be farther out than and E. of the stake boat to enable the racing skippers to carry out their instructions.

At 2:30 the judges' boat was more than half a mile away from where it should have been, and there was no starting line at all—just a stake boat rocking on the bosom of Lake Michigan.

Bang! The little gun on the steam yacht had popped, and the second race for the Lipton cup was supposed to be on. That is, such was the supposition when Sainte Claire was seen to break out a spinnaker very smartly and head N., closely followed by Mendota, with the others strung out. There was a general impression that it was the 10 minute preparatory gun, until watches were consulted and compared. Then the conclusion that it really was the starting gun was reached.

Sprite was somewhere near the judges' boat when the gun was fired. La Rita still was in the harbor.

With spinnaker and balloon jib drawing perfectly Sainte Claire was making the most of the advantage gained at the start that technically was not a start. Mendota winging along on the leader's starboard quarter. In their wake followed Ventura, Spray and Yo San, in the order named. Pilot and Hoosier were not yet so far astern as they would be before the race ended.

Under balloon sails the fleet swept on. A stretch of blue-green water, and then came Sprite—with a man aloft. The spinnaker halliard was afoul of the port stay, and for a couple of minutes Sprite had to run as best she could under mainsail and jib, being the only boat to carry full mainsail.

When half the leg of 3 miles had been run, Mendota was on even terms with Sainte Claire; and when they reached the turning point, after a fine race all the way, they were almost stem to stern. Mendota gybed around with a slight lead, which was increased by Sainte Claire's spinnaker sheet being lost overboard just as the big silk balloon should have been doused. In spite of this mishap, there was but 5s. between them when they filled away on the first tack of the beat back.

Half a minute more, and three other boats had rounded the mark. Yo San was the first of these. On the run down, Yo San had crept up on Spray, and the two had cut off Ventura's wind. After effectually blanketing her, they ran on and soon were disputing for third place, and before the stake boat was reached Yo San, cleverly handled, smothered her rival and worked past into third place by the merest margin. Ventura was just astern. A minute later came Pilot and Hoosier. Then Sprite, 2¼m. behind Sainte Claire. The times at this turn were:

Mendota2 54 50	Ventura2 55 30
Sainte Claire2 54 55	Pilot2 56 22
Yo San2 55 15	Hoosier2 56 32
Spray2 55 20	Sprite2 57 10

La Rita was too far behind to time.

Headed for home, Mendota at once went about on the starboard tack, crossing Sainte Claire's bows and shaking out the mainsail reef that had been carried on

the free run. Just what was the idea of the Milwaukee skipper could not be divined. It looked as if a dull mainsail might have been carried by more of them to advantage on the run down, taking a chance on having to put in a tuck for the weather leg, for the breeze was not too strong for any but a tender craft. Mendota had stood up so well in the stiff breeze and squalls of Saturday, that many yachtsmen felt confident the Milwaukee could carry full sail to-day. With Sainte Claire it was different, and Capt. Sidney Russel wisely left in the reef and was content with a small headsail. From the way the Detroitier pointed and footed, it was evident the skipper knew his ship. Besides that; he held on the port tack until well in shore, where he gained the advantage of many favorable slants and puffs. Spray was not pointing so high, but footed fast and also stood well inshore for a long leg. Yo San followed the leader, Mendota, out to sea, these two splitting tacks with the fleet. Probably they lost something by this.

At 3:04 Mendota was about, but Yo San held on the starboard tack until 3:11. When they met their rivals again, Mendota had lost the lead, crossing well astern of Sainte Claire and coming about only a few lengths ahead of Spray.

Sprite, standing up well and pointing high under full canvas, had worked well up to weather of Ventura, Pilot and Hoosier, and meeting Yo San on cross tacks, seemed to have a shade the best of her when she came about.

Sainte Claire's skipper was content to make fairly short tacks when assured of a nice lead, and his rivals never got within hail of him again. Spray stood out into the lake, and apparently lost thereby. Yo San and Mendota split tacks, and when they neared the end of the weather leg, it was apparent the former had gained materially. Two hundred yards from the stake boat they got into a luffing match and both overstood the mark slightly, which enabled Sprite, beautifully handled by Capt. Cuthbert, to slip in between them and the mark and beat them around it.

It was an unusually pretty fight between these three, and Spray was right after them. The times of the leaders were:

Sainte Claire3 20 17	Yo San3 23 00
Sprite3 22 55	Spray3 23 12
Mendota3 22 58		

By the time the rear guard had finished the beat to weather, it was seen that La Rita had made up a tremendous lot and was sailing a remarkable race.

Spinnakers and balloon jibs were broken out very smartly by the Corinthian crew of each yacht as it gybed around the stake boat, and then a hot struggle began between Sprite, Yo San, Spray and Mendota for second place. This undoubtedly aided Sainte Claire to increase her long lead, and she turned the outer mark almost 4m. ahead of Yo San, which off the wind had beaten her three nearest rivals. Spray also came out of the "scrapping" well, Mendota getting the worst of it. Yo San had shaken out her reef before the end of the weather leg and this time ran faster than before.

Sprite hung to Mendota like a leach, and having an overlap on the inside when the outer mark was reached, forced the Milwaukee boat to give room. They were beam to beam as they doused their light canvas and gybed around, but Cuthbert's strategy placed Sprite to weather when they were on the wind, and it was not long before he forced Mendota to come about under his lee in order to get clear. The times at the end of the third leg were:

Sainte Claire4 04 32	Pilot4 12 46
Yo San4 08 15	La Rita4 13 30
Spray4 08 40	Ventura4 15 04
Sprite4 08 55	HoosierBeaten off.
Mendota4 08 55		

Most of them carried full mainsail by this time, but Sainte Claire, satisfied to leave well enough alone, still had a tuck in her canvas.

The breeze dropped a little on the final beat home, and though the Detroit clipper finished with a good lead, some of the others gained. Before they were half way home Sprite looked good for second place again, pointing uncommonly well and footing nicely. But at the end of the leg fortune did not favor the Cuthbert boat. The lightening breeze was not to her liking. Then, after working well to weather of the fleet—except, of course, Sainte Claire—for a final tack to make the line, the breeze shifted enough to allow Spray and Mendota to fetch the stake boat without standing on farther; while Sprite, now farther away than these two, came down on the line with sheets started.

La Rita finished well up with the fleet. The times at the finish:

Sainte Claire4 56 01	La Rita5 04 08
Spray4 58 33	Pilot5 05 02
Mendota5 00 20	Ventura5 11 13
Sprite5 01 03	HoosierBeaten off.
Yo San5 02 30		

It was a great victory for the Country Club, of Detroit, whose two boats finished first and second. Mendota, the Milwaukee Commodore's good boat that was second to Sprite in Saturday's squally race, was consistently third to-day in a lighter breeze.

The percentage system used in these Lipton cup races allowed 100 points for a win; 88.9 for a second; 77.8 for a third; 66.7 for a fourth, and so on. Consequently, Saturday's and to-day's races left three yachts tied in the lead with 166.7 points each. They are Sainte Claire (fourth and first), Sprite (first and fourth), and Mendota (second and third). Yo San stands next, with 133.4 points for finishing third and fourth.

Immediately after the race Dr. C. P. Pinckard, owner of Sprite, and George R. Peare, owner of La Rita, filed written protest on account of the irregularity of the start. After declaring both Saturday's and to-day's races void, the officials reconsidered and reversed this decision.

Third Race, Tuesday, Aug. 16.

Sainte Claire won Tuesday's race, and the Lipton cup goes to the Detroit Country Club for a year. The race was sailed and won under conditions much the same as Monday's, though the course was dissimilar. But it was Sainte Claire's weather, wind and sea, and that

was what counted most in the result, coupled with clever seamanship.

The breeze was a little lighter than yesterday, and every boat carried full sail. But there was just as much roll on the water because the wind came from the S.E. to-day and had more sweep on the western side of Lake Michigan.

The course was a square, 3 miles to each leg. It was logged in the forenoon, when the wind was in the N.E., and the first leg was laid out to weather. But by afternoon the breeze had hauled to E.S.E., so the first leg was a fair reach, the second a beat, the third almost a broad reach, and the fourth a run home. All marks were left to starboard.

For once there was no trouble over the start, or with the stake boats. A lesson had been learned from the bungling efforts of the two previous races, and in order to give every skipper plenty of time the start was postponed twenty minutes. When the gun fired at 2:50 every boat, except La Rita, was jockeying on or near the line, which to-day was correctly marked by judges' boat and stake boat. La Rita had no one to blame to-day.

At the crack of the gun the skippers of Yo San and Sprite swept around in the lee of the stake boat, gave their craft a rap-full, and shot over the line abeam, leaving the mark to starboard. On their weather quarter came Sainte Claire, which had hung in the wind on the mark. A cable's length behind the three leaders came Mendota and Ventura, with Spray on their weather quarter, and Pilot and Hoosier to leeward and close up. La Rita was 2m. late. All carried full mainsails and reaching jibs.

Sainte Claire quickly passed to weather of Sprite, shutting off her wind. The latter needed more breeze to reach with the Detroitier and Yo San. In fact, they all out-reached the Cuthbert yacht on this leg, throughout which the race for the lead was between Yo San and Sainte Claire all the way. A hot race it was. Spray also passed to weather of Ventura, stealing the wind and going on with Mendota. This was another desperately close struggle. La Rita steered a more direct course than the other tail-enders, besides footing faster.

Sainte Claire held a little higher on the wind than Yo San for 2 miles, but at that was reaching fast enough to draw level with the Columbia Y. C. boat. Then Capt. Sydney Russel eased off his sheets a bit and ran down on Yo San's weather bow. The latter was forced to drop astern, and then shot up on her rival's weather quarter, evidently with the intention of returning the trick. But Sainte Claire had the speed to keep out of harm's way, and the stake boat soon was reached. The times were:

Sainte Claire3 17 25	Hoosier3 19 20
Yo San3 17 40	La Rita3 19 34
Mendota3 18 01	Sprite3 19 50
Spray3 18 17	Pilot3 19 54
Ventura3 18 58		

Leaving the stake boat to starboard, Sainte Claire's skipper trimmed sheets and held on, making a short starboard tack to insure being to weather of Yo San. The latter, as soon as the mark was passed, went about under the Detroitier's stern and started on a long port tack. All the others followed Yo San, except Sprite, which stood on after Sainte Claire. But the latter went about at the end of 3m., while Sprite made a long starboard leg.

Soon the skippers went to splitting tacks, and when half the leg had been sailed the fleet was in two divisions, led respectively by Sainte Claire and Spray. Mendota was second to Sainte Claire in their half of the fleet. Yo San's mainsail seemed to be drawing badly, and Commodore Price's boat fared badly on this beat to weather.

Half a mile from the second stake boat the leaders of the two divisions met on cross tacks, Sainte Claire crossing about 250 yards ahead and fetching the mark with a lead of nearly 2m. Spray came about on the starboard tack in the leader's wake and was just about as far ahead of Mendota. A similar stretch of water separated the Milwaukee boat and Ventura. La Rita had worked up to fifth, and Yo San had dropped away back to last but one.

Sainte Claire's fine windward work again practically settled the race as it had done on the first weather leg of the previous day. The times of the leaders at the second mark were:

Sainte Claire4 07 34	Mendota4 12 00
Spray4 09 25	Ventura4 13 55

Hoosier, the last boat, rounded at 4:23:36.

Sainte Claire had made the beat with a small jib, Capt. Russel using fine judgment in selecting his headsails. For the third leg he set his reaching jib, and it seemed to be all that was necessary, though a slight shift in the wind made the latter half of the third leg a balloon jib reach. Spray's skipper tried to catch the leader by carrying his balloon as soon as he had finished the weather leg. Rounding the second mark the big sail was all ready but was lost overboard, but quickly was recovered. It did not fill well until the breeze veered a little more abaft the beam, when Spray gained fast and rounded the third stake boat 1m. 20s. behind Sainte Claire.

Every stitch of sail was set for the run home before the breeze, which was dropping, as it usually does on Lake Michigan toward sundown. There was no change in the order of leaders, and the race was over, barring accidents.

Among the rear division, Pilot, whose best sailing was done on the wind, dropped back to last. Spray gained 15s. on the leader on the run home, but Sainte Claire won with a minute to spare, and again the Detroit yachts finished first and second, with Mendota, flying the Milwaukee Commodore's burgee, again third.

The Lipton cup races for 1904 were over, and Sainte Claire received a tremendously noisy salute of guns and steam whistles with the usual accompaniment of cheering and waving of handkerchiefs. The finishing times were:

Sainte Claire5 03 40	Sprite5 14 24
Spray5 04 44	Yo San5 17 04
Mendota5 07 00	Hoosier5 20 44
Ventura5 10 17	Pilot5 22 13
La Rita5 12 29		

Robert H. McCurdy's Schooner Lasca winning the Eastern Y. C.'s Ocean Race from Sea Gate to Marblehead.
Photo by N. L. Stebbins, Boston.

The Schooner Lasca.

MR. ROBERT H. MCCURDY'S schooner Lasca, which boat won the 330-mile ocean race from Sea Gate to Marblehead, last July, is not only a very seaworthy vessel, but fast as well. During the three years she was under German ownership, she won, among other races, the one around Heligoland in the summer of 1902 for the Kaiser's cup. In the Atlantic Y. C.'s 300-mile ocean contest, a year ago, she was beaten only by the new Herreshoff schooner, Ingomar. The Lasca's main sheet parted twice, during the latter contest, owing to a defective block. The race last July, although made in slow time, the course was 330 miles and the Lasca took 73h. 54m. 13s. to go over it, was an excellent test both as to handling and speed, beginning in a flat calm off Sea Gate, but ending in a 10-knot breeze and forty-eight hours of impenetrable fog.

Lasca was built in 1892 at City Island by Henry Piegras from designs by A. Cary Smith. She is constructed of steel, is 89ft. 9in. waterline and 119ft. over all. The scenes of her cruises include the Mediterranean, Newfoundland, Labrador and the West Indies. Lasca will spend the summer cruising about the Maine coast.

BABYLON Y. C. OFFICERS.—At a meeting of the Babylon Y. C., held on August 18, the following officers were elected: Com., J. S. S. Remsen; Sec'y, Joseph Lawrence; Treas., Charles Searle. Directors-officers are Benjamin B. Wood, John C. Robbins, John S. Foster, James Magee, John Snedecor, J. F. Oltrogge, T. Frank Shortland, and E. A. Godding. The club now has a membership of thirty, and the new club house has been completed. The formal opening and the first race will take place on September 3.

New York Y. C. Cruise.

BY DUNCAN CURRY.

Monday, August 15—New London to Newport, 40 Miles.

FOR the first time since the yachts started on Friday, the New York Y. C. fleet, who were on their annual cruise to the eastward, had a fine and favoring breeze for their 40-mile run from New London to Newport on Monday, and the result was some splendid racing, and close finishes were the rule rather than the exception.

For the second time during the cruise, W. Gould Brokaw's newly imported British yawl Sybarita had the honor of leading the fleet into port. She not only sailed a splendid race, but she defeated the 70-footer Yankee, which was the second boat to finish, by nearly 11m. elapsed time, and one can't but regret that neither the Vigilant nor Ailsa was out to take her measure, or there might be a different story to tell.

Practically it was a spinnaker run all the way, as the yachts had a fair sailing breeze from the W.-N.W. to Race Rock. Here the wind shifted to S.W. and the yachts set spinnakers to starboard and carried them to Point Judith, where they gybed over and reset spinnakers to port and carried them to the finish line off Brenton's Reef lightship.

The 70-footers and 60-footers again furnished splendid sport. In the 70ft. class W. K. Vanderbilt, Jr., who had been sailing Virginia in a rather indifferent manner in the first two squadron runs, took a sudden brace, and surprised everyone by making a desperate race with Yankee, fighting every foot of the 40 miles, and, after a neck-and-neck finish, was only beaten by 46s. elapsed time by the Maxwell boat, while Rainbow was beaten by 9m.

In the 60ft. class, Neola and Weetamoc furnished

equally good sport, Neola finishing first, but losing by 23s. on elapsed time.

Among the smaller boats, Aspirant carried off all the honors, beating Altair nearly 5m. on elapsed time, and probably winning the Commodore's special cup for sloops, as she was only beaten 46m. by Sybarita. In the schooner classes, Loyal and Katrina won in the small classes, while Corona not only led all of the two-stickers in, but beat Emerald by over 9m. The big Constellation easily beat Endymion.

While the big Atlantic led all of the auxiliaries into port, she only beat Resolute by 2m. 13s. elapsed time, with Intrepid not far behind.

The yachtsmen, after passing two pleasant days in New London, prepared to weigh anchor for Newport early on Monday morning, and for the first time during the cruise it looked as though they were going to have a fair wind, as at 8 o'clock, when the harbor start was made, there was a nice sailing breeze from the N.W. They had a head tide to buck, however, and all were impatient to be off. The regatta committee on Alvina did not keep them waiting long, and quickly established a starting line off Sarah's Ledge. The preparatory gun barked out its warning at 9:05, and ten minutes later the small sloops, led by Altair, Spasm, and Aspirant, slipped across the line, with booms way off to starboard and spinnakers set to port. Irolita, Phantom, Pellegrina, Ishkoodah, and Cymbra, which followed, seemed to hold a different view of the conditions, as they all had their spinnakers to starboard. The larger sloops were started at 9:20, with Neola in the lead, followed by Yankee, Sybarita, Weetamoc, Rainbow, Virginia, and Queen Mab. Yankee, which crossed the line with her boom to port, gybed on the line, and then set her spinnaker to port, all of the others carrying theirs on the other side. The small two-stickers were sent away at 9:25, Katrina leading, with Valmore, Loyal, Mavis, and the yawl Casique following in the order named. All had their booms to port, spinnakers to starboard, and broke out big balloon jib topsails and balloon main topmast staysails as well. The large schooners, led by Emerald, came next at 9:30, and then came Corona, Chanticleer, Constellation, Atlantic, Idler, Vergemere, Endymion, Resolute, and Intrepid. Chanticleer followed Yankee's example, and gybed on the line, but all the others carried their spinnakers to port, and as the wind soon hauled to W. by S., all the boats carrying their spinnakers to starboard had to take them in and gybe their booms over for the 4-mile reach to Race Rock, as they could not now hold the wind in their spinnakers. Aspirant, cleverly sailed by the Hanan brothers, was the first to pass Race Rock at 9:57:30, and the others were timed as follows: Sybarita, 10:00:30; Neola, 10:03; Altair, 10:04; Emerald, 10:04:30; Virginia, 10:05:30; Weetamoc, 10:06:02; Yankee, 10:06:10; Rainbow, 10:06:20; Queen Mab, 10:08:12; Corona, 10:08:15; Katrina, 10:08:40; Valmore, 10:09:10; Irolita, 10:10; Phantom, 10:10:50; Chanticleer, 10:13:30; Constellation, 10:14:00; Resolute, 10:15:00; Cymbra, 10:16; Atlantic, 10:16:20; Spasm, 10:17:30; Loyal, 10:18:00; Mavis, 10:21. Then came Ishkoodah, Endymion, Idler, Alcatarda, Intrepid, and Vergemere.

When the boats got by Race Rock, all but the big schooners Corona, Katrina, Resolute, Endymion, and Sybarita, stood in close to the Fisher's Island shore to get out of the tide, which was running to the westward. The offshore crowd, while they got more tide, also caught

NOORNA—Seawanhaka Cup Defender, 1904.
Photo by Notman, Montreal.

a better breeze, and this division was soon leading the fleet. Spinnakers again blossomed out to starboard, and with ballooners drawing the yachts made an impressive picture as they swept down Block Island Sound.

At 11 o'clock, off the fort that marks the easterly end of Fisher's Island, Sybarita had taken command of the fleet, while Corona was now in second place, leading all of the schooners. Then came Katrina, Emerald, and Yankee, which had got past Virginia in under the shore. The big auxiliary Resolute came next, followed by Constellation, Aspirant, Neola, Irolita, Rainbow, Weetamoe, Altair, Chanticleer, Queen Mab, Endymion, and Atlantic.

At 11:30, off Watch Hill, Corona offshore had picked up not a little, and was now making a great race of it for first place. Emerald and Katrina came next offshore, while inshore Yankee was leading Virginia by a good quarter of a mile.

The wind kept increasing, and Sybarita inshore out of the tide, drew rapidly in front, so that she was a good 2 miles ahead of Yankee, which had moved up into second place, when the yachts were timed at Point Judith whistling buoy. Instead of gybing at once, as everyone supposed she would do, Sybarita held off to the eastward for 6 or 7 minutes with headsails aback before she let her boom come over and then reached in to the finish without the aid of her spinnaker. All of the rest of the fleet gybed at the buoy, and carried spinnakers to port to the finish. Sybarita was a good 11m. ahead of Yankee at the whistling buoy, where the leaders were timed as follows: Sybarita, 1:35:15; Yankee, 1:45:15; Corona, 1:48:10; Virginia, 1:48:25; Rainbow, 1:53:10; and Neola, 1:55:40.

As the wind was blowing strongly from the S.W. now, the yachts made fast time to the finish, where the leaders were timed as follows: Sybarita, 2:18:34; Yankee, 2:29:55; Virginia, 2:31:24; Corona, 2:31:59; Rainbow, 2:39:46; Emerald, 2:41:27; Neola, 2:42:59; Weetamoe, 2:43:52. Then came Constellation, Chanticleer, Atlantic, Resolute, Katrina, Queen Mab, Aspirant, Altair, Valmore, Endymion, Irolita, Intrepid, Loyal, Idler, Vergemere, Mavis, Phantom, Pellegrina, Spasm, Ishkoodah, and Cymbra. Summary:

Sloops—Class L.			
	Start.	Finish.	Elapsed.
Spasm	9 15 57	3 56 59	6 41 02
Ishkoodah	9 17 00	4 05 10	6 48 10
Cymbra	9 17 00	4 12 33	6 55 33

Tuesday, August 16—Newport to Vineyard Haven, 37 Miles.

After a lively, if long drawn out, race from Newport, J. Rogers Maxwell's 70-footer had the honor of leading the New York Y. C. fleet into Vineyard Haven on Tuesday. She not only beat all the boats in her class, but defeated Sybarita, boat for boat, by over 2 miles in distance and 13m. 20s. in time, but she was over 15m. ahead of Virginia, and 20m. in front of Rainbow, her class competitor. Weetamoe gave Neola another 20m. licking, and the little Aspirant practically finished alone in her class, while Spasm beat Phantom by 2m. 25s. on elapsed time. Among the schooners, Katrina won easily in her class, while Corona led Chanticleer by 8m. and Emerald by nearly an hour at the finish. Emerald, however, has protested Corona for forcing her about at the starting line, so Chanticleer will probably win the cup.

In the big class for two-stickers, Constellation beat Endymion by nearly 2h. while among the auxiliaries, Resolute won easily.

As the wind was S.E. by E., the yachts had practically a long and a short leg to Vineyard Sound lightship, and then were able to lay their course to within a mile of the finish, when they had to beat in against a strong westerly tide. As the wind fell flat, all of the tail-enders had great trouble in finishing at all, which accounts for the great difference in time between the winners and losers. While Virginia was trying to beat into the harbor after finishing, she got hung up on a sandbar for a few minutes, but was pulled off by the club tug Unique without damage.

Soon afterwards the schooner Mavis went ashore on the middle ground, and again the Unique was called into service, only to come to grief herself, as, in getting a hawser on the Mavis, the tide carried her on to the shoal,

too. Then Commodore Benedict went to the rescue with his steam yacht Oneida, which was being used by the Regatta Committee, and soon pulled both boats to safety.

The wind was so light from the S. when the harbor start was made in Newport at 8 o'clock that the yachts were a long time getting out to the starting line off Brenton's Reef lightship. The course to Vineyard Haven, 37 miles away, was E.-S.E. to Vineyard Sound lightship, 17¼ miles, then E. by N. 20 miles to the finish line off West Chop light, which marks the entrance to Vineyard Haven.

The race committee, who had transferred their flag to E. C. Benedict's steam yacht Oneida, sounded the preparatory signal at 9:45, and the small sloops were sent away at 9:55. Aspirant, as usual, led the fleet over the line 11s. after the whistle. Then came Spasm, Phantom, and Irolita, with the last named handicapped 27s. Yankee got way the best of the start when the big fellows were sent away at 10 o'clock. Then came Weetamoe, Rainbow, Sybarita, and Neola, with Queen Mab handicapped 11s. and Virginia 1m. 19s. The small schooners followed at 10:05, with Valmore leading, followed by Katrina, while Loyal was handicapped 17s. and Mavis 3m. 19s.

When the big schooners were started at 10:10, the wind was so light that all of them were handicapped. They crossed the line and were handicapped as follows: Idler, 8s.; Corona, 23s.; Chanticleer, 49s.; Vergemere, 52s.; Intrepid, 56s.; Resolute, 1m. 34s.; Endymion, 2m. 9s.; Atlantic, 2m. 55s.; Constellation, 4m. 57s.; Casique, 8m. 57s.; and Emerald 11m. 4s. Corona forced Emerald around on the line when the latter was close-hauled on the starboard tack, and Emerald flew a protest flag when she finally went over the line. All crossed the line close-hauled on the starboard tack, and Emerald and Casique had to make a short hitch to port before they could get across the line. The wind soon hauled more to the E., making it practically a long and a short leg to Vineyard Sound lightship. Off West Island, at 11 o'clock, Yankee had a good lead

The crews of the Seawanhaka boats Noorna and White Bear and the judges of the match.
Photo by Notman, Montreal.

on the rest of the fleet, and was well to windward of the rest of her competitors. Then came Virginia, Rainbow, Sybarita, Weetamoe, Neola, Aspirant, Irolita, and Queen Mab; Katrina came next, leading all of the schooners, and then came Corona, Chanticleer, Valmore, Resolute, Endymion, Intrepid, Idler, Atlantic, and Vergemere. At 11:25 Aspirant took the port tack, and Weetamoe followed at 11:40, crossing Rainbow's bow. Yankee was over 1½ miles ahead of the fleet now, while Sybarita, which was sailing fast, had moved up into second position, while Virginia was third, Weetamoe fourth, and Rainbow fifth. At 12:15 all three of the 70-footers—Neola, Weetamoe, and Queen Mab—took a hitch to port to try to fetch the lightship, while the rest of the fleet were still holding in toward Buzzard's Bay on the starboard tack. When the leaders got far enough out they took the starboard tack once more, and were timed as they passed Vineyard Sound lightship as follows: Yankee, 12:39:40; Virginia, 12:48:53; Rainbow, 12:51:37; Weetamoe, 12:52:25; Sybarita, 12:52:40; Neola, 1:07:10. From here the yachts had a close reach on the starboard tack for 19 miles, or within one mile of the finish. Unfortunately the wind lightened after the first three boats got in, so the rest of the fleet were held up for an hour or more by a strong easterly tide and lack of wind. The leaders were timed at the finish as follows: Yankee, 2:33:01; Sybarita, 2:47:30; Virginia, 2:50:00; Rainbow, 2:53:48; Weetamoe, 3:03:14; Neola, 3:25:12; Corona, 3:29:38; Chanticleer, 3:37:55; Queen Mab, 3:42:10; Constellation, 3:45:49; Aspirant, 3:48:01; Resolute, 3:48:10; Katrina, 3:50:49; Atlantic, 4:01:47; Intrepid, 4:26:00; Emerald, 4:34:33. Summary follows:

Sloops—Class L.			
Start.	Finish.	Elapsed.	
Spasm 9 56 00	5 34 40	7 38 40

Wednesday, August 17—Vineyard Haven to Newport, 37 Miles.

The New York Y. C. cruise, so far as squadron runs was concerned, ended with to-day's return trip from Vineyard Haven to Newport, a distance of 37 miles, when the fleet raced for two special cups offered by Rear-Commodore Cornelius Vanderbilt.

The race was sailed in a nice sailing breeze from the W.-S.W., which developed into a whole sail breeze at the finish, giving the yachts a beat of 20 miles to Vineyard Sound lightship, and then a close reach of 17 miles to the finish.

Sybarita took the lead when near Wood's Hole, and led the fleet across the finish line, covering the course in 4h. 32m. 26s., beating Yankee, which was the second boat to finish, by 11m. 33s.

As this made the third time Sybarita finished first, she will undoubtedly win the special cup offered by Vice-Commodore Henry Walters for the boat winning the most squadron runs on elapsed time, the schooner cup going to Corona. These are the only results which can be figured with any degree of certainty, as the boats have not been measured. So far as the Vanderbilt cups are concerned, it is thought Weetamoe will win the sloop cup, while the schooner prize will probably lay between Valmore and Corona.

Among the 70-footers, Yankee won easily, beating Virginia by 4m. 41s., and Rainbow by 5m. 35s. Incidentally Yankee has won four out of five of the squadron runs, her only defeat being in Friday's opening run from Glen Cove to New Haven, when Rainbow beat her by a minute under very fluky conditions. In the 60ft. class Weetamoe won easily, beating Queen Mab by 19m. 38s., as Neola withdrew soon after the start on account of the fog. Weetamoe has also done very well during the cruise, winning four out of five of the squadron runs, the same as Yankee, and, like the Maxwell boat, her only defeat was in Friday's fluky race to New Haven.

Among the smaller boats, Aspirant won a close race from Irolita by 1m., and she also made a record of four wins out of five starts. Aspirant would have done much better but for the fact that the gun of the committee boat failed to go off, and the Hanan boys, fearing they had gone off before the signal, returned and made a second start, which cost them their windward berth. Spasm and Ishkoodah (formerly F. M. Plant's Herreshoff-designed Nellie) sailed a remarkably close race over the course, Spasm finally winning by 3s.

Among the schooners, Katrina, which has been sailing remarkably well this year, won easily among the small schooners, beating Valmore by 38m. 10s.; while among the class B boats, Corona beat Chanticleer 53m. 8s., and Emerald 54m. 8s. Resolute, which has hitherto been classed among the auxiliaries, has taken her propeller off, and to-day raced against Endymion in class A, beating the Crane schooner by 49m. 19s. Endymion really made a much better showing than the official figures show, as she lost 20m. or more by return to get a "Departure" from West Chops after the fog shut in soon after the start.

Among the auxiliaries, Atlantic beat Idler by 50m. 53s., and the big Intrepid by 1h. 8m. 40s.

The officers of the club and the regatta committee were anxious to make an early start to Newport on Wednes-

day morning, and as there was a head wind and tide, most of the boats left the harbor for the starting line off West Chop buoy soon after 8 o'clock. There was a nice sailing breeze from the W.-S.W., but the air was very thick, and it looked as though a fog would shut in, but the regatta committee did not wait, and promptly at 9 o'clock the preparatory gun sounded. The starting gun for small sloops was due at 9:10, but the gun missed fire, and the whistle, which was 8s. late, forced Aspirant over the line before the signal, and while the committee did not recall her, she returned and recrossed the line. So they crossed in the following order: Spasm, Irolita, Phantom, Ishkoodah, and Aspirant. Then came the big sloops at 9:15, led by Virginia, with Rainbow on her weather quarter. Then came Sybarita to leeward of both, followed by Neola, Yankee, Weetamoe, and Queen Mab. The small schooners came next at 9:20, led by Katrina, with Valmore and Loyal in close attendance. When the big two-stickers started at 9:25, a thick fog rolled in from Vineyard Sound, making it difficult to distinguish the boats a hundred yards away. Emerald was the first away, and then came Corona, Chanticleer, Idler, Resolute, Vergemere, Atlantic, and Endymion. Neola, which had smashed her compass early in the cruise, was the first to return, apparently fearing to face the dangers of Vineyard Sound in a fog, and soon Loyal, Vergemere, Casique, and Endymion followed her example, while the others kept on.

The chart course was W. two miles from West Chop to Nobska, then 11½ miles W.-S.W. from Nobska light to Nashawena Island; then W. 7 miles to Vineyard Sound lightship, and then W.-N.W. 17¼ miles from Vineyard Sound lightship to the finish line off Brenton's Reef lightship.

All of the yachts stood over toward the Naushon Island shore on the port tack, and then worked along the shore in short hitches to keep out of the strong head tide. The fog lifted soon after 10 o'clock, and by 10:30 the sun had burned away what was left of it.

At 10:10 Sybarita was leading the fleet off Tarpaulin Cove, with Yankee in second place. Then came Virginia, Rainbow, Weetamoe, Aspirant, Queen Mab, Irolita, Spasm, Ishkoodah, Corona, Phantom, Valmore, Katrina, Emerald, Chanticleer, Resolute, Idler, Atlantic, Volunteer, Intrepid, Loyal, Endymion, Casique, and Neola. Here Sybarita and the 70-footers took a long starboard leg over to the Martha's Vineyard shore, which they worked in short hitches until 11 o'clock, when they were off Menemsha Bight. Here they took the port tack again, and were able to lay their course to Vineyard Sound lightship, where the leaders were timed as follows: Sybarita, 12:11:14; Yankee, 12:15:34; Virginia, 12:19:43; Rainbow, 12:21:13; Weetamoe, 12:47:00. It was a close reach from here to the finish with small jib topsails, and as the wind and sea increased, Sybarita drew rapidly away from the 70-footers, finishing at 1:48:00. The rest of the leaders were timed as follows: Yankee, 1:59:19; Virginia, 2:03:55; Rainbow, 2:05:34; Corona, 2:28:21; Weetamoe, 2:35:42; Queen Mab, 2:55:46; Atlantic, 3:08:56; Katrina, 3:17:05; Chanticleer, 3:21:54; Emerald, 3:22:32; Aspirant, 3:24:52; Irolita, 3:27:16; Resolute, 3:37:33; Idler, 3:59:00; Spasm, 4:09:57; Ishkoodah, 4:10:40; Intrepid, 4:17:33; Endymion, 4:26:52.

Thursday, August 18—At Newport.

While the fleet did not race on Thursday, the yachtsmen were by no means idle, as between power boat and small boat racing, rowing races for the Owl and Gamecock colors, and preparing for the Astor cup races, the members of the club put in a pretty lively twenty-four hours.

The sailing yachts remained at anchor all day, but their owners came ashore early to see what was doing around the club station, and, to the surprise of all, it was found that not a single entry had been received for the steam yacht race for the Hauoli cups offered by F. M. Smith, of the steam yacht Hauoli. It certainly seemed rather strange that out of a fleet of over fifty steam yachts in the harbor, that not a single owner had sporting blood enough to enter his boat for the race, despite the fact that the cups were worth over \$5,000, and are probably the most beautiful trophies ever offered for competition.

After the committee had made a fruitless search for entries, they gave out the following statement: "Owing to the importance of the Hauoli cups offered by Captain F. M. Smith, N. Y. Y. C., and having in view the insufficiency of the entries, the committee, with the approval of Captain Smith, has decided to postpone the event until next year."

"It is believed that the lack of entries is largely due to the fact that the table of time allowances as announced has not been fully understood; the prevailing opinion being that the fast yachts would be certain winners, while as a matter of fact, the allowances favor the moderate power cruising steamers. It is believed that this will be

better understood next season, and a large entry received."

Finding that the steam yacht race was off, the yachtsmen turned their attention to the power boats, and they were rewarded by seeing the best and fastest race ever held by this type of craft.

There were three starters in the race, and they included Nat. G. Herreshoff's steam-driven Swiftsure, a 51ft. boat of 90 horse-power, which he steered himself; Vingt-et-un, a 75 horse-power 40-footer, owned by W. L. Brooks, and steered by C. M. Hamilton; and Mercedes, a 32ft. 60 horse-power boat, owned by Herbert L. Bowden, which was designed and steered by Starling Burgess, which boat was credited with a trial trip speed of 27 miles per hour.

There was a strong N.W. breeze blowing, and quite a little sea on in Narragansett Bay when the preparatory signal sounded at noon. These boats are little better than floating coffins, and their crews went out prepared for a ducking.

The Mercedes people were evidently prepared for the worst, as they were clad in bathing suits under their oilskins, while around their necks they wore rubber life buoys, so if their craft sank they would be able to keep afloat.

These boats were sent twice around an 8-mile triangle, or 16 miles in all. The first leg took them over to Jamestown, and then they went up the bay and back to the starting line. Mercedes got the best of the start, as she was sent away with a good headway. Nat Herreshoff in Swiftsure, who hugged the line closely, was next away from a standing start, but quickly jumped into full speed, and last of all came Vingt-et-un, moving very fast. Swiftsure quickly flew into the lead, as Mercedes took in water so fast that her crew had to pump for their lives; and at the first mark she half filled with water and dropped rapidly astern. Vingt-et-un moved quickly up into second place, and began to pick up on Swiftsure. She made the turn better than the Herreshoff boat, which had to slow down, so at the end of the first round she was only 8s. astern of the leader. The boats were timed as they rounded as follows: Swiftsure, 12:31:34; Vingt-et-un, 12:31:42; Mercedes, 12:34:32. On the first 8 knots of the course Swiftsure had beaten Vingt-et-un 8s., and Mercedes 2m. 58s. Swiftsure averaged 21.55 knots on the first round, and Vingt-et-un about the same.

On the second round Vingt-et-un caught Swiftsure just after they turned the first mark, and for some moments they raced along like one boat. Finally the gas-propelled boat took the lead, but the steam-driven craft had the power and stuck very close to her. With the spray flying in clouds from their bows and a yeasty wake marking their path through the water, they crossed the finish line almost side by side, Vingt-et-un winning by just 3s., with Mercedes over a mile astern. The elapsed time of the last 8 knots were Vingt-et-un, 21m. 16s.; Swiftsure, 21m. 27s.; Mercedes, 24m. 56s. Vingt-et-un and Swiftsure both averaged 22.30 knots, or 25.64 statute miles, for the 16 knots, but judging by the previous work of the boats, there is just a suspicion that the course was short.

Among the smaller power boats which raced over an 8-knot course, the little 4½ horse-power Neon, owned by N. G. Herreshoff, Jr., beat the Wayfarer, owned by John Hays Hammond, Jr., by 15m. 45s. on time allowance. There was also a sailing race for small boats for the Newport cups, which brought out a fleet of five 30-footers and five of the Newport 15ft. class.

The 30-footers sailed a course to Wickford and back, which gave them a beat on the first leg and a run home. The boats had a fair tide with them both going and coming. Carolina, owned and steered by Pembroke Jones, was the first away, with Breeze on her weather quarter, and the pair made a great race of it over the course, Carolina finally winning by 40s.

The feature of the small boat race which raced over the course was due to the fact that no less than three of the boats were sailed by women. Eaglet was sailed by Miss Caroline Grosvenor, Echo and Whisper by the Misses Morgan, daughters of E. D. Morgan, a former Commodore of the New York Y. C., who had charge of Columbia last season. They were sent away at noon, and Miss Grosvenor managed to get across first with Eaglet. Eaglet kept the lead to the weather mark, but on the run home H. F. Lippitt's Minnow passed her, and finished ahead, beating Eaglet by 36s.

During the sailing events, there were rowing races for the Owl and Gamecock colors, which resulted in walk-overs for the Katrina's four and the Isolda's pair oared crews. The dinghy race was won by the Cara II's man, with the Katrina's representative second. The summaries of the power and small boat races follow:

Power Boats—Class I—Start, 12:10.				
	First Round.	Finish.	Elapsed.	Corrected.
Mercedes 12 34 32	12 59 28	0 49 28	0 46 22	
Vingt-et-un 12 31 42	12 52 58	0 42 58	0 41 22	
Swift Sure 12 31 34	12 53 01	0 43 01	0 43 01	

Vingt-et-un beat Swift Sure by 1m. 39s. and Mercedes 5m. corrected time.

Friday, Aug. 19, Astor Cup Race, Block Island Course, 38 Miles.

Friday saw the races for the Astor cups, which, next to the famous America's Cup, are the most highly thought of yachting trophies of the club. Each season Captain John Jacob Astor, of the steam yacht Nourmahal, offers a \$1,000 cup for schooners and a \$500 cup for sloops. These trophies, which have taken the place of the Golet cups, are eagerly sought after, and to win one is considered quite a feat, as all the single-stickers and all of the schooners each race in one class, subject to the regular club allowances.

Heretofore large yachts have invariably won the cups,

but this year, thanks to a light breeze and a more liberal system of time allowances, the sloop prize was won by Wilmer H. and Addison G. Hanan's fast little Gardiner 43-footer Aspirant, which received an allowance of 1h. 19m. 10s. from the big Sybarita, 1h. 5m. 46s. from the 70-footers, and about 49m. from Weetamoe and Neola. However, most of these boats were double and treble size, and in any sort of a breeze they would probably have lost her, but in the light air Aspirant was almost able to hold her own with them in close reaching and windward work, but with eased sheets they left her far astern, but not far enough to beat her, as she was able to finish within 44m. of Yankee, and won rather easily by 21m. 46s. on corrected time.

Aspirant is the smallest boat that ever won an Astor cup, and her victory was in no small measure due to the consummate skill with which the Hanan boys sailed her, and they certainly earned the right to be considered the cleverest amateurs in the country.

In the schooner class, Corona had to allow Katrina 44m. 57s. time allowance, and after a fairly close race she managed to capture the prize by 4m. on corrected time. There was a light wind from the N.-N.E. when the yachts left the harbor for the starting line off Brenton's Reef lightship, and Sybarita and Virginia took a tow line from friendly steam yachts so that they would be on hand in time. The list of starters with their racing lengths and allowances follows:

Sloops and Yawls.		
	Racing Length.	Allowance.
Sybarita, W. Gould Brokaw.....	104.00	Scratch.
Yankee, J. Rogers Maxwell.....	84.13	0 13 24
Virginia, W. K. Vanderbilt, Jr.....	84.13	0 13 24
Rainbow, Cornelius Vanderbilt.....	84.07	0 13 24
Neola, G. M. Pynchon.....	66.32	0 38 31
Weetamoe, H. F. Lippitt.....	66.16	0 38 41
Aspirant, Hanan Bros.....	47.50	1 19 10
Schooners.		
Corona, A. F. Luke.....	89.43	Scratch.
Katrina, J. B. Ford.....	58.76	0 44 57

They were attended by a score or more of big steam yachts, which included John Jacob Astor's Nourmahal, with Miss Alice Roosevelt and the regatta committee among the guests on board. Commodore F. G. Bourne's Delaware; Vice-Commodore Henry Walter's Narada; Elbridge T. Gerry's Electra; H. W. Putnam, Jr.'s Ariadne; H. Clay Pierce's Yacona; E. C. Benedict's Oneida; J. L. B. Mott's Candida; Col. Van Rensselaer's May; A. C. Bostwick's Vergemere; Wilson Marshall's Atlantic; Nat. G. Herreshoff's Roamer; H. A. Chatfield Taylor's Wanderer; A. de Witt Cochrane's Alvina; Charles Hayden's Aria; H. B. Moore's Zara; the torpedo boat Morris, and several Government tugs. The committee, which was a trifle late in coming out, signalled that the 38-mile Block Island course would be sailed; that is, the boats would sail to the West Island mark first. The course was E. by S. $\frac{1}{8}$ S., $6\frac{1}{2}$ miles to a mark off at Sakonnet light, then 18 miles S.W. by W. $\frac{3}{4}$ W. to a mark off Block Island, and then $13\frac{1}{2}$ miles N.E. $\frac{1}{8}$ E. to the finish line at Brenton's Reef lightship.

The preparatory signal sounded at 11 o'clock, and 10 minutes later the sloops were sent away. Yankee was the first away, almost with the gun, with Weetamoe on her weather quarter. Then came Virginia, Neola, and Aspirant, while Sybarita and Rainbow were handicapped a minute or more.

Corona led Katrina over the line at 11:15 when the schooners were started, and all hands carried intermediate jib topsails, as it was a close fetch to the first mark on the port tack. The wind began to back and fill, however, and after shifting to the E. hauled to the S.E., so that Yankee and Weetamoe, which had been leading, fell back, and Sybarita, Rainbow, and Aspirant took command, as the shift of the wind made it a close reach on the starboard tack, which made them the windward boats. Sybarita, Yankee, and Virginia all set big jib topsails, and soon Yankee worked into second place. The wind was very light, and the boats made slow time to the first mark, where they were timed as follows: Sybarita, 12:40:06; Yankee, 12:42:21; Aspirant, 12:44:49; Corona, 12:46:16; Rainbow, 12:48:02; Weetamoe, 12:48:17; Neola, 12:48:39; Virginia, 12:49:06; Katrina, 12:57:41. This showed that Cybarita led the Yankee 2:15, Aspirant 4:43, Rainbow 7:56, Weetamoe 8:11, Neola 8:33, and Virginia 9m., while Corona had a lead of 11m. 25s. on Katrina, which boat was left far astern by the shift of wind. As the yachts located around the mark the wind freshened a bit, and with small jib topsails aloft all were able to lay their course for the Block Island mark on the port tack. As soon as the wind freshened, Aspirant dropped behind, while Yankee, having worked out to windward of Sybarita, began to pick up on the Brokaw yawl, and finally drew by her windward at 1:25, when she set a smaller jib topsail.

At 1:30, Yankee led the fleet with Sybarita a few lengths astern. Corona, which was now in third place, was a quarter of a mile behind, while about the same distance astern of her came Virginia, which boat had just passed Neola to windward. Then came Weetamoe and Rainbow. Aspirant was a mile back of them, while Katrina was nearly 3 miles astern of the leaders.

At 2:15 the wind hauled more to the W., making the last 8 or 9 miles a beat to the Block Island mark, and immediately Yankee, Weetamoe and Neola went off to the S.E. on the starboard tack to head off Virginia, which was well to windward of the rest of the fleet. Sybarita tossed about the same time, while Virginia, Aspirant and Katrina held on to the port tack while the others stood off to E.

At 2:40, Aspirant, Weetamoe and Neola made a long starboard hitch, and the two 60-footers easily crossed Corona's bow some distance ahead of the Luke schooner. Aspirant took the port tack again at 2:50 and Neola followed, crossing Weetamoe's bow and then tacking on her weather. The mark was close at hand, when Yankee took the starboard tack again at 2:55, and about the same time Virginia moved up into second place, passing Sybarita to windward. The air was too light for the big yawl to do herself justice, while it just seemed to suit the seventies and smaller sloops. Yankee had a good 5m. lead on Virginia when she gybed round the Block Island mark, where the yachts were timed as follows: Yankee, 3:02:03; Virginia, 3:07:17; Sybarita, 3:08:08; Rainbow, 3:14:06;

Corona, 3:17:14; Neola, 3:21:11; Weetamoe, 3:23:23; Aspirant, 3:31:28; Katrina, 4:00:00. This showed that Yankee had gained 5m. 13s. on Virginia; 6m. 5s. on Sybarita; 12m. 3s. on Rainbow; 19m. 8s. on Neola; 21m. 20s. on Weetamoe, and 29m. 25s. on Aspirant, while Corona led Katrina by 42m. 46s.

Ballooners were broken out and booms eased off to port for the run home, as the wind was now about S.S.W., and soon spinnakers blossomed out to starboard, so that the yachts made fairly fast time to the finish, the only change in the order being that Sybarita passed Virginia and moved up into second place. Yankee, however, increased her lead considerably, and the yachts were time as they crossed the finish line: Yankee, 4:49:20; Sybarita, 5:01:50; Virginia, 5:03:39; Rainbow, 5:09:50; Corona, 5:13:52; Neola, 5:21:07; Weetamoe, 5:23:34; Aspirant, 5:34:56; Katrina, 6:03:34. Summary:

Schooners—\$1,000 Cup.			
	Start.	Finish.	Elapsed.
Corona	11 16 15	5 13 52	5 57 37
Katrina	11 17 00	6 03 34	6 46 34
Sloops and Yawls—\$500 Cup.			
	Start.	Finish.	Elapsed.
Sybarita	11 12 00	5 01 50	5 49 50
Yankee	11 10 10	4 49 20	5 39 10
Virginia	11 10 49	4 03 39	5 52 50
Rainbow	11 12 00	5 09 50	5 57 50
Neola	11 11 31	5 21 07	6 09 36
Weetamoe	11 10 13	5 23 34	6 13 21
Aspirant	11 11 46	5 34 56	6 23 10

Corona beat Katrina in elapsed time 48m. 57s. and in corrected time by only 4m. Sybarita beat Aspirant, the winner of the sloop cup, in elapsed time by 33m. 20s., and lost the prize by 45m. 50s. corrected time. Yankee beat Aspirant in elapsed time by 44m. and lost the prize by 21m. 46s. corrected time.

Saturday, Aug. 20—Newport.

The programme for Saturday called for an ocean race of 264 miles from Brenton's Reef Lightship to Sandy Hook Lightship and return, for the Brenton's Reef cup, and a special race for the 70 and 60-footers was spoiled by a terrific 40-knot gale from the S.E., which kicked up such a big sea off Brenton's Reef that the committee tug could not get out to the starting line. The entries included George Lauder, Jr.'s schooner, Endymion; Wilson Marshall's big three-masted schooner rigged auxiliary, Atlantic; and J. H. Measury's Resolute, which has had her propeller taken out and is now a full fledged schooner.

It was blowing so hard that Narragansett Bay was a sea of foam, and the waves were so big that the General, a stout boat that makes connection with the Wickford trains, had all she could do to make the passage; while outside the Atlantic rollers 10 or 15ft. high came tumbling in on Brenton's Point with a force that almost made rock-ribbed Newport tremble. In spite of the conditions of wind and wave, Mr. Lauder, the owner of the Endymion, would not consent to call the race off, and the committee tug, Unique, the press boat, Eugene F. Moran, and the Resolute and Endymion left for the starting line soon after 10 o'clock, while Atlantic, which had left her anchorage under steam, started to hoist her sails outside of Goat Island. Resolute and Endymion, after reaching down the harbor at a 12-knot gait under lower canvas, caught a breath of the force of the gale off Castle Head and one puff seemed to be enough, as they rolled over until their lee rails were buried in foam and then turned tail and ran for the harbor with the committee boat close at their heels.

All thoughts of racing was abandoned, and the start was postponed until Monday. While there is no question that all three of the boats could have made the trip in safety, the weather was so thick that their skippers were afraid that they might reach Sandy Hook just as the outgoing and incoming Atlantic liners were converging, and that in a fog there might be a collision accompanied by fatal results.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

A NEW MARINE SUPPLY COMPANY.—A new company has been formed in Boston for the purpose of dealing in ship stores, chandlery, provisions, and maritime supplies of all kinds.

The name of this new company is "The Maritime Stores Company," and the managers are Captain H. J. Howes, James Otis Porter, and Hollis Burgess. Captain Howes has been master of many vessels, including the Sea Witch, the noted ship that ran the English blockade at Delagoa Bay in the Boer war, Annie M. Smull, Mary Whittredge, and many other well-known vessels. Captain Howes has visited about every large seaport in the world; has been around the globe four times, and has a wide acquaintance with mariners of every land. Mr. Porter was a Volunteer Lieutenant in the U. S. Navy during the war with Spain, and served in command of the U. S. S. Catskill. He recently severed his connection with Mr. B. B. Crowninshield, the naval architect. Mr. Burgess was in the yacht brokerage and marine business for some time, and has a wide acquaintance among the yacht owners and seafaring men.

The store and offices of the company are at the head of Lewis Wharf, No. 38 Atlantic avenue, Boston, Mass., where they have a private landing and launches for the convenience of customers. They intend to supply all classes of vessels, including steamers, sailing ships, fishing vessels, yachts, etc., with all kinds of supplies.

ROYAL CANADIAN Y. C. COUNTRY HOUSE BURNED.—The building of the Royal Canadian Y. C., located on Center Island, near Toronto, was totally destroyed by fire on the night of August 5. A number of trophies were said to have been lost, and the damage will be in the neighborhood of \$10,000.

TWO STEAM YACHTS SOLD.—Speedy II., formerly owned by Mr. C. G. Conn, of Elkhart, Indiana, has been sold to the Canadian Government. The steam yacht Bucaneer, formerly the property of Mr. Lucius G. Fisher, of

Chicago, has also been sold to Mr. J. Rosenbaum, of Chicago.

RECORD VOYAGE IN A KETCH.—In the course of the month, two young men from Brighton will start on an adventurous voyage in a 14-ton ketch. Their destination is Western Australia, where they mean to engage in the Broome pearl fisheries. They are not able to pay their passage out, and therefore they are sailing the whole way in their own boat. They hope, with good luck, to reach their destination in four or five months, and are provisioning their boat for a voyage until Christmas. If they are successful, their voyage will be the longest ever undertaken in a craft of this size. The voyage between this country and America has been several times made in small boats, and on one occasion a boat only thirty feet long was successfully navigated from London to Cape-town.—St. James's Gazette.

INGOMAR RETURNING TO THE STATES.—Mr. Morton F. Plant's schooner Ingomar is being put in shape for the return voyage at Southampton, England, to the States. She will leave some time the latter part of September. She has won while racing in foreign waters this season twelve firsts, four seconds, one third, and two extra prizes out of twenty-two starts.

REGATTA POSTPONED.—The annual regatta of the Northport Y. C. was scheduled for Saturday, August 20, but, on account of the severe storm, did not take place.

ALETES II. SOLD.—The launch Aletes II., owned by Mr. Robert C. Fisher, N. Y. Y. C., has been sold to Mr. Amos F. Barnes, Sachem's Head Y. C., through the agency of Stanley M. Seaman, New York. She is 47ft. over all, and built in 1903.

Bensonhurst Y. C.

Bensonhurst, L. I.—Aug. 18 and 19.

ALFRED MACKAY'S Class Q sloop Ogeemah, of the Bensonhurst Y. C. successfully defended the new perpetual challenge trophy recently offered by Commodore Arthur C. Bellows, in the first races held for the same on Thursday and Friday, Aug. 18 and 19. The challenging organization was the New York Y. C., which was represented by Miss Judy, owned by D. D. Allerton. Other clubs on Gravesend Bay were allowed to enter boats. The Brooklyn Y. C. defended on J. C. Erskine's Karma, and the Atlantic Y. C. sent over Mary, owned by Max Grundner. The trophy is open to challenge under certain conditions from any club in the Y. R. A. of Gravesend Bay.

First Race—Aug. 18.

Ogeemah won the first contest, over a leeward and windward course of 10 nautical miles, defeating Miss Judy on corrected time by 4m. and 40s. Karma and Mary were badly beaten. The boats sailed from the start, off Fort Hamilton, down the Bay to and around Romer Shoal Light and return, and was a reach down and windward work home. Throughout the event the contending craft were paired, Ogeemah and Miss Judy fighting it out for first honors, the other two boats seeing which one would be forced to bring up the rear. Miss Judy was the first craft to finish, but was not far enough in the lead to overcome the allowance conceded to Ogeemah. The summary follows:

Sloops—Class Q—Start, 3:20.			
	Finish.	Elapsed.	Corrected.
Ogeemah	5 40 50	2 20 50	2 13 30
Miss Judy	5 38 10	2 18 10	2 18 10
Karma	6 00 10	2 40 10	2 34 10
Mary	5 58 40	2 38 40	2 38 17

Second Race—Aug. 19.

The second and what proved the deciding struggle for the challenge cup was as closely contested as the first. Ogeemah won from Miss Judy by 2m. 13s. corrected time, after a most stubbornly fought battle. Karma was defeated by 3m. 29s., and Mary by 8m. 51s. corrected time. The boats sailed from the start, off Fort Hamilton to the bell buoy at the entrance to Swash Channel, thence to the Craven Shoal buoys and return, a distance of 9 nautical miles. It took a number of windward hitches to reach the bell buoy, the first mark. The leg from there to the Craven Shoal was a spinnaker run, and a reach brought the starters home. The wind was W. by S., with the tide on the ebb. Under the declaration of trust, a craft getting two victories receives possession of the trophy until won by some other boat under the given conditions. The summary follows:

Sloops—Class Q—Start, 3:45.			
	Finish.	Elapsed.	Corrected.
Ogeemah	5 37 18	1 52 18	1 45 42
Miss Judy	5 32 55	1 47 55	1 47 55
Karma	5 39 35	1 54 35	1 49 11
Mary	5 39 53	1 54 53	1 54 33

Edgewood Y. C.

Annual Cruise—Aug. 16-21.

THE Edgewood Y. C. held its annual cruise coincident with the week of open racing of the N. B. Y. R. A., the itinerary being the same, and on the whole the week provided a most enjoyable time for the fleet, which numbered about twenty-five boats, although the bad weather interfered with the programme for Saturday.

The fleet left the club anchorage on Tuesday, the 16th, and under Commodore H. G. Posner, proceeded to Bristol, the scene of the second Association race. The winners on the run were the sloop Romp and the cats Tartar and Onaway. Handsome souvenirs of silver were awarded the winners on all the runs by the commodore. On the second day's run to Fall River the winners were the sloops Chiquola and Romp and the cats Ina, Mae Hope, Wanderer III., Onaway, and Elizabeth.

Wednesday night the fleet proceeded to Newport, going across to Jamestown for the Association racing Thursday afternoon, and returning to Newport Harbor in the evening. Friday many of the boats went outside to witness the Astor cup races. The storm held up the arrangements for Saturday, and the fleet remained at anchor in Newport Harbor, making the run on Sunday morning to Potter's Cove, where a club clam bake was enjoyed, many of the other craft of the club coming down from the city for this event. The cruise ended in the afternoon, with the return of the fleet to the club anchorage.

F. H. Young.

Erie Y. C.

ERIE, Pa., Aug. 6.—The final race for the championship was sailed to-day in what is called a gale here, although it would not be considered much of a gale on the coast; but then we do not often have any 40-mile an hour gales here. This one, however, was high enough to keep some of the boats at their anchorage; they did not go out. Quite a crowd took in this race from the bluffs above the water-works, where the whole course could be seen. The course was 3 miles, sailed over twice.

In the 18ft. class Flora had to sail alone, as she had no competitor. Una also went it alone in her class for the same reason. A new boat came out in the 21ft. class, Wasp. She has lately been brought here from Canada by Capt. Bens, to replace the one he had burned last June. She took first place in this race; Turtle came in second, and ex-Sheriff Capt. Evans, with his Mingo, came in third. Turtle, owned by the Lynch brothers, will have to be satisfied with second place hereafter; this new boat, Wasp, is too fast for them.

Marvel and Iriquois brought up the rear in this day's race. The winning boats have their flags now. Flora, Turtle, and Una got them, having made the most points in the different races sailed in the past two months.

CABIA BLANCO.

Eastern Y. C.

Marblehead, Mass.—Thursday, Aug. 18.

UNDER a reefing breeze from the N.W. and a smooth sea the fourth of a series of special open races of the Eastern Y. C. was sailed off Marblehead on Thursday, Aug. 18. The yachts were sent over a triangular course, the first leg being to leeward, Chewink IV. got the start in Class L, but she had not got her spinnaker fairly drawing when the halliards parted, and the whole thing collapsed. When everything had been cleared, Sauquoit was the leader, with Wasaka second, and Chewink IV. third. This was the order when the yachts gybed around the first mark, but on the second leg, both Wasaka and Chewink IV., passed Sauquoit, Wasaka turning the second mark in the lead. On the beat to the finish Chewink IV. passed Wasaka and led to the line, but the 30-footer Dorel sailed so close to the leading boats that she won on time allowance. In the 22ft. class Medric got the start, and led to the first mark. She also led at the second mark, with Peri II., which had been last, in second place. On the beat to the finish, Peri II. pulled out ahead and won. There were only five 18-footers to start. Fudge got the start, with Moslem II. close behind. When half way to the first mark Moslem went out ahead and turned the mark first, with Arrow second. This was also the order at the second mark, after passing which Moslem II.'s mainsail split, and Arrow was in first place. On the beat home, Bat and Arrow had a very close contest, sailing almost on even terms. When almost to the finish line, Bat's throat halliards parted and Arrow went over the line first. The summary:

Class L.	Elapsed.	Corrected.
Dorel, G. L. Batchelder.....	1 23 29	1 14 58
Chewink IV., F. G. Macomber, Jr.....	1 19 59	1 16 58

Moslem II., B. D. Barker.....	Disabled.

Friday, Aug. 19.

The fifth and last special open race of the season, given by the Eastern Y. C. for Class L, E. Y. C., and classes E and I. Y. R. A., was sailed off Marblehead on Friday, Aug. 19, in a fresh S.E. breeze. The first leg of the course was a beat to windward. Chewink IV. got the start in Class L, but Wasaka was benefited by a long tack to the southward and turned the windward mark with a long lead. She led to the finish, with Chewink IV. constantly gaining. In the 22ft. class Medric got the start, but Peri II., which also took a long board to the southward, turned the weather mark with a big lead, which she held to the finish. In the 18-footers, Boo Hoo got the start, but on the beat to windward, Bat went out ahead and led to the finish. The summary:

Class L.	Elapsed.	Corrected.
Wasaka, T. Reed Anthony.....	2 05 51	2 07 38
Dorel, G. L. Batchelder.....	2 13 44	2 01 52

Westhampton Country Club.

West Hampton Beach, L. I.—Saturday, Aug. 13.

AN Association race was held under the auspices of the Westhampton Country Club on Saturday, Aug. 13. A fresh S.E. breeze held throughout the race, enabling the boats to make fast time over the 10-knot course. Of the twenty-seven starters, all the boats finished. Julia was disqualified in Class A.

The winners were Dodo II., Spalpeen, Idlewild, Lorna, Lass and Medaler. The summary:

	Elapsed.	Corrected.

East Gloucester Y. C.

Gloucester, Mass.—Thursday, Aug. 11.

A Y. R. A. open race was given by the East Gloucester Y. C. on Thursday, Aug. 12, off Gloucester. There was a fresh W.S.W. breeze, and the racing was good. Chewink IV. was the only 30-footer to start, and she sailed over the course alone. In the 25-foot class Seeboomook got the start, and led all over the course. Urchin got the start in the 22-footers, but Peri II. took the lead on the windward leg and held it to the finish. The 18ft. knockabouts were well bunched at the start, with Moslem II. in the lead. Hugi got out to the windward mark first, and led to the finish. In the 15-footers Tabasco, Jr., led until after the windward mark was turned, when Vera II. caught and passed her. Kit led all the way in the first handicap class. Kamador was home first in the second handicap class, but to Owaissa on corrected time. The summary:

Beverly Y. C.

Wing's Neck, Buzzard's Bay—Saturday, Aug. 13.

THE Beverly Y. C. sailed its 358th regatta off its club house on Saturday, Aug. 13. A light wind blew, varying from S. to S.W. Mr. F. E. Cabot acted as judge.

The 30-footers were sent over a triangle, first to Gifford's Ledge, and then across the bay to Bird Island, and then home, a distance of 18½ miles.

The 21-footers went over a triangle, one leg of which was repeated twice, making a total distance of 14 miles. They went, first to Dry Ledge, then to Scraggy Neck Buoy No. 10, back to Dry and No. 10, and then home.

The 18-footers and fourth class cats sailed over a triangle, first to Scraggy Neck Buoy No. 8, then across the bay to Dry Ledge, and then home; and the small one-design boats went twice around a small triangle marked by Mosier's Rock, striped buoy, Beverly Y. C. Buoy No. 2, and the starting line, making a total distance of 6½ miles.

Young Miss and Praxilla, of the 30-footers, had an exceedingly close race, Young Miss finally winning by only 24s. Much to the surprise of all, Arethusa, which sailed in the 21ft. class for the first time this year, won. She was sailed by Mr. Baker's son Ezra. Mr. Baker, in Illusion, was in second place for most of the course, but was finally passed by Terrapin. Mr. Crane's new Hybrid did not do well in the light air, and withdrew. Jap won in the 18ft. class, and Vim in the 15ft. one-design class. The times in detail are given below:

30-footers.	Actual.
Young Miss, D. L. Whittemore.....	3 47 18

Boston Y. C.

Boston, Mass.—Saturday, Aug. 20.

A CLUB championship race of the Boston Y. C. was sailed off the Hull station of the club on Saturday, Aug. 20, in a S.E. gale. None of the 30-footers showing up, the 22-footers were the first to be sent away. Opitsah V. got the start by about 4m. on Clotho, and led all around the course, although Clotho reduced the lead to 30s. at the finish. Hayseed got the start in the 18-footers and led all over the course. The best race was between Vera II. and Tabasco Jr., in the 15ft. class. Tabasco, Jr., got the start and led until the first mark was passed. On the windward leg Vera II. took the lead and held it by a short margin to the finish. In the first handicap class Jingo made the fastest time of any yacht around the course. In the second handicap class Mildred led on the first round, but on the second round Anne took the lead and held it by a short margin to the finish. The summary:

22-footers.	Elapsed.

*Western Pennsylvania Trapshooters' League tournaments. C. G. Grubb, Sec'y, Pittsburg.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM goes to press on TUESDAY OF EACH WEEK.

The secretary, Mr. H. A. Gettys, informs us that the second annual tournament will be held at Marysville, Pa., on Aug. 27.

Mr. Chas. G. Grubb, secretary of the W. P. T. S. L., writes us that "The Monessen Rod and Gun Club, of Monessen, Pa., have cancelled the dates of their tournament, to be given under the auspices of the Western Pennsylvania Trapshooters' League, Oct. 27 and 28."

In the contest for the Morrison cup, at the shoot of the Indianapolis Gun Club, held on Saturday of last week, two of the 18yd. contestants, Messrs. Barry and Bell, tied on 44 out of 50. The high score, 45, was made by Mr. Lawrence at 18yds., and Mr. Gregory, at 17yds.

The Seashore Gun Club announces a tournament to be held on Young's Ocean Pier, Atlantic City, N. J., Sept. 19-21. There are ten events at 15 and 20 targets each day. The competition is open to all amateurs. For further particulars, address Mr. Albert A. Schoverling, 2 Murray street, New York.

The Middleton, Wis., Gun Club have issued the programme of their second annual amateur tournament, to be held Aug. 28-29. There are fifteen events each day, thirteen at 10 targets, \$1 entrance, and two at 15 targets, \$1.50 entrance. Targets, 2 cents each. Class shooting. Mr. F. L. Pierstorff, manager.

The Windsor Locks, Conn., Gun Club announces a tournament to be held on Aug. 29, commencing at 10 o'clock. Fifteen events at 10, 15, 20 and 25 targets are provided in the programme. The 25-target event is a professional event, \$5 entrance, high guns. The other events have 50 cents, 75 cents, \$1, \$1.50 and \$2 entrance. Targets, 2 cents. Messrs. Leach & Cutler are the managers.

The Lowell, Mass., Rod and Gun Club are making earnest preparations for their annual Labor Day shoot. The forecasts are in favor of a successful gathering. At the shoot of the club held on the grounds at East Chelmsford, Aug. 18, a number of the club's "old-timers" were present, and of these were Messrs. Wm. A. Lang, Charles Varnum, Henry Runels, Lucius A. Derby, Dr. W. H. Downs, Charles Runels, Dr. Snyder, E. A. Smith, George V. Gregg.

At the annual business meeting of the New York State Association for the Protection of Fish and Game, held at Buffalo, N. Y., on Aug. 15, Utica was fixed upon as the place for the next New York State shoot, and the second week in June was fixed upon as the time to hold it. On motion of Mr. Harvey McMurchy, it was carried that State officers would be elected and paid for their services, and in furtherance of this purpose a committee was appointed, the members of which are as follows: Messrs. McMurchy, chairman; Burkhardt, Kelsey, Gates and Blandford.

Mr. E. B. Shogren, secretary, writes us that "the programmes for the Chicago Trapshooters' Association tournament, Sept. 9, 10 and 11, will be ready for distribution next week. The Association will spring something new in the division of moneys. Many inquiries are being received, and the officers look for a large gathering of visiting shooters. It being a strictly amateur shoot, fully-protecting the 80 and 85 per cent. shooter, so he will receive a fair return of his entrance. Added money and merchandise prizes will make it worth while for many shooters to visit our city and also shoot over the best equipped grounds in the State."

In the averages of the New York State shoot, held last week, in the open events, the professional leaders were: First, Messrs. Fred Gilbert, with 459 out of 480; second, J. A. R. Elliott, 452; third, W. H. Heer, 448. Amateur leaders in the open averages were: Messrs. E. C. Griffith 446, Frank D. Kelsey 435, C. W. Hart 432. Mr. Harvey McMurchy was high man in the State events with a total of 457 out of 485, and therefore was the winner of the New York City cup. Mr. Hart was second in the State averages with 446, Mr. Kelsey was third with 444, and Mr. C. W. Floyd was fourth with 441. The Fulton Gun Club, the members of which were Messrs. McMurchy, George Lewis and Capt. I. K. Chapman, won the Dean Richmond trophy with a score of 66 out of a possible 75.

Concerning an incident of the Indian tournament, a correspondent, "Wildman," writes us as follows: "Frank Harrison, Chief Battle Ax, acted as referee and puller at the badger fight, which was pulled off for his special edification and entertainment. Before the fight, Battle Ax was positive that a 'badger' could not outfight a coon. He now knows better. There was some dissatisfaction at first among those having heavy wagers on the badger at the selection. But when Tom Marshall assured the bettors that Battle Ax had officiated as referee for the All-American and English team match in 1901, and had given perfect satisfaction, all objections were withdrawn. Battle Ax was a success. What a dandy time the squaws had at this meeting—horseback riding, driving, walking, dancing, card playing, etc. They are to have an organization of their own, with Mrs. R. O. Heikes as president. They will keep the chiefs guessing."

BERNARD WATERS.

Norwich Shooting Club.

NORWICH, Conn.—At the regular shoot of the club, held on Saturday, Aug. 13, very good scores were made, and two of the members succeeded in breaking 25 straight in a regular event, thus winning the \$5 prize offered by the club. Mr. Beebe, of New London, also broke 25 straight. The following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	Shot	at.	Broke.	Av.

Glen Rock Gun Club.

GLEN ROCK, Pa., Aug. 18.—There was an excellent exhibition of trapshooting skill at the shoot of the Glen Rock Gun Club yesterday. Somers was high with a score of 191 out of 200 targets. Mr. Frank E. Butler was a visitor and made the good score of 177 out of 200. McSherry had a straight run of 76 broken targets. The scores:

Dominion Tournament.

BRANTFORD, Ontario, Aug. 13.—The fourth annual tournament of the Dominion of Canada Trapshooting and Game Protective Association opened here on Wednesday, Aug. 10, at 10 A. M. About 2 P. M. a heavy rain set in and the management decided to postpone the events until the following morning. The two succeeding days were ideal days for trapshooting, and some remarkable scores were made. Messrs. Forest H. Conover, J. H. Cameron, J. A. R. Elliott, Heath, Cole, D. S. Dault and Byrne, and R. C. Walker, of the St. Louis Sportsman were present and rendered services which were greatly appreciated by the Brantford Gun Club.

Professional high average was won by Mr. J. A. R. Elliott. Amateur high average won by Mr. H. D. Bates, Ridgeway. Amateur high average first day was won by Phil Wakefield, Toronto; second day, T. M. Craig, Sherbrook; third day, tie between Fred Westbrook and C. Summerhays, Brantford. In the Montreal Rolling Mills event, at 50 targets, F. Westbrook, C. Summerhays and W. A. Smith tied with 49 each. In shooting off the tie they again tied with 49. In the next shoot-off Mr. Westbrook won.

The Grand Canadian Handicap, at 50 targets, was won by Fred Westbrook.

Mr. Summerhays made a straight run of 105 targets, and in the last 540 targets shot at by Westbrook and Summerhays only 15 targets were lost.

In the Mail trophy event, five-man team race, Brantford and Hamilton tied with 233 targets each out of 250. In the shoot-off Brantford won by 4 birds, they breaking 230 out of 250, and Hamilton 226.

Aug. 10, First Day.

Aug. 12, Third Day.

The sixth event was the Grand Canadian Handicap at 50 targets, and was won by Fred Westbrook.
The eighth event was the Montreal Rolling Mills trophy, 50 targets, and was won by Fred Westbrook. Scores:

WESTERN TRAP.

Brandon Gun Club.

BRANDON, Man., Aug. 12.—The annual trapshooting tournament of the Brandon, Man. Gun Club was held at the club grounds on Aug. 12, and proved to be the most enjoyable and altogether successful of any yet held by this organization. A number of shooters were present from Kilarney, Fort Garrys, Winnipeg, Portage La Prairie, Virden, Yorkton and others. The Fort Garry Club came off victors; their team was composed of Bain, Johnson, Britton and Turner; they take away the Brandon challenge cup. The high average was won by Paul Johnson, with R. J. McKay second. There was a strong wind, which caused many "rocky" scores; even the old hands found that they could not gauge them.

Bod Lane, of Brandon, managed, and carried the shoot to a perfection hard to excel.

It was not the club's fault that hotel accommodations were limited, and individually they sought to provide for the comforts of all present. The totals follow:

Shot at. Broke.		Shot at. Broke.	
Bain	175	Harwood	165
Britton	175	Powers	80
Johnson	175	Dowling	60
Brodie	175	Lane	97
Turner	175	Varcoe	92
White	150	Waddell	95
McKay	150	Alexander	72
Schwartz	175	Miller	125
Totten	80	L. Williamson	25
Saunders	175	Carter	85
Hopper	90	G. A. Woolhouse	63
Smith	120	Wainwright	55
Rutledge	165	McComb	15
Patrick	140	O'Sullivan	50
Thomson	135	M. C. Niver	25
Williamson	165	P. F. Woolhouse	55
MacDonald	100	Baird	50
Bailey	175	Mrs. Waddell	35
Anderson	150		92

Audubon Tournament.

Audubon, Ia., Aug. 17.—On Tuesday the boys who compose the gun club conducted a one-day shoot, and the shooters to the extent of twenty-eight came from the surrounding towns, and a good time was the result.

The weather was on the cloudy order, and during the last two events the wind developed into a storm that made shooting very uncertain. Some good scores were made, especially that of C. B. Adams, 193 out of 200. C. E. Petty came on strong for a new shot, and made high amateur average, 188, leading the excellent shot Russell Klein, by just 3 targets for the day. Wm. Lambert came third with 180.

The club here is composed of a rare lot of sportsmen. The grounds and traps are well nigh to perfection, and there was general comment on the way the shoot was conducted. All present will act as boosters for the next shoot they hold.

The club and participants were under obligations to Mr. Fred Whitney for the easy and careful manner in which he kept the office and passed out the tickets with the cash at close of the shoot.

The programme consisted of thirteen events, 10, 15, 20 and 25 targets. Following are the totals:

Shot at. Broke.		Shot at. Broke.	
Lambert	200	Campbell	200
Kline	200	Talbot	146
Vermilya	200	Crudmire	96
Weiss	200	Hoffman	112
Cretchell	200	Hewey	100
McDonald	200	Rober	83
Adams	200	Breckenridge	97
Forney	200	Brockman	55
Baker	180	C. Talbot	158
Sinclair	145	Wilson	101
Petty	200	Wall	36
Burger	200	Fraley	60

In Other Places.

At the good city of Lafayette, Ind., a new amateur club is to be started. Fred Jamison is at the head of affairs, and with twenty-five names to his list, success is assured.

The programme for the Davis County Gun Club shows that there will be a challenge medal open to shooters in both Kentucky and Indiana.

The second shoot between the Detroit and Battle Creek, Mich., clubs was pulled off last Sunday, and this time Battle Creek won out, though with a small margin. The third and deciding match will be held in two weeks, at Jackson, the half-way place. Some good shooting was done, Nelson, for Battle Creek, making 48, and Marx 49 and Schaberle, of Detroit, 48. Total score: Battle Creek 302, Detroit 298.

At a meeting of the Highland Gun Club, of Duluth, Minn., Bert Holcomb was elected as captain. Plans were discussed leading to establishing a new ground. The management is to be congratulated, as, starting in February last, they are now twenty-eight members.

Peter Galles won the medal at the Kenosha Gun Club on Sunday last. Fred Palmgreen was second.

When you see a good gun club in a town it can generally be depended on that some one man is the leading genius. So in this case, Fred Keef is the man at Kalamazoo, and now comes the announcement that he will secure the silver loving cup for competition. A strong string of rules has been provided, which call for handicaps from 14 to 23 yds.

The Bridge City Gun Club, of Logansport, Ind., is keeping up weekly practice, and will hold a shoot Labor Day. The last time out the high scores were made by Furgeson and Jenkins.

The Freeport, Ill., Gun Club will hold their practice shoot every Friday.

The Homer-Ogden Club, of Illinois, made famous through Charlie Wiggins, is holding regular weekly matinees.

The Lincoln City, Ill., Gun Club has leased grounds at the Johnston race track, and will hold regular shoots until Sept. 21 and 22, when a tournament will be held.

At the last regular shoot of the Pastimes, of Detroit, the medals were won, viz.: Class A, Wolf; Class B, Whitmore; Class C, Gordon; Class D, Webber.

Charley Grimm has been heard from. He has organized a gun club at his home town, Clear Lake. McGowan is president, Martin Peterson, Vice-President, L. E. Boyd, secretary.

The Biloxi Gun Club held a tournament, Aug. 20 and 21, at which many shooters were expected to participate.

Kalamazoo, Mich., will hold a tournament Sept. 3 and 4, if plans mature that are now under consideration.

The Fort Adams, Miss., Gun Club held a tournament Saturday last, and Dr. Magruder, of Woodville, made high score, 99 out of 103.

There will be an awakening in the old Lafayette, Ind., Club soon. About once a year Livinguth, Thompson, Blistain and Kraus get going sufficient to pull off a tournament. The announcement is made of a league shoot to be held Sept. 8 and 9, on the Interurban street car line, which will obviate any possibility of a stick in the river, which sad fate befell those who trusted the boat ride on the occasion of the last shoot. Since this club lost their famous old park, it has been without a home. If the old traps possessed by this club could be placed on exhibition it would be the wonder of the trapshooting world.

Trapshooting at Des Moines, Ia., has blossomed out afresh. At the last meeting, H. Patterson made the very excellent score of 97 per cent., Mr. French 90 and Holgerson 89. Holgerson, Windsor and Patterson tied on Hopkins Bros.' prizes, each scoring 24 out of 25. This should cause our C. W. Budd to look to his laurels.

And now comes Elkhead, Ind., with an announcement that the Highland Gun Club will hold a shoot, with many visitors from South Bend and other nearby cities, to assist them. What a great convenience the trolley cars are to the trapshooters.

At Wellsburg, Ia., a new gun club has been organized. In a statement made, the promoters claim that the principal object of the club will center in the enforcement of the game laws in their immediate vicinity.

Another new gun club has been organized at Lansing, Mich. About forty names have been recorded with a promise of making it a social club. There will be target tournaments held at various times during the season. The officers are: President, J. E. Nichols; Vice-President, Frank G. Rome; Secretary, Homer D. Parker; Treasurer, Fred Hopkins.

The Saturday Afternoon Club at Belding, Mich., has been resurrected, and shoots will be held each week until cold weather sets in.

The Pine Bluff, Ark., Gun Club was visited last week by Jack Fanning, and of course there was a visit to the shooting park. The scores made will put the home boys on edge for the remainder of the season. Scores at 20 and 25 targets: Fanning 19, 22; Clements 17, 23; Ambrose 16, 21; Lloyd 12, 14; Simpson 12, 18; Arnold 15, 18.

There was not a large turn-out at the Janesville, Wis., last shoot, owing to many being off rustivating. As the fishing is good, there is ample excuse.

A letter from Portage, Wis., states that Guy Dering, of Columbus, won the high average of 94 per cent. at the Fox Lake tournament, held Aug. 13. Joe Raup, of Portage, was second. The shooting on the whole was below par, as 66 per cent. only was scored of the 3,000 targets thrown.

Owing to the state shoot, at which all non-residents are barred, the Ft. Smith, Ark., boys were out and held a practice shoot. H. C. Cox made 23, Walter Mann and Mr. Copeland were next. To show how the trapshooting comes and goes, it will be interesting to mention that Mr. Copeland has not shot over the traps before in five years, although he was formerly one of the best in the State.

The fifth semi-annual shoot for the gold medal will be held at Watertown, Wis., Sunday. There will be twelve events, and the Jefferson county medal will be the center of attraction. H. C. Ryder, of Waterloo, is the present holder of this medal.

Mr. G. F. Burmister managed a very good shoot on Aug. 15 for the Donahue, Ia., Gun Club. Shooters were present from the towns of Davenport, and the nearby villages. This being the first shoot the club was much elated at its success. At the completion of the programme there was yet time for other amusements, and many of the shooters put away their guns for the more vigorous exercise of dancing.

The shoot at Elkhead, Ind., was a success from the standpoint of attendance, as there were forty-five shooters present from the surrounding towns of northern Indiana, viz., Knox, La Porte, South Bend, La Grange, Bitner and Kolb, of Goshen rather had the best of first money positions. The success of the day stimulated South Bend enthusiasts to announce that a shoot will be held by them in September.

The Tacoma, Wash., Gun Club are enthusiastic in their determination to win the prize at the next Association shoot, which will be held at Cosmopolis. To this end weekly practice shoots are being held.

Garfield Gun Club.

Chicago, Aug. 20.—The appended scores were made on our grounds to-day on the occasion of the third trophy shoot of the third series. McKinnon won the Class A trophy on 24. W. Einfeldt won Class B on 23. Kehl won Class C on 20.

In the cup shoot, which followed, Thomas won Class A on 23, Kamp, Class B on 23, and Birkland, Jr., Class C on 17. The cup shoot was at 15 singles and 5 pairs.

The day was an ideal one for trapshooting, being just pleasantly warm and but little wind, and twenty-eight shooters took advantage of it for an afternoon's sport at the traps. All had all the shooting they wanted, and all went off very pleasantly.

Cup shoot:

IN NEW JERSEY.

Fairview Gun Club.

FAIRVIEW, N. J., Aug. 20.—The main event was the cup race. In it Mr. H. von Lengerke was high with 45 out of 50, breaking his last 34 straight; but he did not compete for the cup. The conditions were 50 targets, from the 19yds. mark.

Cwing to the threatening weather, the attendance was less than it otherwise would have been. Dr. Moeller was heavily handicapped by shooting his field gun, with 26in. cylinder barrels.

New York State Shoot.

THE forty-sixth annual convention of the New York State Association for the Protection of Fish and Game was held at Buffalo, N. Y., under the auspices of the Buffalo Audubon Gun Club, on Aug. 16, 17, 18 and 19. The new park of the club was the scene of the tournament. It is situated on La Salle avenue, on one of the Rumsey farms. The tournament was ably managed by Mr. Charles S. Burkhardt, who is a skillful trapshooter himself, and has had a thorough experience in club and tournament competition. Besides the buildings, a number of tents added to the shelter afforded spectators and contestants.

Aug. 16, First Day.

The weather was delightfully pleasant and favorable for good scores. There was hardly any wind, and consequently the flight of the targets was undisturbed from the flights which the traps gave them.

The professionals were numerous represented. Many of them are the most skillful of America's famous shooters.

The annual meeting was held on Monday evening. Four new clubs were admitted to membership, namely, Owego Gun Club, Owego; Avon Rod and Gun Club, Avon; Cohocton Gun Club, Cohocton; New Paltz Gun Club, New Paltz, N. Y., Poughkeepsie, and Utica were the candidates for next year's shoot. A majority decided in favor of Utica. The second week in June was fixed upon as the time in which it will be held. Mr. McMurchy suggested the election of paid officers for the New York State Shooting Association, a secretary in particular. A committee was appointed in furtherance of the suggestion, as follows: Messrs. McMurchy, Burkhardt, Kelsey, Gates and Blandford.

Mr. Frank D. Kelsey, of East Aurora, N. Y., famous as a skillful performer during many years past, led the competition in the average for the day in the open events. He scored 153 out of 160, a fraction over 95.6 per cent. Mr. Fred Gilbert was next with 151, and W. H. Heer was next with 150. In the State events, Messrs. Harvey McMurchy and C. W. Floyd tied on 150 out of 160 for high average of the day.

There were eight State events at 20 targets each, \$2 entrance, and Nos. 2, 4, 6 and 8 had \$20 added to each. The open events were similar to the State events in targets and entrance, but no money was added.

In the State events, the moneys were divided Rose system, 8, 5, 3, 2, 1. Five per cent of the purses was deducted for daily averages, 20, 17½, 15, 12½, 10, 8 and 7 per cent.

For general average prizes for those competing in the State events, the first three days, \$100 was divided as follows: \$20, \$15, five \$10 and three \$5. A like amount was applied to the three day averages in the open events. Merchandise prizes were given to the three daily averages in the open events. The scores of the first day follow:

Aug. 17, Second Day.

The programme of the second day was similar to that of the first day, a total of 160 targets and \$16 entrance in the open and State events respectively, and average prizes also.

Mr. W. H. Heer, of Concordia, Kans., was high for the day with 154, and Mr. Fred Gilbert was next with 153. Mr. C. V. Hart was high in the State events with a total of 148. In the open events he made the excellent total of 144. The scores follow:

Aug. 19, Fourth Day.

Favorable weather prevailed during the day. The Dean Richmond trophy, for three-man teams, 25 targets per man, entrance \$10 per team, had five contestants: the Hunter Gun Club, of Fulton; the Baldwinville Gun Club; the Infallible Gun Club, of Buffalo; the Audubon Gun Club, of Buffalo, and the Jefferson Gun Club, of Buffalo. The Hunter Gun Club came out victorious, with a score of 66 out of a possible 75, the high score of the team, 24, being made by the veteran, Mr. Harvey McMurphy. The scores:

Hunter Gun Club, Fulton—George Lewis 23, I. K. Chapman 19, Harvey McMurphy 24; total 66.
Baldwinville Gun Club, Baldwinville—Windsor Morris 21, C. J. Dalley 22, Charles Marvin 22; total 65.
Infallible Gun Club, Buffalo—C. W. Hart 23, Frank Parsons 19, Gilbert Deitzer 17; total 59.
Audubon Gun Club, Buffalo—C. S. Burkhardt 19, Major F. W. Foster 21, Frank D. Kelsey 18; total 58.
Jefferson Gun Club, Buffalo—F. Emond 20, George Morris 18, P. Bernhardt 18; total 56.

The Audubon Handicap event divided the interest with the Dean Richmond trophy. It was an event open to all, 50 targets, handicaps 14 to 22yds., \$5 entrance. The first prize was an upright piano, valued at \$325. Second prize was a building lot, valued at \$250. There were about forty contestants. Mr. Fred Gilbert, 22yds., and Mr. Geo. Piercy, 17yds., tied on 46, and were high, taking first and second prize and divided. The ties on 45 shot off at 25 targets, with results as follows: Fleming 23, third prize, a Marlin repeating shotgun; Morris, 21, fourth, a silver tea set; Snyder, 19, fifth, ice box; Nobles, 17; Lewis 17.

The ties on 44, at 25 targets, resulted as follows: Kelsey 24, silver water pitcher; Fulford, 18; Rahm, 17. The scores in the Audubon Handicap follow: Fleming 45, Floyd 45, Henry 40, Pontefract 40, Rahm 44, Upton 42, Daudt 43, King 39, Squier 30, Piercy 46, Hart 41, Harrison 38, Fulford 44, Griffith 40, Gilbert 46, Apgar 40, Hull 37, Nobles 45, H. Elliott 43, Morris 45, Le Compte 41, Lewis 37, McMurphy 39, Hopper 31, Burkhardt 40, Heer 39, Kelsey 41, Glover 41, Stohr 38, Bush 34, Durston 42, Eaton 26, Beazard 31, Wasson 37, Southworth 41, Fish 38, Reinecke 43, Suckow 36, Snyder 45, Deitzer 36, Parsons 39, Broderick 34.

In the open events the averages for the three days at 480 targets were as follows:

	1st Day.	2d Day.	3d Day.	Total.
J A R Elliott	146	150	156	452
F Gilbert	151	153	155	459

THE FIRST BITE.

THE commonly accepted legal principle that a dog is not to be condemned as vicious on the evidence of one bite, has been perverted into a claim that a dog is entitled to his first bite. In a New York case last week, a dog having attacked a nine-year-old child, biting him on the legs and causing severe wounds, the counsel for the dog put in the one bite plea, as reported in the Evening Post:

"You know it is a principle of law that a dog is entitled to his first bite," replied the lawyer. "It requires more than one bite to prove that he is vicious."

"Not in this court," said the magistrate. "And you can tell your client that if the facts alleged are proved I will fine him \$10 for each day he keeps the dog after the day of the assault."

"But the dog is licensed, your honor."

"Not to run about the streets and bite little children," was the answer.

This first bite privilege given to dogs is one of the curiosities of legal practice. No such grace is extended to the vicious human. If a man seizes a child on the street and bites it, his counsel does not dream of putting in as a defense the proposition that every man is entitled to a first bite, and that he must have bitten two children before he can be adjudged vicious. There may have been some good reason for the first bite concession when the precedent was established, but the modern common sense view expressed by the magistrate is the more sensible one, and should be the ruling guide in dog bite cases.

EPHRAIM IN THE TIMBER.

THE remarkable portrait of a grizzly bear which we print this week is neither a fake picture nor a picture of one of the domesticated bears of the Yellowstone National Park. Instead, it is the photograph of a live wild grizzly of the southern Rocky Mountains, taken by Mr. Frederick K. Vreeland, who, with rare skill and patience, circumvented the bear and secured his likeness. A second or two after the picture was taken, all that was seen of the placid, sleepy beast figured in our pages, was a dissolving view of flying fur among the tall, straight trunks of the distant forest. The click of the shutter had projected the thousand pounds of bear meat as if it had been shot out of a gun. So, great results arise from small causes, and the pressure of a finger on a telegraph key may put in motion the wheels of a great engine.

We call the picture "Ephraim in the Timber," for "Ephraim," according to the books of old, was the familiar title of the grizzly among the early trappers. Yet he had another name, for Catlin, in the passage quoted on another page, states that "Caleb," or "Cale" for short, was a common term applied to the grizzly in the Rocky Mountains in his time.

All the world over, the bear, of whatever name he may be, is regarded with respect and reverence—admired for his astuteness and his supposed power. Among the Ainos of Japan the bear is worshipped, and this general sentiment of reverence is almost universal among the people of the North.

The Russians call the bear "Little Father." The Scandinavians say that he has "the strength of ten men and the wisdom of twelve," and refer to him always with the greatest respect. They do not speak of him familiarly as the bear, but call him "the old man with the fur coat," or "the dog of God." The red Indian, though killing the bear when he could, always apologized to the dead for having done so, calling the animal grandfather and relation, and expressing bitter regret that he had been forced to perform the act. Our readers will remember the account of this propitiatory ceremony, as described by that fine old fur trader, the elder Henry, printed in *FOREST AND STREAM* last spring.

The Indians of the plains, besides believing in the great wisdom of the bear, believed also—of course as a result of their experience in hunting it with their primitive weapons—that it was hard to kill. If wounded it could heal itself, and its power was such that it could transfer to others its wisdom, its toughness, and its power to heal wounds.

This is what took place at the parting between a bear and a young Pawnee whom it had pitied and restored to life after he had been killed in battle, as the folk tale runs:

"When they were about to part, the bear came up to him, and put his arms about him, and hugged him, and puffed his mouth against the man's mouth and said, 'As the fur that I am in has touched you, it will make you great,

and this will be a blessing to you.' His paws were around the young man's shoulders, and he drew them down his arms until they came to his hands, and he held them, and said, 'As my hands have touched your hands, they are made great, not to fear anything. I have rubbed my hands down over you, so that you shall be as tough as I am. Because my mouth has touched your mouth, you shall be made wise.' Then he left him and went away."

CAMPS AND CAMPS.

A HUNTING or wilderness camp, according to the general and accepted mental conception of it, is a primitive, relatively diminutive, inexpensive structure, more or less ramshackle, constructed perhaps of the odds and ends of dead wood and shrubbery, and barren of all but the most simple conveniences of life and living. It is a temporary abode apart from the homes of mankind. It is the makeshift of emergency.

It is supposed to furnish a temporary domicile to the hunter, miner, prospector, angler, canoeist, tourist, timber looker; serving as a shelter and dormitory. It can be constructed quickly by anyone, however unskilled in mechanical ability, be the owner poor or rich, and it can be abandoned at any time without financial loss.

The material of a camp may be the brush and bark available in the woodland, or rough logs worked into a still rougher cabin. Again, it may be a tent, which is classed as baggage during the journeyings by day, and as a camp when pitched for purposes of transient accommodation by night.

Concerning a camp, the conventions impose no restrictions as to shape, size, material or ownership. Its essentials are simplicity and roughness. It may be a simple lean-to, a teepee, a wall without a roof, or a roof without a wall. It may have any form or no form. Anything extemporized as a house for the moment fills the popular ideal of a camp.

It is commonly supposed to be a makeshift to meet the requirements of the straggler, the wanderer, the sportsman, the pioneer, or the laborer without the borders of the settlements. No ordinary person would imagine it to be a luxurious permanency.

At the present day the term camp has a much broader significance. It may comprehend a structure made of a few boughs, or a palace designed by a skillful architect, constructed by the most skillful mechanics, and furnished and embellished by the most fashionable upholsterers and decorators. In short, the modern camp may be primitive or it may be a luxurious city home transplanted into the camp area.

In respect to the latter, all that now remains of the true camp is the natural setting of field and forest, though these are largely shorn of their primeval roughness, and therefore of their primeval beauties, by the work of improvement.

This wide transition from the makeshift domicile of the individual to the palatial city home where families and guests gather in wild surroundings, has been brought conspicuously and sadly to public notice by the grievous and regrettable misfortunes of some camp owners whose properties are situated in the Adirondacks.

Recent press dispatches narrate the burning of Fish Rock Camp, on the upper Saranac Lake, owned by Mr. Isaac Seligman, of New York. The loss in buildings, furnishings, and personal property, is estimated at \$100,000. The calamity occurred on August 19. Later reports stated that Mrs. Lowengard, one of many guests at the camp, lost \$140,000 worth of jewelry, \$40,000 of which was recovered. The diamonds were uninjured, though melted out of their settings.

On August 28, the daily press recounted that, on upper Saranac Lake, a robber invaded the camp of Dr. E. L. Holt and stole silverware and much jewelry. The robber's next visit was to the recently burned camp of Mr. Seligman, where he searched the tents and took a number of trinkets, but missed the strong box in which were many valuables worth \$40,000. He next searched the camps on Doctor's Island, but secured little, the dwellers having taken the precaution to keep their valuables with them while on the lake. The losses by this robbery are said to exceed \$10,000.

Comparing the higher camp life, as it now is, with the primitive camp life as it was some years ago, it will be readily discerned that the term camp has acquired an en-

larged meaning. It may denote a tent pitched on a city lot, or a city palace erected somewhere in the country out of the view of the next domicile. A camper may signify a person who is living a primitive life in the primeval wilderness, or a person who is living with his family and guests in a commodious mansion, with all the accessories of stables, launches, stage service, mail service, and all the table luxuries, domestic and foreign, instantly available as essential factors of a life in camp.

THE American black bass has been introduced into French waters, and the result of the experiment is such as to warrant further enterprise in the same direction. In December of 1902, Mr. E. Roger received from the Prussian fish breeding establishment at Berneuchen a consignment of 200 large-mouthed black bass fry, which were put into a pond at his country home near Paris. The fry were about 2½ inches in length when put out. In March of 1903 he received, and deposited in the same pond, twenty-two fish which were about 7 inches in length. The pond, of some two acres, contained roach, bream, eels, and a stock of American sunfish, a species which has been extensively introduced in France, where it is regarded as something of a pest, because, while without value as food or for sport, it is believed to devour the spawn and fry of other species. The bass thrived in their new home; and this year in June it was discovered that they had spawned, "myriads" of fry being observed; and in July Mr. Roger, with a black bass fly imported from New York, succeeded in catching a fish of 9 inches, which was presented to a friend in Paris as "the first black bass ever served on a French breakfast table." Later in the same month the Parisian friend, with an American rod and reel, and an American "yellow-kid" bait, took a number of the American fish.

In this age of international exchange of fish and game, we might well consider the importation of the partridge. The rearing of the bird in captivity is practicable; we print on another page an account of how it is done in France. The same system might be followed in the United States. Now that the foolish customs prohibition of the bringing in of game birds' eggs has been repealed, the introduction of partridge eggs is only a question of someone having interest enough to import a stock. It is a foregone conclusion that the game preserve with its artificially bred supplies of birds must provide much of the shooting in this country in the not far distant future. The imported pheasant and the imported partridge will some day be counted among our chief game birds.

MR. HARDY'S notes on the old-time bullet molds will carry many a memory back to the days of their use. In common with the other implements of firearms, the bullet mold has undergone many changes; and from the simple form shown by Mr. Hardy has developed into a tool which casts grooved bullets, and is so adjustable as to give various lengths of bullet and various numbers of grooves. A study of the gun implement and reloading tool catalogues shows that the rifleman of to-day is by no means contented with the simple outfit of his forebears; but there are provided for him many inviting facilities for experiment and test of theories. Possibly he may not, after all, get so much game after he has cast his bullets, but then game is scarce, while the theories and crotchets of the rifle shooter are never ending, and not to be solved in the life of any one man.

WE print elsewhere from a circular of the Agricultural Department a consideration of the phraseology adopted in the definition, or want of definition, of the open and close seasons, as intended to be designated in the laws. The ambiguities arising from these defects of legal phraseology are often confusing and extremely vexatious; and there is the less excuse for them, since the remedy is so simple and ready to hand. To specify, as the New York law does, that the dates named are inclusive, leaves no room for uncertainty as to the precise days of opening and closing; and this is a formula which might with advantage be adopted universally.

FROM a canning establishment of the Northwest come complaints of salmon scarcity like those which have been the rule on Canadian salmon angling rivers this year. The pack will not be more than half the usual amount.

THE SPORTSMAN TOURIST

Wilderness Reserves.*

BY THEODORE ROOSEVELT.

(Concluded from page 171.)

AFTER we had finished this horseback trip, we went on sleds and skids to the upper Geyser Basin and the Falls of the Yellowstone. Although it was the third week in April, the snow was still several feet deep, and only thoroughly trained snow horses could have taken the sleighs along, while around the Yellowstone Falls it was possible to move only on snowshoes. There was very little life in those woods. We saw an occasional squirrel, rabbit or marten; and in the open meadows around the hot waters there were geese and ducks, and now and then a coyote. Around camp Clark's crows and Stellar's jays, and occasionally magpies came to pick at the refuse; and of course they were accompanied by the whiskey jacks with their usual astounding familiarity. At Norris Geyser Basin there was a perfect chorus of bird music from robins, purple finches, juncos, and mountain bluebirds. In the woods there were mountain chickadees and nut-hatches of various kinds, together with an occasional woodpecker. In the northern country we had come across a very few blue grouse and ruffed grouse, both as tame as possible. We had seen a pigmy owl no larger than a robin sitting on top of a pine in broad daylight, and uttering at short intervals a queer un-owl-like cry.

The birds that interested us most were the solitaires, and especially the dippers or water-ousels. We were fortunate enough to hear the solitaires sing not only when perched on trees, but on the wing, soaring over a great cañon. The dippers are, to my mind, well nigh the most attractive of all our birds. They stay through the winter in the Yellowstone because the waters are in many places open. We heard them singing cheerfully, their ringing melody having a certain suggestion of the winter wren's. Usually they sang while perched on some rock on the edge or in the middle of the stream; but sometimes on the wing. In the open places the western meadowlarks were also uttering their singular beautiful songs. No bird escaped John Burroughs' eye; no bird note escaped his ear.

On the last day of my stay it was arranged that I should ride down from Mammoth Hot Springs to the town of Gardiner, just outside the Park limits, and there make an address at the laying of the corner stone of the arch by which the main road is to enter the Park. Some three thousand people had gathered to attend the ceremonies. A little over a mile from Gardiner we came down out of the hills to the flat plain; from the hills we could see the crowd gathered around the arch waiting for me to come. We put spurs to our horses and cantered rapidly toward the appointed place, and on the way we passed within forty yards of a score of black-tails, which merely moved to one side and looked at us, and within a hundred yards of half a dozen antelope. To any lover of nature it could not help being a delightful thing to see the wild and timid creatures of the wilderness rendered so tame; and their tameness in the immediate neighborhood of Gardiner, on the very edge of the Park, spoke volumes for the patriotic good sense of the citizens of Montana. Major Pitcher informed me that both the Montana and Wyoming people were co-operating with him in zealous fashion to preserve the game and put a stop to poaching. For their attitude in this regard they deserve the cordial thanks of all Americans interested in these great popular playgrounds, where bits of the old wilderness scenery and the old wilderness life are to be kept unspoiled for the benefit of our children's children. Eastern people, and especially eastern sportsmen, need to keep steadily in mind the fact that the westerners who live in the neighborhood of the forest preserves are the men who in the last resort will determine whether or not these preserves are to be permanent. They cannot in the long run be kept as forest and game reservations unless the settlers roundabout believe in them and heartily support them; and the rights of these settlers must be carefully safeguarded, and they must be shown that the movement is really in their interest. The eastern sportsman who fails to recognize these facts can do little but harm by advocacy of forest reserves.

It was in the interior of the Park, at the hotels beside the lake, the falls, and the various geyser basins, that we would have seen the bears had the season been late enough; but unfortunately the bears were still for the most part hibernating. We saw two or three tracks, and found one place where a bear had been feeding on a dead elk, but the animals themselves had not yet begun to come about the hotels. Nor were the hotels open. No visitors had previously entered the Park in the winter or early spring—the scouts and other employes being the only ones who occasionally traverse it. I was sorry not to see the bears, for the effect of protection upon bear life in the Yellowstone has been one of the phenomena of natural history. Not only have they grown to realize that they are safe, but, being natural scavengers and foul feeders, they have come to recognize the garbage heaps of the hotels as their special sources of food supply. Throughout the summer months they come to all the hotels in numbers, usually appearing in the late afternoon or evening, and they have become as indifferent to the presence of men as the deer themselves—some of them very

much more indifferent. They have now taken their place among the recognized sights of the Park, and the tourists are nearly as much interested in them as in the geysers.

It was amusing to read the proclamations addressed to the tourists by the Park management, in which they were solemnly warned that the bears were really wild animals, and that they must on no account be either fed or teased. It is curious to think that the descendants of the great grizzlies which were the dread of the early explorers and hunters should now be semi-domesticated creatures, boldly hanging around crowded hotels for the sake of what they can pick up, and quite harmless so long as any reasonable precaution is exercised. They are much safer, for instance, than any ordinary bull or stallion, or even ram, and, in fact, there is no danger from them at all unless they are encouraged to grow too familiar or are in some way molested. Of course among the thousands of tourists there is a percentage of thoughtless and foolish people; and when such people go out in the afternoon to look at the bears feeding they occasionally bring themselves into jeopardy by some senseless act. The black bears and the cubs of the bigger bears can readily be driven up trees, and some of the tourists occasionally do this. Most of the animals never think of resenting it; but now and then one is run across which has its feelings ruffled by the performance. In the summer of 1902 the result proved disastrous to a too inquisitive tourist. He was traveling with his wife, and at one of the hotels they went out toward the garbage pile to see the bears feeding. The only bear in sight was a large she, which, as it turned out, was in a bad temper because another party of tourists a few minutes before had been chasing her cubs up a tree. The man left his wife and walked toward the bear to see how close he could get. When he was some distance off she charged him, whereupon he bolted back toward his wife. The bear overtook him, knocked him down and bit him severely. But the man's wife, without hesitation, attacked the bear with that thoroughly feminine weapon, an umbrella, and frightened her off. The man spent several weeks in the Park hospital before he recovered. Perhaps the following telegram sent by the manager of the Lake Hotel to Major Pitcher illustrates with sufficient clearness the mutual relations of the bears, the tourists, and the guardians of the public weal in the Park. The original was sent me by Major Pitcher. It runs:

"Lake. 7-27-'03. Major Pitcher, Yellowstone: As many as seventeen bears in an evening appear on my garbage dump. To-night eight or ten. Campers and people not of my hotel throw things at them to make them run away. I cannot, unless there personally, control this. Do you think you could detail a trooper to be there every evening from say six o'clock until dark and make people remain behind danger line laid out by Warden Jones? Otherwise I fear some accident. The arrest of one or two of these campers might help. My own guests do pretty well as they are told. James Barton Key. 9 A. M."

Major Pitcher issued the order as requested. At times the bears get so bold that they take to making inroads on the kitchen. One completely terrorized a Chinese cook. It would drive him off and then feast upon whatever was left behind. When a bear begins to act in this way or to show surliness it is sometimes necessary to shoot it. Other bears are tamed until they will feed out of the hand, and will come at once if called. Not only have some of the soldiers and scouts tamed bears in this fashion, but occasionally a chambermaid or waiter girl at one of the hotels has thus developed a bear as a pet.

The accompanying photographs not only show bears very close up, with men standing by within a few yards of them, but they also show one bear being fed from the piazza by a cook, and another standing beside a particular friend, a chambermaid in one of the hotels. In these photographs it will be seen that some are grizzlies and some black bears.

This whole episode of bear life in the Yellowstone is so extraordinary that it will be well worth while for any man who has the right powers and enough time, to make a complete study of the life and history of the Yellowstone bears. Indeed, nothing better could be done by some one of our outdoor faunal naturalists than to spend at least a year in the Yellowstone, and to study the life habits of all the wild creatures therein. A man able to do this, and to write down accurately and interestingly what he had seen, would make a contribution of permanent value to our nature literature.

In May, after leaving the Yellowstone, I visited the Grand Cañon of the Colorado, and spent three days camping in the Yosemite Park with John Muir. It is hard to make comparisons among different kinds of scenery; all of them very grand and very beautiful; yet personally to me the Grand Cañon of the Colorado, strange and desolate, terrible and awful in its sublimity, stands alone and unequalled. I very earnestly wish that Congress would make it a national park, and I am sure that such course would meet the approbation of the people of Arizona. As to the Yosemite Valley, if the people of California desire it, as many of them certainly do, it also should be taken by the National Government to be kept as a national park, just as the surrounding country, including some of the groves of giant trees, is now kept.

John Muir and I, with two packers and three pack mules, spent a delightful three days in the Yosemite. The first night was clear, and we lay in the open on beds of

soft fir boughs among the giant sequoias. It was like lying in a great and solemn cathedral, far vaster and more beautiful than any built by hand of man. Just at nightfall I heard, among other birds, thrushes which I think were Rocky Mountain hermits—the appropriate choir for such a place of worship. Next day we went by trail through the woods, seeing some deer—which were not wild—as well as mountain quail and blue grouse. In the afternoon we struck snow, and had considerable difficulty in breaking our own trails. A snow storm came on toward evening, but we kept warm and comfortable in a grove of the splendid silver firs—rightly named magnificent, near the brink of the wonderful Yosemite Valley. Next day we clambered down into it and at nightfall camped in its bottom, facing the giant cliffs over which the waterfalls thundered.

Surely our people do not understand even yet the rich heritage that is theirs. There can be nothing in the world more beautiful than the Yosemite, its groves of giant sequoias and redwoods, the Cañon of the Colorado, the Cañon of the Yellowstone, the three Tetons; and the representatives of the people should see to it that they are preserved for the people forever, with their majestic beauty all unmarred.

Trails of the Pathfinders.—XVI.

Alexander Henry (The Younger).

(Continued from page 151.)

WE KNOW too little of the hardy men who a hundred years ago or later pushed westward into the unbroken tracts that lay beyond, in search of knowledge or wealth. Among them were many who were true heroes, and all we have by which we can judge of the deeds they performed are the few accounts left by some of them. These accounts give us hints of the real character of the men, but we must remember that they were occupied more by the matters immediately before them than by any thought of how posterity might think of them. They considered more the outlook for beaver and the success of the Indian trade than literature; their hands were readier to the rifle and the paddle than to the pen. If among them there were a few who strove to describe the scenes through which they passed, and to set down in some order the incidents of their lives, such were few in number and were writing for their own amusement. The vast majority of pathfinders have left us no hint of the deeds they performed.

Among the northmen who overran the country long known as the Hudson's Bay Territory, Alexander Henry, the younger, was a commanding figure. He was a nephew of that other Alexander Henry who, thirty years before, had been a fur trader among the Indians, and had traveled westward nearly to the Rocky Mountains, and after many adventures, wrote of his travels over the great meadows and among the wild oxen of the West.* To Alexander Henry, the younger, we owe the most curious and complete record ever printed of the daily life of the fur trader in the north.

Alexander Henry, the younger, was a diarist; he kept a journal in which he set down, in the most matter of fact way, everything that happened to him, and, as has been said by Dr. Coues, "it mirrors life in a way Mr. Samuel Pepys might envy could he compare his inimitable diary with this curious companion piece of *causerie*, and perceive that he who goes over the sea may change his sky, but not his mind."

The wonderful journal of Henry's slept for nearly a century. Where the original may be we do not know, but a copy was made by George Coventry about the year 1824, and this copy about seventy years later came under the notice of Dr. Elliott Coues, whose studies of the old west, published by F. P. Harper, of New York, have furnished so great a mass of material from which the student of history may glean.

The diary covers a period of about fifteen years, from 1799 to 1814, during which time Henry traveled from Lake Superior to the Pacific, often residing at different points for long periods. Thus he lived in and traveled through, at various times, the Canadian Provinces of Ontario, Manitoba, Assiniboia, Keewatin, Saskatchewan, Alberta, and British Columbia; while in the United States his travels were through Wisconsin, Minnesota, North Dakota, Idaho, Oregon and Washington. In these long journeys he met many different tribes of Indians, and saw much of the Chippewas, the three tribes of the Blackfeet, the Crees, Assinaboines, Sioux, Sarcees, and other northern tribes, while in his southern journeyings he reached the Mandans, the Minitari, the Rees, and even the Cheyennes, south of the Missouri River, and on the west coast saw many tribes of the Columbia.

The journal begins in the autumn of 1799, when he was camped on the White Earth River, near the foot of what is now known as Riding Mountain, in Manitoba, a little west of Portage La Prairie. Here he had stopped after his journey from Montreal, to trade with the Indians the liquor, blankets, strouding, and various trinkets the Indians liked. He made that fall a clear profit of £700. This was his first trial in the Northwest.

*See papers on Alexander Henry in our issues of March 5 and 12.

*This is one of the chapters in the new volume of the Boone and Crockett Club Book, "American Big Game in its Haunts."

OLD EPHRAIM IN THE TIMBER.

Photo copyright, 1904, by FREDERICK K. VREELAND

"DOWN THE WIND."

In the summer of 1800 Henry was on his way westward, with a brigade of canoes, each of which carried twenty-eight pieces of goods, ten of which were rum, containing nine gallons each; loads which sunk the canoes to the gunwales. He was proceeding by the Grande Portage to Lake Winnipeg, over the road which, even then, was being traveled by many fur traders. Wherever he found Indians, they were usually drunk, and when drunk always troublesome. They crossed the Lake of the Woods, and ran down the river Winnipeg. At Portage de Lisle one of the canoes, to avoid the trouble of making this portage, passed down near the north shore with a full load. "She had not gone many yards when, by some mismanagement of the foreman, the current bore down her bow full upon the shore against a rock, upon which the fellow, taking advantage of his situation, jumped, while the current whirled the canoe around. The steersman, finding himself within reach of the shore, jumped upon the rock, with one of the midmen; the other midman, not being sufficiently active, remained in the canoe, which was instantly carried out and lost to view among the high waves. At length she appeared, and stood perpendicularly for a moment, when she sank down again, and I then perceived the man rising upon a bale of drygoods in the midst of the waves. We made every exertion to get near him, and did not cease calling out to him to take courage, and not let go his hold; but alas! he sank under a heavy swell, and when the bale arose the man appeared no more. At this time we were only a few yards from him; but while we were eagerly looking out for him, poor fellow, the whirlpool caught my canoe, and before we could get away she was half full of water. We then made all haste to get ashore, and go in search of the property. The canoe we found flat upon the water, broken in many places. However, we hauled her ashore, and afterwards collected as many pieces as we could find. The men had landed a few packages above the rapid, otherwise our loss would have been still greater."

On August 16 they entered Lake Winnipeg, and were almost wrecked by a storm, the wind blowing violently over a shoal flat, and raising a tumbling sea. Wildfowl were plenty; so were also Rocky Mountain locusts, which Henry said were thrown up on the beach to a depth of six to nine inches. He shot a white pelican, of which many were seen. From here Henry went up the Red River to establish a trading fort, and on the way up he divided his goods, one-half of which were to be sent to Portage La Prairie, on the Assinaboine River. The Indians here were chiefly canoe and foot people, and had few horses. Pigeons were very numerous, as were also fish, and the Indians had some dried buffalo meat, which was purchased from them. Fruit was abundant along the bank; plums of three different sorts, peminbas, and grapes.

A number of Indians had joined him, all of whom wanted liquor and supplies. He gave them more or less liquor, with the result that most of them were drunk much of the time, and showed no disposition either to hunt or to trap. As they proceeded up Red River, they approached the country ranged over by the Sioux, between whom and the Ojibwas there was everlasting war. The Indians were therefore in a continual state of alarm, and every time a shot was heard they thought that the enemy were about to attack them. They were now close to the country of the buffalo, and the Indians were bringing in fresh meat. Henry speaks of the abundance of these animals at his camp of August 26, where, he says, "The ravages of the buffaloes at this place are astonishing to a person unaccustomed to these meadows. The beach, once soft black mud, into which a man would sink knee-deep, is now made hard as pavement by the numerous herds coming to drink. The willows are entirely trampled and torn to pieces; the bark of the smaller trees is rubbed off in many places. The grass on the first bank of the river is entirely worn away. Numerous paths, some of which are a foot deep in the hard turf, come from the plains to the brink of the river, and vast quantities of dung gives this place the appearance of a cattle yard. We have reached the commencement of the great plains of Red River, where the eye is lost in one continuous level westward. Not a tree or a rising ground interrupts the view." Here he had his first experience in running buffalo, and merely for the amusement of it killed not a few.

The Indians continued drinking and fighting among themselves. No one as yet had been killed, but more than one had been severely injured. Now, however, they had used up all their liquor, and Henry refused to give them any more; so that while many continued to loaf about and beg for drink, some went hunting. Keeping on up the Red River, he pushed on southward, being anxious to reach a country where the beaver seemed to be plenty. Game was very abundant—buffalo, elk, and bears. "Whilst we were arranging camp I saw a bear on the east side of the river, a little above us, coming down to drink. I crossed over and followed him; he instantly stopped within a few paces, and ran up a large oak. I shot him between the shoulders, and he fell to the ground like a rock, but in a moment was scampering away as fast as he could. I traced him by the blood, and soon found him sitting under a brush heap, grumbling and licking his wounds. A second shot dispatched him. By the hideous scream he uttered when he fell from the tree, I imagined he was coming at me, and was waiting for him with my second barrel cocked, when he ran off. I went for my two men, and it was hard work for us three to drag him to the canoe; he was very fat. I found that my first ball had gone through his heart. I was surprised that he should have been so active after a wound of that kind."

Early in September, Henry, having gotten up Red River as far as the mouth of Park River, decided to build there, and began the work of cutting and carrying stockades and house logs. Game was astonishingly abundant, bears being so plenty that they were killed almost daily. Three men came in with twelve bears; a hunter returned with four bears, and so on. Now that they were settled, Henry began to give out to the Indians their debts; by which is meant that he furnished them the articles that they needed for hunting and for their life during the winter, charging them with the articles, which were to be paid for by skins—that is, the value of a beaver skin. He prepared for himself a tall oak, which he used as a lookout station, and from which he had an extensive view. Every morning he used to climb to the top of this

oak and look over the country, not only to see where the game was, but also to see if people were moving about. After the stockade had been finished, the houses were built, and then came the task of preparing food for the winter. Meantime, the Indians had persuaded Henry again to give them liquor, and they were once more drunk and quarreling. Happily, when fighting, they did not use their guns or bows, but only their knives; and so, although men and women were frequently severely stabbed and cut, there were no immediate fatalities.

Henry was a good deal of a hunter, and much of his journal is given up to accounts of what he killed. Indian alarms were as frequent as ever, but none of them amounted to anything, being causeless panics. In October Henry made a journey down the river, to look up some of the people that he had sent off to establish small trading posts. On his return, about the middle of October, he found that his hunter had killed a large grizzly bear, about a mile from the fort, and mentions that these bears are not numerous along Red River, but are more abundant in the Hair Hills. This is one of the most eastern records for the grizzly bear, although Long—"Voyages and Travels," London, 1791—speaks as if they were sometimes found a little further eastward, even east of the west end of Lake Superior. A little later Henry set off with one of his hunters and another man to search for the Red Lake Indians, whom he wished to inform that he had established a trading post here. The journey was long, and much of it through thick woods and underbrush, and it almost proved fruitless. However, he at length came across a young Indian, who was very much frightened at seeing them, but finally realizing that they were friends, talked freely to them. The Indian reported that his people were at Red Lake waiting for traders, and Henry tried to persuade him to bring them into his fort. Henry then returned to his post.

Winter was now approaching. The Indians were making the mats with which they covered their huts in winter, while many of the men were preparing to go to war. An interesting note on wolves appears here, under date of Sunday, November 2: "Last night the wolves were very troublesome; they kept up a terrible howling about the fort, and even attempted to enter Maymitch's hut. A large white one came boldly into the door, and was advancing toward a young child, when he was shot dead. Some of them are very audacious. I have known them to follow people for several days, attempt to seize a person or a dog, and to be kept off only by firearms. It does not appear that hunger makes them so voracious, as they have been known to pass carcasses of animals which they might have eaten to their fill, but they would not touch flesh, their object seeming to be that of biting. The Canadians swear that these are mad wolves, and are much afraid of them."

Another note of interest to the zoologist is this: "We saw a great herd of cows going at full speed southward, but on coming to our track, which goes to Salt Lake, they began to smell the ground, and as suddenly as if they had been fired at, turned toward the mountain. It is surprising how sagacious these animals are. When in the least alarmed, they will smell the track of even a single person in the grass, and run away in the contrary direction. I have seen large herds walking very slowly to pasture, and feeding as they went, come to a place where some persons had passed on foot, when they would instantly stop, smell the ground, draw back a few paces, below, and tear up the earth with their horns. Sometimes the whole herd would range along the road, keeping up a terrible noise, until one of them was hardy enough to jump over, when they would all follow, and run some distance." On November 8, with an Indian, Henry started in search of Indians about Grand Forks. Although the weather had been cold and snowy, it had now turned warm again, and they had much trouble in crossing streams and sloughs. They went south, to what Henry's Indian told him was the border of the Sioux country, and old camping grounds were pointed out, which the Indians said were Sioux. Beaver appeared to be very numerous, but they killed nothing, making no fire, and firing no guns, and keeping their horses always close to them.

In describing the country passed over, Henry speaks of the Schian River, a tributary of the Red River, which flows into it about ten miles north of Fargo. This, he says, "takes its name from a formerly numerous tribe of Indians who inhabited its upper part. They were a neutral tribe between the Sioux and Salteurs for many years, but the latter, who are of a jealous disposition, suspected that they favored the Sioux. A very large party having once been unsuccessful in discovering their enemies, on their return wreaked their vengeance on those people, destroying their village, and murdering most of them. This happened about sixty years ago, when the Salteurs were at war with their natural enemies, the Sioux, of the plains, who are the only inhabitants of St. Peter's River. The Schians, having been nearly exterminated, abandoned their old territory, and fled southward across the Missouri, where they are now a wandering tribe."

This story agrees very well with the traditions related by the Cheyennes to-day, except that the modern stories put back these wars with the Salteurs much further than 1740. On November 13, Henry reached the post again, having failed to find any of the people that he looked for. Moreover, when he got here he received a messenger from Langlois, one of his clerks at a trading post at the Panbian (Pembina) Mountains, reporting that a number of more or less turbulent Crees and Assinaboines were gathering there, and that Henry's presence was needed to quiet them. Two days later he set off, stopping at Bois Percé, where "I remained about an hour with the worthless vagabonds, who do nothing but play at the game of platter. Nothing is heard but the noise of the dish, and children bawling from hunger; their scoundrelly fathers are deaf to their cries until necessity obliges them to kill a bull for their sustenance." On his arrival at the post, he found all his people well, and the trouble apparently over.

The weather was now very cold. Swans were passing south in astonishing numbers. Now the men took no more raccoons with their traps, for these animals had begun to hibernate in the hollow trees, where they would remain like the bears until spring, without any sustenance.

Some time before, an Indian named Crooked Legs, while drunk, had very severely stabbed his young wife, who now, however, had perfectly recovered. At a drink-

ing match, held at the post, just after Henry's return, this woman, in revenge, gave her old husband a cruel beating with a stick, and afterward burned him shockingly with a brand snatched from the fire.

Rum was constantly desired by the Indians, and was begged for on every pretext. If a woman's husband died, or a man's wife, they came to Henry to beg, or buy, rum, to cheer their hearts in their sorrow. A curious trapping incident is reported November 28. "La Rocque, Sr., came in with his traps, with a skunk, a badger, and a large white wolf, all three caught in the same trap at once, as he said. This was thought extraordinary—indeed a falsehood—until he explained the affair. His trap was made in a hollow stump, in the center of which there was a deep hole in the ground. He found the wolf, just caught, and still alive. He despatched him, and, on taking him out, noticed something stirring and making a noise in the hole in the ground. Upon looking in he perceived the badger, which he killed with a stick, and upon pulling him out, smelt the horrid stench of the skunk, which was in one corner of the hole. He soon despatched him also. From this the Indians all predicted some great misfortune, either to the person to whom the traps belonged, or to our fort."

Two days later some of the men went raccoon hunting, the weather being warm. "They returned in the evening with seven, which they had found in one hollow tree. The size of this tree was enormous, having a hollow six feet in diameter, the rim or shell being two feet thick, including the bark. Raccoon hunting is common here in the winter season. The hunter examines every hollow tree met with, and when he sees the fresh marks of the claws, he makes a hole with an ax, and then opens the hollow place, in which he lights a fire, to find out if there be any raccoons within, as they often climb trees in the autumn, and, not finding them proper for the purpose, leave them, and seek others. But if they be within, the smoke obliges them to ascend and put their heads out of the hole they enter. On observing this, the ax is applied to the tree; with the assistance of the fire it is soon down, and the hunter stands ready to despatch the animals while they are stunned by the fall. But sometimes they are so obstinate as to remain at the bottom of the hole until they are suffocated or roasted to death. The bears, both grizzly and common black, which reside on Red River, take to hollow trees also, and are hunted by the Indians in the same manner as raccoons. But the bears in the Hair Hills and other places never take to the trees for their winter quarters; they reside in holes in the ground, in the most intricate thicket they can find, generally under the roots of trees that have been torn up by the wind, or have otherwise fallen. These are more difficult to find, requiring good dogs that are naturally given to hunt bears. The reason why the bears differ so widely in the choice of their winter habitations is obvious. The low lands along the river, where the woods principally grow, are every spring subject to overflow, when the ice breaks up. The mud carried down with the current and left on the banks, makes their dens uncomfortable. On the Hair Hills and other high lands, where the ground is free from inundation, the soft and sandy soil is not so cold as the stiff black mud on the banks of the river, which appears to be made ground. Frequently, on digging holes in winter, we found the frost had penetrated the ground nearly four feet, like one solid body of ice, while in high, dry, sandy soil it seldom exceeds one foot in depth."

Winter had now set in, as well by the calendar as by temperature. It was ushered in by a great prairie fire, which seemed likely to burn over the whole country. At first it was supposed that the Sioux had fired the prairie, but later it appeared that the Crees had done it by accident. These Crees reported that they had seen a calf as white as snow in a herd of buffalo; and Henry mentions how greatly white buffalo are esteemed among the nations of the Missouri, but that they are not valued by the Crees and Assinaboines, except to trade to other tribes. Occasionally buffalo are seen that are dirty gray, but these are very rare. Christmas and New Years passed, these holidays being celebrated by drinking, so that for New Year's Day Henry says: "By sunrise every soul of them was raving drunk—even the children." Buffalo were now seen in great abundance, and came within gunshot of the fort. A day or two later it was necessary to go out only a short distance from the fort to kill buffalo, but the cold was so intense that it was impossible to cut up those killed. On January 2 there arrived at the fort, Berdash, a man who, as used to be not very uncommon, wore the dress and busied himself with the occupations properly belonging to women. He was a swift runner, and a few years since was considerably the fleetest man among the Salteurs. "Both his speed and his courage were tested some years ago on the Schian River, when Monsieur Reaume attempted to make peace between the two nations, and Berdash accompanied a party of Salteurs to the Sioux camp. They at first appeared reconciled to each other, at the intercession of the whites, but on the return of the Salteurs, the Sioux pursued them. Both parties were on foot, and the Sioux had the name of being extraordinarily swift. The Salteurs imprudently dispersed in the plains, and several of them were killed, but the party with Berdash escaped without any accident, in the following manner: One of them had got from the Sioux a bow, but only a few arrows. On starting and finding themselves pursued, they ran a considerable distance, until they perceived the Sioux were gaining fast upon them, when Berdash took the bow and arrows from his comrades, and told them to run as fast as possible, without minding him, as he feared no danger. He then faced the enemy, and began to let fly his arrows. This checked their course, and they returned the compliment with interest, but it was so far off that only a chance arrow could have hurt him, as they had nearly spent their strength when they fell near him. His own arrows were soon expended, but he lost no time in gathering up those that fell near him, and thus he had a continual supply. Seeing his friends some distance off, and the Sioux moving to surround him, he turned and ran full speed to join his comrades, the Sioux after him. When the latter approached too near, Berdash again stopped and faced them, with his bow and arrows, and kept them at bay. Thus did he continue to maneuver until they reached a spot of strong wood, which the Sioux dared not enter. Some of the Salteurs who were present have often recounted the

affair to me. It seems the Sioux from the first were inclined to treachery, being very numerous and the others but few. The Salteurs were well provided with guns and ammunition, but on their first meeting were surrounded, and the guns taken away from them, in return for which the Sioux gave them bows and arrows; but in a manner to be of little use, giving one a bow and no arrows, another a quiver of arrows, but no bow."

On January 14 he was awakened by the bellowing of buffalo, and found the plains black, and apparently in motion. An enormous herd of buffalo surrounded the fort, and were moving northward, extending south as far as the eye could see. "I had seen almost incredible numbers of buffalo in the fall, but nothing in comparison to what I now beheld. The ground was covered at every point of the compass as far as the eye could reach, and every animal was in motion. All hands soon attacked them with a tremendous running fire, which put them to a quicker pace, but had no effect in altering their course. The first roads beaten in the snow were followed by those in the rear. They passed in full speed, until about nine o'clock, when their numbers decreased, and they kept further off in the plains. There was about fifteen inches of snow on a level, in some places drifted in great banks. Notwithstanding the buffalo were so numerous, and twelve guns were employed, we killed only three cows and one old bull, but must have wounded a great number." The next day the plains were still covered with buffalo, moving northward; and this continued for a day or two. The stock of winter provisions was now all laid in—an abundance of good, fat buffalo meat. In February the buffalo began to get poor, as they always do at that time, and toward the end of the month some of the men caught a cow on the ice of the river, the dogs having surrounded her, and the men entangling her legs in a line, so that she fell on her side; they then dragged her, still alive, to the fort, when she jumped to her feet and ran to attack the dogs. Two men mounted on her back, but she was as active with this load as before, jumping and kicking at the dogs in most agile fashion.

On February 28, an Indian brought in a spring calf, which he had found dead, a very unusually early birth. The Indians declared that this meant an early spring.

The first outarde—Canada goose—was seen March 12, and on the same day a swan. On this day, too, it was noted that the sap of the box-elder began to run; this yields a fine white sugar, but not so sweet as that from the real sugar maple (Acer). He notes that bitter-sweet is abundant along the Red River, and that the Indians eat it in time of famine.

Now the river, on account of melting snow, began to rise, and to lift up the ice. Henry began to get out his canoes and mend them up for the summer use. Wildfowl made their appearance in great numbers, and on the 23d young calves were seen by the men. And now, the ice of the river coming down, carried with it great numbers of dead buffalo from above, which had been drowned in crossing the river while the ice was weak. Their numbers were astonishing. Often they were drifted to the shore, where the women cut up some of the fattest for their own use, the flesh seeming to be fresh and good. On the 7th of April one of his men brought in to Henry three wolves born this spring; another had brought in six, which he had found in one hole, and which were now very tame. It was proposed to keep them for sledge dogs in winter.

A little later the odor of the decaying buffalo lying there along the river was terrible. In fact, on his journey down the river with his goods, which were now to be dispatched to Montreal, the stench of the drowned buffalo was such that Henry could not eat his supper.

At last he dispatched his goods, and about the first of June left for the Grand Portage. The proceeds of the winter's trade amounted to nearly two thousand pounds, Halifax currency.

Life in the Woods.—XVI.

Last Night in Camp.

(Concluded from page 176.)

Thus our hunt began and ended. Thus our hunts have begun and ended for seventeen years or more. We have bade farewell to the camp and the scenes about it, and now, in bidding farewell to you, the reader, I must, in a measure, bid farewell to my comrades, too, for life is fleeting. The eighteen-year-old boy who began to hunt when the others were in the prime of life, has grown to manhood, and his companions have passed the meridian of the known, and are fast traveling toward the mysterious future of the unknown. A life prolonged by active outdoor exercise grows to that stage when it is pleasanter to live over old exciting experiences than it is to court new ones, and toward that condition they are fast traveling. And yet who shall say that they will cross the border first, for is it not written the first shall be last and the last shall be first?

As we have all changed, so have our old haunts been changing under the restless activity of man and the resistless activity of the elements until they no longer convey the same invitation that they did. What was once a trackless wilderness is fast becoming a settled civilized country. The past fifteen years have been the era of the passing of the pine tree; the vast forests have been laid low. Beginning at the mouths of the rivers where the timber was most accessible, the hardy lumberman, crowded on by the ambitious capitalist, has penetrated further and further each year, until not only the country along the main rivers has been stripped, but the smallest tributary streams have been ascended even to the headwaters, and all the pine cut. Rapids in the rivers have been cleared out, gigantic rocks removed, and falls obliterated by the herculean power of dynamite. Nor has the pine tree alone been sacrificed. The cedar swamps have been cut for fence posts, railroad ties and poles; the spruces and the poplars have been taken to the paper mills, and the hemlock has been flayed to fill the maws of the tanneries. The hard wood, too, has been taken for various purposes until it seems as if no living tree is desired to escape. Then have followed wind and fire, and a black desolation has settled upon the earth, blotting

out the smiles of nature and seemingly destroying her few remaining treasures. Even the forests not adjacent to water have not escaped, for into these the enterprising lumberman has built railroads until the entire northern part of the State is gridironed with the pathway of the iron horse, and roads that seemed at first to run nowhere have gradually developed into trunk lines, over which the passenger and freight traffic of the world flow with unceasing regularity.

Not the surface alone has been attacked. The bowels of the earth have been made to yield up treasures also. Along the road over which our team for several years took us into camp, vast mines of iron ore have been discovered. Towns have sprung up like magic, and where the game, the Indian, and the hunter roamed at will, thousands of people rush here and there in the eager chase for wealth or at least of a living. The rivers, too, have been harnessed. Gigantic dams have been built, and the power used to turn the wheels of machinery. Saw mills have sprung up at every considerable point, all seemingly waging war on nature.

But now behind them all another army is advancing; not one of destruction, but rather one of restoration. The advance guard came from Germany, from Poland, from Norway, from Sweden, and from almost every clime. This is the flow of immigration—'tis the advance of the pioneer. Soon the trail of the deer will become the cow-path of the settler, and soon the trail of the hunter will become the roadway of the farmer. Barren as the land may seem to us now, under the hand of man it will blossom and blossom again until in time it will appear more radiant than ever before. Then will the hunter's camp have given way to the home of a happy people, whose laughter the rivers will catch as they dance merrily on their way. Even now nearly all the old landmarks have passed away; one of the very last was old La Salle.

At a very early day, and long before the lumberman and miner had penetrated this wilderness, Charles La Salle, a young trapper and hunter, pushed his way far into the woods. Without road or trail he worked his way for over 150 miles from the nearest frontier settlement, and built a cabin at the junction of the Pine and Poplar rivers, there commencing the vocation of a trapper and Indian trader. As time passed on a companion joined him in his forest home, and together they set their traps and endured the hardships of the wild life. During the winter months they suffered much from the inclemency of the weather, and for the want of proper food. In the dead of one winter the companion was taken sick and died. La Salle could not think of burying him in the woods, neither was it possible to take the body out through the forests and down the rivers in the summer months. Consequently he must endeavor to get the remains out over the snow and icy rivers before spring. With this determination, he built a sled, and preparing the body, lashed it on. Then with some provisions, blankets, and a few camping implements, he started on his long journey. As most of the distance was without road or trail, his progress was slow, but he was determined to reach civilization. He camped at night in the snow, with the great pine trees as sentinels and wolves and owls for companions. Thus he marched on through the forest, over the frozen lakes and rivers, and across the bleak plains, never faltering on his weary journey until the settlement was reached, the body taken in a sleigh and transported another 150 miles to the home of the dead man. It was only then that La Salle returned to his forest cabin, with, to him, the supreme satisfaction that his former companion had been buried in, to him, consecrated ground, and with the services which those who are faithful to the church hold so dear. A better example of heroic devotion to a friend and of faithful adherence to church is hard to find, and so far as the busy world is concerned, through no act of the chief actor, would it ever have become known, because he looked at it as a matter of duty, a thing which anyone ought and would do, never thinking of his own untold sufferings. La Salle still resides on the same spot, but a more modern house has supplanted his cabin. It is surrounded by a settlement, and he now enjoys the comforts of civilization. La Salle's history is but an obscure fragment of the untold tales of the development of a section which one day is destined to stand as one of the richest farming districts of the great commonwealth of Wisconsin.

There is considerable satisfaction in going back to the scenes of former pleasures, even though all may seem to have been changed. Even though the first effect may be to make one lonesome and to oppress him with the feeling that he alone is left, and is destined to live and die alone; for after all, the lesson is taught that nothing is in vain, and that out of seeming destruction and desolation is bound to come in time some of the sweetest fruits of life. But for the present dearer to each of us is the thought that some of our companions are still left to us, older in years, but with hearts unchanged, and that they have retained the affections formed during camp life—retained them unchanged, and will continue to cherish them until death do us part.

I have seen old diaries placed away in which in a few lines were briefed the important events of each fall's hunt for many years. Sometimes I take them out and look them over, with what emotions I can scarcely tell. They are old and dirty; finger-marks and gummy covers show the dirt of a camp. They are written in lead, evidently with the stub of an old pencil, for the lines take up more room than they should, and they stagger quite a little, and are not over and above legible. I prize them, though, and to me they possess inestimable value. I have read them over and over again. They are not much, to be sure, and if, when read by others, they do not seem silly, even childish, I will be satisfied. But, good friends, those lines tell of many happy days. They recall the excitement of youth, the fire of the chase, the health of the woods, and the blessings that come from association with good men and loyal companions. When I read them, I can almost shed a tear for the days that are gone and the scenes that have vanished. It then seems as if I have lost something near and dear to me—time passed that can never be recalled, moments of joy and of comfort that cannot be duplicated. And yet from this one can turn to the heritage of the future, and ample satisfaction is there. When we meet we have the memories of

the past to live over; for to us our stories never become tiresome, and though others may fail to appreciate them, yet to us they have a charm which naught else possesses. We have our pictures of many a camp and many a place around which are associated many bits of life which otherwise might escape unnoticed from the storehouse of the mind. We have, too, the spoils of the chase which the tanner and the taxidermist have preserved for us, and which by their mute presence recall many an exciting incident of the chase. We have our camp equipments, old and worn, yet eloquent to us on account of long service. But greater than all these, we have the living presence of those who are still with us.

There is the Old Trapper, with his sixty years and more, envying no man, giving all he can to deserving humanity, and blessed with three boys in whom the spirit of the father is plainly discernible. There is Henry, patient and persevering, never resting except to greet his friends, and with heart as large as ever. There is Bill, restless, and ever looking ahead; keen in business, a man of capacity wherever he may be. There is the Buckeye, grown from the athlete to the robust knight of the grip, but still the same cordial friend that first tossed rifle to his shoulder. There is Mack, the same thoughtful, enduring friend, always ready to join in making others happy. Three have passed away; well-mannered men, good citizens, who did naught but good for their fellow-men, and whose ways have made us seem as if they were still here. "We think of them still the same as if not dead but just away." They had their faults. Who is there without them? We write them on the sands, but their virtues we inscribe on our hearts ever to remain there. Soon we must break up the camp of life, and some must go before the rest. And as to the woods, this time, too, it will be away from streets that teem with busy life—away from where man celebrates his triumphs, mourns over his sorrows, and weeps in the presence of death. But until that time comes, the chains that have linked us together shall remain unbroken; and may we not hope when we pass out upon that dark ocean to seek the unknown shore beyond, that there we may be reunited as each fall we have been reunited at our camp in the woods? So farewell, reader, and farewell comrades, and as you now close these pages, so do we hang up the rifle and the rod, and as you turn to open the pages of another book, so will we, as long as we can, turn each fall to take down the gun, pack the chests, and hie ourselves to the North Woods, there to prove to our own heart's content that in some ways at least primitive man was happier than his civilized brethren of modern times; there to renew health; there to worship nature in all her grandeur.

Having come to the end, I have reached the beginning again, for I am reminded that I have not told anyone who, of all the party, Alexander Sampson was. If I remember correctly, I eulogized him quite highly at first, and now I come to him once more. Faithful companion, I cannot do you justice, for it has not been given to me power to express in adequate language a fitting tribute to your worth to me. Many a long chase have you led me over hill and through hollow; many a long tramp have we taken through the trackless forests and across the plains. You have tried me as never tried by anyone else; and exposed me as never before or since exposed. Through rain and sleet and snow we have plodded along for many a mile; through swamps, where every step was a quaky bog; into unknown districts, from which only the faithful compass led us; through windfalls and brush and briars and rocks; at river crossings and along the runways we have watched until almost frozen, then to stumble into camp mid the gathering gloom, stepping to the accompaniment of hooting owls and the distant wail of the wolf. But though you have done this and even more you have always stood by me. You have never failed, and often by your assistance the end of some of our greatest trials has been glorious success, which has driven away all memory of hardship or fatigue. Thus we have camped together, hunted together, and lived together these many years, and our relations have always been pleasant, and I live in hopes that we may continue to do so for many more years to come. What care we what others say, so long as we are satisfied? What care we though others affect to despise our caliber and our aim, so long as we are constant each to the other? What care we though we are compelled to compete with others of greater penetration and power, so long as our successes are sufficient for ourselves? At all events, I am without complaint, for I am frank to confess that if fault there is it rests with me and not with you. So, good companion, as long as I live your future is assured, for I will never see you suffer abuse or injury. You and I will not say farewell until, until—well, so long as life shall last. But who is Alexander Sampson? My .45-90 repeating rifle. CAROLUS.

A Pastoral Lifting.

Or the literary results of the poet's vacation at Halls Corners, N. Y.:

Oh, for a life in the country free,
Where the sighing wind in the sweet corn tree
Mingles its music, drowsy and low,
With the song of the milkmaid, as, to and fro,
Through the sunny pastures she skips about,
Milking the milk weeds with many a spout.

How sweet are the wee white leghorn lambs,
That scamper about with the half-grown hams,
Barking in glee at the farmer's lad
As he wades in the brooklet fishing for shad,
While out through the barnyard come strident notes,
For the farmer is busy a-shearing the shoats.

The drowsy sound of the husking bees
Drifts in at noon on the scented breeze,
The farmer's men all cease their toil;
No more they cultivate the soil,
Nor educate the sheep; no more
Swap ancient puns at the country store.

For 'tis the festive dinner hour,
And they gather round and eke devour
Enough of the juicy buckwheat cake
To make their rural bellies ache.
But back to the orchard at once they go,
For the strawberry bushes they now must sow.

Oh, a country life is the life for me,
Where the neighing calves go frisking free;
The swallows cackle at sunset hour,
As they sip the dew from the whole wheat flower,
And early to roost the ravens go,
For at morn they must flap their wings and crow.

—Frederick Aruthr Palmer in the Journalist.

NATURAL HISTORY

Some Animals I Have Studied.

V.—Coallie, The Snake Dog.

If there is a dog, large or small, in all our great country that can excel my Coallie in exterminating large and dangerous snakes, without the help of man or any mechanical device, let us hear of it. She is common enough in appearance, saving that she's one of the blackest of all black things, with a narrow white streak under her neck and breast, and white toes on both her hind feet; rather heavily built, "fiste" size, nearly straight haired, and possessing prodigious strength and incredible endurance. Withal she is much more quick and active than she appears.

Although I claim for her only average natural intelligence, I propose to show that even that average must be something quite different from mere instinct. Indeed, some of her habits would seem to indicate a very foolish mind, if not an upset mind, rather than a lack of mind. She shows her intelligence in various ways. If I tell her to bring a dead hen from under the house, she does so, putting it in my hands, not running off with it to eat it after the instinctive manner of a dog. If I ask her to bring anything out of the water, and it is a thing that can be found and lifted, even a stone larger than her head, having any flattened corner thin enough to grip her jaws on, and no matter if she must dive two feet under to get it, and wade or swim out head under, she invariably does it, or nearly drowns trying. A few years ago we had three lively steers which my brother Clay (who is considerable of a wag) named Smith, Jones, Brown (and Brown was white, though Smith was brown). They were sometimes in the pasture, sometimes outside, generally near together; but no matter where, Coallie knew each one by name, and would bring all or any one of them to the barn as called without error. She also knew the names of several of the cows. She knows, as surely as Malty did, the meaning of "hen," "pig," "cow," "calf," "horse" (and knows our own two horses by their individual names, too), and the common name of all domestic creatures near, and the name of every species of wild thing she ever has to do with, from "snake" down to "bug," yet her knowledge of words is very limited compared to Malty's.

She shows her foolishness, not instinct, by the way she plays with large stones, preferring them to softer or lighter substances; but perhaps this is wiser than apparent. It may be her method of keeping her muscles hard and responsive. She will roll a stone, from the size of a goose-egg to the size of a half-gallon bucket, down a steep hillside, then hurl herself after it and catch it, perhaps at its greatest velocity, and stop it, too, or go tumbling along with it. I have never known any man to be able to bowl a stone down a gentle slope too swiftly for her to catch it, though she were held until the rock struck the ground about twenty feet ahead. Talk about sport! It is a most exciting sight, if not an appalling one, to see her overtake a huge stone when, at a distance of one hundred feet or more, it has attained its highest speed, and is knocking fire out of the flinty ground at every bound, and mowing down the stiff dead weeds as might a small tornado, and plunge upon it like a confused, misshapen black ball, stopping it within ten feet, at farthest, sometimes within three feet. One expects to see her teeth knocked out, or her head jerked off, or her paws torn off, or her whole body hopelessly mangled; that is, on first beholding the performance.

She will roll a large rock, using her nose, pig-fashion, into the water; wade in, carry it out, gnaw it awhile, then tumble it in again; and repeat over and over. Usually she manages to hurl it further and further, until it lodges in water deep enough to compel her to dive after it. Thus she goes on until she loses it, or is recalled, or diverted in some way.

Once, in swimming where she could not touch bottom, a stone, the size of a mighty fist was hurled toward her, the thrower designing to have it sink and see her dive after it; it was done before I could warn him. But the dog—fearless or fool, as you please—sprang fairly out of the water, perch-like, caught it, held on to it, fell back, and went under with it, and then crawled on the bottom to the edge of the pool, about six feet, and came triumphantly ashore with it. How's that for retrieving? She'd be worth a fortune to me if I were a duck hunter. But all this is small for her. Note the following: Prof. F. F. Macc, of Hot Springs, was in swimming with the undersigned in the picturesque Ouachita. We found a heavy beer bottle (no, we didn't take it there, for we are strictly temperate, even to crankiness), which we tightly corked and threw into the water. Now comes evidence of Coallie's strength and endurance. It was so thick and heavy that when it ceased bobbing, but little more than the neck showed above the surface, and even that little was difficult to see, being near the color of the water. But Coallie saw the splash and plunged after it, and tried to grab it. Hard and smooth, it eluded her, sinking perhaps a foot. Without waiting for it to rise, she promptly followed it, snapping at it more violently than before. Of course, the more suddenly she struck it, the deeper it descended. When she was compelled to come up for air, it popped up behind her; feeling it strike her tail, she flew around and began another eager struggle with it; and she did not give up until she won it, and brought it out. Does "a burnt child dread the fire?" As soon as the bottle was thrown in again—this time further out—she leaped in as enthusiastically as before. I will not describe the trouble of finding it and securing it; suffice to say she brought it out all right, and "wrung herself out" on the sand, then got up and "dared" us to throw it again. Prof. Macc threw it this time, sending it a distance I could not have believed possible—so far, in fact, that it

could not be seen, only the splash as it struck the water serving to locate it. Again the dog got it. It was an interesting exhibition of staying quality, of strength, sagacity, grit; the long watery voyage, the searching round and round in a diminishing circle; the desperate struggle, on and under the water; the laborious return with the hard-earned prize. It seemed that she could scarcely hold her nose above the water by the time she reached shore. Still she was willing to "spend and be spent" in our service. So it was sent out again, and again, and again; so many times I would hardly dare state if I had counted them, from the fact that I have agreed not to exaggerate, and I have no doubt that my account will already look rather florid to persons who have known only timid and characterless canines; yet, as I read it over to myself, I sigh and mentally exclaim: "Truly, words are sometimes merely a hint of the reality."

I here feel it incumbent upon me to defend myself from probable charges of heartlessness toward the dog, in allowing her to venture her life so much, and for mere sport. Allow me to say that I was neither indifferent nor unprepared regarding her. I often swam after her, generally far behind, but near enough to reach her in time if she began to show indications of giving way, and was at all times ready to plunge after her. And as to my ability—well, I have never known a man whom I believed could swim further or for a longer time, or dive deeper than Coallie's master. As to Coallie's own powers in the water, local sportsmen all speak of her in terms of highest praise, and none ever suggest a possible rival. I wish all true sportsmen who read *FOREST AND STREAM* could see her in the water.

But her most valued and inexplicable accomplishment or habit—it is almost a habit—is her snake-killing one. And, whether from intelligence or instinct I know not, it is almost impossible to compel her to kill or injure one of the harmless sorts, unless it is of large size. But she needs no encouragement to attack venomous ones, such as rattlers or moecasins, and destructive, egg-stealing species like blacksnakes, coachwhips, and "chicken-snakes." I don't think Mr. Hay described or even mentioned the latter in his valuable treatise on snakes. It is the largest American snake that I am acquainted with; that is to say, it averages largest. I never saw a small one—"Wundah whar dey stays till dey git growed?"—and is the toughest, strongest, and hardest to conquer. It climbs trees rapidly and easily, and by means of even a slight crook, much less than a coil, about a slightly rough projection, holds on so firmly that a very hard pull is required to tear it loose; that is, tail first. Of course it can be drawn forward easily, as a snake's scales are not adapted to resist forward motion, and it cannot move backward without contorting its body. I have had some very queer experiences with many sorts of reptiles, but a series of adventures with this species surpasses all the others combined; but of that some other time.

Coallie commenced her warfare on snakes while yet a puppy; and as she was very awkward about it at first—giving the enemy every chance to strike first—I helped her a few times. Soon she became so expert that I ceased to be uneasy about her, and her self-confidence was such that she didn't even call me always. Frequently she was "popping" a serpent before I knew she had found one. If she found one in the water, though, or in a hole, or in a hollow tree, anywhere that seemed inaccessible or that allowed it too great an opportunity for escape—she always called for help.

The second season after she had learned the exciting art, I began to count the big snakes she destroyed; but after the number reached sixteen or seventeen before my corn was planted, I gave it up. Two of them were "king-snakes;" I am sorry to say I am compelled to try to keep even the non-poisonous varieties in check, as they are too numerous here, and are very destructive of eggs and young chickens, though I once allowed a four-foot black-snake unrestricted possession of my barn loft for a week, because I saw him catching rats and didn't see him taking eggs.

A detailed account of Coallie's more difficult or dangerous feats with snakes would expand to a serial by itself; but I will mention two, and then dismiss her for the present.

She discovered the head of a cotton-mouth above the surface of a pool in the brook near-by. The pool is about two feet deep in the center where the head showed, and twelve feet wide. Determined not to let it escape, she barked loudly. Gypsy, a tiny terrier, and fairly respectable snake dog herself, ran to help surround it, and crossed over to the opposite shore, just in time, too, to head it off. I hadn't my rifle along, so picked up a stone, and waited to see if I would be needed. The loathsome reptile (I hate them more than rattlers, and for several very good reasons) appeared in the middle again, and seemed more defiant than fearful. Coallie was quivering with rage, her usually brown eyes glowing like green balls of fire. Suddenly, after taking careful aim, perhaps, she leaped outward and downward, squarely upon that astonished monster—if a snake has sense enough to ever be astonished; you see, I'm not claiming any great intelligence for that animal. There was a tremendous splash, then confusion in the midst of a muddy spray, followed instantly by a slapping, popping sound, and she came ashore with the mangled snake, which was not five feet long, as I had expected, but a good three. It had all been done so surprisingly that I cannot be sure whether she caught the snake by the head ere he could go under, or whether she dived and caught him beneath the surface, either of which could not have been easy, as a snake dives very swiftly.

In hot weather Coallie always makes a careful and intelligent search for the reptiles every time she goes near a watercourse. Her methods suggest an experienced detective picking up clues.

One day when I was working in a patch of new ground, I heard Coallie barking in a livelier manner than usual out in the virgin forest beyond. Leaving my brother plowing, I hurried to her. She had found three big chickensnakes, the shortest 4½ and the longest 5½ feet, I afterward found by measuring them, lying full length, defying her. I leaped toward them with my formidable sprouting-hoe; they started to run, but—well, that small dog not only stopped every one of those swift, powerful creatures, but actually killed them all without me striking a blow. It was all done in a few seconds, but it would take half a column to minutely describe how it was accomplished. Briefly she caught two of them at first grab, and by a tremendous effort temporarily disabled them; then dropping them, she dashed after the third, which she caught and also placed, for a time, *hors de combat*. Subsequently she finished them one at a time, chewing and crushing nearly every joint of each from head to tail. Winding them around my hoe-handle, and noting that they produced a bulk at least half the size of a common water bucket, I carried them to the field and exhibited them until their odor warned me to bury them. We seldom leave any dead thing large enough to seem important lying around to pollute the atmosphere. Even the child Chester (the naturalist) has acquired the habit of picking up and burying every dead chick, rat, etc., that he finds near or far.

In very dry weather when the brook ceases to be a living stream, and lies dormant in a chain of disconnected pools, Coallie, alone or otherwise, reconnoiters the bed for half a mile, up or down, daily; and, if evidences are not misleading, she seldom fails to conquer at least one snake. Sometimes she finds one with only its head protruding from a hole in the bank, so that there is no chance to attack it in the rear; whereupon a terrible battle ensues. If every art she can devise to lure it forth fails, she becomes so desperate that she will snatch it by its very jaws and tear it from its den. Under no circumstances will she give up; the snake she must have at any cost. Four times, at least, she has carried away an enormously swelled head or neck from wounds that would have been fatal to some animals. She is just as fearless of the fragrant skunk; she dug out and executed eleven matured ones at one den.

L. R. MORPHEW.

[TO BE CONTINUED.]

Foreign Birds in America.

Editor *Forest and Stream*:

It is a well established law of bird life that all birds go from their equatorial limit toward the poles to breed, never in the other direction. I think the shape of North America was the cause of the loss of the quail and other birds turned loose in the Northern States. The birds followed the Atlantic Coast southwards, and having no hereditary pathway to guide them as the American birds have, they were lost at sea when they left the south Cape of Florida.

In the case of the skylark and the European goldfinch, these birds were hardy enough to winter in the Southern States. I am glad to see by Mr. Frank Moonan's letter of July 21, that the skylark is spreading in the Eastern States. In President Roosevelt's "Hunting Trips on the Prairie," published in 1902 (but it must have been written several years before), he speaks of hearing the song of the skylark in the bad lands of South Dakota. If it was the European skylark he meant, and I think the President is accurate in his descriptions, it must have come from the Portland, Oregon, importation twelve or fourteen years ago; at that rate the Eastern and Western birds ought to meet soon.

It is wonderful how indifferent most people seem to be to the advent of this magnificent songster. We ought to build a monument to the first man who turned loose the skylark. The way to build it would be to start an all-American Acclimatization Society, with headquarters for liberating the birds on the plateau of Mexico, where they would have unbroken land for their migrations both north and south. Then we could get the nightingale with a fair chance of success. I believe there are thousands of people all over this country who would respond to the right man in this cause.

MOUNTAIN TEXAS.
[The skylark referred to by President Roosevelt was the Missouri skylark (*Neocorys spraguei*), a native species. It has a song like the European skylark, and, like it, sings on the wing.]

Amherst's Audubon Bird Collection.

By the gift of the Hon. Elbert E. Farman, L.L.D., of Warsaw, New York, Amherst College possesses Audubon's celebrated collection of birds, amounting in all to about six hundred species. Many of these are the typical specimens by which the species were determined, and about one hundred have been mounted for exhibition in the Appleton Cabinet. Also, there have been added to this collection by the same donor several of the rarer California birds which have been discovered since the death of Audubon.

MASSACHUSETTS.

He Had Felt It.—Singleton—"Did you ever feel that you were an insignificant atom in the great plan of the universe—that you were really unnecessary, so to speak?" Wedderly—"You bet I have—and I never felt it more strongly than I did last night when I got home and found my wife discussing the fashion with a couple of her women friends."—Chicago Daily News.

Cause for Rejoicing.—Mrs. Rabbit—"Oh! I am so glad you're home again. I've missed you dreadfully." Mr. Rabbit—"Thank you, my dear. I'm happy to say that the amateur hunter I met did the same thing."—Puck.

GAME BAG AND GUN

Days in Cherry County.

WYMORE, Nebraska.—*Editor Forest and Stream:* When the hot weather is over and the leaves begin to turn, the business man in city or town, as a rule, renews his efforts in the mad race for place or pelf, but not so with all.

There are a few in every community whose ancestors were mighty hunters in their day, and upon whom heredity exerts an influence which inclines them toward the fields and lakes, where grouse and ducks are likely to be found. These few still feel, or hear, the "call of the wild" or of the "red gods," and they must go.

They seem to have no disposition to renew their efforts in a business way, but wander aimlessly about, and sometimes they meet and talk about shooting, discuss the qualities of the various makes of smokeless powders, guns, etc., and tell and listen to stories of the good old days when all kinds of game was plentiful, and could be found in an hour's walk from home. And when one old and grizzled veteran tells of shooting twenty great big Canada geese from behind one corn shock, and describes how he could have killed a hundred just as easy, but, being no hog, he picked up his twenty geese and his old muzzleloader and walked home, they do not stop to figure up how much those geese would weigh, or what a task it would be for an ordinary man to carry 250 pounds of goose in one hand and his gun in the other; but they begin to talk about where they can go to find good shooting, and at last two or three of them get together and begin to arrange to go somewhere. Thus it happened that on the 27th day of September, 1903, Tom and Lake and I held a meeting to make our final arrangements, and to decide on the place to go, and what to take along. What to take along was easy—our guns and shells—but where to go was the question. Finally Tom, who seldom gets an outing, said he wanted a place where he could turn around with the hay ladders on and not feel cramped; so at last we decided on Cherry county.

Cherry county is the largest county in Nebraska. If you could set the State of Connecticut down in the center of Cherry county, you would still have more than a thousand square miles left around the edges to play in. It has a population of about one to the square mile, and they are nearly all along the Elkhorn Railroad in the eastern and northern edges of the county; so we decided to go to the southwestern part.

On Monday, the 28th, we boarded a Burlington train at two o'clock in the afternoon, changed cars at Lincoln, and at seven o'clock Tuesday morning we arrived at Mullen, the county seat of Hooker county, and here we rested for a day, and prepared for our long drive to Pullman in Cherry county.

The open season on grouse did not begin until Thursday, October 1, but in talking to the people, we found that no one paid any attention to the game laws in that part of the State, except as to its provisions in regard to hunting for the market, and shipping to market, and that they had been shooting grouse since the middle of July; in fact, about all their shooting had been done in July and August, and nearly all the hunters that we talked to said that they had not been out for three or four weeks, but that there were oceans of chickens in July and August. But we found that the game law had stopped the market-hunting, and that no grouse were being shipped, as had been the custom before the passage of the present game law; and we were also told by nearly all the old settlers in Cherry county that the grouse had increased very fast since the market-hunting had been stopped.

On Wednesday morning we started in a two-horse spring wagon on our long drive to Pullman, forty miles northwest.

The county attorney at Mullen telephoned to the house on the 101 ranch, twenty-two miles from Mullen, that we were coming, and would be there for dinner. It was a little over twenty miles from the front gate on this ranch up to the house; the roads were very sandy, and the traveling very slow; but it was open season on prairie dogs, and we whiled away the time very pleasantly, as we struck a dog town every two or three miles, and sometimes one town ran into the next one, and we were kept busy, only shooting at such dogs as barked at us, until at about two o'clock we arrived at the ranch house and had our dinner.

The superintendent of this ranch was a young Englishman. He wore a suit of white duck, with boots the top of which came above the knees, and he had spurs on his feet. He got us badly mixed up, and called our hired driver "Judge," and asked me how the livery business was in Mullen; then he rolled a cigarette for himself, and offered to roll one for each of us, but this was too small a vice for any of our party, except the driver.

After dinner and a good rest, we started on, and about dark drove through a gate, and were out of the 101 ranch and back in the United States again, and hurrying on, we arrived at Pullman at about ten o'clock. We found the town to consist of one store building and two dwellings, to one of which belonged a bunk house, and of this we took possession at once.

The proprietor told us that if we wanted grouse, to get up at five o'clock in the morning and walk over the big sand-hill south of the house, and we would have all we wanted before we got to the top of the hill. So at day-break we were out, and promising to be back at seven for breakfast, started on our long climb. We reached the top of the hill in two hours, but nary grouse did we have. Of course we saw plenty of grouse, but did you ever try to shoot a grouse when you were out of wind? It takes wind to kill grouse. Have you ever been in Cherry county? Have you climbed the mighty sand-hill, with the raw, right-angled blow-out at the top?

Did you ever try to climb a sand-hill, where you slipped back a foot and a half for every foot you traveled? If

not, you have missed something; and if you have, you will understand what I mean when I say it takes wind to kill a grouse. It was ten o'clock when we got back to breakfast, and we decided to do all our hunting in the future after breakfast.

When we got back to the house, we did not see anything of the proprietor until after we had breakfast and a good rest, and it was a good thing for him that we did not see him when we first got back, as Tom has several times intimated that he felt as though he had never contributed his full share to the school fund of the State. But he showed up after breakfast looking as pleasant as a basket of chips, and seemed very much surprised to find that we had brought in no game.

The sand-hills of that part of Cherry country run in ranges east and west, and between the ranges of sand-hills are pretty little valleys of half a mile to three miles in width, and in these valleys are lakes of all sizes, from those covering a half acre, to those covering a thousand acres. While we were resting in the morning on top of that sand-hill, we had noticed a couple of lakes south of us, around which the ducks were flying in clouds; so after we had somewhat recovered from the effects of our morning's climb, we had the team hitched up, and drove to the lakes. Just as we alighted from the wagon, a little bunch of teal went over us, and I managed to get four of them. The lakes were covered with ducks; there were millions of them; every seat was taken, but how to get them was a question. The lakes were surrounded with rushes, and we could not wade through them, nor shoot over them. The mud was bottomless, and the depth to which one would sink depended solely on the length of time he remained in one place. It was really very dangerous to try to wade even around the edge. We could do nothing without a boat, so we went back to the house and had our dinner, and then drove to Twin Lakes.

One of these lakes covered about a section of land, and the other looked much larger, and they were connected by a ligament of water about three rods wide. There was plenty of water, with countless numbers of ducks, but mud—it was simply frightful. We could not retrieve what we shot, and after a hard afternoon's work had only fourteen ducks, although we had killed many more that we could not get, and not wishing to destroy game that we could not use, we desisted and went back to the house.

In the morning, Tom and Lake decided to go back to Twin Lakes, as they had heard of an old boat that might be had, and I decided to try for a few jack snipe around some of the swamps.

I walked several miles and killed nine snipe, of which I retrieved only three, but could not get the rest because they invariably flew toward the swamp and fell into it, where the mud could not be waded, so I went back to the house and went to sleep.

When I awoke it was about one o'clock, and I hurried to my dinner, and found that my companions had been there before me. After dinner I walked out to the store and inquired for the boys, and was told that they were gone. Gone where? Why, gone home with old Pap Tie, an old market-hunter, who had taken pity on them, and taken them home with him, and promised to find and shoot for them all the grouse they wanted; and I was left behind. It seemed, from the story that was told to me, that the boys had come in from Twin Lakes pretty much disgusted, and had about decided to start for home, when they ran across old Pap, and for a consideration he had agreed to take them home with him, and shoot the birds for them, and show them how to hunt grouse; and that I had been mentioned, but there was only room for the boys, the old man, and our driver; so they had decided to go without me, and if the shooting proved good, to send back for me. But on going back to the bunk house I found that they had taken half of my shells and part of my clothes, so I did not look for them back very soon, and had to shift for myself.

On going back to the store I met, and was introduced to, a gray-whiskered gentleman who had come in to telephone to the railroad for some cars in which to ship a lot of cattle, but not being able to get the cars for another week, he had plenty of time to talk, and we soon got on good terms, and he invited me to go home with him for a few days. I at once accepted. He had a fine ranch a few miles up the valley, a double sod house, sheds, barns, about a thousand head of black Galloway cattle, and some of the finest horses I ever saw. His name was S. E. Stilson, and he was called 'Squire. His son Will was with him, driving a fine team of horses to a two-seated spring wagon, and after a few minutes' preparation we were off for the Stilson ranch, where we arrived at about four o'clock, and it was decided that we would take a little hunt before supper. One seat was taken out of the wagon and a keg of water put in, and we were ready. The 'Squire's other son, Sam, mounted a horse, took a Winchester repeater, and rode alongside the wagon; Will did the driving. The 'Squire had an old 10-gauge Parker that had seen service for over thirty years. It had the old lifter action and hammers, but it had shooting ability that was surprising. We drove to the top of the sand ridge north of the house, and when the 'Squire's dog pointed, he and I got out; Sam sat upon his horse, and Will took care of the team. A grouse got up away to my right, and went squarely across in front of me. No one else offered to shoot, so I pulled up, and holding about three feet ahead of him, I "lammed 'er loose," and made a clean miss. The 'Squire had a way of talking to game before he killed it, and he said, "Hold on there, my beauty." His Parker spoke, and down came the grouse. Then the 'Squire said to me, "Don't mind my doing that; we are getting these grouse for you," and, "You held too far ahead, with that smokeless powder; it's awful quick." I explained that I had been shooting at the trap, and that it spoiled one for shooting in the field. I asked the 'Squire

where he would have held on that grouse, and he said, "Right on the point of his bill."

Well, I soon learned not to hold so far ahead, and got one once in a while, but that shot has always reminded me of a picture I once saw in a sporting paper. It was at the time that there was so much discussion going on in the papers about holding on and holding ahead. The picture was of two city dudes, all rigged up for hunting, with fine guns, game-bags, dogs, etc., but no game. The other figure in the picture was of an old negro man, with an old musket, and he was loaded down with ducks. One of the city dudes asks the old negro if he held on or ahead, and the old negro replies, "Mostly boss, mostly; when I gits 'em, I holds on."

We then moved up a little to where the dog was waiting for us, and the chickens began to get up all around us, in pairs, in bunches, and in droves. Sam worked that pump six times, and had six grouse. I did not notice the 'Squire miss any, and my own gun got hot. It sounded like a Fourth of July. Sam did not seem to lose any time in reloading, but kept that old corn sheller going, and the grouse fell like hail. When they quit getting up, his horse galloped a quarter of a mile and stopped where he had marked down a couple that had got away, and up they went, and down they came. That was the first time I had ever seen a horse point game in the field. Then we counted up; we had forty-six grouse, and I had killed all of them but forty. We drove back to the house, where I met Mrs. Stilson, and we sat down to one of the nicest suppers I ever ate in my life. I will not try to describe the bill of fare, but may say that among other things we had six fried grouse. These had been killed two or three days and kept in cold storage, and were fried to perfection, and served as daintily as it could be done in the finest home in the land.

After supper we went out to take care of our game and feed the dogs. I had noticed a number of hounds, and wondered what they were kept for. They were the greyhound crossed with the staghound, and were from one-eighth to one-half staghound, and I will tell you a little later what they were kept for, but must now tell you how they were fed. Will brought up forty-six grouse in a couple of grain sacks; the dogs were all let loose, and surrounded him; then, taking a grouse, he held it up in his left hand, with the tail pointing up, the breast toward him; then with the fingers of his right hand he broke the skin and drew out the entrails; these he threw to the dog that he had selected to be first fed; and as he threw the feed to the dog, he jerked his hand back out of reach, and at least a hundred yards away you could hear the snap of the hound's teeth as he closed upon this mouthful. The whole forty-six grouse were pulled in the same way, and the entrails fed to the hounds. Then they were given some corn-meal mush cooked on purpose for them, and that constituted their supper.

After the grouse were all cleaned in the way described, they were tied in bunches of six or seven each and hung upon the platform of the wind-mill, about thirty feet from the ground, and left to cool until morning, when they were taken down before sunrise and laid upon their backs on the ground floor of a large and deep cave, where, Mr. Stilson said, they could be kept for weeks, even in warm weather.

That night I slept on a feather bed made from the down plucked from wild geese, and on the floor of my room was a rug made from the skins of sixteen coyotes, and at breakfast we had more fried grouse.

On Saturday morning it was stormy and very wet, so it was planned that we would have a coyote hunt on horseback, and let the dogs have a little exercise. I was mounted upon a big bay horse that Sam had ridden when shooting chickens the evening before, and Sam was left at home. The 'Squire and Will were mounted, each on his favorite horse. Will was the owner of the dogs, and was the coyote killer. But four of the dogs were let loose. They were Old Boxer, the oldest one of the bunch, about half staghound, and large and powerful; Whiteie, an old bitch, about a quarter staghound, a powerful runner and terrible fighter; the other two were young dogs, and need not be further described. A ride of half an hour took us over the sand ridge. As we descended the slope, the dogs were let loose, and, after playing around a few minutes, they settled down to business, and we galloped along behind, but well spread out, Will on the extreme right, the 'Squire on the left, and I in the center field. Then came a yell from Will, and my horse jumped so far and was so long in coming down to the ground again, that I lost my hat, and could do nothing but hold on for the next quarter of a mile, when my horse stopped, and was standing over the dogs watching the fight. We had started three coyotes, two young ones and one old one. Three coyotes in half an hour, two of which would weigh thirty pounds and the other one near forty pounds, were the results of the chase, and we thought it a pretty good record.

Now, for fear that I have not sufficiently impressed FOREST AND STREAM readers with the vastness of Cherry county and the importance of the coyote industry, I quote from a letter received from 'Squire Stilson, written March 14 last, as follows: "In December I made a trip to Valentine, 180 miles (round trip) through the sand; a trip to Merryman, 104 miles, and several trips to the railroad. My hunting has nearly all been after coyotes, and I have caught 51 this winter, or rather the dogs have. Will started this morning for a few days' hunt, and I know he will catch a few, sure."

After our coyote hunt we returned to the house for dinner, and had a grouse potpie; not one of the boiled dough kind, but baked, and it was so good that I was not able to hunt any more that day. We stayed in the house and had a nice visit, while the 'Squire told me of many of his hunts and rare experiences during his third of a cen-

tury in the wilds of Cherry county.

On Sunday morning the storm was over, and the weather beautiful, and we concluded to shoot a few more grouse. The law allowed me to bring home fifty, and I only had forty-six. The 'Squire and I went off by ourselves, leaving instructions for Will to follow shortly with the team. Sam was left at home, as we did not want to exterminate the grouse. We walked about a mile to the top of a sand ridge south of the house, and soon found a large patch of wild rose bushes full of red berries. The 'Squire explained that these red berries constituted the food of the grouse during the winter months. The bushes stood from six inches to a foot in height, and were all loaded; it was seldom that they were entirely covered with snow, and the grouse killed in the winter months were always fat and delicious eating.

While we had been talking, the dog had pointed, and getting tired of waiting for us, had lain down, but as we moved up he got up and resumed his point. We moved up until we found good footing, and then told the dog to put them up. We did not move over two hundred feet from where we began to shoot until we realized that we had all the grouse that we could take care of. When Will came up with the wagon, we loaded up our game and drove to the house. When the game was all counted, we had eighty-three grouse that belonged to me, and I was in shape to help the boys out, in case they did not have the fifty birds apiece allowed by law.

We had grouse baked with dressing (stuffing we called it when I was a boy) for dinner, and at the request of the 'Squire, Mrs. Stilson had baked a rollic-pollie for me. It was something like an apple dumpling, baked instead of boiled, and made in a long roll, and as a compliment to Mrs. Stilson I ate so much of it that I had to lay up for the rest of the day. I think eating has become a habit with me; I began it very early in life, and often, when a boy, mother would tell us that the one who could eat the most mush and milk should have a piece of pie; I always ate so much mush and milk that I did not want any pie.

Monday morning came all too soon, and my visit was at an end. The team and driver, with Lake and Tom, appeared about nine o'clock on their way home, and stopped for me. They had just forty-nine grouse and one duck packed in a telescope, so I presented them with thirty-three grouse. My own grouse were packed for me by the 'Squire, who was an expert, fifty grouse in one large telescope, and it made a load.

When we were about ready to start, I took the 'Squire into the stable and told him that I felt as though I should offer to remunerate him for all his kindness and assistance to me; that I had had the services of himself and his sons and his horses and his dogs for three days, and that Mrs. Stilson had done nothing but cook for me, and that I had been entertained most royally, and that I would like to do the right thing, etc. But the 'Squire let me talk until he found what I was driving at, then he said: "Now please don't spoil our visit by offering to pay. If you will give me your promise to come again, and keep it, I shall consider myself well repaid. You will always find a welcome in my house."

So bidding my friends good-by, and with a promise to see them all again, I joined the boys, and we were on our road again for home. It was a long and tiresome drive to Mullen, where we arrived at ten o'clock that night, having been compelled to telephone from the 101 ranch to a livery stable in Mullen for a team to meet us on the road, our horses having given out. We killed enough grouse on the long drive to give each one of us his fifty birds.

We took the train at seven in the morning, and arrived at home at eight the same night. The next morning our surrey was hitched up, and forty of those grouse were distributed among my friends who never have the chance to hunt for themselves, and ten were kept at home. One lady to whom I gave a couple of grouse kept them until the following Sunday, when her husband came home to help eat them, and they were still as good, if not better, than when taken from the muzzle of the gun.

As soon as I could arrange it, I sent a box of loaded shells to my friend Stilson, but I find I cannot get even, for on the Tuesday before Thanksgiving Day I received from Cherry county an express box of good things in return for the loaded shells. For the first ten days of next October my address will be Pullman, Cherry county, Nebraska, in care of S. E. Stilson, Esq.

A. D. McCANDLESS.

Bullet Molds.

BREWER, Me.—As Cabia Blanco speaks of bullet molds being seldom seen now, I thought that some of those who have never seen them might be interested to know something about them. They open sidewise like a pair of pliers, each part making half of the bullet. They usually had a sharp cutting edge just below where they joined. After the bullet was run it was placed with the nib between these sharp edges, and pressing on the handles cut it off smoothly. This part was then made round by scraping with a knife. In loading, care was always taken to place this part down. Usually gunsmiths bought bullet molds in what were called blanks; that is, they were nearly solid, and were fitted to the size wished by being reamed out with what was called a cherry. It was customary to smoke new molds with birch bark to make the bullets smooth, as those first run were apt to have fine creases round them, till the molds had been smoothed by use. Some molds were made to run three at a time. Common molds cost fifty cents a pair.

After conical bullets began to be used, molds were made of brass which opened like scissors; the lower part contained the bullet except the rounded top. The upper part molded the top, and had a sharp edge which in opening cut the nib off. Such molds cost \$2.50 a pair.

I have quite a lot of molds of the different patterns. I have one set of molds which are quite a curiosity. They are made of soapstone, are $3\frac{1}{2}$ inches long by exactly 2 inches wide and $1\frac{1}{2}$ inches thick. They open through the center like opening a book. On one side are molds for four bullets of several sizes; a channel or groove connects all the holes at the top, so that the lead can flow into all at once. The mold was set edgewise when bullets were cast. On the reverse side three bullets of another size could be run. The sides were joined by two wooden dowels; the sides closed as closely as the leaves

in a book. The molds for all the bullets are as smooth and sound as any can be made. The outside of the mold has all the edges nicely beveled. I think it would be hard to find anyone now who could duplicate it. A member of the Stone family of Mt. Auburn, Mass., gave

it to me. The donor is over fifty years old, and said that it had been in the Stone family for four generations, and was brought over from England by the father of Seaborn Stone, one of the very early settlers of Massachusetts. I inclose a rough drawing showing the molds when shut and open.

M. HARDY.

Guns and Gun Feats.

CHARMAN, Pa.—Editor *Forest and Streams*. Referring to the discussion on the subject of barking, I would say that I have seen many squirrels bark the hunter, but I have never seen the operation reversed; but let that go, and let me state the following instances which have come under my observation. During an expedition for deer in southern Pennsylvania, my companion flushed two ruffed grouse, and sent a .38 Winchester bullet after one of them. The bird collapsed in its flight and fell to the ground as if dead. Almost immediately, however, it pulled itself together and ran. My friend caught it and found that it was entirely uninjured, not even a feather cut as far as we could see. The bird evidently was made unconscious by the near passage of the ball.

Last September I shot the head off of a duck with a .303 Savage, and immediately fired a second shot at his companion. The second duck spun round in the water "like a hen with its head cut off," making three complete turns. Then it flew away, evidently unhurt. Neither I nor my guide saw any loose feathers, and we made up our minds that the demoralization of the bird was due to the near passage of the ball and its accompanying "cyclone." Imagine a ball passing the open eye of a bird or squirrel within, say, 1-32 of an inch—would it not make his head swim?

Cyclones and explosions will often tear all the clothes off of a human being and leave him dead, but without the least evidence of violence or damage to the body.

WM. M. ELLICOTT.

READING, Pa., Aug. 15.—Editor *Forest and Stream*: In reply to an article in your issue of August 13, signed Manhattan, I would say that the rifles of to-day—that is, a modern gun fitted with peep-sights, but not used on a rest, shot offhand—are used for smaller targets than the charred substance on the end of a candle will give. The ordinary candle, if let to burn down for a few minutes, will give a target on the end of the wick about three-eighths of an inch long and an eighth wide. The .22 caliber bullet has been used for $\frac{1}{4}$ -inch targets at 15 yards, and scores of 10 and 11 out of a possible 15 were made. Now if this be possible, which I know is and was done, what is there impossible in snuffing the candle? And it has been done without any muzzle rest, and smaller guns than a .50 and .52 caliber. Can furnish scores and lots of similar feats performed with a modern rifle.

M. S. B.

Editor *Forest and Stream*:

Why all this debate over the possibility of snuffing a candle with a rifle bullet without putting out the flame? I submit that the inability of three expert members of a New York shooting club to do the trick with a .22 caliber rifle demonstrates only their inferiority to old-time riflemen, and does not prove that the feat was not or could not be accomplished with the Kentucky rifle carrying a heavy round ball.

Mr. O. H. Hampton says he tried it with an old-fashioned rifle and a tallow dip, imitating precisely the Kentucky conditions, but always the flame was blown out by the ball passing within four inches of it.

Cabia Blanco and his cowboy friends seem to have been equally inept or unlucky. Latigo Joe and Quien Sabe only argue the point, and their contributions may be dismissed as irrelevant. Mr. Gould doubts the squirrel-barking stories, and therefore his views on candle-snuffing would be valueless if he should express them.

Now, what does all this negative testimony tend to prove? Only that the writers are unable to shoot like the old-timers, just as that doubting Thomas, Kelly, proved only that his particular squirrel was not barked effectively.

Against all the testimony, opinions, and arguments adduced, I will call but one witness, and his evidence shall settle the question to the entire satisfaction of a host of your readers. I am surprised that the controversy has been allowed to go so far when the means of settling it authoritatively are readily accessible.

In *FOREST AND STREAM* of August 6, you reprinted the chapter on "Kentucky Sports" from Audubon's works. The great naturalist testifies that he saw Kentuckians perform the feat which our modern so-called experts declare to be impossible. To quote literally:

"We have individuals in Kentucky, kind reader, that even there are considered wonderful adepts in the management of the rifle. To drive a nail is a common feat, not more thought of by the Kentuckians than to cut off a

wild turkey's head at a distance of a hundred yards. Others will bark off squirrels one after another until satisfied with the number procured. Some, less intent on destroying game, may be seen under night snuffing a candle at the distance of fifty yards, offhand, without extinguishing it."

That was not hearsay evidence, for Audubon further says:

"The snuffing of a candle with a ball I first had an opportunity of seeing near the banks of Green River. * * * At a distance which rendered it scarcely distinguishable, stood a burning candle, as if intended for an offering to the goddess of night, but which in reality was only fifty yards from the spot on which we all stood. * * * Each marksman shot in his turn. Some never hit either the snuff or the candle, and were congratulated with a laugh, while others actually snuffed the candle without putting it out, and were recompensed for their dexterity by numerous hurrahs. One of them, who was particularly expert, was very fortunate, and snuffed the candle three times out of seven, while all the other shots either put out the candle or cut it immediately under the light."

For more than two generations, scientific men in every land have accepted the observations of Audubon as absolutely trustworthy. For near a hundred years the American people have believed that the old-time riflemen of the South and West were great shots, and that among the feats which they used to perform was snuffing candles. Audubon tells us that he saw Kentuckians snuff candles without putting out the flame, shooting offhand at fifty yards, yet it remains for so-called marksmen of these days to throw doubt on the writings of a great man, and, because they cannot snuff a candle, to ponderously declare that no one else can or ever did.

Is there one of them who has the temerity—the impudence—to insinuate that Audubon did not see what he described, or exaggerated the facts?

FLINT LOCKE.

MINNEAPOLIS, Minnesota, Aug. 27.—Editor *Forest and Stream*: Although a new reader of your publication, I have been interested in the articles on squirrel barking, and pleasantly reminded of a personal experience following closely after the conclusion of the Civil War, when, under an appointment from General Schofield, commanding Department of Virginia, I was stationed at Rocky Mount, Franklin county, Virginia, as one of the registration officials engaged in conducting the registration and election provided for by the reconstruction act of Congress. I made my home with Colonel Turnbull, a typical tavern keeper of the olden time, who combined business with pleasure by supplying his tables with that justly celebrated southern delicacy, "barbecued squirrel." There was a sauce of melted butter and vinegar with which the squirrels were basted while cooking, and the recollection of the savory odors, and the toothsome morsels linger as precious memories. Although I was a "Yankee" and the Colonel a "Johnnie Reb," the fact that I was his guest bridged all differences, and I accepted his proffer of horse and rifle, and often accompanied him on squirrel hunting expeditions. I did not learn to bark squirrels, but under the patient tuition of the Colonel, who taught me that if I could see the ear of a squirrel and shoot straight enough to catch the bark of the limb from which it was shown, my bullet would pass through the head, I soon became proudly proficient as a squirrel hunter.

During my service as a soldier, I was paralyzed by discovering that a bullet had emptied my canteen, and I am therefore prepared to accept the finding that a squirrel may collapse from the shock occasioned by a humming bullet. I hope that before you drop the squirrel, some of our Southern brethren will furnish for publication the old-time recipe for "barbecued squirrel."

C. E. FAULKNER.

Squirrels in the Old Days.

ALONG with the discussion about barking squirrels and snuffing candles with bullets, there has been somewhat said about the wonderful skill of the old-time rifleman: how he used to start a nail on to a board and finish driving it with a bullet from a distance of anywhere from thirty to fifty yards, and how these experts never shot at any part of a squirrel except the head, and that it was so seldom a miss was made that the miss and not the hits was a subject for wonder. Not all of these things have been talked of in the recent discussions, but everyone who is interested in shooting has heard them many a time. The riflemen of those days were no better shots than those of to-day; the rifles were not so accurate as the ones we have now. Nevertheless it is a fact that the squirrel rifleman of those days disdained to take a shot at any part of a squirrel but its head. The conditions, however, were very different. When a boy, fifty years ago, I saw hundreds of squirrels in the woods surrounding my home. So little attention was paid them by the people who were in the woods constantly about their work that the squirrels were very tame, paying little or no attention to the approach of a man until he came within thirty to thirty-five yards, and then if the hunter was careful to make no sudden motions, many of them sprang on to the side of a tree, frequently head downward, and remained motionless, affording an easy shot—so easy, that an ordinary rifleman of even these days would hardly fail to miss the squirrel's head. If the squirrel did not stop and afford a fair shot, no further attention was paid to it, for there was another one a few steps further on, and it did not pay to waste time on one that showed no disposition to set himself up as a fair target.

While the vast woods of Ohio and Indiana were in an early stage of settlement, most people considered squirrels as vermin, and in years when the mast failed, they made serious havoc with the small patches of corn which were the settlers' dependence for bread. They sometimes swarmed into the corn by hundreds, and if not constantly kept driven away, would destroy acres of it. Shooting them was of little use. There were too many of them. At such times it became the business of the children of the family, the dog included, to make war on them in any way to scare them off. Some boy who doubtless afterward became an expert trapper, thought of tying sheaves of straw around the bodies of the dead trees which still

stood in the cornfields; the lower ends of the sheaves were six feet or more from the ground, and trimmed off squarely. A squirrel had no trouble climbing up to the evenly trimmed "butts" of the straw, but could get no further. When the dog gave hot chase to a squirrel which was in the cornfield, it made a run for the nearest tree, and if it was one of the straw-bound trees, that squirrel was in hard luck, for the dog kept it there till the boys came with clubs, and if there were two or more dogs, the squirrel generally was caught. Another boy with genius improved on the straw trap by arranging it so a squirrel could hide between it and the body of the tree, and then a rap with a club did the business for him. Not only were squirrels destructive in the ripe corn, but made much trouble by digging up the newly planted grains in the spring, and it was the usual custom for each neighborhood to have a side-hunt as soon as the corn planting was finished. Two men went with each rifle, one to drive and secure the scalps (for only the scalps were brought in), and the other to do the shooting. The count of scalps often ran into the hundreds. O. H. HAMPTON.

Partridge Rearing in France.

MANY owners of partridge manors, and nearly all the most progressive gamekeepers on such estates, are at present occupied with one great and absorbing question. The problem before them is how to learn, and practice successfully, the system by which our neighbors across the channel induce partridges to lay, sit, and hatch off their broods in captivity. It might be supposed from its sudden and simultaneous trial on English estates this season that the discovery was recent in France; but such is not the case. Though it has only lately been systematized and set out in a book (by M. H. Danin), it has been in use in some form or another for the last twenty years, not only on certain French preserves, but most probably in parts of the Netherlands.

The French rearer catches up (or buys) old partridges in December. He places them all together, and lets them pair in the spring. He provides separate quarters for the pairs to nest in, lets the hens sit and hatch, and when the brood is a few days old liberates both old birds with the chicks, and these at once resume their natural life. The advantages are that both the old birds, sitting bird, and eggs are safe from vermin, and in a large degree from the weather (if the pens are well situated and well made). Almost all the eggs hatch, and the nests can be made up to any reasonable number either by slipping eggs under the hen partridges or having eggs ready in incubators, that the chicks may be added to the brood. Lastly, there is no trouble in rearing (the great difficulty with little partridges, which in the first three weeks live almost entirely on insect food), because the old birds rear them naturally.

The system is simplicity itself. A large central pen is made, with small pens at the sides, communicating by "drop" doors. The best simile is that of a London square, with the houses all round it. The square itself is the home of the old partridges, which live there, and if frequently interviewed grow very tame, from the middle of December till the beginning of March, or later, according to the season. It should be mentioned that clips made of India-rubber and leather are placed on one wing of each bird. They then begin to pair naturally, and as each couple makes a match it naturally draws away into one of the side pens. Here the hen lays and sits, while the cock keeps guard, and is often ridiculously tame, running up to the netting and pecking at any one who touches it.

When pairing time comes on the keeper watches the courting and engagements of his couples with considerable anxiety. There are always some half dozen couples who are coy and coquettish, and these give him acute anxiety. His side pens are like the different numbers in a new block of flats, just ready for occupation. Great is his joy when he can slip down the doors of a newly occupied one, and metaphorically write up "LET" in the windows. But meantime there are other eligible flats still vacant, while the prospective occupants are merely flirting, chopping and changing, or even quarreling in the little park outside. There is not the slightest excuse for them, with furnished quarters, water laid on, meals provided gratis to lighten the cares of housekeeping, and such good examples actually in sight. So he sets to work at "matchmaking" with benevolent watchfulness. If he can only be fairly certain of the inclination of the parties he can hurry matters on. On the other hand, if he is too precipitate he ruins all.

Identification is the main difficulty, and to effect this he borrows a hint from the Chinese. In a Chinese village, where the broods of chickens are allowed to run at large on the communal rubbish-heap, there is always a danger that the hens who are the best "callers" will accumulate most chickens. "Calling" means "clucking," which again is equivalent to the dinner-bell and is so understood by chicks. If three hens start equal, as regards families, the chances are that the best "caller" will annex a large part of the broods of others. This form of accumulating other folks' children raises a serious question in the village economy of China. The difficulty was solved by dyeing, or dipping the broods of chickens, so that each assumed a family color or livery. At the present day, the broods hatched on the premises of Mrs. Ho-ti, or Ah Sin, are dyed magenta or green, as the case may be, while those of other householders are yellow, orange or blue. Our French neighbors have adopted the system at an earlier stage. They mark with distinctive colors, not the offspring, but the prospective parents. Red, green, blue, mauve, orange, or other distinguishing colors are tied round their legs as garters; and if it is noticed that the wearer of a green garter is inclined to be épris of a bird with an orange badge, or pink is seen to be more than usually attentive to a green or blue, the keeper catches the couple with a landing net, and sets them up with a home according to his discretion. As a rule his selection is justified. But if there is any decided incompatibility of temper

the union is dissolved, and the remaining couples "pooled" to come to wiser conclusions in general society.

At Sandricourt, the estate of the Marquis de Beauvoir, the furnishing of the married quarters is elaborate. They are spacious enough, 12 yards by 8, and from 4½ to 5½ feet high, as the builders prefer; the latter allows more room for the keeper to enter comfortably. One end is previously dug over, or even ploughed across and harrowed, the plan being so arranged that the plough and harrow can be drawn from end to end before the pens are put up. This is sown with wheat, which grows up just as the birds are nesting, and provides shelter, and green blades for them to peck, and attracts insects. There is always a pan of clean water, a heap of dry wood ashes to dust in, another and larger heap of old dry farmyard manure for them to scratch in, and some fir boughs placed ridgeways for them to creep under if it rains hard. When the hen seems inclined to make a nest, a few handfuls of hay and straw are put in the pen. Her first eggs may be scattered about. These are picked up with a small green gauze butterfly net. In the main pen other eggs will be dropped, which are also picked up and saved for use later. Some of these are put under the hen partridge when she has been sitting for two days or three days if she seems restless, having been previously placed in an incubator for as long as she has been sitting, that the whole batch may hatch out simultaneously. Another plan is to keep them in the incubator, and add them to the brood when the partridge has hatched her own eggs. The number of eggs which a hen partridge can cover successfully is twenty-two. The birds begin to sit, as a rule, about the beginning of May in France, but in England usually at least three weeks later. Three days after the chicks are hatched, the "brails" are taken off the wings of the old birds, and they and the brood, augmented by chicks from the incubators, are turned out into the cornfields near. A writer in *Country Life* says:

The following figures show the wonderful success obtained on the estate of the Marquis de Beauvoir at Sandricourt from thirty-five pens. The result is quite extraordinary, even though possibly the season was exceptionally good:

Number of pens.....	35
Pens with no nest.....	1
Nests laid in, but no hatch.....	3
Successful pens.....	32
Pens with 100 per cent. fertile eggs.....	10
Best pen (22 eggs) hatched.....	21
Worst pen (10 eggs) hatched.....	3
Young birds hatched in pens.....	406
Young birds added.....	234
Coveys of 20 turned out in a week (with old birds).....	704

There is a further advantage in applying the French method, that is for those who are fond of natural history. For months they possess a remarkably interesting aviary. Partridges are among the prettiest and most interesting of birds, very intelligent, bold, and beautifully marked. Many readers will be inclined to differ from the idea that the birds must be prevented from seeing strangers. When they have paired there is no doubt that the quieter they are kept the better it is for the sitting hen. But before that it is just as well to accustom them to see strangers and people about them. Partridges, like grouse, grow amazingly tame and "cheeky" in confinement. In India they are regularly kept as pets, and there is no reason, except for the ubiquitous and cruel cat, why they should not be so kept here. At the Hague some partridges were kept at the zoo in a pen adjoining the path. The cock bird would crow defiance at any one who came near, and rush up and try to peck a boot or stick placed against the netting. After the experiments made in England this summer, it will be possible to speak more confidently as to the chances of success in England.—C. J. Cornish, in *Cornhill*.

Concerning a Humble Creature.

IT WAS a long time ago on the banks of the Housatonic that I witnessed a tragedy still fresh in my memory. We were out after quail, a young farmer guiding us to likely swales and cosy fence corners, briar-shaded and leaf-carpeted. "There goes a woodchuck!" exclaimed the farmer, one pointer dog springing after the little furry fellow and making such a close second that when the burrow was reached the dog was so close up to the 'chuck that, instead of exposing himself for a fraction of a second while darting into his burrow, he, like a flash, darted to one side and, making a pivot on his haunches, settled himself upon the apex of his mound home. The dog, instantly recovering, came afresh to the attack, the sight of the exposed teeth of the woodchuck making him cautious. And then the fun commenced. The dog kept prancing in a circle looking for an opening, the woodchuck keeping his body rotating in its center of gravity, constantly facing the enemy. Now and then the dog would lead in only to get a nip from the razor-like teeth of his adversary.

By this time we were close at hand and almost within reaching distance of the woodchuck, but he paid no attention to us whatsoever—move and shift as we might he saw and heeded us not. His source of nearest and greatest danger was that snarling and encircling canine. With his eyes glistening, his incisors bared, every nerve in his body quivering and every hair in his body standing on end, he made an animated animal picture never to be forgotten as he rotated around and around as he faced the alert and active canine enemy.

Miscalculating an opening the dog sprang in only to receive a more than ordinarily vicious nip on his jaw that brought forth a whine which seemed to madden the dog for a moment or two and tempt him into a rough and tumble with the woodchuck. Fearing for the dog, the young farmer without waiting sent a load of No. 6s into the little furry champion and it was all over. The dog, before the smoke had cleared, had jumped in upon his late antagonist and crunched every bone in his body, thoroughly venting his feelings of revenge in this inglorious fashion upon the dead body of the enemy.

CHARLES CRISTADORO.

Definitions of Seasons.

SPECIAL annoyance is likely to be caused when the question involves uncertainty as to whether the open season does or does not begin or end on a holiday. Many close or open seasons involve a possible inclusion or exclusion of the Fourth of July, Labor Day, Christmas Day, or New Year's Day, and it is not certain to one unfamiliar with the construction placed upon such a season by the authorities of the State whether shooting is or is not permitted on the holidays in question. In several instances the uncertainty is doubled by a date at each end that possibly covers a holiday. Thus a close season between January 1 and September 1 (September 1 is occasionally Labor Day in nearly all States) is established for deer and mountain goats in Montana, deer in Georgia, upland game birds in South Dakota, grouse in Washington, and squirrels in Iowa.

Differences often occur in the laws of a single State. Thus the Nevada game law of 1903 contains the following variations: "After February 15 and before July 15"; "between March 1 and September 15"; "from September 15 and until November 15"; "from and after December 15 and until September 15"; "during the time intervening between September 15 and November 15." A law of Allegany county, Md., recently passed, provides as follows:

No person shall kill or destroy any rabbit on and after the first day of January until the 15th day of October of each and every year, nor any squirrel after the first day of January, until the 31st day of August of each and every year.

These examples might be multiplied almost indefinitely.

If each of the different terms used in the laws had received a positive and single interpretation by the courts, the difficulty would be lessened; but little, if any, certainty has been derived from judicial decisions. Although the exact meaning to be given to such expressions as "from—to," "between—and," "from and after," "on and after," "until," etc., has been often passed on, especially in cases growing out of business relations, yet much diversity of construction has resulted, and there is a growing tendency to interpret such terms according to the facts of each particular case. Formerly attempts were made to establish certain distinctions. Thus it was laid down as a settled principle that when the time is computed from an act done, the day of its performance is included; but when the words are "from the date," if a present interest is to commence, the day is included; if it is the terminus from which to compute time, the day is excluded.

In a case which arose in Maine in 1841, the fish committee for the town of Cape Elizabeth was authorized to keep a brook open and free for the passage of fish from the 5th day of May to the 5th day of July in each year, and it was held that the act did not authorize the committee to enter upon lands of others and remove obstructions prior to May 6. Adherence to this rule of construction has grown less, however, and it was said by the Supreme Court of Massachusetts about twenty years ago that—

Many early cases stated a distinction between computations from a day or date and computations from an act done, or from an event. But this distinction does not rest upon a sound principle, and in most jurisdictions it is no longer recognized. The tendency of recent decisions is very strongly toward the adoption of a general rule which excludes the day as the terminus quo in such cases. But this rule is not inflexible; and in the interpretation of a statute or contract, it yields to a manifest purpose or intention in conflict with it.

The same court had previously declared that although the prepositions "from," "until," "between," generally exclude the date to which they relate, the general rule will yield to the intent of parties. Bouvier, quoting this decision, adds:

But the rule has not been unvarying, and many courts have not hesitated to follow the view of Lord Mansfield in *Cowp. 714* (overruling his own decision of three years before, *id. 189*), that it is either exclusive or inclusive according to context and subject matter, and the court will construe it to effectuate the intent of the parties and not to destroy it.

Cases supporting the principle that the inclusion or exclusion of the date named depends upon the intent of the maker of the statute or instrument under consideration are very numerous. "This intent is to be determined by the application of the general rules of construction, such as a consideration of the whole instrument, the subject-matter of the instrument, the context, etc."

From—to is the form of expression involved in a large proportion of cases decided by the courts, but the ambiguity of most of the other terms used in statements of game seasons has brought them frequently before the courts for interpretation, usually in connection with commercial disputes. In the expression from and after it has been held that the words are exclusive. But in 1815 the United States Supreme Court held that the act of July 1, 1812, which provided that double duties were to be imposed on all goods imported "from and after the passing of this act" applied to goods imported on July 1, 1812. In deciding this case, Justice Story said:

It is a general rule that when the computation is to be made from an act done, the day on which the act is done is to be included.

In *State vs. Mounts*, 36 W. Va., 190, it was said:

All the best authorities hold that the words "from" and "after" may be construed to include or exclude the day of the act, as will best serve to carry out the intention of the Legislature, subserve public policy, avoid forfeiture, and validate a proceeding rather than to annul the same.

Until is generally regarded as a word of exclusion unless a contrary intention appears from the context. In *People vs. Walker*, 17 N. Y., 502, it was held that the charter of a bank which was continued in force "until the first day of January, 1850," expired December 31, 1849. In this case the court said:

But the consideration which seems to be strongest, and indeed conclusive, upon its meaning in this act, is the obvious one, that to give the word its exclusive meaning ends the corporation at the close of the legal and political year.

On is held to be a word of inclusion; to is usually interpreted according to manifest intention. A curious distinction between on and to appears in *People vs. Robertson*, 39 Barb. (N. Y.), 9. A lease was made for ten years, to commence May 1, 1852, and end on May 1, 1862; and the premises were sublet from May 1, 1856, to May 1, 1862. It was held by the court that the original lease expired at 12 m. May 1, 1862, and the sublease at 12 at night April 30, 1862, and that during the intervening twelve hours the original lessee had the right of re-entry and possession.

The form of expression between—and (so common in the game laws fixing seasons) has received various interpretations. In Illinois it was held in 1853 that a contract to pay "\$400 between now and the 1st day of September" was not fulfilled by a tender of payment on September 1. Similarly in a case arising in New York in 1867 a stipulation to deliver between certain dates was made to exclude the last day named. In a Nebraska case in 1895 the statement in a mechanics' lien claim that material was furnished "between August 21, 1890, and January 22, 1891," was interpreted as excluding the first date. These cases were commercial in character, and so, perhaps, not strictly analogous to the question under consideration. A Rhode Island decision of 1897, however, had it been fuller, might have been more serviceable in the present connection. In this case (*State vs. Stone*, 20 R. I., 269), the possessor of 19 partridges out of season undertook a defense based on the uncertainty of the law in its statement of seasons, and the court held that the expression "from the first day of January to the first day of October" was equivalent to "between the first day of January and the first day of October," and hence free from uncertainty. But as it is not stated whether the latter form of expression is inclusive or exclusive, the decision throws little light on the question of interpretation of the terms quoted.

Official Interpretation of Terms.

As courts are seldom called on to interpret these ambiguous terms as used in statements of open and close seasons, interpretation is left to the authorities charged with enforcing the game laws of the various States. Hence when such terms are used it is impossible to know the exact dates of beginning and ending, except through familiarity with the practice of the State in each case. The extent of variety of interpretations is well shown by a few instances, brought out mainly by recent correspondence of the Department. In Minnesota the open season for deer, "between November 10 and November 30," is interpreted as including both the dates named, and thus permits hunting on each; while the Montana close season for deer, "between January 1 and September 1," is construed so as to include the first date and exclude the last, and thus allow deer hunting on September 1, but not on January 1. In Maine the close season for moose, "between the first day of December and the fifteenth day of October," is interpreted, like Montana's deer season, as including the first day and excluding the last; but that for deer, "between December 15 and October 1," is regarded as excluding both dates, and the immediate following statement of the open season for deer, "between October 1 and December 15," is so read as to include both dates. In Delaware the open season for quail, "between the 15th day of November and the 31st day of December," is interpreted as including both dates, thus permitting shooting on both November 15 and December 31; but in the close season for rails, "between the first day of February and the first day of September," the words used are regarded as exclusive, and rail shooting is allowed on both of the dates named; while the Massachusetts close season for quail, "between the first day of December and the first day of October," is held to include the first date and exclude the last.

Remedies.

Three features characterize the statements of game seasons in existing laws: Variety, uncertainty, and inconvenience. Some laws state open seasons during which killing is permitted, others close seasons during which killing is prohibited, and a number of different terms are used in the statements. Of these terms between—and is used preferably by nearly thirty States and all the Provinces of Canada except British Columbia, and the form from—to (or from-until) is used exclusively or preferably by seven States—Arkansas (1903), Florida, Indiana, Kansas, Ohio, Tennessee, and Wyoming.

Sometimes ambiguity is obviated, especially when it is the open season that is given, by adding "inclusive," "both inclusive," or "both dates inclusive," as is the practice in Alabama, Alaska, Connecticut, Michigan, New Jersey, New York, Pennsylvania, Rhode Island, British Columbia, Newfoundland, and Nova Scotia. The expression "during the month of," which appears in the game laws of New Mexico and is used to a limited extent by several States, removes uncertainty, but as many seasons include parts of months, it is available only in special instances. Such forms as "the season shall begin — and end —," adopted by Colorado and Nebraska, or "shall open on — and close on —," employed by Louisiana in its game law for 1902, are nearly, if not entirely, free from ambiguity.

All these statements, however, are open to the objection of inconvenience. It is, of course, perfectly clear to state the open season thus: "From September 1 to November 30, both dates inclusive;" or, "between August 31 and December 1, both dates inclusive." But the much more common plan to include the first date and exclude the last is preferable, as the opposite season may be shown by a mere reversal of the dates. This method, which practically amounts to giving the first date of the open and the first of the close season, has been adopted by the Department in its published tables of close seasons for game, for the sake of clearness and uniformity; and as many persons are directly interested in the game seasons of various States, its general adoption would be of much advantage. It could be employed and all ambiguity removed by making the form of statement "from September 1 to December 1, first date inclusive; or, 'from September 1, inclusive, to December 1, exclusive,'" but the unfamiliarity of such forms of expression would make it difficult for legislators to retain them in mind in all cases.

A much more convenient system, adopted by Vermont in 1892, New York in 1894, and New Brunswick and the Northwest Territories in 1903, is to include in the laws a definite rule of interpretation of seasons. Thus Vermont provides that "If an act is prohibited between two dates, the prohibition shall include the first but not the last date;" and the Northwest Territories provide that "The period of close seasons shall include the first date but not the last mentioned." New Brunswick's provision makes the dates exclusive, and hence, while obviating uncertainty, does not permit the use of a form by which they can be reversed to show the opposite season.

The general adoption of the Vermont plan would secure uniformity, certainty, and convenience, and has the addi-

tional advantage of requiring the least change in the present form of statement and method of interpretation; for the words most commonly used in stating game seasons are between—and, and while there are differences of interpretation of these terms by different States, yet the custom of including the first date and excluding the last is more general than any other. The principle underlying this plan has the support of several decisions of State courts in regard to computation of time under the laws. Thus in a New York decision it was stated that "As a general thing, in computing statute time, the first day is included and the last excluded." And, finally, it may be stated that the plan suggested is directly analogous to the rule of computation of time for other purposes found in many of the State codes, and also to the rules of construction of words and phrases, found in practically all codes and in several of the general game laws.

Such a rule could easily be incorporated at the time a new game law for a State is adopted, and the new statements of seasons made to conform to it. With little trouble, therefore, existing annoyance could be obviated, and a system established that would be clear, consistent, and convenient.

HENRY OLDYS,
Assistant, Biological Survey.

An Adventure With Caleb.

WRITING from the Mandan village on the upper Missouri, in 1852, Geo. Catlin tells this story of a morning adventure with the grizzly:

In the morning, and just before sunrise, as usual, Bogard (who was a Yankee, and a "wide-awake fellow," just retiring from a ten years' siege of hunting and trapping in the Rocky Mountains), thrust his head out from under the robe, rubbing his eyes open, and exclaiming as he grasped for his gun, "By darn! Look at old Calc, will you!" Ba'tiste, who was more fond of his dreams, snored away, muttering something that I could not understand, when Bogard seized him with a grip that instantly shook off his iron slumbers. I rose at the same time, and all eyes were turned at once upon Caleb (as the grizzly bear is familiarly called by the trappers in the Rocky Mountains—or more often "Calc," for brevity's sake), who was sitting up in the dignity and fury of her sex, within a few rods, and gazing upon us, with her two little cubs at her side! Here was a fix and a subject for the painter; but I had no time to sketch it. I turned my eyes to the canoe which had been fastened at the shore a few paces from us, and saw that everything had been pawed out of it, and all eatables had been without ceremony devoured. My package of dresses and Indian curiosities had been drawn out upon the bank and deliberately opened and inspected. Everything had been scraped and pawed out to the bottom of the boat; and even the rawhide thong with which it was tied to a stake had been chewed, and no doubt swallowed, as there was no trace of it remaining. Nor was this peep into the secrets of our luggage enough for her insatiable curiosity; we saw by the prints of her huge paws that were left in the ground that she had been perambulating our humble mattresses, smelling at our toes and our noses, without choosing to molest us; verifying a trite saying of the country, "That man lying down is medicine to the grizzly bear;" though it is a well-known fact that man and beast upon their feet are sure to be attacked when they cross the path of this grizzly and grim monster, which is the terror of all this country, often growing to the enormous size of eight hundred or one thousand pounds.

Well, while we sat in the dilemma which I have just described, each one was hastily preparing his weapons for defense, when I proposed the mode of attack, by which means I was in hopes to destroy her, capture her young ones, and bring her skin home as a trophy. My plans, however, entirely failed, though we were well armed, for Bogard and Ba'tiste both remonstrated with a vehemence that was irresistible, saying that the standing rule in the mountains was "never to fight Caleb except in self-defense." I was almost induced, however, to attack her alone, with my rifle in hand and a pair of heavy pistols, with a tomahawk and scalping-knife in my belt, when Ba'tiste suddenly thrust his arm over my shoulder, and pointing in another direction, exclaimed in an emphatic tone: "*Voilà! voilà un corps de reserve—Monsr. Cataline—voilà sa mari! Allons, allons! Descendons la rivière, toute de suite! toute de suite! Monsr.,*" to which Bogard added, "These darned animals are too much for us, and we had better be off;" at which my courage cooled, and we packed up and re-embarked as fast as possible, giving each one of them the contents of our rifles as we drifted off in the current, which brought the she monster, in all her rage and fury, to the spot where we a few moments before had passed our most prudent resolve.

Senator Vest's Famous Tribute to the Dog.

ONE of the most eloquent tributes ever paid to the dog was delivered by Senator Vest, of Missouri, some years ago. He was attending court in a country town, and while waiting for the trial of a case in which he was interested, he was urged by the attorneys in a dog case to help them. Voluminous evidence was introduced to show that the defendant had shot the dog in malice, while other evidence went to show that the dog had attacked defendant. Vest took no part in the trial, and was not disposed to speak. The attorneys, however, urged upon him to make a speech, else their client would not think he had earned his fee. Being thus urged, he arose, scanned the face of each jurymen for a moment, and said:

"Gentlemen of the jury: The best friend a man has in the world may turn against him and become his enemy. His son or daughter that he has reared with loving care may prove ungrateful. Those who are nearest and dearest to us, those whom we trust with our happiness and our good name, may become traitors to their faith. The money that a man has he may lose. It flies away from him perhaps when he needs it most. A man's reputation may be sacrificed in a moment of ill-considered action. The people who are prone to fall on their knees to do us honor when success is with us may be the first to throw the stone of malice when failure settles its cloud upon our heads. The one absolutely unselfish friend that man can have in this selfish world, the one that never deserts him, the one that never proves ungrateful or

treacherous, is his dog. A man's dog stands by him in prosperity and poverty, in health and in sickness. He will sleep on the cold ground, where the wintry winds blow and the snow drives fiercely, if only he may be near his master's side. He will kiss the hand that has no food to offer; he will lick the wounds and sores that come in encounter with the roughness of the world. He guards the sleep of his pauper master as if he were a prince. When all other friends desert he remains. When riches take wings and reputation falls to pieces, he is as constant in his love as the sun in its journeys through the heavens. If fortune drives the master forth an outcast in the world, friendless and homeless, the faithful dog asks no higher privilege than that of accompanying him, to guard against danger, to fight against his enemies. And when the last scene of all comes, and death takes the master in its embrace and his body is laid away in the cold ground, no matter if all other friends pursue their way, there by the graveside will the noble dog be found, his head between his paws, his eyes sad, but open in alert watchfulness, faithful and true even in death."

Man Traps.

WE were reminded the other day of some of the incidents of country life of former years by the offering for sale at a London auction mart of a couple of man traps. These engines were, once upon a time, part of the chattels of well nigh every considerable landowner and every energetic gamekeeper. Another implement was the spring gun, which turned on a swivel and discharged itself as soon as one of the connecting wires was stumbled against, the muzzle of the gun turning in the direction of the trespasser as indicated by the wire, the guilty party generally receiving a coating of pitch, if of nothing worse. The man traps sold the other day were probably the first some of the attendants at the sale ever saw, and were of the old formidable pattern; that is to say, they resembled a glorified gin. They measured seventy-four inches long and were just about three feet in height, so they would catch a poacher well above the knee, and, once nipped, there he would remain till his cries or the ordinary round of the keepers led at once to his release and capture. The spring gun gave its alarm, and watchers were speedily in attendance. There was something very barbarous about the use of these engines, which were not so very long ago quite common; in fact, people need not be very old to have seen boards bearing the legend "Beware of man traps and spring guns," and it is only about thirty years since the 24th and 25th Victoria made their use illegal.—London Field.

The Maine License Law.

DIXFIELD, Me.—Our non-resident license law is working finely. I would myself rather have seen the State give us the means to protect our game; but they would not do it; so we had to do the next best thing, and I must say it is doing better work even than we anticipated. The original objectors are growing fewer every day; the law is gaining friends, and, I think, has come to stay. We now have abundant means to keep good wardens on our borders, and they are doing good work. I think we have the best corps of wardens in the United States. We can now select good men, and have the means to pay them—something we never had before.

H. O. S.

Marriage Festivities in 1550.

IN the diary of King Edward VI. appears this entry: "1550, June 4. Sir Robert Dudley, eldest (surviving) son to the Earl of Warwick, married Sir John Robsart's daughter, Amy, after which marriage, there were certain gentlemen that did strive who should first take away a goose's head which was hanged alive on two cross posts."

The noble sport of taking away a goose's head was transplanted to America, and lasted to the nineteenth century, if indeed it may not yet be practiced in some of the by-paths. One of the stories in the current number of the *Woodcraft Magazine* is Fred Mather's famous description of an Arkansas gander pull, which occurred in the '70s.

Another 100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

101

EAST WAREHAM, MASS., July 12.—Late in the fall, some 85 years ago, my grandfather went down to Barnegat for a little shooting. He was in the habit of making an annual trip for the ducks and geese. On this occasion he had put up over night at his usual stopping place, and in the morning went to the marsh where he intended shooting. Some time during the day he got a shot at a flock of geese and brought one down. On going up to his game he was surprised to find a watch on the ground by the dead goose. To all appearance it must have belonged to the bird and come down with it, but of course this was extremely improbable.

The watch was going and could not have been lost very long. Grandfather had seen no one, and could not account for its being there. Supposing that some one had lost it, he took it to the hotel and turned it over to the landlord, and described the place where he found it. He left it there when he came away, and thought no more of it until his next trip the following year. On going to the same hotel he saw the watch hanging on the identical nail where his host had hung it the year before. No one had called for it, and the landlord took it down and handed it to grandfather, who wore that watch the rest of his life. He died in 1861. The watch is still in evidence, but worn out. It is slightly larger than an ordinary timepiece, being a trifle over 2¼ inches across and ¾ of an inch thick, open faced, winding from the face, no second hand. On the inside of back case is the number 1641, with initials "C. H. I." A round scroll protects the hair spring and balance, and there is no other attempt at ornament. The hours are marked on the dial with Arabic numerals, and the motion is conveyed from the spring to the works by a tiny chain.

WALTER B. SAVARY.

SEA AND RIVER FISHING

In Nebraska.

OMAHA, Neb., Aug. 21.—The modest hepatica and fragrant violet and mayflower, harbingers of springtime, and welcome guests, have come and gone, and the catkins on the willow that appear before the snows of winter depart, have long since been succeeded by the frondescence of summer. The burning sun of July invites to shade and cool retreat, whence we may see the heat waves rise from earth and dance and tremble until lost in the higher atmosphere. Hardly a breath stirs, and it seems as if we were all alone in the world, and that nature is enjoying a siesta. But no, look right here where we sit, in the shadow of the big cottonwood, a colony of ants ply their honest toil, a spider noiselessly spreads his net in the branches overhead, and a katydid breaks in with his sibilant nasal song. Our companion of many a day in field and covert, old Sport, for instance, tired of panting and lolling, throws himself broadside on the ground, and let us hope that he, like his master, finds comfort and pleasure in the recollection of distant, but not forgotten, days with the quail and snipe in the autumn time.

Ah me! Many is the time that I have been there, and in these sweltering days it does me good to recall the other days of interest and delight, days when the cares of business and the perplexities of life were laid aside and forgotten. My thoughts go back to days in the marsh and in the fields that will linger long as cherished remembrance, not because I shot so remarkably well or scored such a large bag of ducks, quail or chicken, for I have long ceased to measure my joys by the dimensions of my kill or catch. The early drive in the clear, frosty morning air, genial comradeship, the good old Barrister, for instance; no friction, no mishap, cordial reception at our destination, fine working dogs, reasonable number of birds and fair shooting, all contribute to the joys of an outing.

It has often been said, but bears repetition many times over, that it is not all of shooting and fishing to shoot and fish. Week by week and year by year the truth of this is being shown anew in these columns, wherein it is my aim to make record of nature's studies, the travel experiences, the observation, suggestion, wit and wisdom of the sportsman's family. Nothing serves better to bring out the light and shade of all the sportsman and the man loves best than just such pictures as are here presented. What a work-a-day life this would be, indeed, if nobody took these trips and if there was no one to tell of them.

An Omaha gentleman, an elderly man, who imagines he sees the restoration of youth in the fisherman's garb, called on Henry Homan the other day for his advice about buying a rod. Henry showed him one after another until he had exhausted his stock, some dozen in number, and the respectful caller lectured him in his own house over the extravagance of owning so many rods. I do not know what he would have thought had he been at the dinner of the Fly-Casters' Club over in Chicago the other evening, where one member said he owned eighty-four rods, with reels, lines, flies, and everything to match. The probabilities are he would have had a stroke of heart failure.

Talking about the destructive habits of the buffalo and the carp to the spawn of other fishes, Hon. Lew May, our ex-Fish Commissioner, the other day said that he had been informed by old residents of this section that when they first came here the abundance of the buffalo was something enormous, and their plentifulness to-day does not compare at all with that of the old-time period. They also told him that the quantity of game fish existing with the buffalo was immensely larger than at present, and that no one ever imagined that the presence of the buffalo was destructive to the existence of game fish. The characteristics of the carp and buffalo are so closely related and their habits so similar, that one might well doubt whether these fish are the cause of the extinction of the game fishes. May it not be that they are the effect and not the cause; that they multiply and take up the water formerly occupied by the game fish which have been destroyed by the persistent and everlasting fishing of the market fishermen, who from time immemorial have used their nets and seines in every waters of the State?

A brother Council Bluffs sportsman tells me that the resident Chinese wall in Iowa doesn't amount to anything. Sportsmen from Nebraska have been over since the non-resident law was passed, and are now welcomed over there, and will be given the best the State affords, whether the best be clad in fur, feathers or scale. I am glad to hear this, for it is the American way of doing things, and the American way is better than the Chinese way. The only reason I indorsed the non-resident proposition in the late law passed by the Nebraska Legislature was simply through the theory of self-preservation. The Dakotas, Iowa and Missouri had all passed such laws, and it seemed necessary for self-protection that Nebraska follow suit. But as in Iowa, however, I think that it will amount to nothing, anyway, so far as our near neighbors are concerned.

It is invariably the big fish that finds its way into the columns of the newspapers, but for every big one heralded, a thousand smaller ones go to the frying-pan unchronicled. If there were no fun in fishing except when a big fish was captured, the aggregate of disappointment and disgust would far outweigh the sum total of satisfaction found in the average fisherman. As it is, one may find a day full to overflowing with interest and bright

memory stories, experiences, and yet not catch a fish worth the weighing.

A golden precept is to make the most of the fishing open to you. If you are "chained to business," don't sulk because you cannot journey to the far-away and famous resorts, where the giants of the waters are waiting for minnow, fly or spoon; but take a half day and go up to Cut-Off or out on the Elkhorn. There you may hear the liquid tinkle of the blackbird, the sweet call of the meadow lark, the trill of the thrush, and the jingle of the robin, and you can find flowers, too, and feast your tired eyes on the surrounding world of emerald; besides, in all probability, get a few fish; and if you don't get these, if you are careful, you can get tired and dirty, and then, when you get home at night, you can go to sleep. Oh, my, how you can sleep!

I had a little talk with ex-United States Senator Manderson on the street the other morning, and both having just returned from a delightful sojourn at Lake Washington, our conversation naturally turned to subjects pertaining thereto, and the Senator innocently unfolded a little story on himself, which he said they all thought was a great joke up there. He was out with George A. Hoagland, with Dutchy, one of the Volk's guides and boatmen at the oars, after pike. They were anchored off the third point, at one of the deepest holes within all Shantaska's shores. They had fair luck for a while, then came a long and tedious lull, and Mr. Hoagland in desperation exclaimed: "Here, Dutch, take this pole and show the Senator how to catch a pike. 'I do dot, too, alretty,'" responded the Teuton, as he grasped the old sportsman's rod, hooked on a good big chub and threw out. There was a golden flutter of light on the ripples round about when the chub disappeared a moment; the gleam of a near-by white oak kindled the purple gloss of the water; the dragon fly flashed his blue and emerald as he zig-zagged about, and around the boat the brown water spiders skated.

"I got dot peck," suddenly exclaimed Dutch, as a mighty tug at his line rouses him from his phlegmatic calm. There is a vicious plunge, a swirl and a jerk, but Dutch plays him just right, and soon he is reeling in. His captive's motions become slower, he makes one more desperate lunge for the depths, one more dart for the rocky bottom, but he, like all his kind, is quickly wearied, so Dutch pulls him carefully toward him. There is a flop or two in the water, then a last faint resistance and out-pull, when there is a silvery glistening under the surface near the boat. Senator Manderson seized the landing net, dips with the deftness of an old hand at the business, and in a trice a 5-pound pike is captured. Both Hoagland and the Senator were a little nettled at this—that the boatman should show them how to fish and make the catch of the day, and while Hoagland sulked in just disgust, Manderson exclaimed: "Well, now, Dutch, watch me. I'll show you how to catch a pike as is a pike." And with a chub nearly the size of the one Dutch had used, hooked beneath the vertebrate, the Senator threw in just where "Already yet" had made his big catch. The sinker had barely dragged the minnow out of sight, when the Senator got a strike, and a furious one, too. This way and that the line cut the cerulean surface, a line of rubies and pearls following the silken flight. Off he goes like an arrow from a bow; down like a lump of lead; up again, and pulling for the tule border, but the Senator turns him off. Hoagland is up already with beaming face and landing net in hand. How skillfully the Senator plays his monster catch. Now he gives him line, now he reels it away from him. Look at the Senator's face: how grave, yet collected and self-reliant. He reels in and he reels out; then in again, and he cries for Hoagland to be ready; in, in, in, but the fish tries to pull under the boat; but the Senator will not let him touch—he's too old a hand at the rod for that; so, dexterously, he winds him in, Hoagland leans over the boat, while Dutch grasps the gunwales in keen expectation; Hoagland raises the netted bow; bends lower to make a perfect dip, then falls back into the boat like a man who had been pierced with a Mauser rifle ball, and bursting into a derisive laugh, he exclaims: "Nothing but a danged sunfish," and lifting up his rod, a four-ounce goggle-eye dangles helplessly from the Senator's imported hook.

Senator Manderson agrees with me that Lake Washington is one of the most entrancing and picturesque bodies of water in all this lovely northern country. He made a forty-mile drive there one day round about the lake with Mr. Hoagland, and in this jaunt they touched on the shores of eight more lakes, several of them as big as Washington. He rhapsodized over the scenery, which, with its matchless expanses of silvery waters and its sea of darksome woods, and long stretches of flowing fields, cannot be surpassed in the civilized world. Twenty years ago this wilderness hardly contained a hut or shanty, and was rarely invaded by visitors. But of late years the number of sportsmen and tourists has gradually but greatly increased. The deer are gone, of course, but the bass and the pickerel are as plentiful as ever. The shout of the loon, too—that symbol of the wildest and loneliest of the scenes haunted by this wildest and loneliest of birds—now but rarely meets the ear. What enjoyment, what health, wealth and religion there is in an outing at such a place as Shantaska's beautiful waters and leafy bowers. The savage lake, the bluffs, the green forest, the blue skies, all present an impressive picture. We linger for days on the beamy lights, the velvet shades of the old masters, of Dominichino, of Cinabue, of Giorgione, of Titian, of Tintoretto and Claude, whose names glitter with the magic tints of Italy and ring with the golden

richness of her music. But the colors born of that great artist, the Minnesota atmosphere, flash disdain upon the tame blazonry of the old masters' mimic hues. Give me one day in the woods or on the waters, with gun or rod, to forty years in a Paris salon. Even the divinest frescoes of Raphael must yield to the common tints of dawn and twilight at Shantaska, and the architecture of Angelo, Brunelleschi, and Giotto—they have cast a spell to which time is powerless; but look upward in your strolls from your boat or wherever you may be, and there you will find architecture with pillars and arches and colonnades and towers, not tiresome to the eye in their sameness, but ehanging even as you gaze, resting on foundations of living sapphire, and flushed with flitting tints that transeend even the most holy dreams of those masters, the "great heirs of Time."

SANDY GRISWOLD.

Fish and Fishing.

High Water in Canadian Rivers.

QUEBEC, Aug. 27.—The high water that was so badly needed for the continuance of good salmon fishing in the early part of the summer has made its appearance, now that the salmon fishing is over. There has been more rain of late than anglers have wanted. Trout fishermen have found the rivers too high for good sport. In the lakes the fishing has been better, but the August trout fishing has proved quite disappointing. The weather-wise arc foretelling a good September for river fishing. The September weather is usually about the finest and pleasantest of the year in Canada, and old anglers say that the late rains and consequent high water must have had the effect of stirring up the fish that had grown lazy in the hot and shallow summer water, and that nothing but somewhat lower water is now required to furnish the best of fishing. Most of those who could conveniently do so have postponed their holiday fishing trips until after the present rains have subsided. Notwithstanding this, quite a number of American anglers are at present in camp at the different club houses along the line of the Quebec and Lake St. John Railway. September is certain to be a busy month for guides and others in northern Quebec. The fact that the hunting season commences here on the first of September will serve to increase the volume of travel in that direction.

As a rule, I have in the past counseled those who do their Canadian trout fishing in the tail of the year, to provide themselves chiefly with small flies. This year, on account of the present high level of the water, visiting anglers will probably make no mistake in bringing with them a fair assortment of larger flies. Some of them should be as large as those employed in rapid water in the early spring fishing.

Ouananiche Fishing is Better.

While the high water of the last fortnight or three weeks has proved anything but favorable for trout fishing in the Lake St. John country, it has exactly suited those fishing for ouananiche. As a rule, the low, warm water of the month of August causes quite a falling off in the nature of the sport in the Grand Discharge. This year the ouananiche not only remain plentiful in the most accessible parts of the Discharge, but continue to rise very freely to surface lures in the high water, especially in the pools below the Grand Fall and at the upper end of Isle Maligne. The flies now being taken there are the Jock-Scot, silver-doctor, professor, and coachman. Recent visitors to the locality report the killing of several doubles.

Ouananiche fishermen may be reminded that the season for this sportive fish, which formerly closed on the 15th of September, was extended last year by order-in-council of the Dominion Government, and that it may now be fished for up to the last day of September. This is quite a boon for fly-fishermen, as the fish rise better in September than in any other month, and it has been quite satisfactorily established that they do not spawn until after the brook trout, which have always been fished for in Canada up to the end of September.

Both at the Grand Discharge and also at the different club houses in Northern Quebec, an unusually large number of applications have been received for accommodation during the month of September. It promises, in fact, to be by far the busiest month of the season for all concerned.

When Fishes Leap.

One of the earliest lessons taught by experienced anglers to the tyro is to be sure to lower the point of the rod when a hooked fish leaps out of the water. It is safe to say that the salmon fisherman who would fail to follow this advice would cover himself with ridicule from both guides and fellow-anglers, so universal is the belief that it is dangerous to continue connection with the fish to maintain the rod in the same position when a salmon leaps at the end of the line as it occupied before. As ouananiche have recourse to the same tactics as salmon in their endeavors to free themselves from the hook, the practice of lowering the tip of the rod when a hooked fish leaps is about as general with ouananiche anglers as with those who fish for salmon. The other day I heard two returning anglers from Lake St. John discussing this general rule. One of the two was quite skeptical as to the necessity for the practice, and claimed that he had enjoyed more than the average amount of success in saving his fish while systematically refraining from following it. There is something in his argument, and an increasing number of anglers seem to share his views. He holds that there is no more pressure upon rod or hook or line while the fish is in the air than when he is in the water, either immediately before he leaves it or immediately after

he has returned to it, and that therefore there is no good reason for either giving him line as he leaps or for lowering the tip of the rod. So far as the actual strain upon the tackle is concerned, I am inclined to think that this contention is not very far astray, but the more generally prevailing practice is no doubt more specially designed to prevent the tearing out of the hook from the mouth of the fish, especially if he be a lightly hooked one, by the strain upon the portion of flesh held by the hook, when the weight of the descending fish is exerted upon it if the rod is not lowered, during the period that such weight is bending the recently straightened rod to the bow which it formed when the fish was about to leap, and which it is again required to assume as the fish regains the water under similar conditions.

In any case I firmly believe that a great many fishermen altogether overdo the practice of lowering the tip, or doing obeisance, as it is sometimes called, to a rising fish. Both salmon and ouananiche will often take the water and their next run after a leap at right angles to the general direction of the line, and in such instances too much lowering of the tip when the fish breaks water simply adds to the length and weight of the "bellying" portion of the line, and makes it so much more the easier for it to tear out the hook.

E. T. D. CHAMBERS.

Newfoundland Notes.

THE burden of the cry around the whole island is that the weather is too dry. Many of the streams and ponds are nearly dried up. The fish are very plentiful, but very sluggish. In fact, in many pools the salmon can be plainly seen lying in large numbers near the bottom, but no lure, however seductive, will make them rise. Hence, many anglers have been disappointed. The records show that the leading streams are yielding sport enough to retain their reputation for good fishing, but nothing in comparison to that to be had in a favorable season.

We have had a larger number of visiting anglers this season, principally Americans, than ever before. The number of hunters for caribou heads promises to be much greater than ever. As far as I have learned, all the visiting sportsmen enjoyed themselves. Of course we have had included among our visitors the kicker and the critic. 'Tis hard to get any large number of men together (even including sportsmen, who are naturally and proverbially good-natured and easy to please) that won't contain some grumblers; but, on the whole, the sportsmen enjoyed the fishing, scenery, climate, and everything else that was a constituent of the trip. Many of them have written glowing accounts in the American journals, and one at least—our genial friend, Mr. L. F. Brown—has burst into song, the ordinary prose channels being too dry and sluggish to convey or express his feelings. In a musical little quatrain of verses entitled, "An Appreciation," published in a local paper, a copy of which I send you, occur the following lines:

"And yet the song of the river was there,
The sigh of wind 'mid the pines,
The balsam's fragrance, the forest fair,
And the moonlight—caused these lines,
For the Red Gods called us, and made us their guests
In that wilderness far and wild;
We only obeyed Dame Nature's behests,
'Twas the mother's call to the child."

Did I write "red gods?" Please rub it out quickly before the author sees it, and substitute "wood gods," which was what Mr. Brown wrote. Mr. Brown is not taking any red gods in his trip. I would not wilfully tamper with the red gods. One war at a time is my motto; the sturdy little Japs are furnishing excitement enough now in the East to satisfy my cravings. I do not want to start another war in the West by any fooling with the red gods. I know the mere mention of the word is like the clarion call to arms to the venerable Old Angler and his formidable hosts. "Wood gods" is the word; the misquotation is mine.

J. W. CARROLL.

Another First Fly Experience.

Editor Forest and Stream:

Some time since, when the myths first began to get busted, a correspondent mentioned another myth that he thought needed busting—the myth of the bare-footed boy armed with a hoop pole with a string tied to one end of it, who caught and carried home large strings of fish. The correspondent had seen the boy and his fish, but the fish had always turned out to be suckers or sunfish; he had seen but few trout among them.

I thought at the time to tell him that had he been where I was over fifty years ago, he might have seen three barefooted boys carrying home several strings of trout that had been caught by rude lines tied to hoop-poles; but it cost me a good deal of thought before we succeeded. Catching trout with hoop-poles is much like barking squirrels—it can be done, if you only know how to do it.

Pine Creek empties into the Allegheny River at Sharpsburgh, just above the Allegheny city line. It rises back near Butler county, and flows between hills and meadows, or it did then; it flows now between stone quarries, brick-yards and rolling mills, until it finally falls into the river. This creek was where we did the most of our fishing. We caught suckers and perch in the lower pools down near the river; the trout were up near the head of the creek among the hills. There are none there now, nor has there been any for a good many years. I think that we got about all of them in our time, and the creek is too small to stock again. We could get the common fish without much trouble, but the trout refused every bait we offered them, and we had tried them with about all the different ones we knew of—angleworms, grubs out of decayed logs, minnows, and grasshoppers; the trout did not want any of them.

I noticed that the trout would come to the top of the water as we lay watching them hid in the bushes, and seize flies and bugs that floated on the surface; and a thought struck me. Taking off my bob and sinker, I put a grasshopper on the hook, and throwing it in, tried to float it on top of the water. The trout would swim around it and look at it, then swim off again. My coarse, heavy line, no doubt, scared them away.

Going home to town, I began to think up a plan to get

those trout. I had heard of artificial flies, but had never seen any, and did not know how they were made or used. I hunted through the books in a library which we town boys were given the use of, but could not find anything here about them either. Next I asked several old river fishermen; only one of them knew anything about those flies. He told me that I could not use them if I had them; I would have to be taught how to use them first; but he told me how they were made.

I had no colored feathers, hair, nor wool, and had to hunt up substitutes for them, to begin with. I got colored calico, old red flannel, and some small pieces of silk ribbon, white and brown, the only colors of silk I could get. Then I tied them in small bunches, as near like flies as I could get them. I have since seen some of these artificial flies that did not look much better than mine did. I threw my flies into a basin of water and drew them through the water by the thread they were tied with, to see how they worked, and soon discarded the cotton ones; they took up the water too quickly and sank; the flannel did better, and the silk best of all; but I wanted a variety of colors, so I retained the flannel to use among the silk. I had about a dozen extra hooks—a fortune for a boy then. I had got these by trading baseballs and bats for them. I tied my flies on the hooks just where the old fisherman had told me to tie them, then hunted up three of the smallest sea grass lines I could find in town, and started out after the trout again.

I and two of my cousins cut three long, slender hickory poles. The other boys were rather skeptical about the trout biting "them things," so I told them to bring along our old lines also; if the trout did not want these things, we could go down stream and catch suckers and perch.

We began on a quiet pool up among the hills, where we knew there were plenty of trout, and after some trouble, on account of the bushes that caught our lines when we tried to throw them, we at last succeeded in dropping the flies on the water without making much of a splash. I got the first strike, and landed, away back on the grass, a trout weighing nearly a pound. We just jerked them out as soon as we had them hooked; we knew nothing about playing them, and would not have known how to use a reel if we had had it.

We all caught trout; they would bite at "them things," it seemed, after all; but a good many that we ought to have got succeeded in getting away; we no doubt caught them some other time, though. But the three of us had eighteen trout, I think it was, that would weigh in all about as many pounds. The largest caught that day—and we never got a larger one after—weighed nearly a pound and a half.

CABIA BLANCO.

Massachusetts Fish and Game.

BOSTON, Aug. 26.—Editor Forest and Stream: Three men have recently been prosecuted and fined for taking short lobsters in Boston harbor. These were employees of the life-saving station at Hull, and being appointed by the general Government, the question naturally arises whether the federal authorities can afford to keep men in their employ who are not law-abiding citizens. One of the three paid a fine of \$54, another paid \$72, and the third, who was fined \$285, has appealed his case.

The commissioners inform me that the number of arrests for violations of the game laws so far this year is considerably in excess of any previous year, being above one hundred. Captain Collins has examined fifteen ponds the present season, this being a line of work that he prosecutes every summer as he has opportunity.

Deputy Warden F. A. Bent obtained a search warrant last week and called at the summer residence of Charles Letendre, a wealthy liquor dealer, at Ocean Grove in Swansea. The deputy had been told that Mr. Letendre was keeping three wild black ducks among his exhibits in a small menagerie which he had started. The case will come to trial in a few days.

This has been an exceptionally good season for blue-fishing, from all reports, in Massachusetts waters, and a boat that went out from Cottage City last week returned with nineteen fine fish taken off Cape Pogue. Visitors at Provincetown have witnessed an unusual sight of late, as neither city nor country people often have the opportunity to look at live halibut, but the past week a local fisherman, Mr. Manuel Cook, has captured two, the aggregate weight of which was 550 pounds.

New Hampshire continues to hold in her granite hills the magnet that attracts many of the prominent men of the country. The only surviving ex-President has recently taken possession of his summer home in Sandwich, where he received a royal welcome from the people of that and other towns. Among the prominent men who assembled in Mr. Cleveland's honor were Gov. Batchelder and former Governor Rollins.

Another man who has been conspicuous in political life is ex-Congressman Joseph H. Walker, of Worcester, erstwhile known as the "Gray Eagle of Quinsigamond," whose summer home is at New Hampton, located in the geographical centre of the State. This is the ancestral home of his wife, and has been for more than a hundred years in the family. To the north several ranges of mountains rise one above the other for more than fifty miles to the Franconia Mountains. The woods furnish cover for ruffed grouse and other game. Not many miles to the west lies Lake Winnepisseogee, and there are many smaller lakes and brooks accessible which abound in trout. The Congressman has been a sportsman from early life, and your correspondent heard him tell a legislative committee how it happened that he was led to seek the recreation of rod and gun. Having become worn out by close application and overwork, his physician recommended him to take such out-of-door exercise as was congenial, and Mr. Walker declared that, in his opinion, his present good physical condition was due to his indulgence in field sports. He has stated that he found good grouse shooting within easy reach of Worcester for many years, but of late has been to New Hampshire for his fall shooting.

From my friend, Mr. E. H. Davis, proprietor of the Lakeside Hotel, on the New Hampshire side of Umbagog, I learn that for several weeks business has been rushing.

Passenger traffic on the lake has been very heavy the present season. This lake is noted as an excellent place for duck shooting, which is one of the inducements that

led Mr. Harry Dutton to build the camp on Mettuck Island, where he has been passing the summer. Among the many well-known guests are Rev. J. W. Suter and family, of Winchester; Prof. John F. Dwight and family, of Boston, and Dr. J. Hasford Abel and family, of New York.

Mr. Cyrus A. Taft, of Whitinsville, reports seeing a flock of as many as fifteen young quail in the immediate vicinity of the place where he liberated the birds we sent him last spring. This he regards as very gratifying evidence that the quail which he liberated are breeding. He says this is not a surprise to him, as the birds he received were "very large and very lively."

Dr. W. C. Woodward, secretary of the Middleboro Fish and Game Club, is passing the month of August on the streams of Newfoundland.

Within a few days a new club has been organized, chiefly by Boston merchants, lawyers, and brokers, unique in character, to be called The Rocky Mountain Country Club. The sports are to be stalking big game, hunting with hounds, polo and golf.

CENTRAL.

Susquehanna River Fishing.

SAYRE, Pa., Aug. 27.—Old river anglers declare that the black bass and pike (or yellow bass, as local phraseology has it) fishing is better at the present time than for several years past. The river is in ideal condition; and other necessary factors in the economy of angling are present, so that fisher folk generally are in fine fettle, and getting plenty of black bass and pike, with some lesser fishes. Silas Cook, of Waverly, one day recently caught a pike in the Susquehanna above the State line that weighed 9½ pounds. Numerous other catches of big pike and bass are reported not only along the water from the State line up to and beyond Owego, but from Sayre to Wyalusing and below that famous angling point.

M. CHILL.

Massachusetts Black Bass.

HOPEDALE, Mass., Aug. 23.—I have had some sport with the bass in Lake Nipmuc this summer, and have taken quite a number of Oswego bass. Saturday afternoon, August 13, I caught eleven, my largest catch so far. I have only taken one small-mouth and one rock bass as yet; the largest I have seen was about 3 pounds. I have heard of 5 pounds, but have not seen them. I have tried all kinds of bait and flies, but do best with live shiners. They have repealed the law on black bass, so they may be taken at any time not under eight inches in length. There seem to be plenty of partridge and quail. I have seen a number of broods, and think there will be good sport this fall if we can stop the sooner.

C. W. A.

"Child, Milk and Snake."

LITTLE Eliza Sophia Kemper came with her father, Jacob, to Philadelphia from Amsterdam in 1741, and went with them to her uncle Ernest at Rhinebeck, and then settled with them at Beekman, sixty miles below Rhinebeck. There occurred this parable of the infant and the asp, that the Scriptures might be fulfilled. The story is told by the wife of the first Mayor Quincy, as related to her by her mother, Mrs. John Morton, of New York, at and after the Revolution:

"In this wild country an incident happened to my mother, which she has often related. When a child of six, she was accustomed to eat her bowl of rice and milk seated on the sill of the house-door; and was heard to speak of the pretty snake (*die schöne Schlange*) who came and eat her rice. Her mother watched to see what this meant, and to her consternation, saw a large rattlesnake with its head in the bowl, eating with the child, who, when her visitor took more than its share, tapped it on the head with her spoon. It went quietly away when the meal was finished. But this intimacy was too dangerous, and Mr. Kemper killed the snake; the rattle, a very large one, with eleven or twelve rings, was preserved for some years, but was lost when the family removed from the Livingston Patent to New Brunswick, N. J."

It seems that Priscilla Wakefield in London related this tale with some variations in her "Instinct Displaid," and that a German engraving perpetuates it under the title of "Das Kind mit der Milch und der Schlange"—"Child, Milk and Snake." The little heroine grew up, married John Morton, a Scotch-Irish commissary in the British army, in 1761, and kept his house on Water street, New York, where he became a rich merchant by the time the Revolution came on.—Springfield Republican.

A Word of Thanks.

Editor Forest and Stream:

My wife and I are rejoicing in the privilege of following on after Mr. George Bird Grinnell on the "Trails of the Pathfinders."

Surely the readers of FOREST AND STREAM have cause for gratitude in the fact that he is impelled to take these long journeys for their profit and pleasure; and the keener should be our gratification as we recollect that the one member of all the great FOREST AND STREAM family best fitted by sympathy and early training for the difficult task, has undertaken the work for us.

And is not this just the fit and proper task for our own great paper at this particular time?

To gather the best of the old records of the turbulent days gone by forever, and to put them into presentable shape, before they are buried under the driftwood of the stream of time.

(What would I not give to-day for the old book of my boyhood, containing the story of the five years' captivity of Col. James Smith, made prisoner just before Braddock's defeat, and held in captivity for five years among the Indians of the Northwest Territory, together with a lot of adventures of similar nature, and illustrated with the crude wood cuts of the days of long ago!)

I wish to publicly thank Mr. Grinnell for my own particular share of the pleasure and profit I am deriving from his labors, and to express the earnest wish that he may be impelled to continue this labor of love until his work shall include the best of all the old records of the westward "Great Trek" of the Anglo-Saxon race.

ORIN BELKNAP.

The Kennel.

A Long Dog that did Not Stay Long.

From the New York Times.

WHEN Louis Allmendinger sent out postal cards a few days ago announcing to his friends that he had just purchased the saloon at Reid and DeKalb avenues, Brooklyn, scores of men who were acquainted with Louis hurried to the place to congratulate him and tell him just how he ought to conduct it. One man appeared with a patented ice grinding machine, which he was anxious to unload on Louis, and another came around with new inventions in the line of beer taps and cork screws. Still another had a device for mixing mint juleps, while a little man with a red beard came around to tell Louis he had a patented egg cracker for milk punches.

There were, besides, many of Allmendinger's friends who suggested things, such as machines for cooling ice, hot air fans, wireless beer kegs, and rubber limes, which latter, it was explained, could be used perpetually in the mixing of gin rickys.

On Wednesday night three men arrived at the saloon dragging a dachshund at the end of a rope. They introduced themselves as Noisy Dan, Hank O'Neill, and Stump McLaughlin. They explained that they had heard that Louis was buying up everything in town to make his place a first-class saloon and told him they came around with the dog because they knew Allmendinger needed one in his business.

"He's built like a stove pipe," said Louis. "Ven. I look at him I must laugh in my own face. Did you had him long?"

"Much longer than he is now," answered Noisy. "He gets shorter as the day grows longer, but the older he grows the longer you have him."

"Den pooty soon he would be too long to shut der door mitout doubling him up," remarked Louis.

"Dat's de beauty of havin' a dog like dat," said Hank. "He'll double like your business in a year."

"When I look at der longness of him," continued the saloonkeeper, "I think mebbe he could eat too much."

"Not at all," answered McLaughlin. "What he swallows to-day don't reach his stomach till the day after to-morrow. He also has the advantage of being in two places at one time."

"Vat is him's name?" inquired Allmendinger.

"Skylight," answered Hank.

"I wouldn't buy a dog mit dot name," remarked Louis.

The three men put their heads together and whispered. Then Hank spoke up, saying:

"After talkin' it over we decided to sell him with the Skylight name for \$5, but without the name for \$3."

"I'll take him mitout der name und call him Prince Hanover," said the saloonkeeper, counting out the \$3. He led the dog behind the bar, and Hank, Noisy and Stump went out. A few minutes later a man poked his head beneath the swinging doors and shouted:

"Here, Skylight! Here, Sky!"

The dachshund made a dash for the door and ran down the street. Allmendinger watched him until he disappeared from sight, and returning to the saloon said sadly:

"Dot's how I mistakened myself. If I had bought dot name mit dot dog I'd had him yet. What?"

New England Beagle Club.

THE New England Beagle Club has sent out the following circular:

The Eleventh Annual Field Trial of the New England Beagle Club will be held on the preserves of the Grafton Country Club, Grafton, Mass., either the week before or the week following the National Trials which are to commence on October 31. The exact date is dependent upon where the National's are run.

Last year the trials were held on these grounds and a great abundance of game was found, which added mate-

rially to the sport, as there were no long and tedious delays between runs, and since the covers, although open, are large, driving of three-quarters to an hour's duration was the rule rather than the exception.

Two hundred feet of airy, dry box stalls afford absolute protection and comfort to the beagles, and man is equally well cared for at the club house.

The club property, consisting of 3,000 acres, is one and one-half miles from the N. Y. N. H. & H. Railroad station at Millbury. Arrangements have already been made for the comfortable transportation of beagles, owners, handlers, and spectators to and from the grounds.

There will be the usual open All-Age classes, as well as the Derby, Pack, and All-Day stakes. Several specials of cups and horns have already been offered, and a most attractive meet is assured.

Good Dog Training.

FROM a personal letter to us, we quote the following: "As the hunting season draws nigher, you may have inquiries about trainers. I want to recommend my friend, W. S. Stevens, Montpelier, Miss. He has done a good deal of training for me and half a dozen other friends, and in every case he has given the very best of satisfaction. He does not go to field trials at all, so that he can give his time entirely to his dogs. He has a splendid bird country, and I know that there is not a more honest and reliable man than Sam Stevens. I am sending him now a young pointer, and later on shall send him two setter puppies I have."

World's Fair Dog Show.

NEW YORK, Aug. 24.—*Editor Forest and Stream:* In view of the fact that it has been publicly stated that I am to be the superintendent of the dog show to be given by the Louisiana Purchase Exposition Company in conjunction with the World's Fair, held at St. Louis, I feel it incumbent upon me to state that such announcement was never authorized by me.

I have not accepted the position described, and do not intend to do so.

A. P. VRENBURGH.

Narragansett Bay Y. R. A.

Week of Open Racing—Aug. 15-20.

THE week of open racing of the Narragansett Bay Y. R. A., which was expected to eclipse the series of last year, was sadly marred by unfavorable weather conditions. The first race of the week was a flat failure, owing to an entire lack of wind; the second day was better, although the breeze was far from enough to provide satisfactory racing, and the race for the last day, that of the Rhode Island Y. C. at Potter's Cove, which, judging by last year's series, would have proved the banner event of the week, was made impossible by an unusually severe storm. The two good regattas of the series were that of the Fall River Y. C. and the Association race off Jamestown, which afforded some racing in several classes as pretty as has been seen in these waters.

First Race—Monday, Aug. 15.

The first regatta of the Association series, which was under the auspices of the Edgewood Y. C., was a complete fizzle. There was nowhere near enough wind to send the boats over the 16-mile course within the five-hour time limit, and within two hours of the start, what little wind there was died almost to a flat calm. The course was about 4 miles to leeward and return, twice over, and nearly all the boats withdrew after completing the first round.

The only two that finished and were awarded prizes were Unique, a little freak sloop of the Lark type, owned in Fall River, and Martha, a small Washington Park B. A. sloop. Among the outside craft entered in this race was the 30ft. sloop Iola, of Osterville, Mass., built by Capt. Dan Crosby, the well-known Cape builder, who is responsible for Mblem, Scatt and other fast local boats. Capt. Crosby was a visitor at the Association week, and sailed on Mblem in several races. The summary:

30ft. Sloops—Start, 2:52.

Iola, M. L. Talbot.....	First Round.	5 47 00
Priscilla, Wood Bros.....		5 47 40

21ft. Sloops—Start, 2:52—Course 8 Miles.	Finish.	Elapsed.
Unique, J. Whitehead.....	5 49 05	2 57 05
Molly II., A. Landen.....	6 20 22	3 28 22

18ft. Sloops—Start, 2:59.		
Martha, W. S. Baxter.....	6 38 22	3 39 22
Terror, W. B. Frost.....	Did not finish.	

30ft. Cats—Start, 3:11.

Elizabeth, W. D. Wood.....	First Round.	5 37 06
Mblem, G. E. Darling.....		5 40 45
Scatt, H. B. Scattergood.....		5 42 14
Wanderer III., H. J. & D. W. Flint.....	Withdrew.	

25ft. Cats—Start, 3:13.		
Ina, N. C. Arnold.....	5 49 10	
Nobska, W. J. Rooks.....	5 47 40	
Mae Hope, D. C. Stranger.....	6 06 55	

21ft. Cats—Start, 3:15.		
Marguerite, J. D. Peck.....	5 50 15	
Ingomar, J. Whitehead.....	6 01 00	

Second Race—Tuesday, Aug. 16.

The second regatta was with the Bristol Y. C., and was sailed in a light breeze that was far from satisfactory, although it allowed most of the boats to finish within the time limit. There were thirty-five starters, including another fast Cape sloop, Eleanor M., Roswell Colt's sloop Hope, once owned by C. Oliver Iselin, and a number of other speedy craft. The winners were Little Rhody (of ocean race fame), Trio, Oriana, Hope, Zella, Mblem, Ina, Marguerite and Julep. The summary:

30ft. Sloops—Start, 1:43.

Little Rhody, C. F. Tillinghast.....	Elapsed.	Corrected.
Eleanor M., T. M. Claffin.....	3 52 03	3 47 48
Priscilla, W. S. Wood.....	4 10 51	4 10 51
	4 13 50	4 12 30

25ft. Sloops—Start, 1:46.		
Flying Fish, H. Ingersoll.....	Sailed wrong course.	
Trio, R. W. Zuill.....	4 58 25	4 58 25
Chi, H. W. Hayes.....		

21ft. Sloops—Start, 1:49.		
Oriana, F. Pardee.....	4 16 25	4 14 39
Mosquito, W. H. Knight.....	Did not finish.	
Graces, S. Witherell.....	5 16 45	5 15 11
Mistral, D. Thurber.....	5 23 02	5 23 02
Molly II., Landen Bros.....	Did not finish.	

18ft. Sloops—Start, 1:52.		
Unique, J. Whitehead.....	Did not finish.	
Terror, W. L. Frost.....	Did not finish.	
Hope, R. C. Colt.....	5 16 45	5 09 45
Martha, W. S. Baxter.....	Did not finish.	

Warwick One-Design Class—15-footers—Start, 1:55.

Zest, F. M. Smith.....	3 58 22	
Zuzu, R. C. Watrous.....	4 05 28	
Zip, W. Aldrich.....	3 53 57	
Zella, E. R. Bancroft.....	3 47 20	
Zike, Merriman Bros.....	Time not taken.	
Zebub, J. Campbell.....	Time not taken.	

30ft. Cats—Start, 2:00.

Mblem, G. E. Darling.....	3 44 18	
Elizabeth, W. D. Wood.....	3 50 58	
Scatt, H. B. Scattergood.....	4 02 40	

25ft. Cats—Start, 2:03.

Nobska, W. J. Rooks.....	3 59 55	3 59 55
Jane E., T. Howarth.....	Did not finish.	
Mae Hope, D. C. Stranger.....	4 42 40	4 39 11
Ina, N. C. Arnold.....	3 58 48	3 58 09

21ft. Cats—Start, 2:06.

Ingomar, J. Whitehead.....	4 17 00	4 11 45
Free Lance, J. Collins.....	Did not finish.	
Marguerite, J. D. Peck.....	4 07 17	4 07 17
Gloria, F. P. Howe.....	Did not finish.	

Launches—Start, 2:20.

Julep, Rogers Case.....	2 57 53	Finish.
Ina.....	3 02 15	
Firefly, J. B. Mills.....	2 58 19	
Ragut, C. Olsen.....	3 05 23	

Third Race—Wednesday, Aug. 17.

A piping breeze favored the third regatta of the series, sailed under the management of the Fall River Y. C., on Wednesday. Everyone of the twenty-two entries finished the course in good time, and the racing in the 30ft. sloop and 30ft. cat classes was some of the best ever seen here. The winners were Iola, Oriana, Unique, Mblem, Nobska and Ingomar.

The summary:

30ft. Sloops—Start, 1:35.

Iola, M. R. Talbot.....	Elapsed.	Corrected.
Eleanor M., M. J. Claffin.....	1 46 35	1 42 35
Priscilla, Wood Bros.....	1 44 35	1 44 35
Little Rhody, C. F. Tillinghast.....	1 49 40	1 45 58
	1 50 10	1 46 02

21ft. Sloops—Start, 1:41.

Oriana, F. Pardee.....	1 54 25	1 51 38
Mistral, D. Thyrber.....	2 02 00	
Trio, R. W. Zuill.....	2 02 10	2 02 10
Molly II., Landen Bros.....	2 04 55	2 03 01

18ft. Sloops—Start, 1:44.

Unique, J. Whitehead.....	1 58 10	1 53 41
Terror, W. L. Frost.....	2 21 45	2 14 46
Martha, W. S. Baxter.....	2 20 45	2 20 45

30ft. Cats—Start, 1:47.

Mblem, G. E. Darling.....	1 47 15	
Elizabeth, W. D. Wood.....	1 47 25	
Scatt, H. B. Scattergood.....	1 48 40	
Stella, A. A. Tuttle.....	1 58 30	

25ft. Cats—Start, 1:50.

Nobska, W. J. Rooks.....	1 50 45	1 50 45
Ina, N. C. Arnold.....	1 52 15	1 51 39
Mae Hope, D. C. Stranger.....	1 57 50	1 54 30
Olivette, J. W. Leach.....	2 01 45	1 57 02
Jane E., T. Howarth.....	2 00 45	1 57 45

21ft. Cats—Start, 1:53.

Ingomar, J. Whitehead.....	1 53 20	1 50 22
Orme, A. Deveau.....	2 03 50	2 03 50

Fourth Race—Thursday, Aug. 18.

Another very successful regatta was sailed off Jamestown, Thursday, and several of the skippers declared that it was the best racing they had ever engaged in. This was an Association race, not under club management, but the details were attended to by Fleet Captain Benjamin Peckham and Harvey J. Flint, of the Edgewood Y. C., who acted as regatta committee. The course was from the mark off the Conanicut Y. C. house at Jamestown, to the buoy off the south end of Goat Island in Newport Harbor and return, three times over, a distance of 12 miles, and as the wind was N.W., this gave a good leeward and windward course. It was a rattling good breeze and the result was some fine racing, the finish of the 30ft. sloops and 30ft. cats being particularly close and exciting. Little Rhody and Elizabeth won in these classes, and the other winners were Micaboo, Grace, Terror, Wenonah, and Mae Hope. The wind was puffy at times, and there were several accidents. Unique carried away her mast, and Oriana lost her boom, by breaking against a stay while gybing. The summary:

30ft. Sloops—Start, 2:12.

Little Rhody.....	Elapsed.	Corrected.
Priscilla.....	2 05 46	1 59 44
Iola.....	2 05 30	2 00 09
Eleanor M.....	2 05 52	2 00 10
	2 00 40	2 00 40

25ft. Sloops—Start, 2:14.

Micaboo, W. R. Tillinghast.....	2 14 28	
Rowdy.....	2 26 05	
Skraeling, H. Willoughby.....	Disabled.	

21ft. Sloops—Start, 2:16.

Grace, E. Catlin.....	1 42 50	
Oriana.....	Disabled.	

18ft. Sloops—Start, 2:18.

Terror.....	2 06 08	1 58 10
Martha.....	2 03 57	2 03 57
Unique.....	Disabled.	

15ft. Sloops—Start, 2:20.

Wenonah, H. Wetherell.....	1 40 50	
----------------------------	---------	--

30ft. Cats—Start, 2:24.

Elizabeth.....	2 07 59	
Mblem.....	2 09 20	
Scatt.....	2 09 25	

25ft. Cats—Start, 2:26.

Mae Hope.....	2 27 40	2 24 31
Ina.....	2 31 00	2 31 00
Ingomar.....	Did not finish.	

The fifth and last race of the series was scheduled to be sailed under the management of the Rhode Island Y. C., at Potter's Cove, Saturday afternoon, but the wild S.E. storm that prevailed all day rendered this an impossibility, so that the week closed rather ingloriously, although it is possible that the Rhode Island Y. C. will arrange an open regatta for a later date.

F. H. Young.

Duxbury Y. C.

Duxbury, Mass.—Friday, Aug. 26.

The first of the Y. R. A. open races of the Duxbury Y. C. was sailed on Friday, Aug. 26, in a puffy W. breeze. Medicor got the start in the 22-footers and led to the first mark, but Peri II. passed her on the second leg, and led to the finish. Mirage II. got the start in the 18-footers, but Again went out ahead soon after and led to the finish. Vera II. took a sailover in the 15-footers. Pocahontas lost to Marvel on time allowance in the first handicap class. Challenge won easily in the second handicap class. The summary:

Class E—22-footers.

Peri II., George Lee.....	Elapsed.	
Medicor, H. H. White.....	1 24 10	1 24 10
Warrior, S. C. Winsor.....	1 27 15	1 28 10

Manchester and Beverly Y. C. 18-footers—Match Race.

Provincetown, Mass.—Monday, Aug. 22.
EARLY last spring arrangements were made between the owners of a one-design class of 18-footers of the Manchester Y. C. built under the restrictions of the Massachusetts Eighteen Foot Knockabout Association, and the owners of a new class of 18-footers owned by members of the Beverly Y. C. The Massachusetts Bay boats were designed by Mr. E. A. Boardman, and the Buzzard's Bay boats by Mr. N. G. Herreshoff. The Massachusetts Bay boats are of the keel type, while the Buzzard's Bay boats are centerboards, having more beam and more sail area. The conditions of agreement arranged for three series, the club winning two out of three races in a series to be the winner of the series, and the club winning two out of three series to be the winner of the match, a series of races to be sailed each season.
It was arranged to have the first series sailed on neutral ground, and so the boats, three on a side, met at Provincetown on Monday, Aug. 22, for the first race. There was a stiff breeze blowing, which caused five out of the six boats to be more or less disabled before they could be sent away. One boat of the Beverly Y. C. was withdrawn, which necessitated the withdrawal of a Manchester boat. The breaking down of Boo Hoo of the Manchester Y. C., soon after the start, caused the race to be a tie, and the contest went for nothing, it being specified that all ties should be sailed off. Enough was shown, however, to prove the superiority of the Manchester boats in a strong breeze and a lump of a sea.

Tuesday, Aug. 23.
To hasten matters, it was arranged to have two races on Tuesday, the first to be triangular and the second to be windward or leeward and return. Only four boats competed in the first race, which was all Manchester. The wind was strong N.E. and the sea lively. The Manchester boats had the Beverly boats covered at the start, and Arrow and Fudge led Jap and Wizard all around the course.
In the afternoon there was not quite so much wind, and the sea was smoother. Three boats competed on each side, and the six were all bunched at the starting line. The same team work which counted for Manchester in the morning was again evident after the start of this race, when each Manchester boat had a Beverly boat under her lee. Boo Hoo and Arrow were easily first and second, while Fudge was fifth, giving the Manchester Y. C. two races and the series. The next series will be sailed at Manchester. The summary:

Morning Race.		
Arrow, E. A. Boardman (M).....	Elapsed.	
Fudge, C. H. W. Foster (B).....	0 55 55

Southern Y. C.

Lake Pontchartrain, New Orleans, La.—Saturday, Aug. 20.
THE Rawlins cup, for all model cabin sloops over 20-rating, the Tranchine cup, for all open sloops, the Olivera cup, for all model catboats, and a special prize for one-design knockabouts were contested for over the 5-mile triangular course of the S. Y. C. on Aug. 20. The day was inclined to be stormy, and the wind was decidedly variable, veering from S.W. to E. and back again in wobbly fashion a number of times at the light velocity of about 6 knots from the starting gun until the first half of the 10 miles had been run by the larger yachts, when it came in quick order out of the W.S.W. at an 18-knot clip, the general condition being squally.
The entries for the cabin sloop event brought out Chewink III., Calypso, Invader and Nydia. The first two, imported Northern rivals, had exactly the same measurement, and both had to allow Invader 2m. 30s., and Nydia 4m. 10s. A commendable incident in connection with the race of these boats was the special preparation which had been given Invader for the occasion. This is one of the new boats of the season, and she was built locally from a design by Messrs. Burgess & Packard, of Boston. Ex-Commodore J. Walton Glenn, one of the owners of Chewink III., took Invader in hand and prepared her for the race for her owners, lowering her cabin house, having her black-leaded, and otherwise bestowing his past-master attention on the craft, until her condition apparently approximated closely to that of Chewink III. and Calypso, which have been hauled out and rubbed down for all their races. Commodore Glenn handled Invader in the race, and he did splendidly with her until she was crippled by the head stay carrying away. He pluckily kept on, making repairs meanwhile, and finished in good order, the boat sailing in the third best time around the course. Nydia's owner realized that he hardly had a chance against the larger boats

and went in merely to fill-in, so that with Invader at a disadvantage, the race really resolved itself into a splendid duel between Calypso and Chewink, the latter winning by 3s. Calypso started 19s. before Chewink, and finishing just 16s. in the lead. On the first round Chewink went to the fore and led by several minutes. Later Calypso was enabled to overhaul and pass her on the wind, and she held a short lead to the home stake, not, however, far enough ahead to win the race.
Virgin won the cup for open sloops, Chiliktah that for catboats and Sinner carried off the special compass and binnacle prize for the one-design knockabouts.
The most pleasant incident and a special feature of the afternoon was the presentation to ex-Commodore Emile J. O'Brien of a handsome watch, fob and charm, a testimonial from the commodores of the six clubs forming the Southern Gulf Coast Yachting Association, the president of the Association, Commodore John A. Rawlins, making an able presentation speech and acting as toastmaster for the occasion. Commodore O'Brien is looked upon as the father of later day yachting in the south, he having started a revival of the sport about 1879, and four years ago he was largely instrumental in organizing the Association which is so splendidly swaying the destinies of the noble pastime in this section. He is chairman of the Regatta Committee of the Southern Y. C. and officiating judge for the entire round of Association regattas, and during more than twenty-five years he has not missed a single season, either as an active participant in the contests, or officiating in some capacity looking to the sport and enjoyment of others. Yachtsmen of the south cannot too highly honor and compliment this beloved guide, philosopher and friend.

The summary of the races as above outlined:

Atlantic Y. C.

Sca Gate, L. I.—Saturday, Aug. 20.
TWENTY boats started in the open regatta given by the Atlantic Y. C. on the afternoon of Saturday, Aug. 20, over courses in the Lower Bay. It was the fourth race to count on the Association championship of 1904. The winners were Red Wing, Era, Lizana, Ogeemah, Beta, and Colleen. The race was sailed in a strong W.S.W. breeze. Double reefs were in order on most of the starters, and those which had to journey out of Gravesend Bay across the ship channel, met a heavy sea, which stopped all headway at times, and gave them a very wet time of it. The event was marred by a misunderstanding in the starting signals, the yachts being sent away by the system in general use at the Sea Gate organization, and not by the one under which the three other championship events of this season have been conducted.
Starters in Classes M and N went out to West Bank Light and return, doing the distance twice, making a total of 12 nautical miles. It was windward work going out and a spinnaker run home to Sea Gate. In the spirited weather conditions Red Wing showed superiority over Vivian II. and Maydic, and won out by a good margin. Era also proved herself a better sea boat than Bagheera, winning handily. The other craft in the race twice covered the usual Association course, making an aggregate distance of 7 nautical miles. It was a reach to Fort Hamilton, another reach to the Marine and Field Club, a close-hauled leg to the stakeboat off Ulmer Park, and windward work home.
The misunderstanding of the starting signals caused confusion, especially in Class Q. Some of the craft waited for the Association time of sending them off, and consequently got away considerably later than the gun under the Atlantic Y. C. system. Among these were Ogeemah, Miss Judy, Karma and Cicada. The former, however, sailed very fast, and was a winner in her class, despite the handicap at the beginning. Lizana scored a clever victory over Naiad in Class P, being sailed in expert manner from start to finish. Red Wing broke the jaws of her gaff, but was not obliged to withdraw from the contest. Maydic, Cicada and the catboat Rascal did not finish the race. The summaries follow:

Sloops—Class M—Start, 3:00.

Corinthian Y. C.

Marblehead, Mass.—Saturday, Aug. 27.
THE sixth championship race of the Corinthian Y. C. was sailed off Marblehead on Saturday, Aug. 27, in a light S.E. breeze. In the 18-footers, Fudge took the lead soon after the start and held it all over the course. The wins in the handicap classes were all easy, going to Cossack, Sally VII. and Khalifa respectively. The summary:

18ft. Knockabouts.

Plymouth Y. C.

Plymouth, Mass.—Thursday, Aug. 25.
THE annual Y. R. A. open race of the Plymouth Y. C. was sailed in a reefing S.W. breeze. Medric got the start in the 22-footers, and led to the first mark, when Peri II. went out ahead and led to the finish. The 18-footers were well bunched until the windward leg, when Hayseed went out ahead, with Menace second. Soon after the windward mark had been turned, Hayseed's mast went by the board, and Menace led to the finish. Pocahontas was an easy winner in the first handicap class. Challenge finished first in the second handicap class, but lost to Alice on time allowance. The summary:

Class E—22-footers.

Huguenot Y. C.

New Rochelle, L. I. Sound—Saturday, Aug. 20.
BOISTEROUS weather conditions rather spoiled the tenth annual regatta of the Huguenot Y. C., sailed on Saturday, Aug. 20. Nearly thirty boats were entered for the event, and but six actually started; of this number only three finished.
The programme provided for nine classes, but only two filled, the raceabout class and the 25ft. class.
None of the club's regular regatta committee were present, but Messrs. Harry C. Ward, G. W. Kean and J. E. Sanborn kindly consented to act, and the race was admirably handled.
The course was from the starting line off the eastern end of Whortleberry Island; thence to red and black buoy off north-easterly end of Execution Rock, bearing S.E. by E.; thence to red spar buoy off southwesterly end of Hen and Chickens Reef, bearing N.; thence to mark boat at starting line, bearing S.W. This course was covered three times, making a total distance of 11 1/4 miles. There was a nasty sea on, and with the strong S.W. breeze, the boats had a reach to the first mark, a beat to the second, and then another reach.
The raceabouts were sent away first, at 1:40. Tartan was first off, followed by Hobo and The Kid. Tartan drew away from Hobo, and the latter boat dropped The Kid, so that at the end of the first round Tartan was 1m. 30s. in the lead of Hobo and Hobo was 2m. ahead of The Kid. Hobo cut down Tartan's lead somewhat on the second round, but the former was never in danger of losing the race. On the third round Tartan drew ahead again, and finished a winner. The Kid withdrew.
The 25-footers were started at 1:45. Wintje was first away, followed by Heron and Reverie. At the end of the first round Wintje led Heron by 2s. Reverie split her jib and withdrew. On the second round Heron carried away her starboard spreader, and in order to save her mast, Mr. P. Le Boutillier, the boat's owner, was forced to withdraw. Wintje finished alone. The summary:

Raceabouts—Start, 1:40—Course, 11 1/4 Knots.		
	Finish.	Elapsed.
Tartan, A. H. Pirie.....	3 20 45	1 40 45
Hobo, Frenor L. Park.....	3 21 05	1 41 05
The Kid, Oliver Harriman.....	Did not finish.	
25ft. Sloops—Start, 1:45—Course, 11 1/4 Knots.		
Wintje, W. H. Clark.....	3 44 15	1 59 15
Heron, Philip Le Boutillier.....	Disabled.	
Reverie, H. C. Southwick.....	Disabled.	

Seawanhaka Corinthian Y. C.

Oyster Bay, L. I. Sound—Saturday, Aug. 27.
ELEVEN boats started in two classes in the club race held on Saturday, Aug. 27. The raceabouts were sent away at 3:10, and of the four starters, Nathalie had rather the best of the race from the beginning, and won by 1m. 38s. from Merrywing.
The seven contenders in the 15ft. class got away at 3:15. Cayenne went into the lead at the start and was never headed. Chipmunk was second, finishing 1m. after Cayenne. Sabrina was third. The summary:

Raceabouts—Start, 3:10.		
Nathalie, F. G. Stewart.....	Finish.	
Merrywing, H. M. Crane.....	5 36 02	
Jolly Roger, T. B. Bleeker.....	5 37 40	
Scamp, J. R. Maxwell, Jr.....	5 40 55	
	5 43 57

Brownie, R. W. Gibson.....	6 24 15	

Mr. Thos. S. Young has offered a prize for a ladies' race in the 15ft. class belonging to members of the S. C. Y. C., the course to be in the inner harbor at Oyster Bay, and each boat to be sailed by a lady. Preparatory, 11 A. M.; start, 11:05. Chart of the course will be ready later. The club offers a second prize if four boats start, and a third prize if seven boats start, with the intention of completing the course.
The race for the Robert Center memorial cups will be sailed on Monday, Sept. 5, open to raceabouts and 15-footers belonging to members of the S. C. Y. C. Preparatory 2:15. Start: Raceabouts, 2:20; 15-footers, 2:25.

Boston Y. C.

Boston, Mass.—Saturday, Aug. 27.
A SPECIAL club race of the Boston Y. C. was sailed off the Hull station of the club on Saturday, Aug. 27 in a light S.E. breeze. In the first handicap class L'Aiglon led, but lost to Mildred II. on corrected time. Mildred won easily in the second handicap class and Dorchin took an easy win in the 18-footers. The summary:

Scapegoat, W. P. Keyes.....	2 38 29	2 38 29

Brenton's Reef Cup.

Brenton's Reef Lightship to Sandy Hook Lightship and Return, Aug. 22 to 24.

After about the slowest contest ever sailed for the Brenton's Reef Cup Mr. Wilson Marshall's three-masted schooner-rigged auxiliary Atlantic won this historic, if seldom raced-for, piece of plate last week, over a 264-mile ocean course, from Brenton's Reef Lightship to Sandy Hook Lightship and return.

Incidentally Atlantic defeated the auxiliary Resolute by over nine hours and the Atlantic record-holder Endymion by nearly seventeen hours. The race was sailed under rather trying conditions, for while the yachts had a good breeze to start with on Monday morning, Aug. 22, which was increased to half a gale at Sandy Hook, the wind gradually dropped to a whisper off the Long Island coast on the return trip, and the yachts had hard work to finish at all, Endymion being becalmed for 14 hours.

While it was originally intended to start the yachts on Saturday, Aug. 20, the race was postponed to Monday morning on account of the S. E. gale and heavy sea, and as the New York Y. C. fleet had disbanded there was only a handful of spectators out to see the starters on Monday morning.

They included the three-masted auxiliary Atlantic, owned by Mr. Wilson Marshall. She is 187ft. over all, 135ft. on the waterline, 31ft. beam and 15ft. draft. She was designed by Messrs. Gardner and Cox, and built by Townsend & Downey at Shooter's Island last year, and her tonnage registers 303 tons gross and 206 tons net. Atlantic outside of a cruise to the West Indies last year won nearly all of the squadron runs in the auxiliary class on the recent New York Y. C. cruise, and was a decided favorite among the yachtsmen.

Resolute, owned by Mr. James W. Masury, was designed as an auxiliary schooner by Mr. A. Cary Smith and fitted with a four-cylinder gas engine, but recently her propeller was taken off. She is built of steel and measures 124ft. over all, 90ft. on the waterline, 23ft. 5in. beam and 14ft. 2in. draft, while her tonnage is 128 gross tons and 110 tons net.

Endymion is a keel schooner, designed by Mr. Clinton H. Crane, of Messrs. Tams, Lemoine & Crane, and holds Atlantic record, having crossed, from Sandy Hook to the Needles, during the summer of 1900, in 13 days 20 hours, when she logged 304 knots in one day. She was built for the late George Lord Day, but was afterward purchased by Mr. George Lander, Jr., the present commodore of the Indian Harbor Y. C. She measures 137ft. over all, 100ft. on the waterline, 24ft. 4in. beam and 14ft. draft, while her tonnage registers 144 tons gross and 116 tons net.

While there was little wind at Newport on the morning of Aug. 22 it increased considerably in strength before the yachts arrived at Brenton's Reef Lightship, and was blowing a fine whole-sail breeze from the S.S.W. when the yachts were started at 10:45.

Resolute was the first away at 10:45:11, carrying a working staysail and small jibtopsail over her lower canvas. Endymion followed under about the same canvas at 10:46:13, while Atlantic, which boat took plenty of time, was last at 10:50:10, breaking out two staysails as she went over the line.

Atlantic soon began to outpoint and outfoot her rivals, and passed Endymion off Point Judith in less than an hour after the start, and then drew by Resolute shortly after 1 o'clock, just off the bell buoy at Block Island. Atlantic was never headed afterward. At 7:14 P. M. Shinnecock Light was made out, and the wind increased considerably so that the Highland Light loomed up in the W.N.W. at 2:30 on Tuesday morning. At 3:32 A. M. Sandy Hook Lightship was abeam with none of the other boats in sight. Then came a change of wind from the N.E. which increased in force until it was necessary to have a double reef in Atlantic's spanker and clew up the topsails. At 4:38 A. M. Atlantic, headed E., passed Resolute westward bound, and at 7:11 A. M. the leader, which boat was fairly flying along at a 12-knot gait, had Fire Island abeam and passed Shinnecock Light just before noon.

The wind began to die out here and reefs were shaken, and by 1 o'clock Atlantic was almost becalmed. It was little better than a drift for seven hours, but at 9 o'clock in the evening Block Island Light was made out due N. about three miles. At 2:20 Wednesday morning Point Judith was sighted. Then the breeze freshened and hauled to the N.W.¾W., and Atlantic finished at 3:29:26 on Wednesday morning. Resolute, which was the second boat to finish, arrived at 12:43:04, or shortly after noon, being beaten 9h. 18m. 32s. Endymion was not reported until 7:56 Wednesday evening, or 16h. 30m. 26s. astern of the leader.

	Start A. M.	Finish	Elapsed
	Aug. 22.	Aug. 24.	Time.
Atlantic	10 50 05	3 29 26 A. M.	40 39 21
Resolute	10 45 11	12 43 04 P. M.	49 57 53
Endymion	10 46 13	7 56 00 P. M.	57 09 47

The Brenton's Reef cup, which is one of the most valued trophies in the possession of the New York Y. C., was originally presented to the club by ex-Commodore James Gordon Bennett in March, 1871. The first race was sailed on July 25, 1872, starting from Sandy Hook, when J. Malcolm Forbes' 240-ton schooner Rambler defeated Jacob Voorhis, Jr.'s, 175-ton schooner Madeline, which boat put into New London and did not finish.

The same boats raced again on Sept. 19, 1873, starting from Brenton's Reef Lightship, and the Rambler was again the winner, covering the course in 43h. 25m. 32s., while the Madeline took 47h. 18m. 41s.

In the third race, from Sandy Hook Lightship, July 26, 1876, the starters included S. J. Colgate's 191-ton Idler; 170-ton America, owned by Gen. B. F. Butler; James Stillman's 197-ton Wanderer, William Voorhis, Jr.'s, 211-ton Tidal Wave and the 138-ton Canadian cup challenger, Countess of Dufferin, owned by Major C. Gifford. The race was sailed in a strong wind, and the Idler won in 32h. 18m. 16s., while the Wanderer took 34h. 28m. 51s. The others were not timed at the finish.

There was no racing for the cup for nine years, when Sir Richard Sutton's unsuccessful cup-hunting cutter Genesta challenged for the cup in the fall of 1885. The start was made from Sandy Hook Lightship, and the Genesta easily defeated Caldwell H. Colt's schooner Dauntless, covering the course in 48h. 19m. 40s.

The cup was taken to England, and in 1893 C. R. Packer, then the owner of the Genesta, resigned the cup to the Britannia, owned by the Prince of Wales, now King Edward. Royal Phelps Carroll's Navahoe then challenged for the cup. The race was started on Sept. 14, 1893, and the course was from Needles Light-house to Cherbourg Breakwater and return. The yachts sailed a record-breaking race, averaging close to 12 knots per hour, and, while the Britannia finished 3s. ahead, the race was given to the Navahoe on protest, as the finish line had been moved. Since then there have been no races for the cup until last week's contest, which was won by Atlantic.

DUNCAN CURRY.

Bensonhurst Y. C.

Bensonhurst, L. I.—Saturday, Aug. 27.

The Bensonhurst Y. C. held an interesting handicap regatta on the afternoon of Saturday, Aug. 27, over courses in the Lower Bay. Twenty-nine boats started in four divisions. The winners were Smoke, Trouble, Kelpie and Martha M. Handicaps were based on the average elapsed times made by the different boats in races of the year. Commodore Arthur C. Bellows offered prizes for the winner of each division. The handicaps under which the craft competed were as follows:

Classes M, N and P—Maydic, allowed Bobtail, 2m.; Vivian II., 2m.; Bagheera, 5m.; Era, 6m.; Red Wing, 6m.; Naiad, 12m.; Smoke, 16m.; Dorothea, 18m.; Indian, 20m.; Caribou, 20m. Class Q—Miss Judy allowed Mary 1m. 30s.; Ogeemah, 3m. 30s.; Wraith, 4m.; Trouble, 4m.; Careless, 5m.

Classes RR and Marine and Field Special—Kelpie allowed Beta 1m.; Esperance, 2m.; Gamma, 3m.; Trio, 7m.

Catboats—Classes V and W—Colleen allowed Martha M. 1m.; Rascal, 2m.; Boozie, 2m.; Orient, 7m.; Rosalie, 8m.; Beth, 8m.

The event was started in a light S.W. breeze, which at the beginning was hardly strong enough to send the boats over the line. Before the finish, however, it increased enough to make the end of the race a spirited one. Boats in Classes M, N and P went once from the start off Ulmer Park out to the bell buoy at the entrance to Swash Channel, thence to Craven Shoal and home, a distance of 9 nautical miles. The first leg was one of windward work, and the next a broad reach. The short journey from Craven Shoal home proved a run in which spinnakers were carried.

The other starters covered the regular Association course, leaving all marks to port. They had no windward sailing. It was a reach to the Marine and Field Club, another reach to Fort Hamilton, a close-hauled board to the Atlantic Y. C. and a run home. The journey was covered twice, aggregating 8 nautical miles.

The finish of the boats going the outside course was a fine one, the first four being very close to one another. Smoke, winner of the division, was eighth to end of the race, beating Bagheera on corrected time by only 16s. Of the smaller craft Trouble won from Ogeemah by 49s., Kelpie beat Esperance 5m. 45s. and Martha M. was far in the lead of Rascal. Caribou was disqualified for fouling the stakeboat at the start. The summary:

Sloops—Classes M, N and P—Start, 3:05.	Finish.	Elapsed.	Corrected.
Smoke, L. H. Dyer	5 40 15	2 35 15	2 19 15
Bagheera, Hendon Chubb	5 29 31	2 24 31	2 19 34

Rhode Island Y. C.

Narragansett Bay, R. I.—Saturday, Aug. 27.

The eighteenth annual open regatta of the Rhode Island Y. C. was sailed off Potter's Cove, Saturday afternoon, Aug. 27, in a moderate S.W. breeze that afforded some fairly interesting sport. The event was also the last race in the Narragansett Bay Y. R. A. series, postponed on account of the storm from the previous Saturday. There were twenty-two entries arranged in eight classes. The winners were the sloops Little Rhody, Micaboo, Oriana, Unique and Tyke, the cat Mblem and the launch Neon.

There was particular interest in the special classes for Newport 30-footers and the Warwick Neck one-design 15-footers. Only two of the 30-footers were entered, and these started what promised to be a close and exciting race, but both followed too close inshore along Prudence Island and grounded on North Point, about 15 minutes after the start. G. Widener's Eleanor got off in a short time, and sailed the first round of the course. Breeze, owned by W. G. Roelker, Jr., however, remained hard and fast for more than an hour. Eleanor did not cross the line at the finish of the first round, and while waiting for a decision as to sailing the second round according to schedule, fouled the committee boat. The committee suggested a new start, and a sail once over the course. This was agreed to and carried out by Breeze, but Eleanor protested, claiming the race on the first round, and withdrew. The committee were in a quandary, not being able to give the prize to Breeze under the peculiar circumstances, and in like manner being unwilling to give Eleanor the decision, as the latter did not complete the course, and in any event would have been disqualified for the foul that was made. The trophy is a \$100 cup offered by former Commodore A. E. Austin, in accordance with his annual custom, and the committee concluded to refer the vexatious question to the donor of the cup for decision. The only equitable way seemed to be to hold a special race for the trophy later.

Little Rhody administered a sound drubbing to her old rival, Priscilla, finishing more than 8m. ahead, notwithstanding that she had to assume more than two feet above her measurement in order to race in Priscilla's class. The 25-footer Micaboo gave Flying Fish an even more pronounced defeat. In the 21ft. class Oriana finished a little over a minute, corrected time, ahead of Wenonah, which took second prize. In the 15ft. class the scow Unique had no trouble in beating out Martha and Terror by more than 20m., and the little Terror captured second prize. The Warwick Neck one-design class put up a lively little race, Tyke defeating Zilla by 1m. 35s., while a third prize went to Zu Zu. The two 30ft. cats also had a close race, Mblem leading throughout, and finishing a little over a minute ahead of Elizabeth. Only two launches were entered, and N. G. Herreshoff, Jr., in Neon, won out, the other launch, Ragna, only covering the course once, through some misunderstanding.

The course was a triangular one, sailed twice over by the larger boats, a total distance of 16 miles, while the smaller craft sailed the course once. The race was in charge of the club regatta committee, consisting of F. S. Nock, Dr. H. B. Potter, B. L. Barnes, C. H. Mathewson and H. A. Pike.

The summary:

Special Class—Newport 30-footers, for Austin Cup—Course 16 Miles—Start, 2:10.

	Elapsed.	Corrected.
Eleanor, G. Widener	Did not finish.	
Breeze, W. G. Roelker, Jr.	Did not finish.	

30ft. Sloops—Course 16 Miles—Start, 2:14.	Elapsed.	Corrected.
Little Rhody, C. F. Tillinghast	3 40 15	3 39 21
Priscilla, Wood Bros.	3 48 27	3 48 27

25ft. Class Sloops—Course 16 Miles—Start, 2:16.	Elapsed.	Corrected.
Micaboo, W. R. Tillinghast	3 53 53	3 53 53
Flying Fish, C. D. Ingersoll	4 06 56	4 02 05

21ft. Sloops—Course, 8 Miles—Start, 2:18.	Elapsed.	Corrected.
Oriana, F. Pardee	2 03 30	2 03 30
Wenonah, H. Wetherell	2 08 32	2 04 43
Mistral (yawl), D. Thurber	2 13 35	2 10 00
Dazzler, C. D. Reynolds	2 19 30	2 19 30

15ft. Sloops—Course 8 Miles—Start, 2:20.	Elapsed.	Corrected.
Unique, J. Whitehead	2 09 48	2 06 16
Terror, W. B. Frost	2 32 00	2 26 41
Martha, W. S. Baxter	2 29 57	2 29 57

Warwick Neck One-Design Class—Course, 8 Miles—Start, 2:22.	Elapsed.	Corrected.
Tyke, Merriman Bros.	2 21 00	2 21 00
Zilla, E. R. Bancroft	2 22 35	2 22 35
Zu Zu, R. C. Watrous	2 26 30	2 26 30
Zest, F. M. Smith	2 28 40	2 28 40
Zip, W. W. Aldrich	2 29 20	2 29 20

30ft. Cats—Course 16 Miles—Start, 2:26.	Elapsed.	Corrected.
Mblem, G. E. Darling	3 38 08	3 38 08
Elizabeth, W. D. Wood	3 39 22	3 39 22

21ft. Launches—Course 8 Miles—Start, 2:45.	Elapsed.	Corrected.
Neon, N. G. Herreshoff, Jr.	0 55 54	0 55 54
Ragna, C. F. Olsen	Did not finish.	

F. H. YOUNG.

Moriches Y. C.

East Moriches, L. I.—Wednesday, Aug. 17.

TWELVE boats started in the women's race of the Moriches Y. C. held on Wednesday, Aug. 17. There was a two-reef breeze from the S.W., and all the starters finished the 8-mile course in good time. All the boats were sailed by women.

Naiad finished first, but lost on corrected time. Lorna won, Zim was second and Brunhilde was third. The summary:

	Elapsed.	Corrected.
Naiad	55 54	55 54
Sappho	1 00 50	57 47
Sybil	1 00 20	56 50
Esther	1 00 28	55 23
Dannie D.	1 00 40	55 03
Coquette	1 02 15	55 39
Brunhilde	58 25	51 37
Hironde	1 00 56	53 56
Lorna	58 02	50 53
Enigma	1 01 40	53 12
Zim	1 00 41	51 27
Briesies	1 01 50	55 13

Jamaica Bay Y. C.

Rockaway Beach, L. I.—Sunday, Aug. 21.

THE Jamaica Bay Y. C. held an open race on Sunday, Aug. 21. There were ten starters in the five classes. The winners were Baby Roger, Diana, Pauline B., Boozie and Charlie D. The gale of Saturday disabled a number of the boats entered, so the list of starters was rather smaller than was expected.

At 2 o'clock the preparatory was given. The sloops and cabin cats were not ready, so the open cats, which had to go twice around a shorter course, were sent off in advance. The course for sloops and cabin cats was from a mark off the clubhouse to the black spar buoy off Barren Island, to a stake boat in Broad Channel, thence to the starting line, once around. The wind at the start was N. by W. and gave the open cats, which started first, a reach around the course. The sloops and cabin cats had a reach over the first leg and a half of the second, then a beat to the second mark and a run home. The summary:

Class E—Sloops.	Start.	Finish.	Elapsed.
Baby Roger	3 30 00	6 02 20	2 32 20
Kismet	3 30 00	Withdrew.	

Class H—Cabin Cats.	Start.	Finish.	Elapsed.
Diana	3 30 00	4 50 47	1 20 47
Lizzie Green	3 30 00	4 58 19	1 28 19

Class K—Open Cats.	Start.	Finish.	Elapsed.
Rival	2 18 00	4 49 15	2 31 15
Pauline B.	2 18 00	4 38 16	2 20 16

Class L—Open Cats.	Start.	Finish.	Elapsed.
Doctor	2 20 00	5 11 46	2 51 46
Boozie	2 20 00	4 57 37	2 37 37

Class M—Open Cats.	Start.	Finish.	Elapsed.
Charley B.	2 22 00	4 49 33	2 27 33
Alert	2 22 00	5 03 30	2 41 30

Atlantic Y. C.

Sea Gate, L. I., Thursday, Aug. 25.

Ten craft started in the fourth race for the Havens' challenge trophy for classes M and Under, which was sailed over courses in Gravesend Bay on the afternoon of Thursday, Aug. 25. There was a strong breeze blowing and a choppy sea. In these conditions the Bar Harbor 30-footer Red Wing was very much at home and won out easily, defeating W. H. Child's Maydic, scratch boat, by 1m. 42s. elapsed time and 3m. 50s. corrected time. Era, defender of the trophy, was third boat, and Bobtail, challenger, fourth, to the end of the journey. Vivian II. was disabled just before the finish, when making a fine fight with Red Wing for first place. Bagheera, Lizanna, Trouble and the yawl Kate withdrew.

The event was started at 3 o'clock P. M. in a S. breeze. The course led to a stakeboat off Ulmer Park, thence to a mark off Fort Hamilton and home to the start off Sea Gate. The first two legs were reaches and the last to windward. The journey was sailed three times, aggregating 11 nautical miles. Under the conditions governing the Havens cup, a craft winning three contests in any one season secures permanent possession of the trophy. To date Bobtail has won two races, while Era and Red Wing each have a single contest to their credit. Vivian II. has challenged for the trophy. The summary:

Sloops—Classes M and Under—Start, 3:00.	Finish.	Elapsed.	Corrected.
Red Wing, J. B. O'Donohue	4 50 50	1 50 50	1 48 42
Maydic, W. H. Childs	4 52 32	1 52 32	1 52 32
Era, E. H. M. Roehr	5 02 26	2 02 26	1 55 59
Bobtail, E. F. Luckenbach	5 03 23	2 03 23	1 37 24
Smoke, L. H. Dyer	5 29 54	2 29 54	2 17 33
Vivian II., S. E. Vernon	Disabled.		
Lizanna, D. S. Wylie	Disabled.		
Bagheera, Hendon Chubb	Did not finish.		
Trouble, W. A. Barstow	Did not finish.		
Kate (yawl), J. S. Negus	Did not finish.		

New Rochelle Y. C.

New Rochelle, Long Island Sound—Saturday, Aug. 27.

THE club race of the New Rochelle Y. C., held on Saturday, Aug. 27, proved to be a very satisfactory event. There were 18 starters, and all but two of the boats finished. The winners were Bubble, Alga, Sayonara and Joke. Firefly won a special trophy, offered for the boat making the fastest elapsed time over the course.

The wind was light from the S.W. The starters in the sloop and yawl classes covered a 4½-mile course twice, while the catboats sailed over the triangle once. The summary:

Sloop Class—Start, 3:05—Course, 9 Miles.	Finish.	Elapsed.
Firefly, G. P. Granbery	5 09 10	5 01 04
Wanda, Mr. Toll	5 23 08	5 19 00
Laddie Boy, G. H. Patterson, Jr.	Did not finish.	
Ethel, Dr. Frantz	5 28 00	5 14 00
Clutha, J. L. Mitchell	6 00 40	5 35 37
Dod, D. Ed. Dealy	6 00 20	5 37 17
Bubble, H. M. Lloyd	5 21 45	4 59 36
Sibyl, H. T. Noyes	Did not finish.	

New Rochelle One-Design Class—Start, 3:05—Course 9 Miles.	Finish.	Elapsed.
Acc, R. N. Bavier	5 16 00	5 16 00
Alga, J. D. Sparkman	5 14 50	5 14 50

Yawl Class—Start, 3:10—Course 9 Miles.	Finish.	Elapsed.
Fleetwing, Charles Fletcher	5 39 43	5 39 43
Sayonara, J. P. Donovan	5 41 43	5 29 34

ANOTHER AMERICA'S CUP CHALLENGE?

SIR THOMAS LIPTON has again been in touch with Mr. George L. Watson, the Scotch designer, and recently made a visit to the Clyde. It is only natural that these facts should offer foundation for the rumor that he is again to challenge for the America's Cup.

Of the three challengers Sir Thomas sent out to the States, the Watson-designed boat, Shamrock II., made by far the best showing. This craft was practically Columbia's equal. Watson can do better, and would have to do very much better in order to turn out a boat that would in any way equal Reliance. If a challenge is accepted under the new rule of measurement, the designers on both sides will have to work along decidedly new lines, and much of the experience gained from the older boats will not be available.

The English designers are accustomed to turning out compact craft of the type which it is believed the new rule will produce, and for this reason alone they will be less handicapped than ever before.

The present season has not been an active one, and as races for the America's Cup rather detract from the sport at large than add to it, we shall be sorry to see another challenge filed, as we do not want to see two stagnant seasons follow one another. It will be very instructive, however, to see what the new rule will produce. It needs a good practical test, and such an event would certainly afford it.

British Letter.

Harmsworth Cup Races.

IF THE reliability trials for motor boats in Southampton water were more satisfactory than was anticipated, bearing in mind the comparatively short period since this type of craft came into being, the same cannot be said of the eliminating races for the British international cup, which took place over a course laid between mark boats off Ryde Pier and Old Castle, Point Cowes, on July 30. Last year, it may be remembered, only three boats were entered, and there were no foreign competitors, all three boats being of British manufacture, the firms represented being Edge, Thornycroft and Wort & Beadle, and the cup was won with ridiculous ease by Edge's boat, Napier Minor. This year the entries were far more numerous. Five boats represented the British section, while France was represented by three and America one. Of the British contingent Edge entered two, last year's winner, Napier Minor, and a longer and more powerful boat, Napier II. Napier Minor is only 35ft. long with 55 horse-power, and Napier II. is 40ft.—which is the limit allowed—and has 90 horse-power. Messrs. J. E. Hutton entered a 40-footer, designed by Linton Hope, a boat whose appearance gave every promise of speed. She is fitted with a six-cylinder engine of 150 horse-power. Messrs. Thornycroft were represented by a 40-footer, Champak, 120 horse-power, and Lord Howard de Walden entered Fer de Lance, 40ft. long with a twelve-cylinder engine, whose horse-power has been variously estimated at from 150 to 300. France entered the lists with a 100 horse-power Gardner-Serpollet steam engine in a 39.3ft. hull; a 40-footer owned by M. A. Clement, and the little Trefle-à-Quatre, which is only 30ft. long and is fitted with a Richard Brazier motor. Trefle-à-Quatre has already given a good account of herself in the Mediterranean, and came with a good reputation. America sent over a Smith & Mabley boat, 40ft. long and 150 horse-power, designed by Mr. Clinton H. Crane, of Tams, Lemoine & Crane.

This was quite a respectable entry, and had all the entrants in perfect working order, some most interesting racing must have followed. As it turned out, however, the whole affair was disappointing. Two of the British boats, Champak and Fer de Lance, were not in condition to run and the Gardner-Serpollet boat did not turn up. The eliminating races were to have been run in three heats: Napier II. and the Thornycroft boat were drawn for the first; Napier Minor and Fer de Lance for the second, and the Hutton boat drew a bye. Napier II. and Napier Minor both had walkovers, and the Hutton boat did not get round the course, breaking down soon after the start. For the actual cup race there were five heats down on the programme, but they were in a great measure disappointing. In the first heat Napier II., the Smith & Mabley boat and M. Clement's Bayard were drawn together. Bayard had something wrong with her propeller soon after the start and gave up. Challenger led Napier II. for a time, and then she partly broke down, Napier II. eventually winning by 1m. 44s. In the second heat Napier Minor had a walkover, the Gardner-Serpollet boat not having turned up. Trefle-à-Quatre had a walkover. The fourth race was between the two Napiers, Napier II. winning by 16s. She came to grief, however, directly after, through starting some of her plates, so the honor of defending the cup fell to Napier Minor. The final race for the cup, which was between Napier Minor and Trefle-à-Quatre, was, at the request of King Edward, postponed until 4 P. M., so that their majesties, the King and Queen, could personally view the struggle from the Royal yacht Victoria and Albert. The two boats started punctually at 4 P. M. Napier Minor soon drew ahead and made a steady gain over the course which she completed in 23m. 38s.; Trefle-à-Quatre taking 24m. 27s. The result was hailed by cheers and whistles from the steam yachts, and the jubilation was great when it was known that Britain held the cup for another twelve months. According to a report, which appeared in one of the leading daily papers on Aug. 10, Napier Minor has since been disqualified, as the result of a protest by Trefle-à-Quatre, the contention being that since Napier II. beat Napier Minor, she alone had the right to de-

fend the cup. If this is so the Harmsworth cup goes to France; but if the report of the disqualification is true, it has not had the wide publicity it should have had.

Cowes Week.

Cowes week opened on Aug. 1 with the usual matches of the Royal London Y. C., but the weather was paltry and spoiled the racing to a great extent. Eight boats started in the big handicap, in which the German Emperor's Meteor was placed at scratch. Both she and Ingomar were called upon to give the others a very liberal allowance, but in the prevailing light airs and calms Meteor could not stem the tide and she subsequently gave up. Ingomar gave a very fine light weather display for a schooner, and she and White Heather were in close company throughout the match, the schooner leading the fleet home but only saving her time for third prize. She was, however, disqualified for fouling White Heather, which was the winner, Brynhild taking second prize and Therese third. The new Fife 52-footer, Maymon, was the winner in her class, Camellia being second.

Royal Yacht Squadron Regatta.

On Aug. 2 the Royal Yacht Squadron opened their regatta with the usual race for club boats for His Majesty's cup, when eight boats came to the line, of which only three can be classed as even modern fast cruisers, the others being slow or obsolete. It is a pity that this race is not made an open event, for, owing to the dearth of fast boats in the squadron, the race is becoming, more or less, of a farce. The owners of Glory and Brynhild, two of the three efficient starters, have only been members of the squadron for two or three years, and if it had not been for the presence of their boats, the only yacht with any pretensions to speed would have been the German Emperor's Meteor. The weather was again paltry, and although Meteor sailed well whenever there was any wind and actually had all her time off the fleet during the part of the race, she was badly served over the last portion, and lost the King's cup to Brynhild, which saved her time from Glory by the narrow margin of 1m. 20s. This is the second King's cup Brynhild has won at Cowes in three years. Lucida and Maymon were the winners in the 52ft. class. On the following day there was a big entry for the German Emperor's cup, thirteen boats of all sizes, shapes and ages taking part in the race. Ingomar again distinguished herself by brilliant sailing under conditions by no means suitable for schooners, but the handicap was too much for her, though she was fourth boat on corrected time, and only 1m. 18s. behind the winner. Col. Bogot's famous old Watson 40-rater, Creole, was the fortunate boat, securing the trophy by 6s. from White Heather, while Merrymaid beat Ingomar for third prize by 41s. On Aug. 4 the big boats were kept by themselves. Ingomar won the Cowes Town cup, Valdora taking second prize and White Heather the third. The squadron regatta was brought to a finish on Aug. 5 with a handicap for yachts exceeding 100 tons and races for the 52-footers and the South Coast one-design class. Ingomar won the chief event, Merrymaid just saving her time from White Heather, which took third prize. Maymon and Moyana were winners in the 52ft. class and L'Amoureuse was first of the one-designers. The weather during the week was paltry and disappointing, especially for the big ships, but Ingomar performed well enough to make it clear that she has no peer among the schooners on this side.

E. H. KELLY.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

POWER BOAT RACES FOR THE GOLD CHALLENGE CUP.—The challenge sent by the Manhasset Bay Y. C. for the gold challenge cup was accepted by the Columbia Y. C. The races will take place on September 22, 23 and 24, and will start at 2 o'clock on each day. The launch Shooting Star will represent the challenging club. Mr. E. J. Stone will act for the Columbia Y. C., and Mr. F. A. Hill will represent the Manhasset Bay Y. C.

CHALLENGE FOR THE SEAWANHAKA CUP.—The Royal St. Lawrence Y. C. has received a challenge for the Seawanhaka cup from the yacht club located at Oshkosh, Wisconsin. This place is the home of Messrs. Jones and La Borde, the designers and builders of White Bear, the boat that made such a strong bid for the cup this year.

Canoeing.

Vacation Days in a Canoe.

THE canoe is the original American craft, the invention of the Indian. It is as native in its essence as the buckskin shirt, the snowshoe and the moccasin. It is the craft of the man of the woods, hunter, trapper, fisherman and explorer. It penetrates into the wilderness on shallow and intricate waterways where no other boat can travel.

Then, too, how handy it is, how it answers like a live thing to the twist of the paddle! Rowing seems mechanical by the side of the free movement of the single blade.

The canoe is well adapted to our rapid rivers and inland lakes, east and west. One need not go to the wilderness streams of Maine, or northern Wisconsin, or Canada to enjoy the sport. In all parts of the country there are swift little rivers, dashing down mountain valleys or winding through the farms and villages of the lowlands, which afford plenty of sport for the canoeist.

In New England are the beautiful reaches of such

rivers as the Connecticut, while Pennsylvania can boast of the Susquehanna, the blue Juniata and, above all, the Delaware, each with its peculiar charm of scenery and association.

The Delaware is an ideal stream for the canoe, as it is very rapid in its upper course and passes through a region of unrivalled natural beauty. An interesting trip may be made from Port Jervis, N. Y., all the way down to Philadelphia. As far as the Delaware Water Gap, where a range of the Blue Ridge crosses its course, the river flows through a wild valley bordered on each side by mountains and cliffs, which seem far below to form an interlocking barrier. On the New Jersey side rise the lofty ridges of the Shawangunk range, and on the right tower the steep cliffs of the uplands of eastern Pennsylvania, shaggy with ancient forests and indented with deep ravines where mountain streams have worn their way, and where waterfalls, pouring down the heights, roar among the rocks.

The river winds through the rich bottom lands, or, where the valley contracts into a woody vale, rushes in a deep, narrow channel. Green islands with shady groves and sandy beaches occur frequently, offering cool retreats from the noonday sun and camping places for the night. The river is for the most part shallow and stony, and roars down long series of rapids, broken by riffs and obstructed by boulders, but here and there it sleeps in long, deep, placid stretches.

If the canoeist is also a fisherman, there are gamy black bass to be taken in the dark water of the swirling eddies at the foot of the riffles, and pickerel along the shallow reedy shore. Bald eagles may often be seen sailing out from their eyries high in the cliffs or perched on some dead tree rising above the forest.

Along this stretch of river there are no railways, no factories and no towns of any size to foul the air and taint the stream. There are only summer resorts, fishing camps and hamlets, while a fine hard shale road follows the right bank at the foot of the cliffs.

After the river has forced its way through the wondrous triple gate of the Water Gap, with its mountain barriers rising sheer and grim above the water, it flows through a flatter and more settled country with fewer features of natural beauty.

The Susquehanna in some respects resembles the Delaware, but the coal mines and factories along its banks have changed its aspect in many places. Its course through the Wyoming Valley, once a scene of surpassing natural grandeur and primeval loveliness, is now marked and marred with huge culm banks, towering black breakers and more or less squalid miners' villages and factory towns.

Its upper reaches flow through a still beautiful region, and fleets of canoes are often seen on its waters. Each town of any size along its banks has its canoe club, which takes its annual outing on the river, starting usually from some place on the upper waters in New York State.

Then there are little streams or creeks which conduct the canoeist through quiet pastoral country and quaint villages, under old stone bridges, past cattle grazing, lazy fishermen, hard-working haymakers. Such a stream is the Conestoga (it might well be called the Meander, so much does it wind and twist and involve itself in labyrinthine mazes), which flows through Pennsylvania Dutchland in Lancaster county.

In contrast to the wild forest along the Delaware, here are toy trees, Noah's Ark cattle, quaint farmhouses with huge barns, picturesque old water mills, solid stone bridges, built in the early days of the Republic, over which the coaches used to rumble on the Philadelphia pike.

The people, the Amish, Mennonites and other sects in flat felt hats and long coats, and women in bonnets and plain drab dresses, with their outlandish dialect, fit in with the foreign aspect of the country. The canoe is always an object of mild-eyed curiosity to these peculiar people of Ephrata, or Eden, or Paradise, as they love to name their villages.

In the vast network of lakes and streams in the forests of northern Wisconsin and about the headwaters of the Mississippi there are unrivalled opportunities for the canoeist for roughing it in earnest in the real wilderness. There are, too, in the more settled parts of the west innumerable streams fit for the canoe.

The writer recalls with especial pleasure a journey down a northward flowing river of Minnesota. It was in early summer, and the river was in flood, and was racing down its valley with breakneck speed, spreading itself over the lowlands and dashing against the sandstone cliffs along its bank. The exhilarating tonic of the air on these bright summer days, coupled with the speed of the descent, fairly intoxicated the senses. The canoe flew past the banks, sometimes taking a short cut through the flooded forest, dodging overhanging limbs, fallen trees and submerged stumps. The ridges, clad in low forests of birch and oak and other hard woods, seemed scarcely to have felt the touch of man. A few rude cabins among the hills were the only signs of human habitation.

Descending any of these swift rivers, the canoeist has plenty of chance to display his skill with the paddle. As the canoe slips down the turbulent waters of the rapids there are hidden reefs to be avoided, rocks and sunken logs to be cleared, and a course to be picked out where there is safe going. There is hardy pleasure, too, in working with strength of back and arm up stream against a stiff current, following the eddies and slack water along shore or poling up inch by inch in the rapids.

There is no better way to spend a week or ten days of vacation than by taking such a canoe trip. Almost any river will do; each has its peculiar attraction. You launch out upon the stream, carrying your all with you, leaving your cares behind and abandoning yourself to the current of adventure. You can speed your way or loiter along as you choose, loafing at noon under the water-loving elms and bathing in the cool stream. At night you pitch your tent within sound of the murmuring water and launch out again in the cool of the morning mist before the sun has risen above the eastern ridges. And you come back to the ordinary world tanned and hearty after your contact with the river, the sun and all out of doors.—New York Evening Sun.

Rifle Range and Gallery.

The United States Revolver Association.

SPRINGFIELD, Mass., Aug. 23.—Inclosed herewith is the announcement of the annual championship matches of the U. S. Revolver Association.

I inclose conditions of the matches, prizes, and prize winners in the past:

A. L. A. HIMMELWRIGHT.

The annual championship matches of the United States Revolver Association will be held simultaneously during the week of Sept. 11 to 17, inclusive, at the following places:

Boston, Mass.—At the Walnut Hill range of the Massachusetts Rifle Association.

New York, N. Y.—At the Creedmoor range of the New York State Rifle Association.

Chicago, Ill.—Under the auspices of the Chicago Sharpshooters' Association.

St. Louis, Mo.—Under the auspices of the St. Louis Sharpshooters' Association.

San Francisco, Cal., at the range of the Golden Gate Rifle and Revolver Club.

Official representatives of the United States Revolver Association have been appointed to conduct these matches at the respective places.

For further information address J. B. Crabtree, secretary-treasurer, 525 Main street, Springfield, Mass.

Conditions of the annual championship matches, regular or outdoor events:

Match A—Revolver Championship.—Open to everybody; distance 50yds.; 50 shots on the Standard American target, 8in. bullseye, 10-ring, 3.36in. Arm, any revolver. Ammunition, any. The score must be completed in one hour or less from the time of firing the first shot. Entrance fee, \$5; no re-entries.

Prizes.—First, the championship silver cup, to be held until the next annual competition, and a gold medal; second, a silver medal; third, a bronze medal. A bronze medal will also be awarded to any competitor, not a prize winner, making a score of 425 or better.

1900....First prize.....	A L A Himmelwright.....	422
Second prize.....	J A Dietz, Jr.....	420
Third prize.....	T Anderton.....	417
1901....First prize.....	J A Dietz, Jr.....	419
Second prize.....	C F G Armstrong.....	411
Third prize.....	C E Tayntor.....	353
1902....First prize.....	Thomas Anderton.....	438
Second prize.....	R H Sayre.....	434
Third prize.....	E L Harpham.....	427

Match B—Pistol Championship.—Open to everybody; distance 50yds.; 50 shots on same target as Match A. Arm, any pistol. Ammunition, any. The score must be completed in one hour or less from the time of firing the first shot. Entrance fee, \$5; no re-entries.

Prizes.—First the championship cup, to be held until the next annual competition, and a gold medal; second, a silver medal; third, a bronze medal. A bronze medal will also be awarded to any competitor, not a prize winner, making a score of 435 or better.

1900....First prize.....	J B Crabtree.....	427
Second prize.....	J A Dietz, Jr.....	423
Third prize.....	A L A Himmelwright.....	416
1901....First prize.....	T Anderton.....	453
Second prize.....	C H Taylor.....	430
Third prize.....	J A Dietz, Jr.....	422
1902....First prize.....	T Anderton.....	463
Second prize.....	A L A Himmelwright.....	447
Third prize.....	J A Dietz, Jr.....	443

Match C—Military Championship.—Open to everybody; distance 50yds.; 15 consecutive strings of 5 shots at the same target as Match A. Each string must be shot within the time limit of 15 seconds, taking time from the command, "Fire." Misfires and shots lost on account of the arm becoming disabled while firing any string will be scored zero. If a shot is fired after the time limit has elapsed, the shot of highest count will be deducted from the score. No cleaning allowed. Arm, any military revolver, or any military magazine pistol. Ammunition, the full charge service cartridge. The score must be completed on the same day. No sighting shots will be allowed after beginning the score. Entrance fee, \$5; no re-entries.

Prizes.—First, the championship trophy, to be held until the next annual competition, and a gold medal; second, a silver medal; third, a bronze medal. A bronze medal will also be awarded to any competitor, not a prize winner, making a score of 535 or better.

*1900....First prize.....	R H Sayre.....	300
Second prize.....	J A Dietz, Jr.....	287
Third prize.....	T Anderton.....	282
*1901....First prize.....	R H Sayre.....	325

Third prize.....	G B Young.....	263
1902....First prize.....	R H Sayre.....	579
Second prize.....	J A Dietz, Jr.....	535
Third prize.....	R S Hale.....	530

*In 1900 and 1901 the military target with 4in. by 5in. elliptical bullseye was used; possible 375.

Match D—Military Record Match.—Open to everybody; distance 50yds.; 5 consecutive strings of 5 shots under the same conditions as Match C. Entrance, \$1; entries unlimited.

Prizes.—First, a gold trophy, to be held until the next annual competition, the trophy to become the property of the competitor winning it three times; second, a silver medal; third, a bronze medal. A bronze medal will also be awarded to any competitor, not a prize winner, making a score of 190 or better.

1902....First prize.....	Thomas Anderton.....	206
Second prize.....	R H Sayre.....	203
Third prize.....	R S Hale.....	199

The annual championship matches of the United States Revolver Association for 1903 were held during the period of the meeting of the National Rifle Association, Sept. 2 to 12, inclusive. Arrangements were made to conduct these matches at Sea Girt, N. J.; Boston, Mass.; Chicago, Ill.; St. Louis, Mo., and San Francisco, Cal. The prize winners and order of the contestants in each match are as follows:

Match A—Any Revolver.—First prize, the championship silver cup (value \$200), to be held by the winner until the next annual competition. Inscribed on the cup, in raised ornamental letters, is, "This cup represents the Revolver Championship of the United States of America." The name of the winner, the year, and the score are also engraved on the cup each year. To the winner is also awarded a gold medal (value \$25), with the same inscription on the reverse side as appears on the cup. Second prize, a silver medal, with inscription on reverse side. Third prize, a bronze medal, with inscription on reverse side. A bronze medal of the same design is also awarded to all competitors making scores of 425 or better.

Match D—Military Revolver (Re-entry).—First prize, a gold trophy (a laurel wreath surrounding a scroll, mounted on an ebony shield; value \$150). Between the scroll and the wreath is a ribbon, on which, in raised letters, is, "The United States Revolver Association." At the top of the scroll is engraved "Military Record Match," and the name of the winner, the year, and the score for each year are engraved on the scroll below. This trophy is held by the winner until the next annual competition, and is to become the property of the competitor winning it three times. Second prize, a silver medal, with inscription on the reverse side. Third prize, a bronze medal, with inscription on the reverse side. A bronze medal of the same design is also awarded to all competitors making a score of 190 or better.

National Marksmen's Reserve.

UNDER date of July 15, and by order of the Acting Secretary of War, Major George L. Gillespie, in a form designated as Circular 29, extracts from the proceedings of the National Board for the Promotion of Rifle Practice at its session, are published for the information of the public.

Concerning the plan for a National Reserve of qualified riflemen, the following conditions, duly approved, were announced as governing the qualifications:

"1. All members of the National Rifle Association and of affiliated organizations are eligible to compete.

"2. They must be citizens between the ages of 18 and 45.

"3. The course will consist of twenty-one shots; five shots for record at 200, 300 and 500yds.; two sighting shots allowed at each range, which must be taken.

"4. Arm.—The U. S. magazine rifle, caliber .30, or a rifle that has been viewed and stamped by the National Rifle Association (see conditions, page 5, paragraph 4, General Order No. 53, War Department, March 23, 1904), on page 140 (sic) must be used. Ammunition, U. S. service or private makes that come within the rules.

"5. Entrance fee, 25 cents. Official score sheets can be secured from the secretary of the local affiliated organization, or if not a member of any local organization direct from the secretary of the National Rifle Association.

"6. The score sheets of those who make a total score of 50 points at all ranges will be forwarded to the secretary of the National Rifle Association, who will tabulate them and forward to the War Department. All those who qualify will receive a national marksman button."

The following is added from the preamble of the circular:

"In the consideration of plans for the encouragement of rifle practice in the United States your committee believes that the following facts relative to the military situation in the United States will become apparent:

"1. Our permanent military establishment or regular army must be small, and in the event of a war with one or more of the first-class powers of the world we must depend very largely upon the militia and the volunteers for our fighting force.

"2. In estimating the military efficiency of a soldier if we consider ten points as a standard of perfection at least eight of these points are skill in rifle and revolver shooting.

"3. With the modern long-range small arms it is all important that the soldier should know how to shoot and to hit what he shoots at. If he cannot do this, the chances are about ten to one that the effect of the shot is lost. In other words, the results are similar to those reached when a man goes quail shooting and fires at the flock when the birds get up.

"By the plans proposed hereinafter, if followed, we believe that the United States will within a few years have more than 1,000,000 men who will have for practical purposes on the line of battle nearly all the requirements for the most efficient soldiers in the world, and this great attainment will be reached by a very small expenditure of money by the Government—that is, we propose to educate our young men and boys over fifteen years of age to be an army of expert rifle shots. In drawing up these recommendations, your committee has given much consideration to the plans adopted by the civilized nations of the world for the purpose of encouraging rifle shooting among their citizens. To those who are accustomed to the use of firearms we believe one thing is evident beyond all question, and it is that a high degree of skill in rifle and revolver shooting and the confidence which a knowledge of this skill gives will make a timid man brave and a brave man more courageous.

"Proceeding to a consideration in detail the whole scheme of rifle practice is subdivided into three distinct heads or lines of work:

"Encouragement of rifle practice in the State militia where necessary.

"Encouragement of rifle practice in military and other schools.

"Encouragement of rifle practice among those individuals who may be called upon to serve in time of war.

"We would also subdivide the various headings to which consideration should be given in each of the three subdivisions above named as follows: First, shooting galleries. Second, field ranges. Third, arms. Fourth, ammunition. Fifth, supervision. Sixth, inducements. Seventh, literature. Eighth, publicity."

Plans for the encouragement of rifle practice in the State militia are elaborately set forth, after which plans for the encouragement of rifle practice in military and other schools, and among those who may be called upon in times of war, are presented as follows:

"In considering the matter of the encouragement of rifle practice among school boys, one cannot help being impressed with the urgent necessity for the early training of the individual in rifle practice. It may be assumed that 60 or 70 per cent. of the aggregate of a large body of volunteer troops would be under the age of 25. In cities, where boys often commence business careers at the age of 18 or 20, it is oftentimes hard for them to get the time, even if they desire it, to practice with small arms. Therefore, if we are to get any considerable measure of ground work for our whole scheme of rifle practice, we must commence when the boy is at school and offer every encouragement which will conduct to that end. It is therefore essential that wherever possible indoor ranges be provided in public schools and other institutions, and that a special endeavor be made to promote the use of private and other ranges by schools.

"Considering the matter under the several specific heads, we arrive at the following:

"First—Shooting Galleries.—Indoor shooting galleries can be provided with so little expense, and are so necessary, that special pains should be taken to see that every public and private school throughout the country is equipped with such a range. The establishment of country graded schools with the larger buildings enlarge the possibilities of work in this direction tremendously. Every institution of learning having an army officer detailed as instructor should be required to provide suitable indoor ranges, and a certain definite amount of rifle practice should be required as part of the military instruction by every student.

"Second—Field Ranges.—The ranges already existing for States' practice should be open to the schools under appropriate regulations, and every institution of learning having an army officer detailed as instructor should be required to provide a range at least 300yds., preferably 500yds., and a definite course of rifle practice should be required as part of the military instruction by all students.

"Third—Arms.—The matter of arms to be used for school practice is one of vital importance. It is desirable to commence at an early age to instruct a boy, but it is not possible for him to use the regulation piece, and it is undesirable that he should use any one of markedly different design than that he will be expected to use later.

"At present the cadet rifle as issued to the various colleges is of the old Springfield design, using black powder. It is presumed the Krag carbines will soon be discarded by the cavalry arm of the regular establishment, and these pieces, of which there are, it is understood, a considerable number, would seem to supply a suitable weapon for use in schools. Therefore, there should be immediately issued, say, ten pieces to each school having an army officer detailed as instructor as soon as available for general distribution. These should be issued as part of the equipment to such institutions. Also one carbine to each twenty-five scholars should be issued to public schools possessing indoor ranges and carrying on rifle practice. These arms should be chambered to receive the regulation cartridge, in order that expended shells may be used for loading for indoor practice and with reduced charges at short ranges.

"Fourth—Ammunition.—Twenty-five rounds of ammunition, or material equivalent to the cost thereof, should be issued free for each qualification, in accordance with the regulations hereinafter prescribed, by the United States Government through the adjutant general of the State. Any additional material necessary for school practice to be sold by the United States Government at one-half its actual cost.

"Fifth—Supervision.—The matter of supervision of school and civilian rifle practice would seem to be quite an important one, and it is believed better results will be obtained if inspection and direction by the United States Government of this matter be had, and to this end your committee would recommend if possible one officer to each State shall be detailed from the National Guard organization under the title of 'United States Inspector of Civilian Rifle Practice,' having the rank and pay, when detailed, of captain. His duties will be the encouragement and supervision of civilian rifle practice in schools and outside of National Guard organizations, to report to and be under the direction of the General Inspector of Rifle Practice of the Militia Division of the Army.

"Sixth—Inducements.—A course of school practice should be prescribed which would qualify a student as a 'sharpshooter,' 'junior sharpshooter,' 'marksman,' and 'junior marksman,' a junior marksman or sharpshooter being a boy of less than 15 years of age.

"The National Rifle Association should encourage the promotion of affiliated rifle clubs in the institution of learning and in all branches of the Young Men's Christian Association.

"Special pains should be taken to provide at rifle meetings events for students, with a view to encouraging rifle practice in the schools. The United States Government should issue a State school championship medal for individuals, a State team trophy to be open for competition among teams of eight individuals from the several schools of the State, and a national school trophy, which should be held by the team making the best score in the State competition; in case of a tie, the two teams to be transported at Government expense to some one place where a final competition can be held.

"Your committee would recommend for the purpose of defraying cost of individual State championship badges that an annual appropriation of \$5,000 be sought, and for the purpose of providing the several State trophies and the national school trophy an appropriation of \$20,000 should be asked for. The initial expense will be all that will be necessary in the case of the State and National School trophies because they will be held by the winning teams until the next competition occurs.

"Seventh—Literature.—Each institution having or intending to have an armory range should be provided with a book which would give full information as to the construction of ranges, course of instruction, methods of loading, regulations regarding care of ammunition, arms, etc., and the existing laws, States and Federal, pertaining to public property, rifle practice, etc. This book should be issued on Oct. 1 in each year, and should include statistics as to ranges, competitions of the previous year, the standing of the States in rifle practice, etc.

"Eighth—Publicity.—It is extremely desirable that the public press of the country should be brought to appreciate the urgent necessity of rifle practice, and to this end the National Rifle Association should establish a bureau of public information, which would promulgate through the various State associations articles for publication in the various papers.

"If means can be found to defray the initial expense, a school

boys' paper on rifle practice, to be generally distributed through all the schools and to as many subscribers as possible, would seem to be a most excellent means of reaching the public at large, and particularly the youth, in whose mind it should firmly establish the idea that every one who expects to serve his country in time of need should educate himself while he may in the use of the rifle.

"In consideration of this, one of the most important branches of the whole scheme of rifle practice, your committee would point out that it is, as in the case of school boys, especially desirable to induce practice by the younger men, because, as above stated, by far the larger part of an army in the field would be made up of very young men, so that every endeavor should be made to carry on more particularly the practice of young civilians, which it is to be hoped will be generally commenced while at school.

"Proceeding to consider the matter under its several heads: "First—Shooting Galleries.—In all new armories for National Guards care should be taken to provide range facilities beyond the needs of the actual organization for which the armory is being built, as at comparatively insignificant cost there can be provided extra ranges, so that facilities may be furnished for civilian rifle practice. In country towns it will no doubt be possible to fit up in halls, where needed, additional indoor ranges.

"Second—Field Ranges.—There remains so much to be done in connection with furnishing ranges for the regular establishment and for the National Guard, both of which should be open for civilian rifle practice, that during the next year or two it is presumed little can be done outside of the ranges required for the army and militia, but it would appear to your committee that a most careful study should be given, and at once, to the matter of eventually establishing sufficient range facilities to permit of quite general civilian rifle practice, and for the purpose of this study there should be assumed an active rifle practice by, say, 500,000 and 1,000,000 individuals, and a definite plan should be formulated which will eventually provide facilities sufficient for the number of men above named.

"As one of the greatest difficulties in carrying on rifle practice economically is the matter of expense of maintaining ranges, providing markers, etc., it would seem to be wise to consider the utilization of such regular troops of the army and marine corps as may be available as scorers and markers at ranges at which civilians will practice, and in the location of stations for troops in the future, consideration might be given to this most necessary service.

"The education in rifle practice of large bodies of men would seem to render necessary the establishing of ranges near the large centers of population, if possible within reach of trolley cars at reasonable fares, and in the selection of barrack sites, if any are hereafter established near the cities, consideration should be given to coupling with the establishment of troops a large range.

"In many cases it may be possible to establish near large posts of the army or marine corps ranges of no great length perhaps, but of large capacity for civilian rifle practice. It is especially desirable to have ranges near posts, so that the troops so stationed may be utilized as scorers, markers, and instructors, and a short range is infinitely better than none at all.

"Third—Arms.—At present it is not possible for the civilian to obtain the national arm, and if he had it, there is little or no chance for him to find a place to practice with it. This latter we hope will be changed, and in order to render it possible for civilians to practice, it is suggested that the National Rifle Association purchase at \$10 each for resale to its affiliated organizations to not exceeding 25 per cent. of the aggregate strength the national arm of the regular pattern. It is believed that many organizations of riflemen now using other kinds of arms will gladly avail themselves of the opportunity both to affiliate with the National Rifle Association and provide themselves with the proper arm if this inducement is held forth.

"Fourth—Ammunition.—Your committee recommends that the National Rifle Association be permitted to purchase at cost such amount of field ammunition as may be required for resale to its affiliated organizations at the same price, and that each year there shall be issued to each affiliated organization free of cost through the National Rifle Association, fifty rounds of field ammunition for each qualification as a marksman made during the preceding year; in lieu of the above the organization to be given authority to draw component parts suitable for armory practice, powder, primers, bullets, etc., in case they do not desire to take the whole amount in field ammunition.

"Fifth—Supervision.—The supervision of the issue of arms and ammunition to the organizations and various clubs, etc., by the National Rifle Association will naturally entail considerable clerical expense.

"Your committee recommends that the National Rifle Association be authorized by law to use the mails under the usual franking privilege in the conduct of its business; later when it can be seen what measure of the work the National Rifle Association will be called upon to perform, it should receive some financial support.

"The supervision and instruction of the various clubs, etc., shall come under the charge of the United States Inspector of Civilian Rifle Practice.

"Sixth—Inducements.—The same specifications referred to for the militia organizations for qualifications as experts, sharpshooters, marksmen, etc., shall apply to civilians, and it would seem desirable that the Government should furnish each civilian expert, sharpshooter, or marksman with a button of an appropriate design.

"It would also seem desirable, when sufficient organizations exist to render it proper, that the Government should provide State and National trophies to be competed for by rifle clubs.

"Seventh—Literature.—The National Rifle Association should be provided with a sufficient number of the rifle practice books referred to under the head of State militia, and the individual instruction books should be purchasable for a nominal sum from all postmasters.

"Eighth—Publicity.—The assistance of the press should be enlisted to encourage rifle practice among civilians in every necessary way, and it should be generally understood that it is a patriotic thing for a man to learn how to shoot; furthermore, that those who do not know how to shoot will not be considered when applying for enlistment in time of war, provided others can be had who possess this most necessary qualification.

"The National Rifle Association should, it would seem, establish a corresponding secretary in each State, with whom and through whom matters can be taken up and assistance rendered in the matter of enlisting the public press in disseminating information regarding the aims of the Government and the National Rifle Association.

"We would also recommend that in all legislation providing for the sale of arms or ammunition at cost or less, a provision should be embodied to the effect that the amounts received be held by the Ordnance Department for the purchase of similar material from domestic manufacture. Your committee believes that such a provision would remove the objection commonly urged to the sale by the Government of arms and ammunition because of the possible antagonism of the regular manufacturers."

Cincinnati Rifle Association.

CINCINNATI.—The following scores were made in regular competition by members of the Cincinnati Rifle Association at Four-Mile House, Reading road, Aug. 21. Conditions, 200yds., off-hand, at the 25-ring target. Payne was declared champion for the day with a score of 221. He was also high on the honor target with 67 points. The scores:

Payne	221	219	218	217	217
Odell	218	218	211	207	205
Freitag	207	204	196	192	190
Hofer	206	198	196	192	185

Only eight members were present to-day, and but four shot for publication. On account of the light attendance the awarding of the Topf trophies was postponed until the next regular shooting day, Aug. 28. The scores of the winners are appended.

Payne 2271, Nestler 2212, Hofer 2158, Trounstine 2129. The shoot was in progress from Jan. 31 to July 31 inclusive, and the ten best scores of each member to count. The ones scoring the most points in each class were constituted the winners:

First Class.	
Payne	232 229 229 228 227 226 225 225 225 225—2271
Hasenzahl	231 230 224 223 223 223 222 222 222 221—2241
Gindele	228 225 225 221 219 218 216 216 215 214—2197

Second Class.	
Nestler	224 223 223 222 222 221 220 219 219 219—2212
Roberts	224 223 221 220 219 219 218 218 218 217—2197
Bruns	222 220 219 218 216 216 215 214 211—2162
Odell	219 215 215 214 213 213 212 212 210 209—2132

Third Class.	
Hofer	225 222 219 219 215 213 213 213 210 209—2158
Hoffman	218 216 214 213 211 210 209 209 209 209—2118
Lux	209 208 206 205 203 202 201 201 200 200—2035

Fourth Class.	
Freitag	217 216 215 210 209 208 207 204 204 203—2093
Trounstine	225 218 215 214 213 212 210 208 208 206—2129
Drube	212 208 200 199 198 198 197 193 192 191—1988
Uckotter	198 198 198 197 194 193 192 192 191 189—1992

Presque Isle Rifle Club.

ERIE, Pa., Aug. 20.—The club held its weekly shoot to-day while a gale of wind—there was no mistake about this gale; it was one—was blowing from the west. Messrs. Embrow, Warner and Truesdale were visitors. Scores:

W A Parker	78 68 73—219	W J Lexcr	56 54 50—160
A Mount	69 68 66—203	C J Embrow	26
J Stidman	70 69 66—205	E L Warner	40
J Almeda	68 67 66—201	M Truesdale	29
J Bacon	63 63 62—188		

CABIA BLANCO.

Rifle at Eaton.

THE annual reunion of the Preble Deer Hunters' Association and Preble County Rifle Club will be held at Eaton, on Sept. 2. Prizes to the amount of \$100 will be offered in the contests, which are open to all riflemen in the valley. All shooting at 100yds., off-hand, four shots, 48 possible.

Dayton Sharpshooters.

THE concrete target pits at the Dayton Gun Club's grounds were inspected on Aug. 26 by a committee of the Dayton Sharpshooters and pronounced all right. A new firing shed will be erected at once, and the September shoot of the Sharpshooters will be held on their new range.

Trapshooting.

Fixtures.

- Sept. 5.—Lowell, Mass., Rod and Gun Club Labor Day tournament, E. J. Burns, Sec'y.
- Sept. 5.—Auburn, N. Y.—Labor Day tournament. Knox and Knapp, Mgrs.
- Sept. 5.—Ossining, N. Y., Gun Club fourth annual Labor Day tournament. C. G. Blandford, Capt.
- Sept. 5.—Dover, N. H., Sportsmen's Association annual Labor Day tournament. D. W. Hallam, Sec'y.
- Sept. 5.—Washington, D. C.—Analostan Gun Club Labor Day Shoot.
- Sept. 5.—Maine State championship tournament, given by the Portland Gun Club.
- Sept. 5.—Muncie, Ind.—Annual Labor Day shoot of the Magic City Gun Club. F. L. Wachtell, Sec'y.
- Sept. 5.—Utica, N. Y.—Riverside Gun Club tournament. E. J. Loughlin, Sec'y.
- Sept. 5.—Springfield, Mass.—Fall tournament on Labor Day; \$25 added. C. L. Kites, Sec'y.
- Sept. 5.—Richmond, Va.—Tournament of Virginia Trapshooters' Association. W. A. Hammond, Sec'y.
- *Sept. 7.—Irwin, Pa., Rod and Gun Club tournament.
- Sept. 6.—Litchfield, Ill.—Consolidated Trapshooters' Congress tournament. L. A. Cummings, Sec'y, Bunker Hill, Ill.
- Sept. 7.—Huntington, W. Va.—The Interstate Association tournament, under the auspices of the Huntington Gun Club. L. H. Merrick, Pres.
- Sept. 9-11.—Chicago, Ill., Trapshooters' tournament. E. B. Shogren, Sec'y.
- Sept. 14-15.—St. Louis.—Afro-American Handicap. T. H. Cohron, Sec'y, Pleasant Hill, Mo.
- Sept. 19-21.—Atlantic City, N. J.—Seashore Gun Club target tournament.
- Sept. 20-21.—Lincoln, Ill.—Lincoln City Gun Club tournament.
- Sept. 22.—Moberly, Mo.—Missouri League of Trapshooters.
- Sept. 27.—Morgantown, W. Va.—Recreation Rod and Gun Club amateur tournament. Elmer F. Jacobs, Sec'y.
- Sept. 28-29.—Concordia, Kans.—The Interstate Association's tournament, under the auspices of the Concordia Gun Club. L. S. Myers, Sec'y, Elmer E. Shaner, Mgr.
- Sept. 28-29.—Homer, Ill.—Homer-Ogden Gun Club tournament.
- Oct. 4-5.—Crawfordsville, Ind., Gun Club tournament.
- *Oct. 4-5.—Allegheny, Pa.—North Side Gun Club.
- Oct. 6-7.—Dalton, O., Gun sixth annual tournament. Ernest F. Scott, Capt.
- Oct. 6-7.—St. Marys, Pa.—Two-day shoot.
- Oct. 12-13.—Sistersville, W. Va., Gun Club fall tournament. Added money to all events, and prizes. Ed. O. Bower, Sec'y.
- Oct. 12-13.—Indianapolis, Ind., Gun Club fall tournament. James W. Bell, Sec'y.
- Oct. 18-19.—Litchfield, Ill.—Consolidated Trapshooters' Congress.
- Oct. 18-20.—New London, Ia., Gun Club tournament. Dr. E. C. Cook, Sec'y.
- Nov. 1-3.—St. Louis Mo.—World's Fair shoot; live birds and targets. Alec D. Mermod, Mgr., 620 Locust street.
- *Western Pennsylvania Trapshooters' League tournaments. C. G. Grubb, Sec'y, Pittsburg.

DRIVERS AND TWISTERS.

Mr. John S. Wright, Secretary-Manager, writes us as follows: "There will be prize shooting on the grounds of the Brooklyn

J. L. D. MORRISON

Gun Club on Labor Day, Sept. 5, at 2 P. M. Take Kings County 'L' to Crescent street station; thence by hacks to the grounds, on Kaiser's Farm."

At the tournament of the Mountaineers, held at Chattanooga, Tenn., Aug. 23 and 24 the high averages of the two days, shooting at a total of 400 targets, were as follows: Mr. J. S. Fanning 388, a 97 per cent. total; second, Mr. C. G. Spencer, 385, 96½ per cent.; third resulted in a tie between Messrs. F. C. Riehl and S. Moody, of Bessemer, Ala., on 380, a 95 per cent. average.

Labor Day, being a day without labor, will be observed in due form in the office of FOREST AND STREAM. Therefore, we request our correspondents to mail their matter at their earliest convenience this week.

The contest for the English Hotel cup, between Messrs. Michaelis and Wands will take place on Saturday of this week at Indianapolis. The Indianapolis Gun Club will hold a shoot on Labor Day, at which merchandise prizes will be objects of contest.

Mr. James W. Bell, Secretary Indianapolis, Ind., Gun Club, informs us that "Wednesday and Thursday, Oct. 12 and 13, have been selected as dates for our fall tournament, which will consist of sweepstakes and merchandise prizes. I will mail you programme as soon as received from printer."

The Secretary, Mr. C. G. Grubb, writes us that "the Irwin Gun and Game Club will hold their tournament under the auspices of the Western Pennsylvania Trapshooters' League, one day only, Sept. 7, and not two days, as originally advertised." He further writes us that "the Ruffsdales Rod and Gun Club, of Ruffsdales, Pa., cancel their tournament to be held Sept. 14 and 15, under the auspices of the Western Pennsylvania Trapshooters' League."

The programme of the Bolivar, N. Y., Gun Club tournament, to be held on Sept. 13, consists of twelve events each at 15 targets, \$1.80 entrance. The totals are 180 targets, \$21.60 entrance. Jack Rabbit system will govern the moneys. Fifteen dollars will go to the high guns, divided into three parts, \$7, \$5 and \$3, first, second and third respectively. Ship guns, etc., to the secretary, Mr. J. F. Care. Shooting begins at 9 o'clock. Committee of arrangements: Messrs. Al. Stohr and J. F. Care.

Mr. C. G. Blandford, the energetic Captain, has sent out a postal card bearing the following: "Just to remind you that there will be a good attendance of shooters at the fourth annual Labor Day tournament of the Ossining Gun Club on Sept. 5. Added money. One hundred target race for championship of Westchester county and the Burns trophy. Lunch and shells on the grounds. We are hoping to see a bunch of our friends. You are included. Shooting starts promptly at 11 o'clock."

The Secretary-Treasurer, Mr. Elmer F. Jacobs, writes us as follows: "The Recreation Rod and Gun Club wishes to announce, through your columns, an all-day shoot, and claims the date of Sept. 27. The programme, which is in course of preparation, will consist of about fifteen events, a five-man team race, and sweepstakes to suit the crowd. The entire shoot will be conducted on purely amateur lines. All are invited to attend. Programmes may be had after Sept. 10, on application to the secretary."

The Secretary, Mr. E. J. Loughlin, writes us that "the annual Labor Day sweepstake shoot of the Riverside Gun Club, of Utica, N. Y., will have a programme of seven events, five at 10, one at 20, and one at 25 targets. Entrance \$1 in each. Targets extra at 1 cent each. The jack rabbit system will govern the division of moneys. There will also be free merchandise prizes, entrance cost of targets. Programme commences at 12:30 o'clock. Grounds located at Riverside, foot of Meadow street, close to all depots. Extra events, time permitting."

Mr. J. L. D. Morrison, of St. Paul, Minn., has accepted a position with the U. M. C. Co. as their representative in the Northwest. As a trapshooter he is one of the most skillful. As an amateur, he ranked with the leaders in the use of the shotgun, whether amateur or professional. He was runner-up in one of the recent G. A. Handicaps, and made highest general average at the recent G. A. H. at Targets held at Indianapolis. He is of pleasing, gentlemanly personality, and able in business. We take pleasure in publishing his portrait this week.

At the W. P. T. S. L. tournament at Tarentum, Pa., Aug. 25 and 26, shooting at 165 targets on the first day, the high averages were as follows: First, Mr. G. Cochran and Mr. J. R. Hull, tied on 146 out of 165; second, Mr. E. D. Fulford, 145; third, Kelsey, 141; fourth, a tie on 130 by Messrs. Curry and Pontefract. Second day: First, Mr. E. D. Fulford, 164 out of 175; second, Mr. J. R. Hull, 158; third, Mr. J. A. Stoops, 155; fourth, Mr. Curry, 149. High average for the two days: First, Mr. E. D. Fulford, 369 out of 340; second, Mr. J. R. Hull, 304; third, Mr. Curry, 279; fourth, Mr. J. A. Stoops, 272.

The programme of the Interstate Association tournament, given for the Concordia, Kans., Blue Ribbon Gun Club, is now ready for distribution. The popular expert, Mr. Elmer E. Shaner, Secretary-Manager of the Interstate Association, will manage the tournament. Twelve events are provided each day, 15 and 20 targets, entrance \$1.50 and \$2; added money \$7.50 and \$10. The dates are Sept. 28 and 29. Meals and shells obtainable on the grounds. Targets, 2 cents. Sept. 27, practice day. Guns and ammunition prepaid and marked in owner's name, care of the secretary, L. S. Myers, will be delivered on the grounds free.

At the Interstate tournament given for the Hot Springs, S. D., Gun Club, Aug. 24 and 25, the gold medal for the contestant making the highest general average of the programme was won by Mr. C. B. Adams, with a score of 332 out of 345. Second high average was made by Mr. H. C. Hirschy, 324; third, Mr. C. W. Budd, 312. Of the amateurs, Mr. H. E. Palmer was high with 326; three, Messrs. F. T. Waugh, H. Anderson and Fred Bills, tied on 323 for second; Mr. R. J. McNish was third with 311. The silver loving cup was won by the Hill City, S. D., team.

The Chicago Trapshooters' Association have issued the programme of their amateur fall target tournament, to be held on Sept. 9-11. Added money and guaranteed purses, \$250; merchandise prizes, \$150. Shoot will begin at 9 o'clock. "No bang no bird," which signifies that a contestant may reject such targets as displease him. Ship shells to Messrs. Von Lengerke & Antoine, 277 Wabash avenue. Eleven like events are provided each day, eight at 15 and three at 20 targets, \$1.50 and \$2 entrance. All shooters winning a place divide the purses equally. Prizes for high averages. On the first day there will be an extra event at 25 targets, entrance \$2.50, surplus and \$75 added. Handicaps 16 to 20yds. On the second day the programme also provides the Autumn Handicap race, 50 targets, \$5 entrance, \$100 added to the purses. Mr. E. B. Shogren, secretary, 940 First National Bank Building.

BERNARD WATERS.

WINCHESTER

RIFLES, REPEATING SHOTGUNS AND AMMUNITION

SHOOT a Winchester Rifle or Shotgun, or Winchester make of Ammunition once and you will shoot it always. Winchester rifles, shotguns and cartridges of all kinds are so well and favorably known by intelligent sportsmen the world over, that an explanation of the reason they are so much superior to all other makes upon the market is unnecessary. If you buy other makes, you may get satisfaction; but if you buy Winchester make of guns or ammunition, you are sure to get satisfaction. The experience, skill and quality of materials embodied in their manufacture are the best guarantee that Winchester guns and Winchester make of cartridges represent today the highest development in gun and ammunition making. Whatever your preferences may be, some of the twelve different models of Winchester guns will surely suit you; for they are made in all styles, calibers, gauges and weights. Use Winchester guns for all kinds of shooting and Winchester cartridges for all kinds of guns.

In the Black Hills.

HOT SPRINGS, S. D., Aug. 25.—The seventh tournament of the Interstate Association series for the season of 1904 was given at Hot Springs, S. D., Aug. 24 and 25, under the auspices of the Hot Springs Gun Club.

Hot Springs is situated at the foot of the southern slope of the Black Hills. On the north and west it is protected by the pine-clad hills, dressed in never-fading green; to the south lies the valley of the Cheyenne River, decked in a profusion of flowers, and to the east are the famous Bad Lands, so rich in geological formations. The scenery is charmingly romantic and beautiful, and is declared by many to equal in grandeur the scenes of Switzerland and the Yellowstone Park, having a wonderful variety of beautiful valleys, bubbling fountains, rippling streams, precipitous cañons, lofty mountains, winding caves, magnificent landscapes, aromatic flowers and lovely drives. There is no other spot on earth where so great a variety of natural formations is found in so small a space. There is something peculiarly inviting, inspiring and invigorating in the surroundings. Here you may loiter on the banks of a murmuring river or repose peacefully in the cool shade of some sequestered grove or stand on the summit of a mountain to behold the beauties of the landscape until it fades out of sight, or meanders through the subterranean caverns of an endless cave.

The location of the shooting grounds of the Hot Springs Gun Club is unique. Traveling through Hot Brook Cañon, along roads hemmed in on either side by huge rocks and dense forests, you emerge suddenly into a natural park, which in summer is clad in verdure, beautified by fragrant flowers; fringed with scrubby oaks and stately pines, with an occasional cluster of handsome shrubbery. Here, too, we find Hot Brook, a mountain stream, which flows into Fall River. Great bald peaks of red sand stone rise perpendicularly to giddy heights, and stretching out as far as the eye can reach is magnificent landscape, with its forests of pines, broken occasionally by a beautiful field. This park is known as the Chautauqua grounds, and the Hot Springs Gun Club was indeed fortunate in being able to secure it for trapshooting purposes. The large pavilion in which the Chautauqua meetings were formerly held was partitioned off to form a cashier's office, gun and shell room, lunch room and room for spectators. The grounds are equipped with a Leggett trap and a set of expert traps, arranged Sergeant system. The Leggett trap faces northeast and the set of expert traps southwest, neither of the backgrounds being favorable for high scores. However, some very creditable records were made during the tournament.

Thirty-three contestants took part in the tournament the first day, of which number twenty-eight shot in every event. A high wind, amounting sometimes almost to a gale, prevailed during the whole day, but even with this handicap, some very good scores were made. Among the manufacturers' representatives, Mr. C. B. Adams was easily in first place, with Mr. H. C. Hirschy second and Mr. C. W. Budd third. Among the amateurs Mr. H. Anderson was first; Mr. W. J. Smith second, and Mr. H. E. Palmer third.

Thirty-three contestants faced the traps the second day, twenty-seven shooting in every event of the day. The conditions were more favorable than on the first day, and the scores as a whole were very much better. Mr. H. C. Hirschy was in first place among the manufacturers' agents, Mr. C. B. Adams second and Mr. C. W. Budd third. Among the amateurs, Messrs. Palmer and Bills were tied for first place, with Mr. Waugh second and Mr. Anderson third.

Mr. C. B. Adams won first general average among the manufacturers' representatives with a score of 332 out of 345. Mr. Hirschy was second with 324 and Mr. C. W. Budd third with 312. Mr. H. E. Palmer was in first place for general average among the amateurs with 326 out of 345 shot at. Messrs. F. T. Waugh, H. Anderson and Fred Bills tied for second place with 323, and Mr. R. J. McNish was third with 311.

The gold medal to the contestant making highest average, shooting through the entire programme, both days, went to Mr. C. B. Adams.

The silver loving cup for teams of five men (shot in connection with event No. 7 the second day) went to the Hill City, S. D., team.

During the afternoon of the second day, Capt. A. R. Hardy gave an exhibition of fancy rifle shooting which was greatly enjoyed by all.

The cashier's office was in charge of Mr. J. G. Bradley. Mr. Harry A. Gayhart had charge of affairs locally, and as is usually the case, did not do himself justice in the shooting line. Mr. Marshall Sharp assisted Manager Shaner.

The trade was represented by Messrs. Budd, Adams, Shearer, Sharp, Hirschy and Capt. A. R. Hardy.

The scores of both days follow:

Ohio Trap.

Rohrer's Island Gun Club.

DAYTON, O.—It is doubtful if any gun club has grounds better suited for the purpose and with more beautiful natural surroundings than those of the Rohrer's Island Gun Club, of Dayton.

The club house is built under the branches of two immense willows, on the banks of a branch of Mad River, and affording shade at all hours of the day.

The grounds are large, perfectly level and with a clear sky background, unobstructed by trees or buildings. In the far distance is a ridge of low hills.

There are three trap pits. Refreshments are furnished in the club house free to all, on every shooting day, good in quality and unlimited in quantity, and the officers and members vie with each other in extending hospitality to their guests. A jollier, freer-hearted crowd of shooters it would be hard to find.

The officers of the club are: J. Schaerf, President; W. E. Kette, Secretary; Joe Hohm, Treasurer; Geo. Rohrer, Captain.

Aug. 24, the regular shooting day of the club, was all that any sportsman could desire. It was perfectly clear, rather warm, but with a light, cooling breeze.

The medal event was first shot with an entry of fifteen. Six men qualified. Engle dropped out in the first shoot-off. Lockwood in the second; Chambers and F. Oswald in the third, and Hanauer was defeated by Rohrer in the fourth.

The afternoon's sport was closed with a team match, Hanauer and Miller being captains of the opposing teams. The best scores of the day were made in this shoot. Lockwood was high man with 25 straight. Miller and Smyth were close seconds with 24, the former losing his last target, and Smyth dropping his 21st. The match was closely contested, there being only one target between them when five men on each side had finished, the score then being Miller's team 113; Hanauer's, 112. In the last squad Oldt and Kette (Miller's) walked away from Sirran and Chambers, with a score of 39 to 32, and put their team 8 targets in the lead, the total being 152 to 144.

The day's scores: Medal shoot, 25 targets, handicap, extra targets to shoot at: F. Oswald shot at 31, broke 28; H. Lockwood 30, 27; Geo. Rohrer 30, 26; P. Hanauer 27, 25; H. Engle 35, 25; F. Chambers 35, 25; H. Oswald 27, 22; C. Smyth 26, 22; J. Schaerf 30, 22; Joe Hohm 30, 20; Wm. Oldt 30, 19; W. Kette 28, 18; J. Sirran 30, 18; C. Miller 25, 18; J. Gemin 35, 12.

Shoot-off No. 1: Lockwood shot at 12, broke 10; Hanauer 10, 10; Chambers 14, 11; Rohrer 12, 10; F. Oswald 12, 10; Engle 14, 9.

Shoot-off No. 2: Hanauer shot at 5, broke 5; Chambers 7, 5; Rohrer 6, 5; F. Oswald 6, 5; Lockwood 6, 3.

Shoot-off No. 3: Hanauer shot at 5, broke 3; Chambers 3; Rohrer 4.

Team shoot, seven-man teams, 25 targets per man: Miller's Team—Miller, captain, 24, Rohrer 23, H. Oswald 23, F. Oswald 22, Engle 21, Oldt 20, Kette 19; total 152.

Hanauer's Team—Lockwood 25, Smyth 24, Hanauer, captain, 23, Sirran 22, Schaerf 21, Hohm 19, Chambers 10; total 144.

Cincinnati Gun Club.

Cincinnati, Aug. 27.—Eighteen shot in the cash prize event Harig led with 41. Don Minto and Steinman tied for second on 40. Medico third with 38.

Four scores were shot in the cup race: Medico (18) 21, Harig

(19) 18. This makes thirty-eight entries with Peters and Gambell still in the lead. Ahlers has gone to camp, twenty miles north of Detroit City, Minn., where he will be the guest of Emil Werk.

The weather to-day was fine, a clear sky and cool. A strong wind blew across the traps. The scores:

Cash prize shoot, 50 targets: Harig (20) 41, Don Minto (16) 40, Steinman (16) 40, Medico (19) 38, Tuttle (16) 37, Pfeiffer (16) 36, Boeh (16) 35, Keplinger (16) 35, Falk (18) 33, Roanoke (17) 31, Peters (18) 30, Herman (17) 29, Smith (16) 25, Maynard (20) 23, Merkle (20) 21, Cottingham (16) 20, A. Andrews (16) 19, Myers (16) 15.

Dayton Gun Club.

DAYTON, O.—The weather clerk furnished, Aug. 23, the prettiest day for shooting which we have had in this section for many weeks. The tournament, Aug. 23, was given to dedicate the club's new grounds.

The three trap pits, in a straight line, are of solid concrete, the only wood about them being a shelf in front of the trappers and the door. Thirty thousand targets can be stowed in each. When the proposed club house is built and other improvements made which the club has in view, the grounds will be second to none in the country, and the club will be able to pull off the largest tournaments, as far as accommodations are concerned.

To the south of No. 3 trap pit will be the firing shed of the Dayton Sharpshooters, and 200 yds. to the east of this point concrete rifle pits are nearly completed.

Fifty-seven shooters took part in the sport, twenty-one of whom shot the entire programme. A large number of spectators were present. Messrs. John L. Theobald, C. H. Cord and Z. A. Craig were unrelenting in their efforts to keep things running smoothly and in looking out for the comfort of visitors. Supt. J. E. Barnes was always on hand when needed.

Tents were provided for shelter at the firing points, and refreshments were served all day.

Messrs. O. H. Bailey and John Curphy had charge in the office.

Messrs. H. Reigle and F. Whitacre gave good satisfaction as referees and scorers at Nos. 1 and 3 sets of traps. No. 2 was not used.

Among the visitors were Arthur Gambell, A. C. Dick, L. Pfeiffer, D. Pohlar, W. R. Randall, C. M. Peters, D. D. Gross, H. Jergens, E. B. Barker, Frank See and Milt Lindsley, of Cincinnati; Frank D. Munlist, Tippecanoe City; W. A. Watkins, Centerville; A. W. Ryan, Troy; L. Anderson, Xenia; Dr. F. R. Evans and Mrs. Evans and F. C. Dial, Franklin; Wm. Poole, E. Watkins and Capt. Ben Downs, of Springfield.

C. H. Cord left his camp on Mad River and came to the city to attend the shoot, and rendered great assistance to the managers, besides shooting in every event. As soon as the last shot was fired he packed up and started back to camp, where he is spending this month.

when the shoot for the handicap medal took place. Nine members took part in the contest, Sinan winning with a score of 34 out of 40 shot at.

The Hamilton, O., Gun Club's twelfth trophy shoot of the season was held on Aug. 25, with ten shooters in the contest for the badge. Doc and Steinman tied for first on 45 out of 50. Stickles and Smith were second with 43 each. E. D. C. third with 42. Mrs. Ayres and Parker fourth with 40 each. Ayres 38. Link and Wesley tied for sixth place on 35.

W. P. T. S. L. at Tarentum.

TARENTUM, Pa., Aug. 27.—The Western Pennsylvania Trapshooters' League, held a successful shoot at Tarentum, Pa., Aug. 25 and 26, under the auspices of the Tarentum Gun Club. The weather was as if made to order, barring a fair crossing wind that at times made the targets a little hard and accounted for a few goose eggs, which spoiled some of the scores.

First average on the first day went to Geo. Cochran, of Rodfield, Pa., and Jack Hull, each breaking 146 out of 165. E. D. Fulford, was second, with 145. Kelsey, of Pittsburg, Pa., third, with 141, and Mr. Curry, of Tarentum, Pa., fourth, with 130, along with Mr. Pontefract, of Pittsburg, Pa., with 130.

First average on second day went to E. D. Fulford, with 164 out of 175. Second, Jack Hull, with 158. Third, J. A. Stoops, with 155. Fourth, Mr. Curry, with 149.

High average for the shoot went to E. D. Fulford, with 309 out of 340. Second, Jack Hull, with 304. Third, Mr. Curry, with 279. Fourth, J. A. Stoops, with 272.

The trade was represented by Messrs. Chas. G. Grubb, E. D. Fulford, H. S. Watson and H. P. Fessenden.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Aug. 24.—The Hunters Arms Handicap trophy, the main weekly event of the Rochester Rod and Gun Club, resulted in a number of excellent scores: Kershner, one of the two scratch men, shot in fine form and made a perfect string. The scores:

Score. Hdep. Tot'l.			Score. Hdep. Tot'l.		
Kershner	25	0 25	Rickman	23	5 28
Clark	23	2 25	Borst	20	8 28
Adkin	23	2 25	Stewart	22	0 22
Norton	22	4 26	Sumner	17	5 22
Donovan	20	7 27			

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., Aug. 25.—The scores made at the regular weekly shoot of the Poughkeepsie Gun Club were as follows:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	10	15	25	25	15	10	Targets:	10	15	25	25	15	10
Traver	9	17	16	9	9	9	Du Bois	5	8	18	21	9	5
Perkins	7	9	18	22	13	9	Marshall	22	20	9	4		
Hans	7	11	23	25	10	10							

Event No. 3 was for the Condit medal, and event No. 4 for 1,000 Peters shells. Hans secured both wins. The club has installed a new rapid-fire trap.

We have heard of all kinds of odd reasons for matrimony, but the following, contributed by Vicar, is the most original of them all. He says: "Some years ago I had among my parishioners a collier who was an enthusiastic rabbit courser, and generally regarded as a confirmed bachelor. One day he startled all his friends by getting married, and when he was asked how he had come to do such an unexpected thing, he answered: "Well, ye see, it's this way, I agree wi' ye 'at Betsy yonder is no beauty. If she had been I shouldn't have wed her. But that there dog o' mine, he was simply pining for some one to look after him while I was away at the pit. I couldn't bear to leave him in the house by hissen, and I hit on the idea of marrying Betsy. She's not 'andsome, but she's mighty good company for t' dog."—Exchange.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Aug. 20.—The totals of the different contestants in the events of the Indianapolis Gun Club, Aug. 20, are appended:

	Shot at.	Broke.		Shot at.	Broke.
Parry	150	132	Steffen	65	46
Moller	150	124	Charles	100	76
Vonnegut	50	16	Halish	100	61
Gregory	125	98	Shearer	50	32
Hill	50	28	Robinson	100	69
Anderson	100	87	Gohen	50	12
Bill	100	85	Douglass	75	64
Dixon	125	94	Morgan	50	40
Leib	80	62	Smith	50	9
Wands	75	64	Adams	50	32
Parlington	115	98	Brennerman	50	28
Lawrence	115	102	Buch	75	62
Moore	90	79	Finley	100	86
Hill	65	59			

For Morrison cup, 50 targets, distance handicap: At 18yds.—Parry 44, Moller 40, Bill 44, Wands 41, Lawrence 45, Parlington 40. At 17yds.—Dixon 33, Gregory 45, Moore 40. At 16yds.—Anderson 43, Leib 43, Hill 44, Steffen 34, Charles 33, Finley 41. At 14yds.—Halish 33, Shearer 32, Robinson 28, Morgan 38, Buch 42.

Aug. 27.—The practice events at the shoot of the Indianapolis Gun Club to-day numbered eight. Each was at 25 targets. The totals were as follows:

Shot at. Broke.		Shot at. Broke.	
Parry	150 131	McCammon	50 20
Lawrence	125 110	Robison	100 72
Finley	125 107	Scott	125 99
Dixon	200 138	Gasper	125 83
Gregory	150 113	Michaelis	175 142
Charles	100 80	Wands	200 170
Adney	100 66	Moore	125 93
Anderson	101 81	Shearer	75 49
Hice	125 67	Buch	50 40
Williams	50 31	Schroyer	50 43
Bell	175 147	Voris	25 23
Steffin	75 57	Moller	100 77
Hill	75 58		

For Morrison Cup, 50 targets each: At 18yds.: Parry 44, Lawrence 42, Bell 41, Wands 42, Moller 36. At 17yds.: Gregory 33, Moore 39, Adney 32, Dixon 35. At 16yds.: Finley 47, Hice 43, Charles 38, Hill 40, Steffin 39, Anderson 41. At 14yds.: Robinson 40, Gasper 35, Shearer 38, Buch 40.

Oak Hill Gun Club.

PITTSFIELD, Mass., Aug. 22.—In the competition to-day Mr. J. E. Ranshousen made the excellent score of 104 out of 125 shot at. There were thirty-five contestants, some of whom were from North Adams, Dalton, New Lebanon and Housatonic, besides the professionals, Messrs. Fred Gilbert, E. W. Reynolds and T. E. Doremus. A disagreeable cross-wind caused the targets to take erratic flights. Mr. Gilbert broke his first 75 targets straight and established a new record for the grounds. Mr. Reynolds made second high average. Each of the five events was at 125 targets.

Trap at London.

LONDON, Ont., Aug. 20.—This "Forest City" of Ontario has a live and progressive gun club, the Springwood Gun Club. Its members meet for practice Wednesday and Saturday afternoons. The grounds are easily reached by trolley cars. The club house is a most comfortable one, and the grounds are large enough for several sets of traps. A portion of the background is bad; a dark bank of low trees. They are now using Sergeant's system, unknown traps and unknown angles.

Mr. Leach, of the Ithaca Gun Co., was with them at the practice shoot this afternoon. The clouds were lowering and dark, which kept the scores down.

Below are the scores of the winners, all shooting from the 18yd. mark:

First event, 15 birds: Glover 11, Leach 11.
Second event, 25 birds: Glover 22, Leach 22.
Third event, 15 birds: Leach 13, Glover 11, Screaton 11, Tillman 11.
Fourth event, 10 bird: Glover 8, Leach 8, Finch 7, Tillman 7.

SIDE LIGHTS OF TRADE.

First average on the first day of the Tarentum, Pa., two-day shoot, Aug. 25-26, was tied for by Mr. Geo. Cochran and Mr. Jack Hull, each using Winchester shells. The amateur average for the two days was won by Mr. Curry, with Winchester shells.

The U. M. C. Co. write us that their short range loaded shells are an entirely new type of shotgun ammunition, exclusively controlled by that company, designed especially for brush and field shooting at short ranges, with either choke or cylinder barrels, and that they give practically the same spread and penetration at 20yds. that is obtained with regularly loaded shells at 40yds. This result is accomplished entirely with the wads, which have a cylindrical hole punched through their center, permitting the powder gases to enter the shot charge at its center, causing a uniform spread at short ranges.

The Winchester Repeating Arms Co. have put on the market a new single shot .22cal. rifle, known as the Thumb Trigger Model, which, as its name indicates, is a decided novelty in .22cal. rifles. The trigger, which is located on the upper side of the grip at the rear of the bolt, is operated by pushing down with the thumb. The thumb trigger model is made in the take-down style, with an 18in. round barrel, and has the same simple and reliable bolt action which made the Winchester model, 1902, such a popular gun. It will handle either the .22 short or .22 long, rim-fire, cartridges, and lists at \$3.50. Notwithstanding the low price, at which it is offered, it is made with the same care which characterizes all rifles of Winchester manufacture.

Mr. F. G. Simpson, of Winnipeg, Man., at the Dominion Fair, Aug. 1 and 2, won the challenge cup emblematic of the amateur championship of Canada, with a score of 47 out of a possible 50. On the next day he broke straight, and in the shoot-off for the trophy again broke the possible. His score for the second day's shooting was 124 out of a possible 140. Mr. Wm. L. Boyd, of Richmond, Va., a strict amateur, won the loving cup presented by the Peters Cartridge Co., on Aug. 5, at Richmond, with a score of 49 out of a possible 50. Mr. M. E. Atchison, Giddings, Tex., at the Ennis shoot, July 27 and 28, broke 362 out of a possible 400. At the same shoot Mr. Mexia won high average on July 29, with 184 out of 190. At the Cincinnati tournament, Mr. J. Quincy Ward, of Paris, Ky., a strict amateur, made the highest average on July 22, with a score of 186 out of 200. Mr. Ward also made highest average for any one time, or 93 per cent. Mr. J. Greene, Avon, N. Y., on July 27 and 28 won first general average with a score of 306 out of possible 340. Mr. Greene is an amateur shooter and a strong advocate of the Parker gun and is a comer. Each of the aforementioned used a Parker gun.

Answers to Correspondents.

No notice taken of anonymous communications.

J. T., Saratoga Springs.—Can you inform me where I can send two valuable pointer dogs to be cared for a few months? I want the location very near to New York city. I have read your paper weekly for twenty-two years. Ans. We think that Mr. John N. Lewis, Campgaw, N. J., can fill your requirements.

Hammerless, Edgemere, L. I.—Will you kindly answer the following: A contends that he can shoot woodcock, grouse, etc., in the State of New York, come into Jersey State (Weehawken) en route to New York city, and the officials cannot take the birds from him. B says they can. Who is right? Ans. They can, and the former practice has been to do it. We are advised that this year game, properly authenticated, will be permitted to come through.

E. M. H., Bangor, Me.—I have a large kennel of pointers. I am desirous of making the acquaintance of a good, honest, reliable man, to break dogs. Can you furnish me with the address of such a man? Ans. We presume that our correspondent desires to engage the entire time and service of a trainer. We do not know of one who would work on salary. In our Kennel columns this week there is mention of a trainer such as our correspondent describes. If any one knows of such a trainer and will write of him to us, we will be pleased to forward his letter to our correspondent.

PUBLISHERS' DEPARTMENT.

World's Fair Scenic Route.

BECAUSE of its magnificent mountain, river and cañon scenery, its famous battlefields, and points of interest, and because of its superior equipment and physical condition, providing all the comforts and safeguards of twentieth century travel, the Chesapeake & Ohio is unquestionably the most attractive route between the Atlantic Seaboard and the Mississippi Valley. World's Fair and through tickets by this route allow stop-over at Virginia Hot Springs and Greenbrier White Sulphur, the two most fashionable and famous mountain resorts in the country. Solid trains Washington to St. Louis, with New York connection via Pennsylvania Railroad.—Advt.

Rules for the 100-Year Club.

Sir James Sawyer, an English physician, has formulated the following nineteen rules for prolonging life to 100 years:

1. Eight hours' sleep.
2. Sleep on your right side.
3. Keep your bedroom window open all night.
4. Have a mat to your bedroom door.
5. Do not have your bedstead against the wall.
6. No cold tub in the morning, but a bath at the temperature of the body.
7. Exercise before breakfast.
8. Eat little meat and see that it is well cooked.
9. For Adults.—Drink no milk.
10. Eat plenty of fat, to feed the cells, which destroy disease germs.
11. Avoid intoxicants, which destroy those cells.
12. Daily exercise in the open air.
13. Allow no pet animals in your living room. They are apt to carry about disease germs.
14. Live in the country if you can.
15. Watch the three D's—drinking water, damp and drains.
16. Have a change of occupation.
17. Take frequent and short holidays.
18. Limit your ambitions; and
19. Keep your temper.

Yachtsmen will read with interest of Jefferey's combined Meltin' Pot and Paying Ladle, by which Jefferey's Patent Marine Glue may be applied to seams by any workman without previous experience. The device seems a very useful one, economical of glue and protective of the material in which the glue is run. It is for sale by L. W. Ferdinand & Co., of 152 Federal street, Boston.

BAKER GUNS SHOOT HARD

and are SAFE.

They are noted for this wherever known, and that is almost everywhere. Ask the man who owns one. Fine Trap and Medium Field Grades, \$25.00 to \$200.00 and up. Inquire of your dealer or send for full descriptions.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1904, BY FOREST AND STREAM PUBLISHING CO.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, SATURDAY, SEPTEMBER 10, 1904.

VOL. LXIII.—No. 11.
No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

A PENNSYLVANIA "FISHING BEE."

WHEN the owner of a dam near St. Augustine, Pa., resolved upon draining it the other day, two enterprising citizens saw in the event vast fishing possibilities, and by contract acquired the purchase, upon payment of \$75. They then sold for \$2 each tickets "good for one share in the fishing party to be held at Andrew Carel's Dam near St. Augustine." Several hundred ticket holders and their friends gathered at the rendezvous on August 24, a piece of the breast of the dam was knocked away, wire netting having been placed across the opening, and the scene that followed "beggared description." As told in the Johnstown Tribune: "Men and boys armed with seines and gig spears, and even clubs, rushed into the water, killing and capturing by hundreds the fish and eels which lay in a great squirming mass in the bottom of the stream. The 'fun' lasted for hours before the 'sportsmen,' literally exhausted with the exertion of landing their catch, rested from their labors and set about dividing the prey." The fish, which had been thrown about promiscuously on the ground as soon as killed, were gathered into forty-two piles, and the promoters of the "bee" had just about completed the allotment of the heaps to various sub-divisions of the party when the crowd was thrown into sudden consternation by the appearance of Fish Warden Spangler. There was a frantic rush to escape recognition, but most of the "prominent citizens present" had already been identified by the representative of the law, and as further evidence, there were the cards attached to the several heaps of fish giving the names of the owners. The participants are liable to prosecution under several provisions of the law; arrests and fines have followed, and more are to come. As a case of wholesale fish law violation and wholesale collecting of fines, the Carel Dam bee is without a precedent.

SMOKE AND SMELL.

A BROOKLYN court has held that a section of the Sanitary Code which forbids the owner of a building to allow smoke to escape from it is unreasonable because in restraint of trade and against public policy, and is void. "The mere permitting of harmless smoke to come out of a chimney cannot be made a crime," said the court. "Such an ordinance as this, if literally and strictly enforced, would close every manufacturing establishment in this vicinity. Of course, it is well within the power of the Board of Health to prevent the use of soft coal or the burning of any noxious thing creating a nuisance or interfering with the health of the public, but this is no such ordinance."

This whole subject of smoke and smells in the neighborhood of human habitations presents very complicated problems which are extremely difficult of solution. On the one hand are vast business interests represented by a thousand and one factories giving forth more or less dreadful and noxious stench, and on the other hand are the great collections of humanity, where the air should be pure and healthful. The two are bound together, and they have been accepted as a necessary combination. This has come about because the factory and the town have naturally developed and grown with corresponding pace together. A new factory means more people to be supported by it, and to live convenient to it. A growing town means more people to work in more factories and larger facilities for manufacturing. The two have progressed together thus naturally, and communities have acquiesced in the conditions, until now the average city has the curse of factory-polluted air so firmly attached to it that reform would be most difficult.

Nevertheless this conjunction of smoke and gas and fume exhaling districts and residence centers is radically wrong in principle; and like every artificial condition that is radically wrong, it may be remedied when-

ever public sentiment shall be aroused to the requisite stage.

The factory smoke and stench nuisance is firmly established only because public indifference has permitted its growth. There are, to be sure, certain weak and nullified statutes, like the Sanitary Code section which a Brooklyn justice has just made light of; but there is no strong and adequate law backed up by a healthy public sentiment. As conditions exist to-day, there is nothing in legal prohibition nor in public reprobation to halt the projector of a stench-exhaling factory in a place where it may make miserable the days or nights of a thousand people. But to accept this as a permanent condition of things is to believe that the community is not growing wiser; that our children will be satisfied to endure the conditions we abhor but have not the wit to rid ourselves of; and that the public comfort and the individual citizen's inalienable right to pure air in his home and his surroundings are never to be vindicated. The general sanitary conditions of our day are vastly superior to those of the past; the conditions of the future will be better than those of to-day, and the improvement will, we may be confident, include the air of great cities.

ABOUT ADVERTISING.

COMPARATIVELY few people appear to understand the great interest attaching to this subject—one of the most important elements of commercial success. If we think about it at all, we are likely to imagine that the concern whose goods are described is the one chiefly interested in any advertisement, but a little consideration will show that this cannot be the case, for unless the combined interest by individuals at large at least equals that of the advertiser, his advertising will not pay, and he will lose money and stop.

It has often been said that judicious advertising is the key to business success. This is no doubt true, but the qualification is most important; the advertising must be judicious. A periodical may introduce the advertiser to just the public he wishes to reach, but unless he has something to say to that public which will interest it, his advertising will profit him nothing. Given, however, a good medium, good articles to be described, and good judgment in describing them, and the result of his advertising is not doubtful. The advertiser will receive from the public he reaches far more money than he has paid for his advertising space.

We have weekly in the FOREST AND STREAM examples of this sort, where dealers in goods of various kinds have advertised them each week for ten, fifteen, twenty or thirty years without a break. Keen, hard-headed business men do this because it pays them—because it is as necessary for them to let the public know what it is they have to sell as it for them to have a place to sell it in. The expense of advertising is as necessary to them as the expense of rent. No matter how good an article may be, it can have no considerable sale unless the public knows of its existence.

Moreover, people do not consider, understand or believe statements made to them once or twice only. In the rush of every-day life a statement or a name read but once is at once forgotten, but read ten or a hundred or a thousand times, it becomes familiar, is accepted as fact, and unconsciously has its effect on our actions. The successful advertiser reckons on this familiar principle of human nature, and keeps the name of his articles before the public. Little children know of Pears soap, Sapolio, the Goldust Twins and Quaker oats almost as soon as they can talk, and when the time comes to make purchases, this long familiarity with a name inevitably—if perhaps unconsciously—makes itself felt.

Advertising costs money, and it is only the article which possesses real merit that can stand heavy advertising. Although, by attractive advertisements, people may be beguiled for a time into purchasing some inferior article, no amount of advertising will create a permanent demand for something that is worthless. It is the good things which survive in the struggle of competition, because the poor things—though they may start off with a rush—ultimately cease to sell and the money needed to pay for advertising fails to come in.

On the part of business men who have given but casual

thought to the subject of advertising, there is often little apparent comprehension of its possible effects. They sometimes appear to think that the handing over of their copy to a periodical to print, and then paying its bills is all that they have to do, while, in fact, much more is required. Unless the advertiser gives to his announcements the same intelligent thought that he does to other branches of his business, he cannot expect to receive the full returns to which his expenditure of money should entitle him. Absolute neglect of his advertising may result in its absolute failure, no matter how excellent the goods that he has to sell, or how effective the medium he uses to declare their worth; while, on the other hand, thought and study over the method of advertising will be likely to bring him, without the use of additional capital, returns far in excess of anything to which he has been accustomed.

It is manifestly to the advantage of a periodical publishing advertisements that those who use its columns for that purpose should receive adequate returns for the sums paid to it. Unless the advertiser feels pretty confident that he is receiving from his sales more money than he pays the periodical, he is likely to recognize that he is playing a losing game, and to stop advertising. But it must be remembered, as already said, that the periodical cannot do the whole work; the duties of advertiser and periodical are reciprocal. Both must work together for the common end—success to the advertiser.

REBUILDING THE EARTH.

MR. JAKES has chosen for his paper on irrigation a title which is sufficiently striking to attract attention and yet may defeat its purpose by exaggerating any actual task to which the people of this country might address themselves with a reasonable expectation of accomplishing its fulfillment. We may not "rebuild the earth," but we might "rebuild" little bits of it. Here and there on the expanse of the continent, bits have been rebuilt. California has made over immense tracts of desert into fruitful acres. The Southwest is piece by piece, fraction by fraction, being transformed from arid waste to blooming fertility. Mr. Jaques, if we understand his plea, would not have irrigation enterprises limited to that area recognized as desert lands. He argues for a storage of the waters everywhere; that the supply may be conserved for use as required. He would rebuild the watersheds of the New England hills as well as those of the prairies of the West.

MANY a man who has knocked about the Northwest coast in old times will feel a pang of regret to learn of the death of Capt. Michael A. Healy, best known as Healy of the Bear. He commanded this Revenue cutter for a number of years, and made an annual cruise to Point Barrow in the Arctic Ocean, the northernmost settlement in United States territory. On this voyage it was his custom to stop at the various Esquimaux settlements in Alaska to learn the condition of these people, in whom he took the greatest interest. They were devoted to him. When gold was discovered in Alaska, he predicted the ruin to the native population, which swiftly followed. Captain Healy was a man of most kindly heart, and at the same time of the greatest daring and most dogged determination. He was born in Georgia in 1839.

THE Mandans of the Upper Missouri visited by Henry were pictured by George Catlin twenty years later. During the intervening period there had been no influence to change the tribe in its life and customs. The drawings by Catlin give a graphic representation of the Indians in their villages. The buffalo dance, the horse racing and various other aspects of Indian life are depicted in the "Letters," from which we have reproduced the illustrations given to-day.

A SYSTEM of wireless telegraphy has been devised for use in the Rocky Mountains to signal forest fires. Stations will be established at various points where expert observers will be stationed to give warning whenever a fire breaks out, and to summon help. The first experimental stations will be established in the Black Hills.

THE SPORTSMAN TOURIST

Are Anglers Born or Made?

WE who have to do with anglers are accustomed to hear that fishermen, like other great men, are born, not made. That a man takes to angling as an eel to wriggling—because he has to. That he fishes because he cannot help it. That he is made of clay just a little different from other and less favored mortals. That his love for the wildness of nature is of a different and more irresistible kind than that of his neighbors and friends. Every book, essay, and poem on angling or anglers reflects this view. Anyone who is familiar with such literature, or who comes frequently in contact with fishermen, will testify that I have not misstated the case.

Having heard this asserted so often and so positively, and having seen it lived up to so faithfully, I had come to believe it implicitly, although I have sometimes wondered if those who had to fish, who could not help it, continued their enforced sport if transported to the desert of Sahara, or if landed by a mischance in the penitentiary. Until lately, however, no real doubt ever entered my mind. Now I am become a skeptic, and the tale that follows is largely responsible for the change.

One spring there came, I am told, a new parson to a parish in a quiet Ohio town. I do not know that there was anything especially remarkable about the new parson, except his pleasant, cordial manner, and the air of robust health and vigor that surrounded him. Neither do I know that there was anything particularly worthy of note in the quiet town to which he came. It was just an ordinary town—there are thousands such—a prosperous business community; the men attending to their work, to their families, to politics, to their churches. Ordinary, every-day men and women they were, apparently well contented with the quiet lives they led. It is related that all, both men and women, were pleased with the new parson; his cordial manner and undoubted interest in them taking them by storm. The fact that the first question he asked was about the fishing in the vicinity, and the second concerning the anglers in the town, failed to arouse either wonder or suspicion.

Perhaps you will have surmised that the parson was an angler. He was; an enthusiastic, inveterate, heart-and-soul angler—one of the kind who fish because they have to, because they cannot help it. He had grown up in a mountain town in Pennsylvania, where the principal interest of life appeared to be fishing; where the streams were filled with trout, the river with bass, various runs and creeks and dams and canals with pike and catfish and eels, and where there was something to catch all the year round; where people who knew asserted that there were more men who loved fishing, and more women who hated it than in any other town in the State, and where the honor paid to a good angler was greater than that accorded to the President. The parson's principal and far most precious impedimenta, if the truth had been known, consisted of the various angling implements his means had permitted him to buy, or his friends had been persuaded to give him. Before accepting his new charge, he had made diligent inquiry and had learned that it was situated in the midst of a good fishing country, and that its streams were accessible, and likely to be all that the heart of an angler could desire. No one ever said that this and not the opportunities and emoluments offered was the real reason he accepted the charge, but it certainly did not move him to refuse it.

As I said, one of the first things he did on arriving at his new home was to make inquiries on this vital point, but nobody knew anything about it. As to fishermen—there was one old fellow who lived somewhere around who did fish sometimes somewhere, and this fact alone seemed sufficient to condemn him in the eyes of the person who furnished the information. The parson was not discouraged, but pursued his inquiries, ran down the man who fished, and learned that he had not been misinformed as to the character of the streams, and that he had evidently fallen on his feet.

Now what happened? The parson proceeded to indulge in his favorite sport in the open and flagrant way to which he had always been accustomed. He haunted the streams during his leisure hours and became accustomed to their peculiarities. He carried home large strings of bass, right through the public streets, stopping at store doors and the porches by the way to show them with the usual pride of the successful angler. He made presents of fish to various parishioners, and sent them as dainties to the sick and convalescent of his flock. He wore the usual disreputable garb of the angler in the usual shameless way. He openly arranged his work so as to get off when conditions were right. He told endless stories of his good and bad days to audiences that gradually became appreciative. He showed his store of tackle, and explained its merits and demerits to whomsoever he could persuade to examine it; lent his sporting literature, books and magazines, to whoever cared to borrow them; instructed the small boys of the village how to obtain bait. In short, behaved toward the fishing in the frank and open manner to which he had been accustomed in the Pennsylvania town aforementioned, where everybody masculine fished, more or less.

It is useless to deny that at first the inhabitants of the staid Ohio village, particularly those connected with the parson and his church, were scandalized and alarmed, looking at each other and wondering what sort of man

this was. But the parson proved as ardent in his work as in his play, and little room was found for criticism in that quarter, and soon signs of the spread of the contagion became apparent. First a few of the younger and rasher of the men of the village took to attiring themselves in their oldest clothes and—rather shamefacedly, to be sure—following the parson through the streets with fishing rods over their shoulders and bait buckets in their hands. That they also began to follow him into his church and to aid him in various ways—just as shamefacedly, be it added—perhaps made the observers more lenient in their judgment. Soon these young men, too, began to bring back strings of bass, stopping to show them and to relate the manner of their capture. And the shamefacedness disappeared. The town gradually fell into line. The demands for tackle—rods, lines, bait buckets, hooks, flies, reels, etc.—so increased that various stores added this department to their stock. Old and worn out clothes took on a fictitious value; book stores added sporting literature to their lines; in fact, before many years the village became thoroughly infected. Wives and mothers became experts at making minnow nets for catching bait, and the youngsters at using them. The men came to know a good fishing yarn when they heard it. The newspapers gave advice freely on the subject. One favorite and never old subject of conversation became the prospects as they related to the fishing. The book stores displayed the latest publications; new sporting goods attracted immediate attention, and wives no longer worried over what they should give their husbands. Indeed, in time, the most flattering gift a man could send to his Congressman or to his sweetheart came to be an unusually fine mess of fish.

To show how thoroughly inoculated the community became, it hardly needs the story that was told and currently believed during the later years of the parson's life; told, be it added, with only a smile and a shake of the head by even the most conscientious of the parson's flock. It was said that when he contemplated holding service at certain outlying schoolhouses, where he had become one of the bright spots in the people's lives, the privilege of accompanying him was greatly appreciated. These schoolhouses were almost all built on the banks of some of the streams. The parson usually went on a week day and held the service in the afternoon. The man who went along was not expected, so it was said, to attend service, but to spend the time in getting the tackle ready, and the bait caught, and he was always required to keep in plain view from the windows of the little building, so that the parson could keep an eye on him and see that he played fair. If the man was unable to resist the temptation and started to fish, the parson's final "Amen!" was said to follow so quickly that the congregation would have been startled had they not, too, had an eye out of the window, and known the state of affairs.

Thus was the town transformed from a quiet, slow-going village into a community of men who, according to the parson, actually enjoyed life. This character it is said to preserve unto this day.

A second generation has appeared since then. These latter, I am told, regard themselves as true anglers—as men who fish because they have to, because they can't help it. They exhibit all the characteristics of the true angler. But, knowing what I do, I cannot help asking myself, are these claims reasonable? Does this case upset the delightful fallacy of the angler as to his heaven-sent prerogative, or does it not? In short, are anglers born or made?

JUSTINA JOHNSON.

Boyhood Days in Illinois.

My boyhood home was a pioneer farm in northwestern Illinois, my parents having settled there in 1847. The nearest town was on the Mississippi River, at least fifteen miles away. Our house was on the rolling prairie, but a quarter of a mile south you entered the hazel bushes; then came the burr oaks and black jacks, then the mighty white oaks, black oaks, hickories, hackberries, walnuts, butternuts, buckeyes, etc., stretching away for five miles south, and extending from east to west for fifty miles at least. That timber was a wilderness that remained unsettled until after the Civil War. The various streams ran from east to west with that line of timber and emptied into the Mississippi River. Only a half mile south of our house was the first stream, called Pike Run. Whether this stream was named after the great Pathfinder, Zebulon M. Pike, or on account of the kind of fish caught there in the early days, I do not know; but that pike were very plentiful in it during the fifties I know to be a fact. There are no fish in Pike Run now, and the run only runs after a heavy rain.

My first fishing excursion took place in June, 1857, when I was not quite eight years old. After my father and my Uncle Tom, who lived with us, had plowed corn all day, they decided to go to Pike Run that night and fish by moonlight. Some one had told my uncle that the fish bit well at night, and he was anxious to try it. I was told that I could not go, but must go to bed, but as both the men were going, and there was no other person about the place who cared to sit on me, I arrived at the run almost as soon as the men. Father had crossed the run and taken up a good position on the other side, and Uncle Tom had climbed out on a leaning tree that reached clear across the stream, and they soon had their lines in

the water and were quietly waiting for bites. There were a great many strange sounds down on the ground where I was—owls hooting and screeching, frogs croaking, and once in a while a stick would break, as though some large animal had stepped upon it, and I soon felt very spooky; so I climbed up and out on the leaning tree close to Uncle Tom, right over the middle of the creek, and laid myself out at full length along the body of the tree, with my arms around it, and in this position watched and waited for developments. I had no intention of going to sleep, but I waked up just as I landed on my back and sank in four feet of very chilly water. Father fished me out, and held a very animated conversation with me for a few minutes, and then we all went home. As my clothes consisted of not over a yard and a half of check hickory, I was about dry when I got home, and as Uncle Tom said that nothing but suckers would bite at night, and that we would go again soon in daylight, I went to bed happy.

A few days later the prairie breakers came to do some breaking for my father, and they had eight yoke of oxen and a monstrous big plow that had a pole along the top of it that was used to regulate the depth of the furrow, and about the first thing they asked about, was where they could get some good whip-stocks. I was on deck in a minute, and went with one of them to the run, where we cut a good supply of young hickories from twelve to fifteen feet long, as straight as arrows, very slim and willowy, and to one of these they fastened the whip-lash, which was made out of platted or twisted leather, and was ten to twelve feet long, and to this was attached a buckskin cracker on the end, about a foot and a half long; and I noticed that when the driver would knock a fly off a steer's rump, that he would bow his back away up and twist himself almost out of the yoke, and seem to want to pull the whole load himself for a few minutes; and if either of these men crossed the plains in the early days, I can tell how the Indians learned to swear. When the prospectors crossed the plains in 1860, bound for Pike's Peak, if they met an Indian and asked him how many teams he had met on the road, he would hold up two or three fingers and say, "Whoa haw gaw dams," meaning so many teams of oxen.

A few days after the prairie breakers came, they took a notion that there were young wolves in one of the dens near our house, and concluded to dig them out, so when one morning Uncle Tom reported to them that the old mother wolf had gone out for a walk they went at it, and after digging for a while one of them slid down into the den and handed out the young wolves, eight or nine of them, not much larger than kittens, and Uncle Tom knocked them on the head. While the men were digging for the wolves, my father had walked down to the den, with the old Kentucky rifle on his arm, to watch the fun, as I supposed; and while I was intently examining the young wolves, the rifle cracked, and the old mother wolf, who had just looked over the brow of the hill, was kicking her last, with a little round hole in the center of her forehead.

One bright October morning in the fall of that same year, we were all getting ready to ride eight miles in the big lumber wagon to visit one of my grandfathers, when we noticed a drove of deer on the next ridge, not a quarter of a mile from our house. Some were lying down and the others standing around in lazy contentment, when suddenly there was a scramble and a race. Two or three big prairie wolves had come down the hollow and started after the deer, and it was a pretty sight to see those deer jump the high board fence on the east side of our place, one at a time, and make for the woods south of us. The fence had only three boards, but they were the three upper ones, the two lower boards of all fences having been left off until after the repeal of the hog law some years later. The wolves went under the fence, and soon all disappeared in the woods. The sight of deer and wolves was quite common in those days, but that was the only time I ever saw the one chasing the other.

One cold, blustering morning a little later, one of the children had been looking out of the window and reported that there was a strange dog looking through the fence. Father told us to keep still, and he took down the old rifle from its hooks on the wall, then opened the door very quietly three or four inches, poked the gun out, and almost instantly there was a sharp report and the strange dog—that turned out to be a big timber wolf—rolled over dead. I made an inspection and found that same small round hole in the center of the forehead, and I do not remember to have ever examined an animal—hog, beef, or anything else, that my father shot that did not have that little round hole just in the center of its forehead. That old rifle shot a very small ball, not less than sixty to the pound, and the stock ran the whole length of the barrel, and it was nearly six feet long. It afterwards became a close companion of mine in many an outing in the woods and fields.

The next summer I began to make excursions into the woods, and as the summer advanced they became more frequent and extended. One day about the first of July I made a trip of more than three miles from home, and found a place in the timber where nearly all the trees had been cut, the wood hauled away, and nothing left but the stumps. This was a "hooking quarter." I expect that many young men of to-day never heard of a hooking quarter. There were many of them in western Illinois in

the early days. It was generally a well timbered quarter section of land whose owner lived back east, or it belonged to some estate, or at least there was no owner or agent in the neighborhood to look after it, and for some of these reasons stealing timber from it was considered safer than from other lands in the same wood, and when once a quarter had acquired the name of hooking quarter, people went to it for timber as though they owned it, or it at least was public property; and these quarters were usually entirely denuded of their timber before any of the adjoining timber was touched.

But to me at that time it was quite a sight to see a whole quarter of land denuded of its timber. But it made a grand place to spend my time. It was full of sunshine, birds, and flowers. I found a log seat and from this watched the birds and the squirrels. Then a wild turkey led her brood of young ones out into the sunshine, and in plain sight they skirmished for their dinner. A doe and a spotted fawn came out of the shadows of the wood, and while the doe cropped the blades of grass made sweet by sun and dew, the fawn played about her, jumping over low stumps and logs or little piles of brush. A pheasant came out and ran along a log to the other end, like a minstrel coming on the stage, and there he drummed, then shook himself and flew away, and a brown thrasher in the nearest tree said, "Look there, look there; come here, come here; what's the matter?" And although this place was more than three miles from home, it became a favorite place, in which I spent many long and glorious days. On all these excursions I had one companion—a dog. His name was Watch. He was a very large brindle dog, with very heavy head and jaws, and his match did not roam the woods. He was very quiet, always attending to his own business, and his business was nearly always with me; and while I sat on a log he laid at my feet, with his great head on his paws and his eyes always on me.

One bright July day I was at my usual occupation, sitting on a log in the hooking quarter, with Watch lying before me with his nose on his paws, when I noticed that Watch was looking very intently past me, and that the hair along his back was slightly raised, and he was showing signs of uneasiness that made me turn and look in the same direction, and there, about ten feet from me, stood an old man, and with the man a little benched-legged dog. The man was tall, stooped-shouldered, with grizzly hair and whiskers, and he had a long rifle in his hands. As soon as I looked around, he spoke to me, and said, "How de do, boy." I spoke to him, and he came and sat down beside me on the log. His dog by that time had come nearer, and was growling and making a good deal of fuss, as though he wanted to fight Watch, but Watch laid still with his eyes on the old man, and paid no attention to the dog. Then the old man said: "Don't let them dogs get to mixin'; I expect your pap needs that dog of yours," and I wondered what he meant. His dog was hardly as big as a coon, one of those old-fashioned penny dogs, with bench legs, and white and yellow in color; but I finally said, "Watch won't hurt your little dog," and the old man laughed and shook all over for a while, and then he said: "Whose boy be you?" and when I told him, he said, "Live out there on the perarie?" and when I said yes, he told me that he lived about two miles from where we were sitting, and that he farmed a little and made barrels and kegs, and that if our folks wanted any pickle kegs to tell them to come over and get some. Then the old man told me that he was watching a bee tree, and that just as soon as the bees swarmed, he was going to cut it and get the honey, and that if I happened around at the right time I could have some of the honey, and I made up my mind to be around.

The next morning when I entered the hooking quarter I saw the old man running as hard as he could, and beating on an old tin pan, and I made up my mind that he was crazy; but my curiosity got the better of me, and I followed him, and he soon stopped. He had been chasing that swarm of bees, and they had settled on a low bush, and he went home and got a hive, and soon toted them home, while I looked on from a respectful distance. When we arrived at his house, his wife set out a lunch of cold corn-pone, cold catfish, and some home-made cheese, which was very light in weight and color, and I made a hearty meal.

I spent the afternoon with my new-found friends, and had a very pleasant time. One of the things that interested me most was a fish pen. There was a small brook, fed by springs, that came into the stream just at the old man's house, and the water in this brook was very cold, as well as pure, and he had fenced in about a rod square of this brook. Along the sides, the fence was made of pickets driven into the ground, but across the ends it could not be driven into the ground on account of the solid rock bottom, so the pickets were stood upon end on the rocks and laced together with hoop poles, and in that pen were about a dozen catfish of different sizes, some as large as ten pounds, and then there were three or four fine pike, and a hundred or more sunfish. These he had caught in a net out of the large stream and put into his pen, where he could dip them up when wanted, and he told me he penned them up that way because if left in the large stream they would not be good to eat in dog days, and if kept in the cold spring water they would be good all summer. As eight hours or less constituted a day's work for the old man, he decided to cut the bee tree the next morning; so after another feed of cold catfish, cold pone, and home-made cheese, I scampered for home, and waited very impatiently for next morning to come.

I was on hand next morning, and did not stop at the bee tree, but went to the old man's home and found him about ready to go. He took a tub, an ax, and some matches, and we started, and after a brisk walk of about twenty minutes we arrived at the tree. After deliberately looking around the tree a few times, the old man went to chopping, and in about half an hour the tree came down with an awful crash, but it was not a story-book tree, and did not perform like Washington Irving's or Cooper's bee trees. They always split open from end to end, but this old tree remained as solid as a rock. The old man looked it over carefully from end to end, and finally decided, to his own satisfaction, where the honey was, and then he cut out a log about twenty feet long and prepared to split it. He first made some wooden wedges, and it seemed to me that he was the slowest mortal I had ever

seen, and it was after noon before he laid that log open; but when he did lay it open, it disclosed the most wonderful store of honey, and the old man said it was the greatest store of honey he had ever found in a bee tree, and that he would have to go home and get his wife and the ox team and some more tubs, and he left me to watch the tree. Before starting, he had built several little fires under the tree, and smoked the bees very thoroughly, so they would not trouble us, and I was to watch and not let the tree get on fire. As soon as he was out of sight, I commenced to investigate the honey, and taste it, too. At what had been the top of the hive, the honey was very light colored, and very good, but as it was followed downward along the hive, it was much darker, and finally it was as dark as mahogany wood. I began tasting at the light-colored honey, and gradually worked downward to the darker honey. The darker was the richer and better, so I filled up on that. While I was eating, a bee had crawled inside of my trousers, just below the belt, and as I happened to lean a little too hard against the tree, he stung me. It hurt awful for a minute or two, but not enough to prevent me from finishing my dinner. But before I had finished, I began to have awful pains. They grew worse and worse; I wished for the old man, and made up my mind that he was not coming back. I threw myself on the ground and rolled and tumbled, but it did no good. The paid got worse and worse, and I concluded I had been poisoned, and that I must die. But that did not help the pain, and long before the old man and his wife arrived, I had become perfectly reconciled to die, but I could not stand the pain. At last they came, and I was lying on the ground unable to get up, white as a ghost, and suffering all the torments, perfectly willing to die if they would only stop the pain and let me die easy. They saw what was the trouble at a glance, and while the old lady went home after some milk, the old man pulled some weeds and fed me, or made me eat them. I never knew what the weeds were, but think the old man said it was either boneset or pennyroyal. At all events, the pain gradually got better, and when the old lady arrived and gave me a drink of milk I soon got so I could stand up. But I was still a very sick boy, and so sore that I could hardly move; and to add to my discomfort a storm was coming up, and the old man told me I had better try to get home before it rained, and that I could come back some other day and get some honey to take home, but I told him he could have all the honey, and I started for home. It was nearly sundown, and the storm struck me before I had traveled a mile, and such an awful rain! It came down in torrents, and when I reached Pike Run, just at dusk, it was a raging flood, high enough to swim a horse. But Watch had crossed, and came back before I got to the bank, and as he turned around as though about to start in again, I grabbed him by the back of the neck, and in we went together. I had made the mistake of getting on the upper side of the dog, and when the torrent swept us both off our feet, my legs went under the dog, and they were badly scratched, and the blood was running down in streams when we got out of the water. Just as we crawled up the bank, Uncle Tom came over the hill on a horse hunting for me and pulled me up behind him, and I was soon at home. I did not want any supper, and was put to bed. After rolling and tumbling about on the bed for a while, I fell asleep, and then I dreamed. I dreamed that a panther got me and took me into an old log cabin, and began to grind some corn stalks on an old grindstone to cut me up with, when, just as he raised up the corn stalks, and felt along the edge to see if they were sharp, I made a break for liberty, stubbed my sore toe and fell, and just as the panther landed upon me I awoke and found mother sitting by my bed putting cold cloths upon my head.

A. D. McCANDLESS.

[TO BE CONCLUDED.]

Trails of the Pathfinders.—XVII.

Alexander Henry (The Younger).

(Continued from page 194.)

In August, 1801, Henry was on his way to a new post on the Pembina, the one which Langlois had established the year before. He intended to establish also a post at Grandes Fourches, the site of the present town of Grand Forks, North Dakota. This business, and his travels to other subsidiary trading posts that he built at various points, occupied the autumn. Game was abundant, and so were fish. The Hudson's Bay Company, the opposition, were not far off, and there was some intercourse between the men of the two companies. On March 14, during a drinking match, occurred one of the fights among the Indians which were so common in those days of abundant liquor. "Gros Bras, in a fit of jealousy, stabbed Auposoi to death with a hand-daguer; the first stroke opened his left side, the second his belly, and the third his breast. He never stirred, although he had a knife in his belt, and died instantly. Soon after this, Auposoi's brother, a boy about ten years of age, took the deceased's gun, loaded it with two balls, and approached Gros Bras' tent. Putting the muzzle of the gun through the door, the boy fired the two balls into his breast, and killed him dead, just as he was reproaching his wife for her affection for Auposoi, and boasting of the vengeance he had taken. The little fellow ran into the woods and hid. Little Shell found the old woman, Auposoi's mother, in her tent; he instantly stabbed her. Ondainoiahe then came in, took the knife, and gave her a second stab. Little Shell, in his turn, taking the knife, gave a third blow. In this manner did these two rascals continue to murder the old woman as long as there was any life in her. The boy escaped into Langlois' house, and was kept hid until they were all sober."

March 15, a swan, a turkey-buzzard, and a hawk, the first spring birds, were seen; and by the middle of April wildfowl were plenty, and calves were becoming numerous. Passenger pigeons were passing north, and toward the end of the month some Indians came in with thirty-six whole beaver in a skin canoe. In May came the news of a Sioux attack on the Salteurs, in which seven of the latter were killed. Henry planted his garden, and soon after made ready for his departure to join the brigade.

The next September he was back again at Panbian River, trading with the Indians, and, of course, handing

out rum to them. His entry for February 15 contains a small temperance lecture which represented what he sometimes preached, but never practiced. As he says: "The Indians totally neglected their ancient customs; and to what can this degeneration be ascribed but to their intercourse with us, particularly as they are so unfortunate as to have a continual succession of opposition parties to teach them roguery, and to destroy both mind and body with that pernicious article, rum? What a different set of people they would be were there not a drop of liquor in the country. If a murder is committed among the Salteurs, it is due to a drinking match. You may truly say that liquor is the root of all evil in the West."

Spring came on with the usual signs, and about the usual time. The women were making sugar at the last of March (1803), and it was noted that spring that very few buffalo drifted down the river. The plains of the Red River were covered with water from the sudden melting of the snow, and the men suffered much, for they were continually on the march, looking up Indians along every stream. The water was commonly knee-deep, and in some places much deeper, and was usually covered with ice in the morning, making the walking tiresome, and often dangerous. Some of the best men, Henry says, lose the use of their legs while still in the prime of life. The Indians were now bringing in the proceeds of their spring hunt, and exchanging it for rum. When the time came around, Henry interrupted his hunting and his trading to plant his garden, sowing potatoes, cabbage, and many root crops. With the end of May came the mosquitoes, a terrible pest. Among the articles traded for was maple sugar, an important article of food in that country. As usual, about midsummer, Henry started down the river with his furs, and reached Fort William July 3.

On the 29th of the same month he started on his return journey, with a brigade of eight canoes; and about two months later, September 20, found himself at the present Winnipeg, and somewhat later at the old post on the Panbian River.

Horses had now begun to be used in the trade at this point, and Henry grumbles about them in a long entry, which is worth reproducing: "It is true they are useful

A RED RIVER CART
No metal in its construction.

animals, but if there were not one in all the Northwest we should have less trouble and expense. Our men would neither be so burdened with families, nor so indolent and insolent as they are, and the natives in general would be more honest and industrious. Let an impartial eye look into the affair, to discover whence originates the unbounded extravagance of our meadow gentry, both white and native, and horses will be found one of the principal causes. Let us view the bustle and noise which attended the transportation of five pieces of goods to a place where the houses were built in 1801-02. The men were up at break of day, and their horses tackled long before sunrise; but they were not ready to move before ten o'clock, when I had the curiosity to climb on top of my house to watch their motions, and observe their order of march.

"Antoine Payet, guide and second in command, leads the van with a cart drawn by two horses, and loaded with private baggage, cassettes, bags, kettles, and mashque-minces. Madame Payet follows the cart, with a child a year old on her back, very merry. Charles Bottineau, with two horses and a cart, loaded with 1½ packs, his own baggage, and two young children, with kettles and other trash hanging on to it. Madame Bottineau, with a squalling infant on her back, scolding and tossing it about. Joseph Dubord goes on foot, with his long pipe-stem and calumet in his hand. Madame Dubord follows on foot, carrying his tobacco pouch with a broad bead tail. Antoine Thellier, with a cart and two horses, loaded with 1½ packs of goods, and Dubois' baggage. Antoine La Pointe, with another cart and horses, loaded with two pieces of goods, and with baggage belonging to Brisebois, Jasmin, and Pouliot, and a kettle hung on each side. Auguste Brisebois follows, with only his gun on his shoulder and a fresh-lighted pipe in his mouth. Michel Jasmin goes next, like Brisebois, with gun and pipe, puffing out clouds of smoke. Nicolas Pouliot, the greatest smoker in the Northwest, has nothing but pipe and pouch; those three fellows have taken a farewell dram, and lighted fresh pipes, go on brisk and merry, playing numerous pranks. Dormin Livernois, with a young mare, the property of Mr. Langlois, loaded with weeds for smoking, an old worsted bag (madame's property), some squashes and potatoes, a small keg of fresh water, and two young whelps, howling. Next goes Livernois' young horse, drawing a travaille, loaded with baggage and a large worsted mashguemate belonging to Madame Langlois. Next appears Madame Cameron's mare, kicking, rearing,

MANDAN DANCING FOR THE COMING OF THE BUFFALO.
From Catlin's "Letters on the North American Indians."

and snorting, hauling a *travaille* loaded with a bag of flour, cabbages, turnips, onions, a small keg of water, and a large kettle of broth. Michel Langlois, who is master of the band, now comes on leading a horse that draws a *travaille* nicely covered with a new painted tent, under which his daughter and Mrs. Cameron lie at full length, very sick; this covering or canopy has a pretty effect in the caravan, and appears at a great distance in the plains. Madame Langlois brings up the rear of the human beings, following the *travaille* with a slow step and melancholy air, attending to the wants of her daughter, who, notwithstanding her sickness, can find no other expressions of gratitude to her parents than by calling them dogs, fools, beasts, etc. The rear-guard consists of a long train of twenty dogs, some for sleighs, some for game, and others for no use whatever, except to snarl and destroy meat. The total forms a procession nearly a mile long, and appears like a large band of Assinaboines."

Early in November Henry went over to the Hair Hills. In March, on a journey from the Hair Hills to his home, he mentions he traveled in the night always, preferring to do so at this season of the year, partly to avoid snow blindness, and partly because the cold of the night makes travel easier than during the day, when the snow is melted and soft, and dogs and sledges sink deep into it. In April, when he was chasing buffalo, he came near leaving his bones in the plains, a prey for the wolves. "This was occasioned by my horse stumbling while at full speed. I was just drawing my gun from the belt to fire, holding it by the barrel, near the muzzle, when the sudden shock caused the priming to fire the gun; the ball passed near my hip and struck in the ground, and the gun flew some distance. I was in the midst of the herd; a fine large calf passing near me, I dismounted, caught him by the tail, and held him fast; he began to bleat, when instantly the mother turned and rushed at me; I was glad to let go and run to my horse. As I reflected on my narrow escape, it brought to my mind a similar affair which happened to me some years ago at Michipicoten, when shooting wildfowl in the spring, in a small canoe. In attempting to remove my gun from my left to my right side, passing the muzzle behind my back, the cock got fast in one of the bars, and, on my pulling the gun forward from behind me, she went off; the load grazed my right side, taking a piece of my belt and capot away."

In April he bought a beautiful white buffalo skin; the hair was long, soft, and perfectly white, resembling a sheep's fleece. Early in May extraordinary numbers of wild pigeons were seen, and the Indian women were preparing the ground for their farming. With the summer came the usual packing of the furs, and the journey to Kamanistiquia. The return journey was a short one, and Henry reached the Panbian River early in September. In October he writes, as showing the excellence of his horse, that one day he ran an elk five miles before killing it; then chased a hare, which he killed after a long pursuit; and finally, toward evening, he ran a herd of buffalo, and killed a fat cow for supper. Besides these long races, he had covered about thirty-six miles of travel.

This winter, because he refused to give credit to an Indian for a blanket, Henry was twice shot at, but missed. On his return to his post that summer, he learned of an attack on a small camp of his Indians by Sioux a month earlier. This is the story as Henry gives it, and it may be retold because it illustrates Indian modes: "My beaupère (father-in-law) was the first man that fell, about eight o'clock in the morning. He had climbed a tree to see if the buffalo were at hand, as they were tented there to make dried provisions. He had no sooner reached the top than two Sioux discoverers fired at the same moment, and both balls passed through his body. He had only time to call out to his family, who were in the tent, about a hundred paces from him, 'Save yourselves, the Sioux are killing us!' and fell dead to the ground, his body breaking several branches of the tree as it dropped. The noise brought the Indians out of the tent, when, perceiving their danger, the women and children instantly ran through the plains toward an island of wood on Tongue River, about a mile distant, and on a direct line toward the fort. The men took their arms and made off also, keeping in the rear of their women and children, whom they urged on. The four surviving men had not gone more than a quarter of a mile when they saw the main body of the war party, on horseback, rushing down upon them. Crossing Tongue River, and in a few moments coming up with them, the Sioux began to fire. The four men, by expert maneuvers and incessant fire, prevented the enemy from closing in on them, while the women

and children continued to fly, and the men followed. They were within about two hundred paces of the wood, and some of the most active had actually entered it, when the enemy surrounded and fell upon them. Three of the Salteurs fled in different directions; Grand Gueule escaped before they were completely surrounded, but the other two were killed. One who remained to protect the women and children was a brave fellow—Aceguemanche, or Little Chief; he waited deliberately until the enemy came very near, when he fired at one who appeared to be a chief, and knocked the Sioux from his horse. Three young girls and a boy were taken prisoners; the remainder were all murdered and mutilated in a horrible manner. Several women and children had escaped in the woods, where the enemy chased them on horseback, but the willows and brush were so intricate that every one of these escaped. A boy about twelve years old, whom the Sioux pursued, crawled into a hollow under a branch of willows, which a horseman leaped over without perceiving him. One of the little girls who escaped tells a pitiful story of her mother, who was killed. This woman, having two young children that could not walk fast enough, had taken one of them on her back and prevailed upon her sister-in-law to carry the other; but when they got near the woods, and the enemy rushed upon them with hideous yells and war-whoops, the young woman was so frightened that she threw down the child and soon overtook the mother, who, observing that the child was missing, and hearing its screams, kissed her little daughter—the one who relates the story—saying, with tears streaming from her eyes: "Take courage, my daughter; try to reach the woods, and if you do, go to your eldest sister, who will be kind to you; I must turn back and recover your youngest sister, or die in the attempt. Take courage; run fast, my daughter!" Poor woman! She actually did recover her child, and was running off with both children, when she was felled to the ground by a blow on the head with a war-club. She recovered instantly, drew her knife, and plunged it into the neck of her murderer; but others coming up, she was despatched. Thus my belle mère ended her days."

This same story is told by Tanner, who was then an Indian captive, living with the Chippewas. Tanner even mentions Henry's name, and speaks of his father-in-law having been killed. The Salteurs were determined to avenge the death of their relations, and Henry furnished them with ammunition for their war journey. Later, he visited the battlefield and the Sioux camp, and judged from the sign that there must have been about three hundred men in the Sioux party. In October the remains of the Sioux killed by Little Chief were discovered by some of the Indians; and the certainty that their enemies had met one loss was some satisfaction to the Salteurs.

Although Henry had made an agreement with Mr. Miller, an agent of the Hudson's Bay Company, by which the rum to be given to the Indians should be limited, the winter did not pass without deaths due to drinking. One of these was an accident where a drunken Indian knocked

down a gun which, exploding, killed one of Henry's men, who was lying on a bed in the next room. The profits for the season's work in 1805 and '06, as given in Henry's diary, are nearly three thousand five hundred pounds.

Early in July, 1806, after his return from down the river, Henry made preparations to set off on a tour to the southwest, to the country of the Mandans, who then, as now, lived on the Missouri River. There had been heavy rains, and the plains of the Red River were covered with water, or else were so muddy that travel was slow and exceedingly laborious. The horses often sank up to their knees in mud, and at times had water up to their bellies, while the little rivulets which they crossed they were obliged to swim, carrying on their heads such articles as they wished to keep dry. Mosquitoes were a veritable plague, and Henry had prepared a mask of thin dressed caribou skin, which in some measure protected him; but those who were not provided with some defense suffered terribly. Only when the wind blew was there any relief from the pests. They were more than once obliged to make rafts, and when they were naked, hauling the raft back and forth, they had no defense against the mosquitoes. The horses suffered as much as the men.

The final start for the Mandans was from the establishment on Mouse River, and the party consisted of seven persons, of whom one was a Salteur, a brother-in-law of Chaboillez, who had undertaken to guide the party to the Mandans. It was midsummer, and they traveled west-southwest over delightful prairies, where antelope were exceedingly abundant. After crossing Mouse River, they found buffalo in great plenty, and all in motion, from east to west. It was the rutting season, and the herds were noisy and excited. On the 18th of July, as they were crossing the high Missouri plains, they came in sight of the buttes, called *Maison du Chien*, now commonly known as the Dogden Buttes. This is one of the great landmarks of the country, and many stirring adventures have taken place within sight of it. A little later they could see the high red banks of the Missouri before them, a long way off. When they reached the Missouri, they found plenty of tracks of people there, and an abundance of last year's corn cobs. The winter village of the Minitaris was near. A well-defined trail led down the river, and they were several times in danger of breaking their necks in deep pits, which the natives had dug in the path to catch wolves and foxes in winter. Some of these were ten feet deep, and hollowed out in places to about thirty feet in circumference, while the entrance was no wider than a foot-path, and about five feet in length. "These holes are covered with dried grass, at the season when the wolves are caught, and every morning are found to contain some of those animals. In summer the grass grows strong and high about the mouths, entirely concealing them until one arrives upon the very brink, and he is in danger of tumbling in headlong." Down the river about five miles they came to a Mandan village. The people received them pleasantly, and the Black Cat, the chief, took them to one of his houses, which was kept for strangers. The people were desirous to trade, and could not understand why the white men should have come so far out of mere curiosity. As usual in these permanent villages of earth lodges, the horses at night were confined in one part of the lodge while the people slept in the other. The Mandans had large earthen pots of different sizes, from five gallons to one quart, used solely for boiling corn and beans. The Black Cat was told the next day by a Canadian who lived in the neighboring Mandan village, who his visitors were, and at once brought out the American flag, given him in the autumn of 1804 by Captains Lewis and Clark, and hoisted it over the hut in which the strangers were staying. When they were about to cross the river and go to the opposite village, they packed up such goods as they had, and the few things they had purchased, chiefly provisions, and gave them into the care of the chief. "These people are much given to thieving, but in the hut in which a stranger is lodged his property may be left in perfect security; none dare touch it, as the master conceives his honor concerned in whatever is placed under his immediate protection. Out of doors, if they can pick your pocket or pilfer any article, it is gone in an instant, and search would be in vain; every one would wish to appear innocent, although they are not offended when accused of stealing, but laugh the matter away."

Henry and his people crossed the river in bull-boats, and were well received at the other Mandan village. He noted the expertness of the young men in getting the horses across, one swimming ahead with the rope in his teeth, while others swam on each side, and in the rear, driving each horse very rapidly. He also saw the bull-boats, which were evidently a new vessel to him. They had hardly reached the village when there came in some Pawnees from down the river on an embassy to treat for peace. They could not speak the language either of the Mandans or the Minitaris, but they talked freely in signs; and this

A MANDAN HORSE RACE.
From Catlin's "Letters on the North American Indians."

sign language seems to have been a surprise to Henry. He says: "They hold conversations for several hours upon different subjects, during the whole of which time not a single word is pronounced upon either side, and still they appear to comprehend each other perfectly well. This mode of communication is natural to them. Their gestures are made with the greatest ease, and they never seem to be at a loss for a sign to express their meaning."

The houses, villages, and customs of the Mandans were all new to Henry. The house he lodged in measured ninety feet in diameter.

These people collected their fuel in the spring, when the ice broke up, and great quantities of wood drifted down. The young men were accustomed to swim out among the drifting ice and bring in the trees, however large, which they hauled out on the bank. Immense piles of driftwood were seen opposite each village, and some of the trees were very large. While collecting this driftwood, they also drew to land great numbers of drowned buffalo, of which they were very fond.

He noticed—as many others have—that some children were gray-haired, and that others were blond. A Minutari was seen with yellow hair, something not unexampled in old times.

The men wore their hair twisted into a number of small tails, hanging down the back to below the waist. In some of them it trailed on the ground. The Cheyennes to-day tell us that a hundred years ago the men of their tribe wore their hair in the same fashion. From the village of the Mandans they went on up the river to those of the Soulier and Minutari villages. Here they met Mackenzie and Caldwell, employees in the service of the Northwest Company, who had been residing some little time in the village.

Henry was not particularly well pleased with his reception here, and indeed the Indians paid little attention to the white men, and seemed to despise them. He pays tribute to their physical qualities, and says they all have manly and war-like countenances. The village, which formerly contained nine hundred houses, now had only

with increased celerity and twofold force, whence it requires a much longer time for the freighted winds to return it to the lands again; this to the direct destruction of his own works and to the detriment of the very scheme of nature. He has swept away forests and left a withered waste behind with such frenzy as to suggest that he is afraid of passing away before he can compass all and be compelled to leave some of the lavish wealth of nature to posterity. As yet nothing has been done toward the rebuilding: the trend of the age is toward destruction. Some outcry has been made at the destruction of the forests, and some feeble efforts made to restore them; that is all, so far, on that side of the question.

Drainage sometimes lapses for a short period during protracted drouths, but the first shower starts it up again. Not one word has yet been said or action taken looking to a general construction of reservoirs, with due regard to economy of space, to take the place of lakes, marshes, and swamps that are being drained. Drainage is a great factor in production. But what is land without water?

Who has ever wandered in the lake lands of the North and East and viewed its forest-crowned slopes and clover-decked hills, and again the withered plains and hills of the West and Southwest and not marveled at the difference? The difference is not of soil, for the soil of the arid plains is vastly superior to the soil of the lake lands. It is not in rainfall, for, eliminating local showers, it is about equal. The difference is in formation. The lake lands retain their moisture while the arid lands discharge it immediately back to the ocean. There are no disastrous floods, and seldom long drouths, in the lake lands, because there is no rapid drainage. What moisture comes from afar is retained and rises and falls again and again in local rains. The history of the arid west is of flood and drouth. Its cause is plainly seen. A like result may be reached in any far inland country by artificial drainage and forest destruction without rebuilding.

My life has been spent in these two sections, and much thought has been given to this condition. That part of the Chicago, St. Paul, Minneapolis and Omaha Railway

took place. At the same time New England was withered by drouth and scorched by fire, and a general discussion ensued in newspapers and periodicals on irrigation and flood prevention by a reservoir system. Few, however, seemed to grasp the idea. Most people jumped to the conclusion that reservoirs would have to be dug of sufficient capacity to hold the excess of rainfall in flood times. Seeing how stupendous a work it would be, some were inclined to scoff. Others thought the end could be gained by damming the running streams and forming gigantic reservoirs. But the danger of such a course was too easily detected by the casual observer. The result of such a course was seen at Johnstown, Pa., and various other places. A better way is to stop it in detail before it gets dangerous.

In this article I propose to further show how it may be done, but first let us take a look at the real stumbling blocks in the path of progress in this line. It seems absurd to say that it will or is likely to take a thousand years for this and future ages to understand any problem that is either simple or practical. A backward glance will show many reasons for believing that it will. However, to judge the future by the past, will not do in all cases; but human nature changes rather slowly, if at all, and man will be found to be stumbling over the same big ego a thousand years hence as now.

An old legend telling of the discovery of the art of cooking illustrates one phase of the situation very aptly. In this legend we find the human race living in houses, though utterly devoid of any knowledge of cooking. The diet was fruit, roots and berries, eaten raw, with perhaps a few raw oysters. There were pigs in those days as now, but then the pig was kept in the house and worshipped as a divinity. Anon it transpired that a house took fire and was burned to the ground. The pig, being forgotten, was left inside and roasted to "a queen's taste." The owner, in clearing up the wreck, smelled the savory odor of roast pig and tasted thereof. Tempted beyond resistance by the flavor, he fell to and did eat a veritable wolf's meal of burnt pig. Detected in the act, he was haled before a justice to be tried for heresy. At the trial, his defense was that burnt pig was really good to eat—better than anything before known to man. As he was "a ward keeper" of great influence, the judge listened to his plea, and ordered the rest of the burnt pig brought into court. A smell of the pig strengthened his case, a taste ended it, while judge and jury fell to and finished the roast, and the case was marked off the docket. Thus roast pig came to be a part of the diet of kings and the very rich. The roasting was done by putting the porker in a house, and then burning the house. This style of cooking held good for several hundred years. Presumably then, as now, schools were maintained to advance the interest of the different sciences. Cooking had its department. Scientists were appointed and supported by public tax to do nothing but advance the art of cooking. Societies were formed, debates instituted, and conventions held; rivers of ink flowed, and even wars were waged to settle mooted questions as to whether this, that or the other style of architecture was best adapted to the common end of roasting pork. But the fact that an erstwhile divinity was good to eat remained the single discovery of its thousand years.

Most of the discoveries of man are made by accident, and so the next improvement in the art of cooking came about. It came to pass that a workman was sent into the forest to build houses for the purpose of roasting pigs. There was to be a convention of delegates from all the schools of science devoted to cookery. As such conventions always ended in a feast and general jamboree, many pigs would be required. At that time pigs were so numerous that a great many ran at large in the forest. It happened that a tree fell on a pig and killed it. The workman was greatly alarmed at this, for the penalty was very severe. It was now about the sixth hour, and the workman sat down to eat what little there was in his dinner-pail and to try and think of some way to escape punishment for killing the pig. He had labored hard, and after eating the few roots and a nut or two which the pail contained, he was still very hungry. There was the pig; if it were only roasted he could eat it and satisfy the cravings of his stomach while destroying all evidence against himself. Finally it occurred to him to build a fire of broken branches and burn (as cooking was then called) the meat by holding it against the fire, one side at a time. He built his fire and when the coals glowed red, he held the pig against them, but in doing so he burned his fingers. Then he tried holding it between two sticks, but dropped it into the ashes. Necessity is said to be the mother of invention; if so, hunger is at least its grandmother. Thinking for a time, the workman at last sharpened a stick, and, thrusting it through the pig, held it to the coals, and the thing was done.

After eating his fill of pig, something he had not tasted before, he bethought him that he had made a great discovery. He would see the faculty and relieve them of further trouble on the score of cooking, and they, in turn, glad to be relieved of so great a burden, would proclaim him a great man in the land of his fathers. Away he went forthwith to seek the faculty. He was a very foolish fool. The faculty listened with horror to his revelations. Was the science of cooking to be done away with in this slapdash manner, and by a mere workman? Was their easy living to be thus taken away? Never, never! And they fell on the workman and destroyed him. But generation after generation may be tortured to death by error, even to a thousand, but truth cannot be destroyed until the last human mind is destroyed with it. Thus it smoldered in the minds of the faculty until it finally contaminated other minds which held no prejudice and broke out afresh, and the stick method of cooking came into general vogue.

This legend may not be strictly true as to the facts set forth, but where it applies to human nature it is strictly true. Though the scope of man's intelligence has been vastly increased since those days, human nature remains practically the same.

The real labor of rebuilding the earth is in removing prejudice, jealousy, self-seeking, self-glorification, and ignorance, and that the time limit of a thousand years is none too great. That once done—and it can only be done by the commoner—the work of digging ditches, building dikes, and constructing the necessary machinery will be a mere bagatelle.

It may appear strange at first glance, but the ground

MANDAN VILLAGE ON THE UPPER MISSOURI.
From Catlin's "Letters on the North American Indians."

a hundred and thirty, smallpox and other diseases having reduced them to that number. While in this village the white men found it dangerous to stray out of the hut without a good stout stick to keep off the dogs, which were so numerous and savage as sometimes actually to attack them. The people had many horses, which they valued highly; and Henry greatly objected to their custom of apparently becoming dissatisfied with their bargain after a trade had been concluded, and returning and taking back the article they had sold, while giving up the price paid for it. For example: "One of the natives had a turkey cock's tail, great numbers of which they get from the Schians, and which served them as fans; this was a new and fresh one of beautiful hue. I gave him five rounds of ammunition for it, with which he appeared well satisfied, and left me, but soon returned with the ammunition, and demanded the tail. Being loath to part with it, I added five more rounds to the price, which he accepted and went away. However, he soon reappeared, and I added four more; but to no purpose, for he continued to go and come until the payment amounted to thirty rounds. Upon his next appearance I offered forty rounds; but he would no longer listen to any offer, threw down my ammunition, and insisted upon my returning him the tail, which I was obliged to do."

GEORGE BIRD GRINNELL.

[TO BE CONCLUDED.]

Rebuild the Earth.

BY E. P. JACQUES.

RAIN seldom falls in exact proportion to the need of man. Periods of over-supply are followed by periods of no supply at all; floods rush down and destroy the works of man, often in a single day, in amount equal to the life efforts of many thousand people. Drouths follow and nullify the efforts of other thousands. The one washes away the seed in planting, the other withers the stalk in growing time. In this way half the possibilities from the efforts of man are destroyed, while the burden of support is increased in corresponding degree.

This was so from the beginning and has been intensified by man's own efforts. In his zeal to reclaim the land from the waters, he has laid tiling, dug ditches, and straightened watercourses, draining swamps, lakes, and marshes; tumbling the rainfall back to the distant ocean

that connects St. Paul with Duluth, runs through a very picturesque section of the lake lands of Wisconsin. I have been over that line occasionally for the last twelve years. The last trip was made on "The Twilight Limited," an evening train, both ways, between the two cities. It is a beautiful ride, and was described in part in a letter to the St. Paul Yell, where I had this to say in noting the rapid settlement of the country:

"To make room for more, the ax and dredge are driving the wild things in nature through ever-narrowing limits to extinction. When shall we see the rebuilding begun with equal vigor? When will reforestation and irrigation be begun in a common sense way? When shall we see each swale, ravine and gorge throughout hill and mountain country turned into reservoirs, holding in check floods and increasing rainfall alike? This would open the way to practical forest building, while water for irrigation would be at hand. An amount equal to that spent in destruction during the Spanish-American war would advance the work to a stage where all would understand how practical and simple it was, and that understanding by the masses would in turn insure the finish. But why expect mankind to understand such a problem by a less process than the slow growth of a thousand years?"

This letter was not published, but the next issue of the Yell, in a short, crispy editorial, said this: "If some of the pumpkin huskers of the back counties would devote less time to literature and more to their pumpkins and potatoes, leaving economic subjects to someone who knew something about them, there would be more prosperity and less crop failure, beside giving our overworked waste-basket a much needed rest."

A few days after this the great floods of 1903 occurred in the West. In another editorial on the subject, the Yell exploited itself thus: "It would be a simple matter to impound the surplus water in the hills around the head of the streams by damming the ravines and gorges. That would prevent disastrous floods and leave the water where it belongs to be used in irrigation later on."

This was a great hit, and the Yell was quoted far and wide, and among the members of Congress from the stricken district there was quite a strife as to who should be first to introduce a bill that would lead to action on that plan.

The events that led to making the discussion a national event, was that soon after the great floods of 1903 in Kansas and many other Western States, in less volume,

plan of the greater part of the United States is made up of blocks of land one mile square laid one against the other like the squares of a checker-board. The ground plan of most other countries is somewhat similar to that of the United States. These blocks or squares are sometimes laid to form great levels, but as a general rule in terraces rising from a great gutter on the one hand to cone or dome in the center, and slanting away again to a great gutter on the other hand. The blocks are not made with any regularity of plan as to their upper surface, but roll and dip or are level and again even slopes as chance may dictate. At least it seems a chance, until you note how accurately the blocks fit one against the other, continuing each slope, wall, gutter or cone to a nicety, and then you realize that the mechanism is wonderful indeed. So closely are they joined that water running from the higher to the lower squares passes over the seams as readily as if the whole were a solid block. Herein is the weak place in nature's plan, as far as it relates to man, and is the place where the rebuilding should begin.

Water never falls on a single square (or section) in sufficient quantities to cause floods dangerous to life or property. Each and every square has capacity to absorb its own rainfall; very few squares have insufficient rainfall to produce a good crop if the rainfall could be applied at the proper time. Floods are caused by water running from block to block, until, having gathered from many thousand squares and concentrated in one gutter, it overtaxes the capacity of the gutter and spreads afar over the land, causing death and destruction. Drouths are caused by the rainfall running too rapidly from the upper squares before it can be absorbed to any great extent, and carried by gravity to distant and lower squares, where it gathers in too great quantities on the low lands, and causes swamps or is returned to the ocean, whence it takes the winds—often contrary for weeks and even months—too long to return it to the lands again. If the water that falls on each square was retained there until it filtered through the soil or evaporated, the disaster of flood and drouth would both be averted.

On each of the four sides of each and every one of the many squares that go to make up the whole of the general ground plan is a roadway sixty feet wide, more or less, with the seam between the squares as its center. These roadways lead up hill and down, across the country from ocean to ocean east and west and from limit to limit north to south. They are the key to the situation.

Grade them to as near a level as possible, making waterproof embankments across all dry ravines and hollows, and the water that falls on each square will run to the lowest point and stay there. The ravines will be the reservoirs, and the road grade the dams. These grades should be high enough to render overflow in any single wet spell impossible. Each reservoir should have a valve and drain under the grade to let off the water by degrees where overflow is threatened. But with only one mile to gather in most of the reservoirs, would have a capacity far in excess of the water supply. Thus what water fell in any part of the country would remain there with the exception of what fell directly into running streams.

The running streams should be left unobstructed. The flood tide should be cut off in detail before it reaches the running stream. In *Forestry and Irrigation*, July, 1903, Guy Elliott Mitchell has this to say:

"Every manufacturer in the United States has had a twofold economic interest in the great floods which have been sweeping down the Missouri and the Mississippi. The most generally recognized interest lies in the fact that much property has been destroyed, many farms devastated, and the purchasing capacity of a large number of producers crippled, handicapped, and in many cases obliterated. Another feature of the flood problem which is not so often thought of is the question of the solution of this national problem through the construction of Government storage reservoirs. It has been demonstrated beyond question that a comprehensive system of reservoirs to store and regulate flood waters which can be depended upon every spring at the heads of the Missouri, the Arkansas, the Platte, and their tributaries, would so reduce the flow of the Missouri River before it reaches St. Louis as to keep not only it, but the Mississippi within safe bounds.

"Of course, the flood sufferer who sees a great yellow surge going by St. Louis six or seven feet higher than the danger line, may well express some skepticism as to the possibility of the Government or any other agency constructing reservoirs sufficiently gigantic to impound all the excess of water.

"But the reservoirs themselves would be only a part of the storage system. Of course the construction of such reservoir would mean that the waters safe in them would be used for irrigation, and official surveys indicate that something over 30,000,000 acres is the amount of land which can be irrigated from the water supply running eastward from the Rocky Mountains. Had such a system been in operation, the June floods would have been diverted, first into the great storage reservoirs necessary to irrigate this land; second, into the hundreds if not thousands of miles of canals, ditches, and laterals necessary for its irrigation; and third, under the land itself. The stored waters would not be used until the dry months of July and August, when the Missouri and its tributaries are but shallow meandering streams; but during May and June the watering of this great area of land, soaking it to a depth of a couple of feet, would be done directly from the streams themselves, or rather from the great canal system which would be necessary to carry the water inland from the rivers. This immense body of cultivated land would therefore act as a sort of sponge, and the effect would be to reduce the flow of the Missouri as though a vast obstruction had been thrown across its bed, and its water flooded over all the land.

"The Mississippi is able to take care of its own floods or of the floods of any of its tributaries; but when all the rivers which flow into it go on the rampage, death and destruction must be the outcome. The equalization of the flow of the Missouri River would in a great measure mean the control of the Mississippi, and a greatly decreased annual expenditure for flood protection under the River and Harbor bill.

"The carrying out of such a Government policy would not only palliate the floods, but furnish homes for hundreds of thousands of prosperous farmers, and result in vast good to the entire nation. We would have a dense

farming population occupying small individual areas of land, and contributing to the prosperity and growth of hundreds of towns and cities where now the country is in many places only very sparsely settled."

Now, it is not a question of building reservoirs gigantic enough to hold the floods in check at all. A gigantic reservoir is a menace to the country below; so is a reservoir constructed by damming a running stream. Such a reservoir must in time become full to the brim, and then, when heavy rains set in, disaster is sure to follow as in the case at Johnstown, Pa. To provide small reservoirs is the proper way; and nature has constructed them in thousands and hundreds of thousands. The only thing necessary is the dams, and the grades required to make good roads will furnish dams also.

The question of funds for so great a work now arises. With all agreeable and willing, this part of the business would be as trifling a matter as the work of actual construction itself. But what about those barnacles? Yet this is not a question of purifying politics, but of irrigation and flood prevention, and we will proceed as if leeches were unknown. When the War of the Rebellion broke out, it found the Government without funds or munitions of war with which to conduct it; yet funds were raised, arms manufactured, and the war conducted to a successful issue. In this war with the elements, may we not proceed in the same way, even though there are not thousands of our fellow-men to be shot down, nor yet other millions of dollars' worth of property to be burned up and destroyed. War, even in peace times, is an expensive way of proving our greatness. In an estimate of a recent naval parade lasting a week the cost was placed at \$240,000. In a cartoon accompanying the estimate, Uncle Sam was represented as remonstrating at the expense, which the Chief Executive excused on the ground that it amused the children so. But perhaps the children might be amused some other way. \$240,000 would grade at least one hundred miles of average road and build all the necessary bridges at the crossing of running streams; supplemented by other grades at each section line, these grades would be well nigh eternal. With no floods to tear them out, a well constructed bridge would last a hundred years. The cost of a single discharge from a 13-inch gun in target practice, counting expense of ammunition and damage to ship, would grade an average mile of road; while the cost of building and equipping a first-class battleship judiciously expended in damming the dry runs around the source of the Kaw and its tributaries would have averted the Kansas City flood, while the saving in flood damage during that one event would have amounted to twice the original investment. The cost of sending a shipload of live soldiers to the Philippines would grade several miles, while the cost of returning the dead ones would grade other miles, and the profit on the investment would be a hundredfold. We raise money for all these purposes; why not in a better cause?

It is indeed a sad thing to mortgage the future of unborn generations for purposes of destruction, or even for temporary improvements, with incidental boodle; but when the improvement is such that many generations to come will be benefited, there is no reason why bonds should not be issued to cover the cost.

If this Government of forty years ago could equip and keep three or four hundred thousand men in the field for four years, surely the Government of to-day can enlist and keep a million afield indefinitely doing irrigation and road work. The outbreak of war and the increase of expenditure incidental thereto have always been followed by general revival of business and increased prosperity. The expenditure necessary to vast internal improvement would have a like effect and be a great deal more stable, as the enormous expenditures are adding to the taxable property rather than destroying it. There is work for all to do, and there is money to pay for it. Capital is always ready to invest in Government bonds, and labor is half the time seeking employment. It is not a matter of going into debt, but of borrowing money to enlarge our business, and in a very substantial way at that.

Someone shouts, "Grafters!" Well, of course there will be grafters. But we might as well argue against the sailing of ships because barnacles collect upon them, as to stop needed improvements because of the weight of grafters that are sure to attach themselves to the work. The cost of the Civil War was something over six billions of dollars. Six billion dollars would grade every mile of roadway between the Alleghany and the Rock Mountains, Canada and Mexico to a level with the general incline of the country. Such grades would absolutely control the flow of water in the Mississippi River and all its tributaries. There would be no large dangerous bodies of water; but it would be held in such small details as to be reliable and safe, and the control would be perfect. It would secure the rich bottom lands along the streams immunity from overflow and double their value. It would secure water for irrigation wherever needed. It would provide perfect roadways. It would make the Mississippi basin, now the richest country of like scope on the face of the earth, doubly productive and doubly reliable.

Following the expenditures of the Civil War came a period of business activity that lasted for more than ten years. During that period there was more invention, more general improvement and a more rapid increase in general wealth than was ever known in the history of the world before. Slave became free, poor men independent, and rich men millionaires. "Grafters" multiplied more than an hundredfold and waxed fat to an extent hitherto unknown. This activity would have been none the less if the same amount of money had been expended in improvement; while, on the other hand, there would have been no devastated country to rebuild, no 300,000 pensioners to support, and we would have increased the producing capacity of the country by five.

Wooded Areas of European Countries.

The percentage of the wooded areas of European countries, as compared with their total areas, is as follows: Finland, 51.2; Sweden, 49.3; Russia, 40.4; Austria, 32.6; Luxembourg, 29.1; Hungary, 27.7; Germany, 26.1; Servia, 24.9; Turkey, 23.4; Norway, 22; Roumania and Switzerland, 21.4 each; Bulgaria, 20.8. The other European countries have less than 20 per cent. of woodland. England has the smallest wooded area, 3.6 per cent.—Richard Guenther, Consul-General, Frankfurt, Germany.

Ways of Camping Out.

BUTLER, Mo., Aug. 29.—*Editor Forest and Stream:* In your issue of August 27, "One of the Joneses" describes in a very pleasing manner his method of enjoying a vacation without the expenditure of very much time or money.

I read the article with pleasure, and wish I could personally thank my friend from Haverhill for his contribution to our paper. His mention of steamed clams and fried eels makes my mouth water.

Unfortunately, I am another of your subscribers who are chained to business, and thought possibly my method of securing a vacation might be of interest to your readers.

Those who are familiar with the conditions existing in a county seat town in the Middle West, are well aware that there are some days in each week when the farmers do not come to town in very large numbers, and if one is so disposed, he can usually arrange to slip away for a part or all of the day for a tramp through the woods and fields, filling his lungs with fresh air and getting the kinks out of his muscles.

My hunting partner is somewhat younger than I am and quite as enthusiastic. We arrange where we will go and what we will go after, depending on the season.

We have a camp outfit that is original with us, and while it might not suit all, is handy and easily carried in our pockets. We use common tin plates with two holes punched in the rim, through which a bent wire is placed resting on the bottom for a handle, thus making a skillet of each plate. We usually take three or four each, as when nested together they can be carried in the back of our hunting coats without being in the way. Our coffee-pot is flat, about two inches thick, in which we can pack our eggs to keep them from breaking, and this slips very nicely into a side pocket. Potatoes, bacon, sandwiches, in fact, almost anything can be carried around in the other pockets without being cumbersome.

If in the winter, and we are after rabbits, we carry a .22 caliber rifle; so you see we are not very heavily loaded. We strike off across the fields, tramping along like two boys, for three or four miles or more, picking up a cotton-tail now and then, missing some, but having fun just the same. About noon we look for a sheltered place in which to camp, build our fire, and cook our dinner, which I can assure you is eaten with a relish. After dinner we will probably have a friendly scrap at a target. We loaf away an hour or two in this manner, then pack up our outfit and continue our circle toward home, having tramped eight or ten miles, but feeling no more fatigued than if we had walked down town and back.

My hunting partner is no fisherman, but my wife is the real thing when it comes to fishing; and to tell the truth, she usually has me badly beaten when the strings are counted. When I go home to dinner, she will say, "Papa, what do you say if we go fishing this afternoon?" Well, you know just what papa says. We drive to a pond only a short distance from home, where there are bass, crappie, cats, and sun-perch. Of course we have a basket well filled with lunch, and a small box of ice to keep things cool. When supper time comes, I build a fire, clean some fish, get out the cooking outfit, and we have our supper cooked to a turn and relished as only a camp meal can be by two hungry persons. We get home by dark after a very enjoyable afternoon—a part of our vacation—and anxious to go again.

As I am on the shady side of sixty, it makes me feel young to get out in the open, and, like my friend from Haverhill, I feel better for these short trips, taken, if possible, every week in the year by

ANOTHER ONE OF THE JONESES.

BROOKLYN.—*Editor Forest and Stream:* I was much interested in an article in last week's *FOREST AND STREAM* entitled "Camping Out," with the date line Haverhill, Mass. The story was told entertainingly, and the facts were as stated. This I know, having often gone over the ground twenty years or more ago. I was born on the Merrimac, eight miles above Haverhill, and those eight miles were the hardest part of the journey—rapid water and not enough of it. Lawrence has a great dam across the river to drive numerous factories along its banks, and generally in July and August not much water passed over the falls. The Government, with Captain Eads in charge of the work, drilled out the rapids in the river and built jetties at its mouth to keep Plum Island from making a bar sinister. The scenery is certainly worth a visit. The Indian name Merrimac means "joyous water."

If you consider this worth publishing, and it appears in *FOREST AND STREAM*, the means employed for putting it in type will no doubt be the Linotype. The person in charge of The Tribune Linotypes declares that Mergenthaler took the larger part of his mechanical ideas from the older Burr (later called the Empire) typesetters. And so with our first Brooklyn bridge: the Roeblings got their design from the old chain bridge over the Merrimac mentioned by "One of the Joneses," even to the plan of securing the supporting cables or chains to anchorages, which is a difficult feat in suspension bridge building.

J. T. M.

The animals of the "weasel" family, so called, are mostly very active and vivacious, and in some cases have developed set forms of play. The Cape ratel, a badger-like, honey-eating member of the family, but with much of the activity of the polecat, has an amusing habit when kept in menageries of running round and round in circles, and of varying this performance by turning somersaults, like a street arab running by the side of a coach. Stoats are extremely playful. Often a solitary stoat will come into a ride in a wood and there dance, run after its tail, and twirl round in a *pas seul* of solitary exuberance. Both stoats and weasels are also said to gyrate in this manner in order to fascinate small birds. A description of such a scene was given recently in W. Hudson's reminiscences of Hampshire scenes. But otters are perhaps the most playful of all the tribe. Intensely active and full of high spirits, they play both in the water and on land. In North America their favorite winter amusement is tobogganing. They find a place where a frozen waterfall makes a smooth ice slope, or a hard snowbank gives a chance of a glissade, and slide down this, running back again by a side track to enjoy the same delightful sensation.—*London Spectator.*

NATURAL HISTORY

Migrations.

KNOXVILLE, Tenn., Aug. 10.—*Editor Forest and Stream:* For a period of twenty-five years I have been an observer of the migration of the above, and as it may be of interest to some of the readers of *FOREST AND STREAM*, I will state a few facts on the subject.

The martins are the first birds to leave for the south—I mean the first flights of birds. Last year was the earliest on record, which was July 26; usually the first flight starts on August 12, followed by another, if the weather is clear, on the 18th; if not, then usually on the 19th or 20th.

They breed here in large numbers, and as soon as able to fly and take care of themselves, select some roost, always choosing a number of large shade trees, where they keep up an incessant twittering through the night, making it a veritable nuisance to people living near-by, and the heat of their bodies can be felt for quite a distance; permission has often been asked and granted by the authorities to drive them away, and so their roosts have often been broken up. Year after year thousands have been shot by permission, the average boy thinking it great sport to be allowed to take a gun and shoot into flocks that look like great swarms of bees, just to see them fall. This shooting may have caused their early flight last year.

When getting ready for their long journey, thousands of them begin circling, going higher and higher; thousands of others following, and all at once a long string of those following will be seen to break away and return to the roosts; those circling look like an immense swarm of bees. I have observed them through a strong field glass until they completely disappeared, seemingly still rising; where their destination is, I do not know. They go to an immense height, always starting about sunset, and I think travel the entire night. The last flight leaves us about September 1.

Bull-bats or night-hawks: The first flight leaves here August 27 to 29; they fly rather high, but not out of sight, as they are not a long flight bird, stopping on their way to feed, and rising again with their craws filled.

The chimney sweeps are the last of the swallow species to leave us, staying here until frosty nights come. They congregate in immense numbers, settling in some unused chimney to roost, going into it in a continual stream, seemingly taxing the capacity of the roost to hold them all, and after the first real frosty night they all leave for their winter home.

Butterflies migrate all during October. One fall *FOREST AND STREAM* published an article giving an account of a very heavy flight passing New York city. Just twenty-seven days later an immense number passed here, all headed for the south, and seemingly in a big hurry.

S. B. Dow.

Some Animals I Have Studied.

VI.—Major, the Clown Dog.

THE small "ugly red dog" mentioned in "Some Knowing Dogs" (*FOREST AND STREAM*, August 29, 1903), was a natural or self-taught clown. To amuse spectators he would turn somersaults, forward or backward or sideways, standing or running, high ones or low ones, over and over, or so long as the performance seemed to produce sufficient amusement. Sometimes he even stood on his head for a brief moment in a manner that surely was not accidental or unintentional. He went through these antics without anybody's command or suggestion. This was a case of instinct and reason (or thought) combined. Dogs and all sorts of canines, even in their wild state, roll and tumble about with more or less skill when feeling comfortable, safe and happy; but reason, and not anything less, caused him to like applause and to choose time and place to win it.

One of his favorite tricks was to snatch an ear of corn from the hogs in the pasture and run with it, while the whole herd followed, squealing indignantly. He would stop occasionally to allow them to catch up, lay the ear down, and wait until the nearest hog almost had his nose upon it, then seize it and run on; and all this time the expression on his face was indescribably roguish; he had a very beautiful face despite his ugly color. He so well knew the nature of the pigs that he could lead them thus as long as he liked. When they began to tire of the useless chase, and seemed about to turn back, he had such an ingratiating look, and such a persuasive way of exhibiting that corn, turning it over and over, as if to call particular attention to all its fine points and superior qualities, that no hog of his acquaintance could resist the temptation to renew the pursuit. The hogs did not show such a lack of intelligence, either, as may at first appear in persisting; for their past experience with him taught them that they might confidently expect this little diversion at feeding time every day, if he happened to be present; and he took care never to be absent, unless upon most urgent business, such as chasing a rabbit or digging after a mole or chipmunk or keeping a squirrel up a tree. They understood, too, that after a good long run, he would at last drop the ear, and pretend to forget about it until the nearest pig pounced upon it, quickly followed by the others. If "actions speak louder than words," they emphatically informed me that that ear always was the best I threw out, for they would all take after it as soon as it was carried off, while I was still throwing out others.

He was the best untrained "fetch and carry" dog I ever knew. At the shingle-mill, about one hundred yards from the house, if given a shingle, knife, piece of glass, coil of hay-wire, or small rod of iron, and told to "Take it to Mrs. M.," he would almost always immediately obey. Arriving at the back door, and finding it shut, he would

scrape or thump the object against the door, or pound the floor of the porch with it, until the lady appeared. He almost always desired to help carry in the wood and kindlings; also he liked to be allowed to take hold of one side of every basket or bucket, even when held much too high for him, and pretend to assist in carrying it. Now, although we encouraged him in all that, and sometimes rewarded him for real or mimicked services, we had taken no pains to teach him; why, it would be hard to say, for when an animal shows any unusual desire to please, I generally exert myself to cultivate its talent.

He hadn't the slightest fear of a rifle, but would hold a wild hog by the ear and coolly look into the muzzle of the gun that pointed to shoot it. If the hog dropped at the shot, he would let go and stand calmly by; if otherwise, he would hang on, even though the powerful animal dragged him. This, I take it, showed reasoning; he desired to be useful, and reasoned how to be so.

He was a "mighty warrior," too, despite his small size. As an instance, one of our half-wild sows came up with some large, lively pigs. When one of these had been caught, two big men hurriedly dragged it inside the yard for marking, while another temporarily beat the sow off. But she was so terrible in her wrath that she broke his guard and burst through the gate as if it had been a toy. Major seized her, and not only prevented her from snapping a man's leg off (possibly), but soon, with a little assistance, dragged her back out of the yard. And there he, tireless as an automaton, held or retarded her until all the rest of the pigs that could be captured were marked, although she foamed at the mouth and ground her teeth, and shook herself with rage. I am convinced that only superior intelligence, not strength, enabled him to overcome this really formidable adversary, who was many times larger than himself, and surprisingly quick also.

He seemed to know how to take hold of almost anything, after a little investigation; and if he caught on improperly, he saw his mistake as soon as any man did, and lost no time in changing his hold.

In one important particular he was just like all the "smart" dogs (and men) of my acquaintance: if he placed himself in a ridiculous plight purposely, he liked to be laughed at; if accidentally, laughter offended him, as he showed by his deprecating look and manner. This evinces a high order of intelligence in dogs, whether it does in men or not.

If one held a rock in the hand ten seconds, then threw it away, no matter where or how far away it fell, provided it did not get into some inaccessible spot, he never failed to find it, though sometimes the search was long, and return it to the hand of the thrower, if the thrower seemed indifferent about its recovery; but if the thrower wanted the rock badly enough to start to meet him on his return with it, he would run away with it, occasionally looking back to challenge pursuit. The ability to find the rock may have been merely animal and purely instinctive—it is a common enough quality among dogs of many varieties—but the desire to return it to the thrower, probably for the fun of seeing it thrown again, or the roguish propensity to flee with it (now, boys, please don't pun about "a wise dog taking a stone to flea himself with"), must have resulted from a course of thinking—a reasoning from cause to effect. If it was only instinct, then only instinct induces a man to pay to see a show; but, on second thought, I must admit that anything but reason causes men to enter some shows, pay or no pay.

He was as much at home in the water as any smooth-haired dog I ever knew, but appeared to have no object but sport for entering it. The tricks he performed in that element for fun only were numerous and ingenious—very similar to the antics of the average eight-year-old boy who goes swimming without parental consent in company with other wild, bad boys of different ages. Ye jolly boys of forty to eighty summers! Look back a little. You can still appreciate those gay old times. I own up I am still charmed with such sport—while not exactly excusing disobedience—and cannot conceive of a time when I shall be too old or too infirm to at least look on with delight.

And this calls up another point of resemblance between men and dogs. Both like sports, hilarious enjoyments, and, when they can not participate, show the keenest interest or sympathy in merely serving as spectators. If a dog likes a show at all, he follows it in every detail—absorbed, enraptured! Just closely observe him and see. First he shows subdued wonder, then alert attention, pleasure, anxiety; he trembles with excitement, his favorite actor seeming to be about to fail; he is sorrowful, perhaps eager to fly to his succor. Now he barks with triumph, and in the end the victory is as much his as his friend's.

This picture is not overdrawn; I have seen the reality many a time. The dog not only is happy in the pastimes of his fellows, and of men, but the sports of all animals, no matter how much his inferiors, amuse him.

The dog is probably the only animal that has more love for mankind than for his own race. At any rate, that he does love man more than dogs, more than his own near kin—aye, more than himself, even, in some instances—there need be no doubt. Evidences by the thousands have accumulated since the dog took the place of the falcon in man's life at home and abroad. Indeed, long, intimate association with man has evolved in the canine mind and heart a love and admiration for man which has been the best possible incentive for mental growth in the dog. And I claim that the dog mind is not stationary, notwithstanding the many brilliant dogs of the past, but is still developing, not keeping pace with man's mind, of course, yet ever and steadily improving.

L. R. MORPHEW.

[TO BE CONTINUED.]

All the game laws and fish laws of the United States and Canada are given in the "Game Laws in Brief."

Protection for the Musk-ox.

If there are any musk-ox robes lying about, and are to be had at a reasonable price, corner them. That is the advice given by a veteran and wholesale furrier.

Just now they are worth, retail, from \$100 to \$200 a set, according to their condition, and they are a great favorite in Canada. What their price will be next winter and the next is difficult to foresee.

When Governor Moody, of Hudson's Bay, the first Governor which that territory ever had, goes back to Fullerton, which is to be made the capital of the district, he will see that no more musk-ox, which virtually only inhabit the Canadian possessions near Hudson's Bay, will be killed for export. The Eskimos and Indians will be permitted to kill the animals for food and will, naturally, be permitted to sell the heads and pelts, but they will be severely punished if they kill more than they need.

Whalers will be prevented from buying the skins, as they have been doing in the past. It has been for some time a mystery what the whalers really saw in the bay where whales have been thinned out pretty well. It was generally supposed that they did a good contraband trade in whiskey, arms, and ammunition; but Governor Moody's visit brought to light the fact that thousands of musk-ox have been brought away by these ships upon each return voyage.

Two ships which Governor Moody visited during his stay in the Arctic regions had respectively 200 and 300 musk-ox on board, brought to them by the Eskimos. They pay them in provisions, a small amount for each animal.

Considering the retail price of the skins, and the fact that the whalers receive \$50 each for the head from wholesale furriers, a shipload of musk-ox is not a bad investment.

The Canadian Government, admitting that the native needs the flesh for food, the pelt for clothes, and the soft wool that is rubbed off from the skin in the molting season for underwear, is afraid that the animal will become extinct, and, therefore, forbids the killing, except as a necessity.—*Montreal Dispatch Boston Herald.*

The Gopher and Spotted Fever.

THE pernicious insect supposed heretofore to be a wood-tick, that is responsible for the disease common in certain parts of Montana and Idaho in the spring, known as spotted fever, is, according to medical experts, an animal parasite. It is found particularly upon the gopher, the pest of farmers in many localities. The disease produced by the bite of this insect is similar in some respects to spinal meningitis, but it is even more deadly, the percentage of recoveries being very small. Every farmer's boy who has pursued the elusive gopher to his hole and beyond through the tunnels that connect the various chambers of his subterranean abode, knows how utterly impossible it is to exterminate these creatures by active assault or blockade. Thus, while to exterminate the gopher is to exterminate the tick and destroy the possibility of the contagion known as spotted fever, the chance of immunity from the scourge through war upon this creature is very remote. Gophers seem to thrive upon the toxin produced by the bite of their special parasite, while to human beings it is fatal. This is one of the idiosyncrasies of nature that is inexplicable, and to meet and counteract it is the task to which the bacteriologist has set himself. He will, no doubt, succeed in time in producing the anti-toxin necessary to nullify the bite of the parasite. The season of spotted fever ends for this year with the present month, and it is hoped that scientific research will disclose the anti-toxin sought before the season of the pernicious activity of the gopher tick again comes round.—*Portland Oregonian.*

Duck Eggs in the North.

Editor Forest and Stream:

A friend writes as follows: "When I was in Cayuga, N. D., last fall hunting, I met a gentleman from Iowa who told me that there were vessels running into the Hudson's Bay every year and loading with wild duck eggs that are collected there by people who make a specialty of collecting them each year and delivering them to the different agents of these vessels. Those people have certain rights agreed upon for territory from which to collect eggs, the same as a farmer has his particular piece of land to cultivate. For instance, I have a certain island, or a part of it, or a certain piece of the shore right, and you have yours, and we do not trespass or interfere with each other. These eggs are carefully packed and shipped to England for food purposes. I noticed by the papers that you are trying to get some arrangement made with the Canadian Government about fishing on international waters for the purpose of protecting the fish in those waters. It seems to me just as important to protect our wild ducks, geese, brant, and in fact all of our game birds that go across the line to nest and raise their young. Just think of a ship loaded with eggs, and then think what a lot of birds it means that has been destroyed. The gentleman who told me this is a first-class sportsman, and he told me that he would lay the matter before the game wardens; also their North Dakota Senators. He says on some islands there are thousands of nests, and they collect the eggs each day, and when a bird wants to set they break up the nest, and in a short time they will commence to lay again, and that they figure on, I may say, two crops a year. I have been told of this thing, and I believe it is a fact, and I think there should be something done. It is certainly worth investigating."

If the facts are as given by my correspondent, this matter should have the immediate attention of the Canadian authorities.

SAM. F. FULLERTON.

[This appears to be a variation of the old duck egg fake story.]

GAME BAG AND GUN

From Dawn Till Sunset.

It was early morning. As yet the first long, mellow rays of an October sun had not appeared over a level stretch of land, marsh, and tree-line bordering on one of the great lakes. A thin blue night fog still hung in wreathy clouds near to the frosted, sandy earth that constituted a fertile island nestling within the wide expanse of marsh land.

Now and again in the uncertain morning light a mallard, widgeon, or sprightly little teal arose from a shallow pond hole where it had been feeding, and after circling about low over the marsh, giving vent to an occasional quack, settled down out of sight in some new locality.

As the yellow glow crept up into the eastern sky behind the feathery willow trees growing along the lake beach, separated from the island by a narrow strip of water and rushes, large flocks of blackbirds commenced sweeping in streams and clouds across the former, heading for the marsh, their harsh, chattering murmur first growing louder and then dying away as they sped on. Numerous other birds chirruped among the scrubby underbrush, while, despite the crisp freshness of the air, a song sparrow put forth a brave trill of melody, and once, from the row of dark, heavy-limbed Norway spruces standing on the north end of the island, came the clear, sweet whistle of a cardinal.

A small brown cottage stood but a short distance from the row of spruce trees that afforded a sheltering protection against cold winds. It spread over the ground in a picturesque rambling fashion, for it was only one story high, and as the light of the rising sun grew brighter, a column of smoke curled up from a short, stubby-looking chimney that surmounted the roof, proving that the occupants, like their outdoor neighbors, were awake and astir. Finally the big glowing disc moved up into the sky from a bed of fiery color, and the white frost that covered the stiffened ground and clung to every withered grass-blade sparkled like a thousand diamonds.

The back door of the lodge opened, as the shafts of sunlight struck on the glistening little window-panes, and two figures emerged, while from the warm, snug interior issued the appetizing fumes of coffee and breakfast. The foremost was Pete, an experienced punter; and Billy, in the rear, was striving, under his father's tuition, to learn that art. The former's genial French countenance, made more genial by contact with the spicy crispness of the atmosphere, beamed forth from beneath a peaked corduroy hunting cap, while his stout legs were encased in trousers of like material several sizes too large, so that they looked like little brown barrels. These were stuffed into a pair of hip rubber boots, and the upper half of his ample figure was clad after an equally appropriate fashion. For a minute he stood on the doorstep, looking intently out toward the marsh; then he turned to Billy, standing behind him, saying: "I'm a-stuck at where ter go. Suppose he'll know all right," giving a backward jerk with his thumb toward the interior of the cottage, where at that moment the Veteran and I were gathering our things together and adjusting rubber boots preparatory to the day's shoot.

"Pete's getting worried, I guess," commented the Veteran, wisely divining that the punter was in a perplexed state of mind from his solemn and thoughtful appearance when a few minutes previous the question had been put to him as to the likeliest place to go to obtain a good bag. Like Al., who presided over the kitchen with grace and fidelity, he was subject to worried spells.

The Veteran, entering the former's domain a minute later, eyed him with concealed amusement. "Come, Al., haven't you got those lunches put up yet?" he asked, knowing well his dislike of rush or hurry, and that to urge either only meant increased slowness on the latter's part.

"Well, I'm wrapping these things up as fast as I can," he answered, taking the question most seriously, as usual, but nevertheless growing more slow and nervous as he endeavored to roll the rather unappetizing form of a cold muskrat in a napkin. Although these poor abused marsh denizens are looked down upon by some as an article of food, to those who have eaten them, properly prepared, they afford an excellent and never to be despised dish.

"Here they are," said Al., at length, handing the lunch boxes to Billy, breathing a sigh of relief as he did so, and coming outside where we stood watching the flight of a string of widgeon, evidently intent on alighting near the location we had thought of as a shooting ground for the day.

There were two ways of reaching our intended destination: one by rowing down the river, thence around into a creek, and finally punting through the marsh until a favorable pond hole was found; the other by walking to the southern extremity of the island, where a strip of this same marsh area divided the island from the beach and lake. Thus we had our choice between a watery roadway or a short, pleasant walk down the island, and as Pete had a boat load of decoys and other needful articles, the Veteran concluded to divide up, and while the punters were to go by the former route, we would walk and meet them at the end of the island.

"I'll let Billy come an' get you while I'm pickin' out a place an' buildin' a good blind," were Pete's parting words before he disappeared around the corner of the cottage.

"Well, I hope you will find a good place," answered the Veteran, in a tone of significance that caused Pete to eye him with a worried expression.

"Do der best I kin," said he, accompanied by a nod of comprehension. "Come on, Billy," and away went the two in the direction of the dock, where their ungrateful but comfortable and useful punt boats awaited them, Pete clumping heavily along as though matters of weighty im-

portance rested on his broad, sturdy shoulders; Billy, as usual, following behind.

The cottonwood trees on the west side of the cottage, standing in a single line like the big protecting spruces, were slowly dropping their broad golden leaves as the frost nipped off the delicate stems, and before starting out on the walk down the island we perceived moving about in the bare branches a number of bluebirds, unfearful of our presence, and uttering those soft spring-like notes so welcome to the ear. It was the same everywhere on the island; wild life was seen in various forms. Here were birds singing and twittering on this snappy autumn morning, while quail whistled as the evening shadows fell; ducks quacked in the distant marsh, yellowlegs called sweetly overhead, and now and then an old marsh hawk flapped lazily along in search of a wounded duck. At night the muskrats came forth and held full sway in the dark waters of the moonlit creeks, splashing, diving, and feeding to their hearts' contents, while out on the bay, shrouded in the uncertain, misty light, rafts of canvas-backs and other ducks pulled tender wild celery roots from the shallow bottom, and thousands of mud hens croaked and fed close to them. Surely, I thought many times to myself, this is a sportsman's paradise.

The frost was melting fast under the mild, beaming shafts of the sun, and the sandy road as we tramped along on our way to the end of the island, felt soft and yielding, while the tracks of woodchucks, rabbits, and delicate quail tracings were in many places as plainly visible as though marked on a fresh snow. After brushing through a thick growth of rich red sumac, withered goldenrod stalks and brambles on a narrow path that was a cramped continuation of the road, we neared the creek where Billy was to meet us, when, with beating wings, several widgeon sprang from the water, but unfortunately too far for a shot, so they sped away unmolested. Some distance out in the yellow marsh we spied Pete, evidently at work constructing a blind about the duck boat that lay on the edge of a pond hole, and after Billy's arrival we were soon heading for his direction, seated comfortably in the punt boat, our hearts warming as we observed the number of birds stirred up by our presence in the neighborhood.

"There is some difference in the appearance of this water now from when the carp are in here," said the Veteran, looking down into the shallow crystal depths that appeared almost like a huge aquarium, so luxurious was the growth of plants. "Then it's simply a mud hole, and swarming with fish from one end to the other," he added.

Pete, as we pushed in to where he was putting the finishing touches on a well-made blind, looked up inquiringly. "How you like this place?" he asked of the Veteran. "Pretty good, eh?"

"Did many ducks get up when you pushed in?" questioned the Veteran, in return.

"It were full of 'em," answered Peter, as he stuck a wild rice stem in the blind. Then he pushed out in the pond hole, and soon had a flock of decoys bobbing serenely on the blue water ruffled by a light northerly breeze. After a slight discussion, created by the fact that we would have to take turns shooting in the blind, and that I was to enjoy the first trial, the argument ended after the usual fashion, and I stepped meekly over into the hidden recess of the duck boat, while the Veteran pushed off with Pete to a place of concealment, calling back. "When you've killed some birds I'll come over and we'll change around." So I was content to settle down, open cartridge boxes, and lay them in a handy position, load up, and wait for the ducks.

Perhaps I had sat thus for ten minutes or more, occasionally raising my head and taking a look around for any feathered marsh denizen that might be approaching, when "Mark!" and I raised up with alacrity as the word reached my ears. "Quack, quack, quack!" came sonorous notes and urging calls from Pete, doing his best to bring on the three cunning widgeon that I now espied winging their way low over the marsh and on the lookout for a favorable alighting place. They kept steadily on, apparently not heeding the decoys, and heading across the wind, while I watched them cautiously, now and then peering over the top of the blind. Then, as though some new idea had suddenly struck them, or perhaps having decided that a nearer investigation of the decoys might prove worth while, when nearly opposite the blind's position, they swung around, heading up against the light breeze, and came straight in. Waiting until the foremost threw up his wings to alight, I raised suddenly to a sitting posture, and holding a little to one side on account of the wind's direction, I pulled the first barrel. At the report there was a splash, as the widgeon collapsed and struck the water, while the remaining pair recovered themselves with surprising quickness, mounting up from their hovering attitude almost before I could put in a second shot, which, however, availed but little, and they swung by to the left, more wary and wise than ever. After satisfying myself that the bird knocked down would not come to life and creep off unobserved, as often happens when they are apparently dead, I loaded up and slid down out of sight.

How the warm, golden sunlight and bright reflection on the water did tan one's face, not with a hot, disagreeable touch, but with a pleasant glow. Several times, so effectual was the deceptive appearance of the blind, that red-wing blackbirds came and hopped over the rush-covered stern or clung to a rice stem close beside the screen, uttering soft, rich trills. I came to the conclusion, as I listened, that one of their notes is distinctly like the sound of running water—a liquid gurgle of refreshing melody.

The next ducks to come in were, queer to relate, another trio, but this time they were black ducks. I saw them moving up my way from the opposite side of the

marsh, and was ready as they drew within range, flying almost in a line, and not strung out one behind the other. On they came, while I lay low, with the usual preliminary palpitations, watching their approach through open slits in the blind, but instead of pulling down toward the decoys as they drew near, they kept on in their flight, passing directly overhead, and offering a splendid shot. Holding, as I thought, well ahead of the center bird, I fired the first barrel with no effect, and put in the second on the duck to the left with the same result, and before I could load again they were far out of range. It almost seemed as though their eyes twinkled with derision when those black, plump forms showing in large clear marks against the sky, skimmed by, so near and yet so far, both shots falling behind. With vain misgivings I heard the Veteran shout, "Mark ahead!" and espied a single duck coming for the decoys—one of these self-same cunning old dusks. After much circling around behind and in front of the blind, just out of range, and evidently making a keen inspection of the decoys, he slowly dropped in, and before recovering from his surprise, as I raised up to shoot, he collapsed and fell with a splashing plump. To make sure of things, I gave him the contents of the second barrel, in order that there should be no danger of his giving me the slip, as several previous lessons had taught, now feeling in a decidedly better frame of mind, with shaken confidence partially restored. How different are the after-effects of a kill and a miss! The one elates with satisfaction and pleasure, and the other plunges us into the depths of chagrin; that is, if the shot was not very difficult; yet without the latter the fascination of shooting to a great degree would be lost, for it is just these misses that keep up one's enthusiasm and tend to improve all shooting capabilities by urging a careful manipulation of either rifle or shotgun.

"Flock of teal coming in on your right. Mark!" sang out the Veteran, whose watchful eye was ever on the keen lookout from his place of concealment, and almost before I had time to cock the gun, there was a zip and whirr of wings, as by shot six round, compact little objects going like bullets. "Wait until they come around again," was my mental decision, and in fact they were past before I could do or decide much of anything. Now, however, they had made a sweeping turn, and were coming back on the outside of the decoys at a good rate of speed as I raised up to shoot. Rip! went the first load of shot, and one of the green-wings dodged at the report, flew uncertainly for a short distance, and then sailed head first into a patch of wild rice with folded pinions. Singling out the rear bird with the second barrel, I shoved in well ahead of him and fired. Through good fortune I happened to center him in the load, for down he came, thus making a brace, much more than I had hoped to bag.

"Hey! Mark left!" called Pete, loudly, and with my fingers all thumbs I endeavored to load hastily, and of course, as luck would have it, jammed two cartridges one after the other, until I was in a perfect fever of anxiety and excitement trying to dislodge them. Ducks were certainly coming thick and fast, I mentally concluded, bruising fingers as I tugged at the tightly wedged shell, and at last, with a supreme effort, out it came; in slid a couple that behaved themselves and I sat erect just as a handsome gadwall, flying low and well on the left hand, came sailing along. It was an easy shot, for he was moving slowly, and on firing he crumpled up and dropped with a splash close beside the boat.

For a time there was a lull, and I leaned back, watching the expanse of waving feathery-topped rice, stiff rushes, and blow-guns with my eyes just above the level of the blind, when all at once there was a soft whirring noise close to the boat, and I grabbed the gun a moment too late, as by skimmed a single widgeon that had come up behind unawares.

Pintails, with their long necks and watchful eyes, were the next ducks to come investigating the decoys, some few minutes after the widgeon had given me such a clever slip, and as these came from the rear as well, I fortunately was on the lookout, and lay very quiet as they passed, waiting for them to swing around and give me a better shot. Sure enough, the whole flock turned and came back, as I had anticipated. Just as the first pair alighted, while the others wavered with beating pinions above them, I fired, taking the first shot at one swimming among the decoys, and giving a hovering bird the contents of the second barrel. Down he came, while the first duck lay on its back, requiring no further attention, and it is needless to say that the remainder of the flock beat a hasty retreat; too hasty, in fact, for they were gone before I could give them a parting salute. A few minutes after this, I thought I perceived a slight movement in the grass on the left side of the pond hole, and raising up to obtain a better view, here was one of the "coony" old pintails creeping quietly and stealthily away. In order to obtain a better view of him, I was forced to stand up in the boat, and as it had no support on either side, it was a trifle unsteady, so, as I fired, the recoil of the gun nearly sent me over backward into the water, and only by a wild balancing feat did I regain myself. It may be assumed that I sat down with alacrity. Nevertheless, I had the pintail, and was therefore contented, although the next time I had occasion to shoot a cripple, my bump of caution was more on the alert.

A little later I counted up the birds floating in the pond or lodged in a tuft of grass, and found there were ten, so I thought it high time that my companion should change places with me, and hailed him accordingly, adding that I was quite ready to investigate one of Al's lunch boxes. This last consideration brought him over; and now ducks, beware!

Located in this new position with a natural screen to hide both punt boats, through which we had a good view of the decoys, for only the Veteran's head showing now

and then above the yellow blind marked the place where he was concealed, I now proceeded to look into the welcome little red lunch box.

Pete and Billy kept watchful eyes roving over the wide stretch of marsh, and suddenly the latter, holding his nose tight, commenced a grunting series of quacks that sounded more like music from the sty than the voice of a respectable duck. But he made a brave effort, and, aided by Pete's more practiced and realistic calls, the four mallards that had been espied, came on steadily toward the decoys. Two pale blue puffs of smoke arose from the distant blind, as both barrels spoke, and to each down whirled a duck, while Pete, in the other end of the boat, gave a sigh of satisfaction. "Look der!" he suddenly exclaimed, "one of dem ducks is goin' to fall," and sure enough, a third bird after flying some little distance beyond the blind, had collapsed into the marsh. "Better get dat crip, all right," said Pete, looking at me, and receiving an answer in the affirmative, we pushed out in the direction of the cripple. On coming up with him, no finishing shot was needed, and it proved to be a splendid drake mallard in perfect feather.

Pete now proceeded to take out his tin lunch trunk; it could not be called much else, for it was always amply supplied with quantities of pickles, cold muskrats, ducks, and bread, from which he drew liberally when so inclined. Billy likewise carried a hearty supply of nourishment, and on opening the box that formed a seat for his boat, displayed a tempting array of juicy Baldwins, from which I was very glad to help myself. What other fruit could take the place of apples? Their external beauty and appearance only add to the pleasure of eating that unexcelled flavor and substance within, and then to put one's nostrils close to the apple itself and sniff long the sweetest of orchards and blossoms, is an unfailing delight. So I sat on the stern of Pete's boat and ate apples, watching the Veteran pull a brace of ducks and sometimes more from nearly every flock that came to him, while single birds fared badly. It is always a pleasure, as well as a source of valuable instruction, for a novice to have the opportunity of observing an experienced game shot making clean, quick, accurate kills, and it is more of a privilege and future benefit to have such a one for an instructor.

"Pretty soon you see dem black ducks work round and give der boss a shot," remarked Pete, moving to a crouching position in order to be well out of sight, and commencing to quack softly, while we peered out, watching closely the pair that were circling uncertainly near the decoys, but keeping out of range. "Now they's goin'," he muttered. "You fellers will ketch it in a minute. Ah, how's dat fer a bully shot, eh?" as at the reports from the blind, sharp and ringing, first one duck and then the other turned a somersault and came twisting down.

"He's wavin', so we push over and see what he want," remarked Pete, suddenly, a short time later, and on nearing the blind the Veteran stood up in the duck boat, saying, "Now you can get in here and shoot until toward the middle of the afternoon, then I'll come back and change places and stay till sundown."

"All right," said I, in return, well pleased with the plan. "How many birds did you knock down?"

"A dozen or so, I guess," he answered. "We must have twenty-five ducks all told."

"You bet, an' more, too," put in Pete, who had been pushing around retrieving fallen birds, and laying them on the stern of his boat as one after the other they were picked up, shaken, and safely landed.

For the second time we exchanged places, and here I was again comfortably ensconced waiting for the obliging duck that might choose to come my way. He was not long in coming. I happened at the moment to be lying back in the boat, when "Mark overhead!" from a distant voice caused me to start up and cautiously crane my neck around to look above, and with a whistling whirr of wings by went a black duck, but going so fast that I concluded to wait and let him work around again. At first I thought he intended to keep on going, but evidently not, for after taking a wide circle, he headed around in a favorable direction, coming up to the decoys away to the leeward. On he kept, and expecting he would swing around behind the blind and come in, I had my eye on him all the time, peering through the grass. Finally he turned and came as I had anticipated, but when within a short distance of the blind, directly behind me, he switched around and headed straight across from his previous line of flight. This was too much, and twisting around in a cramped, awkward position, I half raised up and pulled trigger as he passed behind on the right, and, to my surprise and pleasure, down he tumbled, with closed wings and limp form. This shot I enjoyed very much, not from the punch I received on the nose when firing in an unnatural posture, but from the thought of the three wily birds that had escaped previously and the satisfaction that for once an old dusky had been caught in practicing his wiles.

Five widgeon—one of which I succeeded in wing-tipping, although there was a good chance to make a double—next came to the pond hole, and shortly after a single spoonbill sailed in who threw back his wings and put forth his spreading orange feet in a slow assured manner as he prepared to alight leisurely among the outside decoys. But just at that instant I fired, and added another duck to the bag. Out of three scudding little green-wing teal, I knocked down one, but they came in much easier than the bunch that visited the decoys during the morning, and were inclined to settle down on the further side of the hole, when a moment later this idea was rudely dispelled, as they rose again and passed by on the left.

The golden yellow of the marsh took on a deeper tint as the afternoon radiance of the sun streamed in from the west, and flocks of ducks were lifting more frequently from the various pond holes. I sat up for a time—that is, **with my head above the screen**—in order to better enjoy the picturesque outlook over the marsh, and incidentally to keep an eye out for any birds that might come my way. Finally five pintails that had been wheeling about uncertainly in evident search of a new feeding ground, headed up toward the decoys, and a minute later were sailing in. I picked out one just about to alight, and tumbled him over with the first barrel, but the second worked poorly, merely wing-tipping a bird that we never recovered. After this I bagged a half dozen or more ducks, and then, looking around, I perceived the Veteran and Pete pushing over toward the blind. I was glad to exchange places

with the former, for certainly I had more than a full share in the day's shooting.

"Pete can push you over to the island, and when I come home in an hour or so, we'll stay out and perhaps pick up a few ducks flying over, toward dusk, if the wind blows," said the Veteran, as he pushed alongside of the duck boat, and, bidding au revoir to the scene of a pleasant and fruitful shoot, I stepped in Pete's boat. A few minutes later, after a short punt across the strip of marsh that intervened, I landed on the island. On the way across, we came on a crippled widgeon that allowed us to push quite close before jumping unexpectedly into the air. However, I had a cartridge ready in case of such an emergency, and as he started up I managed to knock him down, this time for good. Pete had several of the ducks last shot in the boat, having left the remainder with Billy; these three I carried with me. Somehow it always was a source of enjoyment to take a little game along when homeward bound, and if the bag was small I liked to carry it all. The memory of two of the first ducks I ever shot will always remain vivid, and a good part of the pleasure connected with the episode was in carrying both home, triumphant and contented, in the dusk of an October evening. Walking up the island, I experienced the same feeling of contentment that comes after a successful day afield, no matter where it may be, in woods, marsh or upland.

"What luck?" questioned Al, as I entered the kitchen, after hanging the birds in a small woodshed that served as a rough but useful game larder. So I told him of the day's favorable outcome, and how much the lunch boxes had been appreciated.

"Well, this is a pleasant place out here," he said, looking down the island from the doorway with an ill-concealed homesick expression. "Yes, I've had a very nice time worrying the days away," and at this I was forced to laugh outright, but it seemed to me that the ducks were about the only individuals that had "to worry the days away" in this country overflowing with a sportsman's milk and honey.

When the big red disk of the setting sun was slowly sinking down behind the distant marsh, I saw the Veteran's figure walking up the island, and a short time later we were strolling back again, discussing the best location for our stands. Finally it was decided one of us would go down to the lower end while the other remained further up toward the cottage on an open piece of ground protected by a tall growth of underbrush on the west, and as this was the direction from which most of the ducks came, it formed all the concealment necessary.

Leaving the Veteran here, I moved down a couple of hundred yards below him and took a stand in a thick clump of sumac, where I had a good view of the marsh and the glowing horizon. Off in the west was a rich band of orange-red sky, and a cool breeze carrying with it a frosty touch blew across the island, while the line of marsh land faded and grew more indistinct as I strained my eyes toward its broad expanse. Suddenly I espied a dark moving spot against the sunset glow. On it came, dodging and twisting, straight over the island; when nearly opposite I pulled up and fired, holding a long distance ahead of the fast-going teal. But on he sped, if anything faster than before, disappearing in the darkening twilight like a dusky shadow. Rip! Rip! came two sharp cracks from up the island, and a second later there was a dull thud, as down came the Veteran's bird close to where he stood.

For a second time I discovered three swift scudding forms coming my way, low down, and flying like animate bullets. They were on top of me before I realized it, but just as they were going overhead, I succeeded in bowling over one of the three, and down he came like a dark ball, striking the ground right by my feet, and bouncing quite a distance from the impetus of his flight. A minute after I knocked down this bluewing, a bunch of three or four more whirled past on the left, so close and so unexpectedly that both barrels went off into space. Several shots from the Veteran's location, followed by the sound of falling ducks, told their own tale, and once, looking up that way, I saw a bird come tumbling out of the air at such a height it seemed almost impossible that a load of shot could have pulled him down. The light was growing dimmer, and the forms of the birds melted more indistinctly into the fading sky, so when another teal—this time a single one—went by, presenting a cross shot just above the line of grass and bushes, it was in reality good luck that I happened to hold about right, and bag him. But a few minutes before I was on the point of starting homeward, I noticed a duck coming up on the left, flying higher than most of the former birds. He offered a fair and tempting mark as he came within range, and, leading well ahead, I pulled trigger. With beating wings he came whirling down and landed in the grass quite near by. And then commenced a running match, for unfortunately he was only wounded, and made every endeavor to escape. Away he flopped, and I after him, falling into holes and tripping over briars in the tangle of thick undergrowth, made more impenetrable by the poor light. Finally I made a successful rush, and, nearly falling on top of the hard pressed duck, secured him safely. It proved to be a beautiful drake widgeon, and now, as the growing darkness made further shooting impossible, I found my way out to the path, and walking up the island soon came on the Veteran, who was waiting for me. Four birds were scored to his bag of the evening, two heavy black ducks, one gadwall, and a spoonbill.

Behind us, as we walked up the island, arose the round, bright face of the moon, shining with a yellow harvest brilliancy, and contrasting in beauty to the dull orange sunset still visible in the west. Here and there overhead the stars commenced to appear, faint points of burnished silver, and as we entered the warm, inviting interior of our shooting lodge with contented hearts, night was settling down in quiet peacefulness.

CAMILLA.

Doves in New Jersey.

THE dove is protected in New Jersey. It is included in the category of wild birds "other than a game bird," and as such may not be killed at any time. We understand that many shooters in New Jersey are killing doves this year; but in so doing they are violating the law.

Handy Game Carriers.

MILES of columns of matter have been published on the subject of the proper clothing for the shooter. Garments are made which consist of a lot of pockets and a few brass buttons, good enough for those who fancy going into the woods in stuffy armor, but not satisfactory to the squirrel shooter. He leans toward old trousers or knickerbockers, a cap or small hat of neutral tint, and some sort of footgear in which he can slip about without upsetting all the loose stuff in the woods. A flannel shirt of no special color completes the rig, and it is sufficient.

Equipped thus, with only the rifle to carry, the first squirrel or grouse he shoots is easily taken care of; but when a second and a third are added to the string, it becomes a bit awkward, for the feathery or furry legs have a way of slipping out of one's hand, and whenever another shot is to be fired, it is necessary to drop the string somewhere in the grass, and pick up each individual again after the additional meat is secured or missed. Stringing bloody game on the belt has its disadvantages, and, in my opinion, no better method can be employed than that so often followed by the backwoodsmen of the Southwest. For the benefit of those who are not familiar with this plan, a description will not be out of place.

Take one of the middle toes of a hindfoot in the left hand, and with the right split the toes on either side down an inch or so. Then slip the point of a knife-blade under the tendon of the middle toe and push a bit of string through, tie a knot in the string, and you have a handy carrier. When other meat comes your way, add it in the same manner. The tendons of a squirrel's foot are tough as wire, and will not tear out in carrying. Very many of the old squirrel shooters of the backwoods cut a strip of bark for this purpose from willow, elm, or other trees that have tough inner bark. A willow, sassafras or apple sprout will also answer the purpose, but the handiest thing I ever used was a strip of belt-lacing leather, one end of which was cut rather thin, to be handy in slipping the thong through the opening made with the knife-blade under the tendon; but both ends can be tapered, while the middle of the strap may be left a half-inch or so in width. The thong need only be a foot or fifteen inches in length, and when a squirrel is added to the string, a common square knot or a granny knot will hold until there is another addition. Being full of oil, this lacing leather will not knot hard, like cord.

Rabbits, grouse, or other small game may be treated in the same manner as squirrels for carrying, and I know of no cleaner way of lugging the game about while hunting than this.

This belt-lacing leather is valuable in other ways, too; and every outer should carry two or three thongs to the woods with him. It may be used for sling straps for guns; for repairing a broken gun-stock or canoe paddle, etc.; in fact, in numerous ways. Cow-punchers often have two or three of these thongs tied to their saddles for emergency use, and it is surprising how often they find them handy in making hurried repairs.

PERRY D. FRAZER.

A Minnesota Memory.

WHEN one meets an old friend, he always extends the hardy and horny right hand of fellowship, and if they are in each other's company for any length of time, they invariably refer to some things that happened in bygone days—things brought to mind by the meeting, and probably never thought of for years. Such was the case with myself yesterday. Being at leisure the other day, I concluded to clean my artillery. I have two pieces in the battery, representing the heavy and the light. The heavy consists of a .45-90 single shot Winchester that has seen service for quite a number of years, and was the pride of my heart until I found another love in the shape of a .30 Government Winchester, since which time the "heavy artillery" branch of the service has been kept in the scabbard, and treated as an old and trusted friend; kept on account of the many scenes of pleasure with which it has been associated, it having been my "good pard" in many a good hunt. While cleaning the heavy artillery, I stood full in front of a mounted moose head—one I had killed with the old gun in '97 near the headwaters of the Cloquet River, in St. Louis county, Minn.

The gun and the trophy taken together started me thinking of those hunts in the grand old State, and the capture of this trophy in particular, which took place on the first day of November, in '97, after a long day's tramp, as much for pleasure as hunting. I had started at eight in the morning to locate a good moose ground, and after spending the time until about three o'clock searching for the proper place, I concluded to look up the barrens—i. e., where the fire had destroyed the large timber—for it is there that the large game is mostly congregated after the freezing weather comes on. It was only a short distance; and although it would throw me about eight miles from the railroad and nearly fifty from any other kind of a road, it was near the Breda River, which would be good for a hand-sled or toboggan, and make the work of getting in and out very easy compared with other places.

About half-past three I reached the barrens and found plenty of signs of moose and deer. Being pretty well fagged, I sat down at the edge of a clump of brush to rest and smoke, intending to make a start for home so soon as the smoke was finished. I had been thus occupied for about ten minutes, when I spied a black spot on the opposite hillside, which looked as if it might be alive. After a few minutes, it moved, and I saw it was a moose, but whether cow or bull I could not tell. I took chances on its being a bull, and brought up the artillery and got ready for action. After deciding the distance to be about 500 yards, I took careful aim at the top of the shoulders, and fired. It seemed to be several seconds before the bullet reached the mark, but when it did, I knew that the work had been fairly done. The moose gave a great bound and disappeared in the strip of brush at the brow of the hill near which it had been standing. When I reached the spot, I found nothing to indicate that the bullet had found the mark. The track was plain, and after about thirty yards I came to the victim, dead. The wound was just behind the shoulder.

One who has taken a hand at dressing so large an animal, knows what a job I had on my hand. They also

know that after it was finished there was no time left to make the trip home. I camped that night, and the next morning made a start for home, very much elated over the set of moose antlers, the like of which I had not seen for size and regularity combined. There are 13 points on each horn, and scoops nearly the same; 54-inch spread, and, as near as I could estimate weight, 50 pounds, which was short of the actual weight about three pounds.

Cther hunts have I taken in that country, alone and with companions, and several moose have I taken, but none to compare with this one. DR. J. P. BUSH.

Guns and Gun Feats.

NILWOOD, Ill., Aug. 30.—*Editor Forest and Stream:* I have been greatly entertained and interested by the "Bark and Anti-Bark" articles in *FOREST AND STREAM*; especially by M. D.'s contribution, as it explains the cause of the death of a spruce hen killed by myself in September, 1893. The hen was sitting on a small branch of a scrubby tamarack tree, about twenty yards from me. Thinking to shoot off its head, I took careful aim, and at the report of the gun the bird fell. Upon picking it up, I could find no trace of a wound, and was much puzzled as to the cause of its death. After examining the tree and branch carefully to see if I had barked it, I put the bird in my pocket and when I got home told my partner of the circumstance. He suggested that the bullet had probably just touched the top of the head and not broken the skin. We then skinned the bird to see if any bruise was on it, and found nothing to indicate that the bullet had touched it, and concluded that death was caused by fright. The gun used was a .40-50 Remington, and I am now of the opinion that "wind contusion" fixed the bird.

I have never tri'd barking squirrels. My neighbor, Mr. Street, says he did it once, and that in his early days it was done very often. He also says they snuffed the candle, but to do so and not extinguish the light was never done while he was around.

My experience in barking is confined to one shot that not only killed, but cleaned. The victim was a grouse sitting on a limb of a balsam tree, its head showing full above the next limb. Here was a chance for a bullseye! Alas! the bullet hit the limb instead of the head, glanced down and hit the bird in the back, and the way it "put scatter" to that bird was a caution. I noticed a large piece fall about fifteen feet from the tree, and went to see just how large a piece was left, and found it was the full breast of the bird, with one wing attached. The breast was skinned slick and clean, and not a scratch on it. In fact, I couldn't have done the job nicer in the regular way, and I think this beats killing without breaking the skin, as the whole thing is done at once. Of course, the legs and back were minus, but they don't amount to much anyway.

I got a large buck by barking his horn about an inch above the hair. The shock knocked him down, and from the way he was lying he must have lit on his horns. At least he was lying on his back, with horns sticking in the ground. When I got to him he was apparently dead, and I was about to cut his throat when he winked one eye in such a natural manner that I became suspicious, and shot him again. The first bullet had cut about half its thickness through the side of the horn. I had the head mounted and presented it to an old hunting and fishing companion, with a written statement of the capture. This fell into the hands of the editor of our county's leading paper, who gave the head a write-up and me some gratis sarcasm on my story about the killing. Some time I'll tell how this same editor killed a deer when it was not in sight of the shooter. J. P. B.

Editor Forest and Stream:

Seldom have I read anything with more interest during the quarter of a century and more that I have been a squirrel hunter and a member of the *FOREST AND STREAM* family, than the discussion relative to barking squirrels, snuffing candles, etc. With your permission, I would like to state a few facts obtained from hard and long experience.

I fired my first shot at a chipmunk twenty-eight years ago, using a long Kentucky rifle carrying round bullets somewhat less than .32 caliber in size. Since then I have had a hobby—almost a weakness—for squirrel shooting, and although it has been my good fortune to have hunted and killed many big-game animals, my preference is for squirrel shooting with an accurate rifle. I, too, had the idea that I could bark squirrels with a rifle bullet, and as my head had early in life been filled with such yarns, I tried constantly to do this. Later on, when the Winchester repeating rifle first appeared in small calibers, I purchased one of .38-40 caliber, and later one of .32-20, and tried again to do the trick. These were followed by a still more accurate single-shot rifle of .32-40 caliber, with Lyman sights; then by two others of different make, but both .25-20, and latterly several rifles taking various .22 and .25 caliber cartridges, the latest being a Winchester automatic rifle taking a high-power special .22 caliber cartridge and mounted with a telescope sight, as were also two of its predecessors. Before I was content to use any of these rifles on squirrels, I experimented long and carefully with the ammunition and the sights, shooting at 25 and 50 yards on a machine or solid bench rest, using a sandbag under the forearm. When a rifle was ready for the squirrels, it would place every shot in a one-inch paster at 25 yards, and do almost as close grouping at 50. If not, it was not taken out. In other words, if the front sight was held on a squirrel's head and I missed, it was my fault and not the rifle's. By this I by no means wish or intend to convey the impression that I do not miss. Indeed, I miss squirrels very often, for I am not a very steady holder offhand, and for that reason, like the Indians, prefer to get up close and obtain a rest, if possible, in order to be sure of a clean shot, or a clean miss. While I do not say that squirrels cannot be barked, I will say that I do not believe they can save by some scratch or fluke. Having tried to do this hundreds of times, always to fail, it would be remarkable if I should believe a thing that seems impossible with the most accurate rifles obtainable. While I could give dozens of similar instances, a few will suffice. One squirrel, lying along a horizontal limb high up in a hickory tree, refused to present a fair shot, and going to a tree almost under it,

I fired at the limb directly under his belly, with the result that the limb was cut and broke off, the squirrel coming to the ground with the end, then running up another tree, from which I dislodged him with a shot through the head. In skinning this one, I found the belly bruised for a space as big as a silver quarter, yet the squirrel "lit running," and only a head shot downed it. Another large gray hid on an oak limb less than fifty feet from the ground, and failing to get a shot, I went up directly under the limb, and resting the rifle alongside a tree trunk, fired as before. The bullet must have gone far enough through the limb to splinter it on top, for the squirrel was hoisted fully two feet, and came to the ground within four feet of me. As the woods were open there, and the squirrel refused to tree, I chased it clear across the bottom land and up a hill until it distanced me and evidently gained the home tree. Another squirrel was barking at me when shot. It was knocked to the ground, but regained the tree, and made such a peculiar noise that I bent every effort toward bagging it. Examination proved that its lower jaw was shot away clean, the second bullet going high, through the head. It was resting head down when first hit, and the bullet peeled the fur off its belly and bruised the flesh badly, yet it was a very lively squirrel until it received the second shot. A fox squirrel was shot from one side, the bullet taking off the lower jaw entirely and part of the upper jaw, but although it was knocked to the ground, it first hid in a hole at the base of another tree, and being dislodged, ran up to the very tip of a tall hickory, and was not finished until the third shot, which broke its neck. A companion crippled a fox squirrel, which clung to grapevines. We shot away the vine to which it clung, whereupon it went higher up the tree, was dislodged again, fell into the vines again, which we succeeded in cutting by shooting from rests, only to see the squirrel cling in another place, then come down after a head shot. We found this one shot in five places, any wound seemingly being sufficient to paralyze it. Another time I broke a large gray's hindleg, bringing it to the ground, then chased it over a very steep cliff and lost it. Next day a companion shot it, plowing a deep furrow under its belly, so that it was knocked out of a tree overhanging a cliff, it falling nearly 200 feet, but it ran up a big oak tree and was dislodged with a shot which broke its left foreleg, and we finally finished it with a shot through the head as it clung to the tree thirty feet above the ground.

Dozens of times I have placed a bullet directly under a squirrel in the bark of various trees, knocking them to the ground, but never have I seen one which showed the least inclination to lie there. I have asked old backwoods hunters to try to bark squirrels with their muzzleloaders, but they always failed, and I have yet to hear one say he had ever done this or seen it done. Even on young and tender squirrels the same applies, so far as I have learned. Using a telescope sight, and shooting at distances ranging from forty yards to ten—more often the latter than the former—if I have failed utterly to kill my first squirrel without breaking the skin, the person who will make me believe barking can be accomplished "has got to show me," as they say in Missouri.

The nearest approach to this was when, seeing three young prairie dogs sitting beside a burrow one day, I fired at the loose ground under them with a Sharp's rifle, 100 grains of powder, and a 550-grain bullet, and knocked the little dogs so far away that I caught them all and took them home with the intention of making pets of them, for they suffered little, apparently, from the shock. But they all died eventually, as I believe, from improper food. Perhaps, however, they died from being barked, so to speak.

I was sitting behind a log one day in the Highlands of the Hudson, watching for a squirrel that had hidden in a hole in a tree, when another one appeared on another tree, not forty feet from me. Holding the cross-hairs of my telescope directly under the squirrel's heart on the bark, I fired, elevating the little fellow a foot, and cutting a big chunk of bark off the tree trunk. If he died from the shock—which must have been relatively terrific—it was not for some time afterward, and judging from his speed and agility, so far as I know, he may still be running. If a round bullet and a squib of powder will impart more shock than my smokeless load, then it might be reasonable to forget common sense and go back to the old muzzleloaders.

Someone has said in this controversy that the old rifles would shoot where they were held. This is not in accord with the facts as I have found them in days and weeks in the backwoods, hunting and shooting at a mark with men who used old Kentucky rifles of a superb type. I have found that in matches, as well as in hunting, these men hold off the mark, not on it, very often. They will fire a shot or two at a black spot on a tree trunk, then make a cross a little below and to the right or to the left, representing their group center. They then fire three shots, or five, aiming at the black, their bullets going into a very small bunch at or near their cross. Again common sense explains this. The front and rear sights being fixed, it is not possible to alter them for drift of the bullet and for elevation. But do not attempt to explain these things to the backwoodsman, who merely knows his rifle shoots a trifle left or right, but cannot explain why. My telescope sight is so fixed on the rifle that when sighted to hit center at 25 or 50 yards, allowances must be made for a longer shot, but, unlike the old open sights, guesswork is reduced greatly, the object being magnified. But squirrels are shot under fifty yards with very rare exceptions.

Regarding snuffing candles, I have seen this tried with the finest target rifles of all calibers, at distances ranging from thirty feet to as many yards (you cannot see well enough to aim at fifty yards). Invariably the light went out if the bullet hit the wick or passed too near the flame.

Recently I have made numerous experiments at driving nails. Note this: My rifle, if shot on a bench rest, will hit a ten-cent piece every time at 25 yards. At this distance I use a black paster cut with a .25 caliber wad-cutter. The cross-hairs show clearly on the quarter-inch paster. Note this also: The telescope is mounted on the left-hand side of the barrel, so that my Lyman sights are left in position for use if desired. Both sights are almost exactly the same distance above the bore. If the rifle were fixed in a vise, both sights would be aligned perfectly on the bullseye. This paster is about the size of a nail head. The telescope sight magnifies six times, and

is remarkably clear and perfect. With it I can see the paster well enough to hold on it carefully at 50 yards. Turning to the Lyman sights, at that distance it would be impossible to hold on the paster, as I have proved time and again by trying to do this with the open sights, then looking through the telescope, to find an error of an inch or more. At 25 yards I can hold on the paster with the open sights at times fairly well, but generally the error is from a half inch to an inch. By trying again and again, I have found that I can hold accurately on the paster at 18 yards, but no further—and the oculists tell me that my vision at long range is above normal. These Lyman sights are as far superior to the old open sights as the telescope is superior to the Lyman, for seeing the object clearly. If I cannot see a dead black paster well enough to feel sure of hitting it occasionally at 25 yards, I respectfully ask to be shown how to hit a nail head at 50 yards, or even at 20. Now, it happens that my target at 25 yards is placed on heavy planking against a board fence not yet sufficiently weather-stained to render its nails entirely invisible. These nail heads are larger than the pasters mentioned, but it is with great difficulty that I can hold the cross-hairs of the telescope on them, and I cannot locate them at all with the Lyman sights. My experience has been that in shooting at a tack head, if hit at all, it will be bent out of shape, and either be knocked aside or driven partly into the backing. In other words, if it is possible to drive a tack into a board as one would with a hammer, it must be struck squarely on the head every time. Will the old-time tack-drivers tell us that we cannot shoot as well as they, even on a machine rest? I would point out that there are now several rifle makers who will guarantee their barrels to keep ten shots in a circle less than three inches in diameter at 200 yards, rest. Were the old-time rifles better than these?

Is it not a fact that jockeying and trickery were commonly practiced by riflemen a century ago, and is it not probable that this barking and other things were mentioned so often that they came to be taken for truth? When a boy I believed the Indians and cow-punchers to be superb shots, and it was a hard pill to swallow when, in being among them for a long time, I found them about the poorest shots of all. PERRY D. FRAZER.

Editor Forest and Stream:

Here are two opinions I asked for on the subject of barking squirrels. Both are old-time hunters, who, like myself, began to hunt with muzzleloaders, and have had wide experience. The first one was in reply to a question put by me to J. H. Rushton, the well-known canoe builder, of Canton, N. Y. He said:

"I grew up in the backwoods, learned to use the peashooter, and when at my best delighted in hunting squirrels and 'patridges,' making it heads or nothing. I've tried barking, but never succeeded. I either hit the squirrel or missed him. I've thrown a squirrel 20 feet, sure, off the side of a tree, but he would always light right side up and run like everything. Never got one that way, and of course, after a dozen trials, more or less, gave it up. I shot at one once upon a time and have not got over laughing yet. A big gray ran up a very large hemlock, and try as I would, I could not locate him; but at last I did so. There was a dead limb 50 or 60 feet from the ground, and I discovered hair on it, but, try as I would, all I could see was that—the gray being stretched along the top of the limb. The situation was such that I had to get almost under him to see where he was. After a time I grew tired and decided to play a trick on him, so got under the limb, and, shooting almost straight up, held for center, and let go. Up went the squirrel into the air—it seemed several feet—and then he came down. Of course I expected to see a dead squirrel. Not much. He struck the ground within six feet of me with a thud, and it seemed a grunt; gathered his feet under him, looked at me with the wildest eyes I ever saw, and left like a streak of greased lightning. And I just doubled up and laughed until the tears ran. I suppose my bullet tore a sliver off the top of the limb, and that hoisted him."

The other letter is from S. D. Barnes, the well-known writer on outdoor topics, who writes me from his home at Bald Knob, Ark., as follows:

FRIEND FRAZER—Wish you hadn't appealed to me for an opinion on this squirrel-barking case. I am a great respecter of old traditions, and it looks tough for all the boys to be questioning Dan. Boone's record this late in the day. Jumping on Rud. Kipling's "raw, rantangled log-jam" and "smoky Indians" was all well enough, since Kip is only an Britisher, and has no rights that we are bound to respect; but it's different with Dan'l. He "b'longs of us," and we should stand ready to shed our coats whenever his achievements are called in question. I am positively certain that George Washington chopped down apple trees as a regular after-dinner diversion; that Israel Putnam rode his blind mare down a perpendicular cliff, and "legged" that old mother wolf in her den, and that Daniel Boone barked everything he shot at—from Indians to snowbirds. All this is history, and its truth defies refutation.

I never shot at a Kentucky squirrel. Maybe a susceptibility to nervous shock was a peculiarity of the reds and grays found in that region a hundred years ago. Maybe they are that way yet. Possibly there are atmospheric conditions, don't you know, or something else of that sort. Anyway, we hear of lots of men who drop dead over in Kentucky, and a painstaking investigation of these numerous cases might develop proof of barking. I once owned a Kentucky foxhound that would bark in his sleep. Again, down in Texas, I knew a Kentuckian who liked to make positive statements, and each and every one followed by the formula, "An' that's the word with the bark on." I often wondered whether his stories would stand a little judicious "barking," but his hearers who hailed from the Blue Grass State would not undertake the process, and none of the rest of us felt competent.

It is really unfortunate that you feel impelled to mix yourself up in this discussion, for the balance of testimony is dead sure to go against you. Undoubtedly Daniel Boone barked those squirrels. It was ordained by Fate that they should die in just that way; but they were the last of the lot so foredoomed. If Dan'l could come back to earth to-day, he could use the entire output of rifle cartridges from our three biggest factories and never bag a squirrel that he didn't hit. That's the word with the bark on, and I'll stand by it, even if my own personal

reputation for marksmanship and veracity goes as high as Gilderoy's kite. I have shot squirrels for thirty-five years, and the greater part of the time with a rifle. I have hunted them in a dozen States and Territories, from Minnesota to the Gulf, and with arms of all calibers and weight of charge, from a .22-30 to a .45-70-550. Before muzzleloaders went out of date, I had killed enough squirrels to fill a grain car to the load limit line, and since then I guess I've doubled my score. I've hit them everywhere that a squirrel could be hit, from the tip of the nose to the last hair on tail, and it stands to reason that I have missed them just as extensively and thoroughly. But nary a one ever succumbed to the shock of a bullet that missed his vitals. Of course, I have often cut the limbs from under them, or seen them thrown into the air by the bullets passing between their bodies and the wood, and some of the squirrels so brought to the ground were retrieved by my dog, but they were very much alive up to the time his jaws closed upon them. So much for the chance of accidentally barking a squirrel.

And now as to accomplishing the same feat designedly. More than thirty years ago I read of Boone's achievements along this line, and set myself to equal them, and since then I have essayed the same thing a score of times, always unsuccessfully. I have planted dozens of bullets directly under the hearts of squirrels, big and little—under their throats and jaws—at the very tips of their lovely little noses. I have grazed them with round balls from muzzleloaders, and soft-lead, hollow-pointed, and metal-cased bullets from breechloaders; but it invariably required something a bit closer than a graze to do the work. Which fact induces me to say that the squirrels of to-day are not as those of long ago. My experience has been that you are never sure of one until you get him. Shoot him almost in half, and maybe he'll dig his toenails in the bark and swing there in midair for twenty minutes; break all four of his legs, and he'll balance his body across a limb and rest secure; blow his head into fragments, and he'll cling to the tree a full minute before falling; not invariably, of course, but quite frequently. But don't try to bark him. You will only waste your ammunition.

S. D. BARNES.

BALD KNOB, Ark.

PERRY D. FRAZER.

Editor Forest and Stream:

Quien Sabe, in the number of August 27, seems to doubt M. D.'s statement that the wind of a ball will kill a man. I had at first intended to let the doctor attend to this case himself; he no doubt can give a more scientific explanation of it than I can, though he may not have had as many of these balls shot at him as I have had; but Quien Sabe includes me in the number that he fires his broadside at, so I have concluded to ask him a few questions, all without our getting mad about it, of course.

Has Quien Sabe ever had a three-inch shell that was fired out of a field gun pass so close to his head that it knocked him down and made him think that a mule had kicked him? I have had it treat me that way. The shell was not meant for me, I suppose, but for my gun; but it missed us both. Had it passed a foot nearer me I would have been in the list of killed or missing once more. I figured in two of those lists as one of the killed during "our late unpleasantness," but always refused to stay killed.

And does he not know that if he stood on the deck of one of our battleships when the ten or twelve-inch gun was being fired, within forty feet of its muzzle, the blast from it would kill him as dead as the proverbial mackerel? If he does not know it, allow me to tell him that it would.

CABIA BLANCO.

NUTLEY, N. J., Aug. 27.—*Editor Forest and Stream:* About five years ago, while hunting deer in Humboldt county, California, I succeeded in barking a squirrel after the manner of Daniel Boone and his fellow hunters, as described in the anecdote. It was of the kind known there as the redwood squirrel, somewhat smaller in size than our red squirrel. Its color is a deep reddish brown on the back and outside of the legs, shading to a much lighter brown on the underside. It was crouched on the limb of a large cedar, distance about twenty yards or so; the rifle used was a .30-30. At the shot it rose slightly from the limb and came to the ground dead, quite in accordance with the programme. On my telling the story in camp, it was generally laughed at. One old fellow who had grown up in the woods, however, seemed to know about this method of killing squirrels. When I picked the squirrel up, I noticed a slight perforation through the skin over the belly, showing that something had struck there.

Once before I tried the same trick on a squirrel sitting on a fence-post. The bullet cut a groove through the top of the post, directly under the animal, but the only result in this case was an enormous squirrel leap and disappearance of the squirrel up a tree. I also tried to stun a mountain quail by shooting close to its head, thinking that the wind of the bullet might disable it sufficiently to permit of its capture while alive. The effect of this shot was only to daze the quail for four or five seconds; then it flew rapidly off. From the result of these few experiments, my impression is that in order to successfully bark squirrels, the bullet must pass under the bark on which the squirrel is crouched, but near enough to the surface to break the bark and force it outward. The bullet passing near the squirrel or cutting the bark under the squirrel will have but little effect.

The soft lead bullets used in the old rifles may have had something to do with the success of the trick, as such a bullet flattened somewhat on striking the wood and spread sideways, thus adding to the force of the concussion. The bullet used in barking my squirrel was the mushrooming sporting bullet. The experiment is easily tried in any place where there are squirrels, and it is safe to shoot a rifle in the air, using different kind of bullets and striking at different distances under the surface on which the squirrel lies.

The principal difficulty will be, I think, in holding straight, as it will probably be necessary to hit within one-eighth of an inch of the point aimed at, or even closer. Nowadays men do not live with a rifle in their hands. Of course the closer the squirrel hugs the bark, the greater the effect of the shock will be upon it. If the bark is so thick and soft that it will not tear out over the bullet, there will probably be no effect.

JOSEPH KINGSLAND.

Comparison of Rifles.

Editor Forest and Stream:

A few more remarks seem necessary to make clear my position taken in your issue of August 6.

First, I must disavow any claim to being "posted on scientific facts." My opinions as to the Kentucky rifle were admitted to be only conjectures. I cannot find any precise record of the rifling or powder charge used in these rifles, but would be very glad to hear where such can be obtained.

Mr. Darby believes that a high velocity would not have been attained in the Kentucky rifle without "stripping." Now it is true that with a long bullet a quick twist is needed to prevent tumbling, and the bullet must either be jacketed or move with a low velocity; but where the diameter of the bullet is equal or nearly equal to its length, a slow twist may be employed and a high velocity attained without a jacket. Examples of long bullets are: The Krag-Jorgenson—Length of bullet, 1 3-16 inches; diameter, .30; ratio, 26-100; twist, 1 in 10 inches. Accordingly the Krag requires a jacket to utilize its high velocity of 1,960 foot seconds.

The Martini-Henry and .45-70-500 Springfield—Length, of bullet, 1 1/4 inches; diameter, .45; ratio, 36-100; twist 1 in 22 inches for the Henry rifling and about the same for the Springfield. Accordingly, since these bullets were not jacketed, their velocity had to be low—1,295 foot seconds for the Martini, 1,179 foot seconds for the Springfield.

Example of short bullet: .50 express; length of bullet, 7/8 inch; diameter, .50; ratio, 57-100; twist, 1 in 72 inches. Accordingly this express attains a velocity of 1,800 foot seconds without a jacket.

Other high velocities attained with black powder and without a hard jacket are .45-150-270 express, 1,913 foot seconds; .45-130-310 express, 1,812 foot seconds; .577-164-502 express, 1,680 foot seconds.

Even the 4-bore elephant rifle, with a bullet weighing 1,257 grains, attains a velocity of 1,500 foot seconds. These figures are from "The Gun and Its Development," by W. W. Greener. The same author recommends a twist of 1 in 84 inches for spherical ball rifles. Yet Mr. Darby says: "Those rifles had a very slow twist, about one turn in twenty or twenty-four inches." This sentence seems to me self-contradictory. I hope Mr. Darby will not think me discourteous if I ask his authority for it.

Again, my critic says the express rifling has a twist of 1 turn in 16 inches, and a long heavy bullet. Greener

Length.—Krag-Jorgenson, 1 3-16; .45-70-500 Springfield, 1.25; Martini, 1.25; 340-gr. Express, 7/8; Kentucky long rifle, 52.
Diameter.—Krag-Jorgenson, .30; .45-70-500 Springfield, .45; Martini, .45; 340-gr. Express, .50; Kentucky long rifle, .52.
Ratio.—Krag-Jorgenson, .26; .45-70-500 Springfield, .36; Martini, .36; 340-gr. Express, .57; Kentucky long rifle 100.
Twist.—Krag-Jorgenson, 1 in 10 in.; Martini, 1 in 22 in.; 340-gr. Express, 1 in 72 in.
Velocity.—Krag-Jorgenson, 1,960 ft. sec.; .45-70-500 Springfield, 1,179 ft. sec.; Martini, 1,295 ft. sec.; 340-gr. Express, 1,800 ft. sec.

gives the twist as 1 in 48 to 72 inches, and the bullets are short and light in proportion to their diameter, as he can see for himself if he will pay me a visit or examine the pictures in any English gun catalogue.

Now, all the above shows that with the length and diameter of the bullet equal, or nearly equal, a velocity closely approaching that attained with smokeless powder and jacketed bullet has been given by black powder to an unjacketed projectile. I must admit it does not prove this to have been the case with the Kentucky rifles, but their weights and the slight elevation possible with their back sights suggest heavy charges of powder and high velocities. In the quotation from Audubon in FOREST AND STREAM August 6, we find the following: "Pouring as much powder from his horn as will cover it. This quantity is supposed to be sufficient for any distance within a hundred yards." This is rather vague, but certainly gives the impression that fairly large charges were used for long range.

Davy Crockett's rifle fired a bullet which weighed about the same as that of the Krag. As in the express, its bullet was short and light in proportion to its diameter. If, then, it agreed with the military smokeless rifle and the express in burning a large charge of powder, it seems to me the comparison is close enough to be interesting.

In regard to the flat trajectory, and smokeless discharge of nitro powders, my meaning was not that these advantages were secondary in point of importance, but only in point of time. Historically the experiments which produced the smokeless powder rifle were undertaken for the purpose of reducing the weight of ammunition. It is true, however, that the incidentals have proved of more value than the prime object. You will remember that Saul went in search of his father's asses and found a kingdom.

Mr. Darby says: "Experiments with the full jacketed bullet proved that it had no so-called explosive effect whatever." He is evidently unaware of the fact that while an explosive effect is rarely produced in practice on live animals, it is almost always produced in experiments on dead ones. Let me quote from a few articles published while the arm was still in its experimental stage:

"The skull at short range will be extensively ruptured, the brain more or less disorganized, and large pieces of the cranial vault may even be thrown out through the torn scalp to a distance of several meters, as though an explosion had occurred

within. Such experiments have often been made upon the cadaver."—Article in Warren and Gould's Text Book of Surgery, by Surgeon-General Torwood, U. S. A.

"The explosive of the bullet on * * * all vital organs, or on cavities is enormous, especially when these are full."—Lieut.-Col. J. D. Griffith, Mo. Nat. Guard. Proceedings of the Assn. of Military Surgeons of the U. S., Vol. VII., 1897.

"It is now apparent that conclusions drawn from experiments made on dead animals or men are not borne out by what is observed when living men are wounded by small-caliber projectiles. It is steadily becoming more and more evident that the appalling destruction produced in dead animals and cadavers by small projectiles is not experienced when men are hit by them under ordinary conditions."—Prof. Stevenson, of Netley, in "Wounds in War," p. 35, 1897.

The literature of the time is full of accounts of experiments on dead men which, as I said in my first letter, seemed to prove that explosive effects would be produced on live ones. However, it has worked out, the adoption of the full mantled bullet can hardly be attributed to humane motives.

Mr. Darby thinks that smokeless powder was adopted to increase the power of the rifles. He forgets that while nitro powders are more powerful than black, a smaller quantity is used; that while the pressure generated is greater, the area of the base of the bullet—where alone it is efficiently exerted—is less.

The following table gives for each smokeless powder cartridge a black powder cartridge of nearly equal strength.

Black Powder.	Smokeless Powder.
.38-55 940 ft. lbs.	.25-35 W. C. F. 967 ft. lbs.
.40-72 W. 1360 ft. lbs.	.30-30 1269 ft. lbs.
.45-90-300 1466 ft. lbs.	.303 Savage 1365 ft. lbs.
.45-70-500 1551 ft. lbs.	U. S. N. 6mm. 1563 ft. lbs.
Springfield 236	
Martini Henry 1797 ft. lbs.	Italian Mannlicher.... 1790 ft. lbs.
.45-125-300 1786 ft. lbs.	Krag Jorgensen 1887 ft. lbs.
.50-100-450 1917 ft. lbs.	Spanish Mauser 1890 ft. lbs.
.450-130-350 Express... 2703 ft. lbs.	.35 W. 2600 ft. lbs.
.500-138-444 Express... 3124 ft. lbs.	.405 W. 3200 ft. lbs.
.577 Holland special... 3625 ft. lbs.	.400 Jeffery Cordite 3343-3388 ft. lbs.
8-bore elephant rifle, 5232 ft. lbs.	.45 Holland special... 5004 ft. lbs.
4-bore rifle 6316-8832 ft. lbs.	.600 Jeffery Cordite 6000-8000 ft. lbs.

The term "high power," as applied indiscriminately to smokeless powder rifles, seems to me to be most inappropriate, and to lead to confusion of ideas.

It is true that most, although not all, the governments which have changed from black to smokeless powder have slightly increased the power of their arms. But this increase has been in no case sufficient to cause material increase in efficiency or to justify the expense of adopting a new weapon. It was not for an increase in power that the change was made, but for a more efficient method of applying it.

DAVID E. WHEELER.

BUFFALO, N. Y.

Post Mortems on Burst Guns.

As a general rule, the public hears exceedingly little about the instances of burst guns which are bound to arise so long as shooting remains a popular sport in this country. There are, however, a certain number of persons who gain an exceptional amount of experience in dealing with the burst guns that are from time to time thrown up as wreckage from the world of sport. The greatest difficulty which faces the person who endeavors to make a careful inquiry into the circumstances of an accident, is the almost complete absence of reliable statistics upon which to base a sound opinion. The cartridge which causes the accident is necessarily lost, the shell only remaining for examination.

There is, as a rule, very little difficulty in obtaining samples of the batch of cartridges in use at the time of the accident, and it necessarily follows that these must be subjected to careful test and scrutiny. Unless there happens to be proof positive that some serious error of loading has been committed, it is unwise to lay the blame on the cartridge. An examination of the pressure obtained from a certain number of them may show a few individual high records, but even then it is exceedingly difficult to lay down the dividing line between what is reasonably safe in a sound gun and what may be considered as dangerous. We know that ordinary well loaded sporting cartridges give pressures between three and three and a half tons during the warmer months of the year. There are, however, many instances of commercial cartridges which appear to give thorough satisfaction to the shooter in which individual records of over four tons are encountered. In interpreting results of this kind, it is necessary to bear in mind that the actual charge in the cartridge which gives a high pressure cannot be ascertained beforehand. Consequently it is impossible to say whether a relatively high pressure is produced when all the circumstances of the loading tend to produce excessive results, or whether only one or two of them have been in active operation. This means that an even higher pressure than the maximum obtained in taking a series may have existed in the particular cartridge that caused the accident. If the general characteristics of the ammunition suggest the presence of faults that ought not to occur, then of course the ammunition must be regarded as under suspicion; but even so, it very seldom happens that a clear case is made out against the cartridge.

There is, however, a very satisfactory piece of general experience which appears to characterize investigations of this sort. It is that accidents very seldom occur with the better known varieties of English nitro powder. These, as is well known, are carefully regulated by the manufacturers so as to produce a reliable level of result when reasonably well loaded. They are bulked in such a manner that overcharges are promptly evidenced by the undue space occupied by the contents of the cartridge. Such powders are specially manufactured to suit the requirements of the English market, with the result that they mostly receive fair and intelligent treatment from the cartridge loader. It is, therefore, the little known and exceptionally bulked powders that are liable to be so loaded as to produce doubtful results. A powder which occupies so small a space that it may easily be overcharged without the fact being apparent to the loader, necessarily opens the way to accidents of manipulation; and if it be badly regulated so that an ordinary charge puts an unusually high strain on the gun, then two possibilities at least exist for the production of unduly severe pressures. If combined with these is stiff and resisting wadding and hard turnovers, there is no obvious limit to the pressure that may be experienced. Consequently, when dealing with burst guns, a large amount of valuable but still indirect evidence may be obtained from a care-

ful examination of the cartridges submitted by the user, such experiments as are made necessarily including a systematic analysis of the characteristics of the powder itself.

When we look to the gun for further information, it generally happens that a fresh vista of doubtful possibilities is opened up. Burst guns frequently disclose slight defects of shape and workmanship which may or may not have assisted in bringing about the destruction. There are few rents in a gun barrel that do not disclose to the observer of an imaginative turn of mind slight evidences of flaws or other interruptions in the homogeneity of the metal. These must be duly balanced against the apparent past history of the weapon, the observer being thus informed as to the probability or otherwise of the weapon having stood the test of a course of hard practical service.

The nature of the injury to the weapon must also be carefully considered. If the breech end of an apparently sound barrel is blown away, it must be assumed that a pressure existed which metal of ordinary tenacity could not be expected to withstand. The nature of the burst gives some slight indication to those who have had experience in such matters as to whether an obstruction has been the cause of the high pressure. If an obstruction lies immediately in front of the chamber, say a 20-bore cartridge dropped by accident into a 12-bore barrel, then the effect is to increase the pressure in the chamber without evidence of special strain where the obstruction exists. On the other hand, if the obstruction lies a little more forward so as to be struck by the shot after it has been set in motion, the seat of greatest strain is removed from the chamber to that portion of the barrel where the obstruction lies. The greater the distance between the breech and the obstruction the more powerful is the rending

action that is exercised, so that obstructions existing near the muzzle blow the barrel into pieces.

Another class of injury to which barrels are subject is the formation of rents or tears in the thinner forward parts of the tube. When these exist it is necessary to pay very careful attention to the thickness of the barrel walls and the concentricity of the exterior and the interior. An entirely different class of injury that is frequently encountered, consists in strains on the action which cause an opening of the fastenings of the breech. These generally arise from the use of violent cartridges working as often as not in combination with a gun of doubtful antecedents, the design and workmanship of which is not of the best. Barrels which are set too close together to allow proper space for the insertion of the extractor leg frequently break away along the obvious line of least resistance. Considering that many weapons which give way in this manner have evidently received many years of constant wear, it is difficult to lay down with any precision just why the structure breaks down under the strain of the particular cartridge that causes the accident. In such instances, and, in fact, in many others, the burst seems to arise from accidental combination of a somewhat over-powerful cartridge and a gun which possesses an insufficient margin of strength for present-day commercial cartridges. It may, therefore, fairly be said, in speaking of most gun accidents, that of many possible causes it is very difficult to pick out the probable one. In fact, the verdict of "found burst" seems very often to be the only logical conclusion to which a jury of experts can come.—Arms and Explosives.

* * * The current number of Game Laws in Brief gives laws of all States and Provinces. Price 25 cents.

Non-Residents in North Dakota.

I believe that all non-resident hunters should be required to pay the full fee of \$25, and see no good reason why an exception should be made in favor of those who are the owners of land in the State. A fraudulent use, I think, is frequently made of this latter clause, as it is an easy matter to temporarily transfer the title of land in order to evade the payment of \$25 for a permit. It would only be fair in case all non-residents are charged the \$25 fee if they were granted some privileges in regard to shipping game out of the State. It is almost impossible to prevent the shipping of some game, and it would be better if it were done openly, under the supervision of the game warden or his deputies, and with stringent regulations as to the number of birds or animals shipped.

C. H. STENSHOEL,
Game Warden District No. 2.

Big Game in the Canad an Northwest.

TRAPPERS who have hunted on the north fork of the Saskatchewan, and at the head of the Sunwapa, report bighorn sheep to be more plentiful than ever before in their remembrance. They brought many bear skins with their winter furs last spring.

Mountain goats are numerous on the mountains south of Leachol in the Ice River district, and sheep have appeared on the lower summits. It seems to have been a good winter for big game in the mountains.

Good reports about the game also come from Wilcox Pass, where larger numbers than usual of bighorn have wintered. Goats are reported to be plentiful about Glacier Lake.

Fish Chat.

BY EDWARD A. SAMUELS.

Sport With the Black Sea Bass.

ONE of my friends writes me he had been having "a high old time among the sea bass near Atlantic City. Not hand-line fishing, thank you, but with rod and reel, and I find it as strong a fighter as I want to tackle, a five-pounder being all my bait-rod will stand."

My friend "knows a good thing when he sees it." The black sea bass, while not being as gamy as the striped bass, is a strong, stubborn fighter, its depth and thickness of body giving it great muscular power. It is true, its runs are not very long. I refer now to fishing for it with rod and reel, but it "sags down" with remarkable tenacity, coming to the surface only after a most dogged resistance, and it sometimes, though rarely, breaks water before it comes to the landing net.

With bait-rod and fairly stout tackle, the angler obtains really a high degree of sport with this species, much more exciting sport, in fact, than the average fisherman anticipates in making his maiden trial among them.

Of course, I do not mean to imply that this bass ranks in gamy qualities with squeteague and one or two other marine species, counting out the incomparable striped bass entirely, but it furnishes a most enjoyable recreation to those who are taking their outing at the sea shore.

Distribution of Sea Bass.

This species ranges all along the Atlantic Coast from Delaware to Maine. It is, I think, rather rare south of the "Banks" off the Delaware Breakwater, and north of Cape Cod it is also far from abundant, although it has been taken on the Maine coast.

If it ever reaches the shores of Nova Scotia, the fact seems to have escaped the notice of the hand-line fishermen of that Province whom I have questioned concerning it. Along the coast of New Jersey it is very abundant, and in Buzzard's Bay and Vineyard Sound it is quite numerous, the returns printed in the reports of the Massachusetts Commissioners on Fishing showing it to be an important catch in the weirs, pounds, etc.

Tackle and Bait.

In angling for sea bass, one needs to use a stout rod such as is employed in striped bass fishing. Of course, if one were certain that he would not hook a fish that weighed more than three or four pounds, a lighter rod would suffice; but one never knows how large a fish may take his bait, and a ten-pounder on a six or eight-ounce rod at the end of ten or fifteen fathoms of line would give the angler all the work he desired to bring the fish to the surface, and to the landing net. As for bait, I have always found this fish to be far from fastidious; it seems to be "always on the feed," and anything in the way of bait seems to go. A piece of herring, sheddar crab, or quahog, is usually employed, and I have found that a small crab, such as is used in tautog fishing, often proves a taking lure. Hooks should be strong and of pretty wide bend; a bait of generous proportions is most desirable, for the mouth of this species is large, and its appetite seems to crave a large mouthful. When the hook strikes home, it holds securely, for the mouth of the bass is as tough as leather.

Breeding Habits.

Genio C. Scott, in speaking of these, says: "This fish, like many herbivorous fishes of the Orient, lays its eggs and they are vivified on the weeds and among the shells of the bottom. This process continues from May until August, and the shoals remain on the banks until most

of their annual progeny leave the shell, when they all resort to deeper water for the winter. A shoal of a pair of fish number probably five thousand, which attain the weight of half a pound and over; not more, because ground sharks and other marine carnivora thin their ranks when fingerlings." As a table fish, it is considered by many persons equal, if not superior, to the cod, and for a chowder it ranks second to no other fish.

Cod With Rod and Reel.

Now, I do not want to be set down as a pottering bait-fisherman, for I am not; but there are times when one has to seek recreation with bait-rod or go without angling entirely, fish of the higher classes being unobtainable. I recently found myself in this situation and was forced to rely on the gamy pollock for sport, there being no other fish at hand worth angling for.

On one occasion our boat was anchored over a sandbar, or bank, over which the young flood tide was running like a mill race. The water over the bar was about six fathoms in depth, but the swift tide made the employment of a quite long line necessary.

I was using bait on that day, and to keep my line below the surface was obliged to attach to it a sinker. I let my rod rest across my knees while I attended to a companion's line, and when I had finished my occupation my rod was still permitted to remain quietly as before. At length I lifted it and began to draw up the line, when I felt an extremely heavy tug, and then the fish that had seized it darted away with the speed and strength of a bass. What species it was I could not determine, but that it was not a pollock, I was certain.

After a persistent struggle, in which my fish made several quite sharp runs and attempted to range deep in the water, I brought my captive to the boat. It was a beautiful rock cod. If my brothers of the angle are so situated they cannot use thin fly rods, I advise them to rig their tackle for a bout with one of these fish. I had never before taken one; and the pleasure I had in capturing my first beautiful prize was, therefore, doubly great. I do not offer it as a new acquisition, for, doubtless, there are many who have taken it with rod and reel long before these lines are written, but I will say to all, that if they are in a locality where rock cod abound they will never regret it if they succeed in taking a few large ones on tackle that is light enough to afford the fish a proper range and play.

A Frog's Provender.

In recent issues of FOREST AND STREAM there have been a number of topics discussed which seem to have created more than a passing interest, and one of them, that relating to the frog's diet, has elicited from observers a number of quite important facts. That the frog captures small birds which come to the shore of ponds, etc., to drink or bathe, there can be no doubt, but that it is also capable of catching small snakes, meadow mice, fishes and insects of all kinds and sizes is not generally known, even its own relatives are utilized to complete its menu.

On more than one occasion have I seen a small snake caught and pouched by an old green veteran of the meadow pool, and once discovered a large frog with a striped snake partially coiled around its head, the frog having two or three inches of the snake firmly held in its mouth.

It was quite comical to see old Rana's efforts to uncoil the snake with its paws; in vain it pushed and pulled, the snake knew its business and attended to it. I never knew what the outcome was, for, as I incautiously drew near, the frog leaped into the water and swam away. That a frog should eat a snake is reversing the usual order of things with a vengeance, for if there is any enveloping to be done the snake generally attends to that business.

After all, the frog's existence is not "all pie." During its tadpole stage of life it is in constant peril from turtles, various fishes, crows, raccoons and a number of other animals; even the fish-loving mink does not turn up its nose at a nice, plump "pollywog," and it is a lucky wiggler that escapes all these foes.

When its tail is absorbed and its legs appear, the little leaper has no end of enemies, and as it increases in size they seem to increase in size and voracity also.

I dare say that every angler has seen two frogs leaping about, one in active pursuit of the other, the leader uttering comical little shrieks as he jumped away, and undoubtedly the thought came to his mind that the jumpers were merry little chaps and having a picnic all by themselves.

Oh, no! they were not playing "tag," neither were they engaged in that wildly hilarious game of "leap frog," nor that side-splitting jolly game of "follow my leader." No, it was quite a different kind of recreation they were indulging in; it was simply a strenuous effort on the part of "the party of the first," or the leader, to escape being pouched, and an equally earnest attempt of "the party of the second part" to engulf the fugitive.

Yes, a wart-backed, old green bullfrog is a great gourmandizer, and he will jump at anything in motion that is not too large to be swallowed. I have, more than once, seen a medium sized one capture one of those large yellow, swallow-tailed butterflies, with black and bronze spots on its wings, and "gulp it down without a gasp," as one of my old guides would say. Those butterflies often come to the edge of pools to drink; they spread five or six inches between wing tips, but their size has no terrors for the "monarch of the pool," quite the contrary rather.

I once had a friend, there is a coolness between us now; he asked too much of me. He said to me one day, one lovely day in June: "There is a lot of big, fat bullfrogs in the pond yonder," pointing to a small, muddy pond on the edge of an adjacent swamp. "It would be great fun for you to take a pole and line, put a piece of red flannel on your hook, and bob it over them, you'd catch a lot, I'm sure; their hind legs, nicely fried, are simply an epicurean delight," he added by way of inducement. I replied that, "I have eaten them more than once, but as for fishing for them with a bait of red flannel, not much! it's too much of a drop from salmon angling to catching bullfrogs; I draw the line at pollock."

The Size of a Frog's Appetite.

The frog's capacity for enveloping his comrades and assimilating them was once shown by an incident which occurred under the observation of one of my acquaintances. He had returned from the country with a lot of frogs, large and small, which he had obtained for one of the New York educational institutions. I have forgotten how many frogs there were, but they numbered over twenty I am quite certain. These he put into a large bird cage, the wires of which were close enough together to prevent even the smallest from escaping. On the third day he went to the cage to see how his captives were doing and found, greatly to his surprise, that all had disappeared with the exception of two old "moss-backs," and they were eyeing each other askance apparently in doubt as to which would be the "last survivor of the whole ship's company," as he expressed it.

As an insect-catcher the frog is quite expert, even such quick-moving species as the dragon fly often falling victims to its dexterity. Fishes are also often captured, and good sized ones, too, a fingerling trout having been found in the stomach of a frog, which was not more than six inches in length.

When Trout Will Not Feed.

Mr. Chambers, in *FOREST AND STREAM*, July 30, states that, his experience has been, there are certain times when trout will not feed, refusing every variety of fly and bait. In his communication he says, that on a recent occasion, although the pool on which he was fishing was full of trout and they were rising to the surface and even jumping all around his flies, not one would accept his lures.

Mr. Chambers' experience in this respect is not unique, every angler will tell the same story; time and again have I been provoked beyond measure by such vagaries of the spotted beauties, and have wondered, as does Mr. Chambers, what prompted the fish to act in such a manner.

On one occasion, as I was fishing Old Frogfoot, a reservoir pond near Wareham, Mass., the water was kept in continual motion by the trout rising, even leaping above the surface, apparently in play, but evidently not feeding at all, for I could not see that they captured any of the insects which were flying around. This was just at sunset, when trout are generally supposed to be feeding. Like Mr. Chambers, I tried every variety of fly, but none of them seemed to have any attractions; the trout were playing, not feeding. It was not from fear they declined my lures, for some of them were breaking water only three or four feet from my boat.

Barometric Influence.

All of us have had blank days in trout fishing for which we could not account, for all proper conditions, such as light, breeze, ripple, etc., were present; we knew the trout were there, and in goodly numbers, too; they simply would not rise.

I have let my boat quietly drift over the pool on such an occasion, and, peering down into the water, have discovered the fish lying closely together at the bottom, almost without moving a fin. In late years I have come to the conclusion that the fish are influenced in their movements by barometric changes, and it has seemed to me that when a storm is approaching, the trout settle down, as if awaiting its advent.

Queer Vagaries.

I was once fishing that magnificent pool at northeast Margaree, Cape Breton, known locally as Solomon's Cellar. It is without exception the very best trout pool I ever cast a fly upon, and such glorious fish as it contains! I was busily at work on it one day, and had taken two or three heavy fish; they had been in rising mood, and would come to any fly that was put out to them. The last trout I landed was a silvery beauty just up from the sea, its weight overrunning three pounds. After that fish was landed, I resumed my casting, but the trout had evidently changed their minds, for not one would deign to notice my flies. The pool was about three casts in length and two in width, but its water was so clear I could see fish in it two or three rods distant from my casting place. Not a rise did I get, although I changed my flies two or three times, and I concluded it would be better to rest the pool a while. My guide and I seated ourselves beneath the shade of a tree near-by and burned a little tobacco. As we were enjoying our smoke, my companion exclaimed excitedly, pointing to the pool, "There's the trout, sir, swimming around like a school of mackerel." I looked in the direction he indicated, and saw thirty or forty swimming in a compact body near the surface of the water along the edge of the pool. I watched them as they moved around the shore, and saw them traverse the entire pool in a regular, methodical way several times. At length, when they were at the lower end, I resumed my station at the upper end or inlet, and recommenced casting, planning to drop my fly just ahead of the school as it came toward me. I did so, but they paid no attention to it whatever. Around the pool they traveled, almost in a compact mass, time and again, but my flies were not noticed.

"I guess you've caught their leader," exclaimed my guide, "and they are looking for him. They won't take anything now, anyway."

Now, why those trout acted in that manner, so entirely different from the ordinary ways of trout, I have never been able to understand. They evidently were not anxious to escape from the pool, for if such had been their desire, they could easily have done so, the outlet being free from any obstruction, and I can lay their strange performance to nothing but a caprice to which these fish are often subject.

Jumping Salmon Will Not Take the Fly.

Every old salmon angler has had his days when, although the fish were jumping all around him, not one would accept his fly. I have had many such days, and excessively aggravating occasions they were, too. I used to believe that if I hung to them patiently I could induce one at least to "come in out of the wet," and so I diligently continued to cast over them, but though they jumped all around me, and even splashed the water in my face as they dropped back into the pool, not one would respond to my efforts.

A Concord River Trout.

BOSTON, Aug. 29.—*Editor Forest and Stream:* I thought it might be interesting to your readers to know that a squarc-tail brook trout was caught by me in Concord River, Concord, Mass., recently measuring 15½ inches in length, and weighing 2½ pounds when taken from the water. The fish put up a good fight, and as I was not fishing for trout, I was quite as much surprised, probably, as the fish was. Mr. Wm. Ballard, of Lexington, was in the canoe with me.

EDWIN C. STEVENS.

The London Casting Tournament.

It should have been said that Mr. E. J. Mills, of this city (who, by the way, is a son of Mr. Thomas B. Mills, not of William Mills, as our English contemporary had it), did not go to England specially to contest in the tournament. He was abroad for his health, and thus deserves all the more credit for his pluck in taking part and sustaining so well the credit of America in the friendly competition.

Fish and Fishing.

The Philology of the Ouananiche.

IN the interest of science and philological truth, it seems quite necessary to notice the renewed attempt to impose upon the credulity of the readers of some current sporting literature in regard to the derivation of the word ouananiche. I see that the old fiction of ouanan or wanan meaning salmon, and iche being a diminutive—hence ouananiche, little salmon—is again insisted upon, though neither ouanan nor wanan, nor anything of the kind signifies salmon in the Montagnais language, as pretended. The Montagnais equivalent for salmon is ouchachoumac (pronounced who-sha-shoo-mac), and little salmon in this dialect would therefore be ouchachoumaciche.

Dry Fly-Fishing for Trout.

I suppose that we see and hear so little in America about dry fly-fishing because of the rarity of the conditions which called it into existence in the south of England, where it is essentially a product of the over-fished chalk streams, so sweetly embalmed for us in the writings of Charles Kingsley. We have such ample opportunities for successful trout fishing on this side of the Atlantic that there is small temptation for us to change the manner of our sport. Should our favorite stream become over-fished to such an extent that the trout become scarcer and shyer, we simply move away to some other fishing water, where the fish are more plentiful and less educated. Yet I doubt not that there are many partially abandoned trout waters near some of our large centers of population which would well repay the attention of the dry fly-fisherman, and I am quite sure, from what I saw an English angler do the other day in a Canadian lake, that there are trout in the heat of summer in many of our waters to be attracted and risen by the dry fly which can rarely be induced to take any notice of an ordinary cast. Two of us had been quite unsuccessfully whipping the surface of the water for over an hour, though we knew it to be almost a virgin lake, and our Indians assured us that it was full of beautiful trout, though they had only taken them through the ice in winter with bait. We had no reason to doubt their word, but if the fish were there it was apparent that they were not on the feed, for there was no sign of a rise at the insect life on the surface of the lake. It was suggested to our English companion that here was an opportunity for him to try his favorite sport of dry fly-fishing. He promptly explained that the conditions were by no means those which would call for its practice on English waters, but as our conversation in camp had largely turned upon this particular branch of the sport, and the Londoner had promised to seize an opportunity of illustrating it for us, he at once consented to do so.

I suppose that almost every reader of *FOREST AND STREAM* knows that in dry fly-fishing the very finest of tackle is used, with a single artificial fly made very small, dressed with upstanding wings, and cast with a scientific calculation of direction and force, the object aimed at being to deliver the imitation fly in the exact presentment of the natural insect, and in a manner that would insure its floating upon the stream as if it were the real thing. What may not be quite so generally known in regard to this branch of the sport is that the dry fly-fisherman in the old land is supposed to remain perfectly inactive, possessing his soul in patience until such time as the trout are seen to be visibly rising at and taking the fly sailing down the stream.

The conditions at the lake to which I have reference were then altogether different to those usually looked for by the dry fly-fisher. Nevertheless success at once attended the efforts of our English friend; rather, I imagine, to his own astonishment, and new possibilities in summer angling for trout at once occurred to my mind. In less than an hour half a dozen splendid trout from eight to twelve ounces each in weight had been secured.

While enthusiasts in the art fit themselves out with special rods, reels, and tackle throughout, this expense may well be dispensed with. Any ordinary light fly-rod and tackle answers the purpose, but the casting-line should be fine and the fly dressed upon an eyed hook, instead of being whipped on to a strand of gut. The latter mentioned method of fastening the fly causes it to stand very little of the kind of casting necessary. It is requisite, in order to make the fly float, to dry it in the air between each cast, by making several sharp false casts in the air, and if this is done with flies fastened on fine gut in the old way, it frequently happens that the fly is flicked off. Most dry fly-fishermen find that they can considerably reduce the amount of beating the air which would otherwise be required for drying the fly, by anointing it with odorless petroleum or coal oil, all that is necessary of it being a touch of the camel's hair brush on hackle and wings. A couple of casts in the air will then suffice for drying the fly. With this precaution, and a properly tied fly, it is astonishing how comparatively easy it is for quite a novice at the practice to fish throughout the wettest day with his fly always floating upon the surface, especially if it be made with the wings standing out from the body like those of a butterfly, and with rather more hackle than is needed in wet fly-fishing.

I am not aware whether American anglers have experimented very much with dry flies in American or Canadian waters, though I know of several who practice the art when on the other side of the ocean. As already explained, the conditions here are very different. Still, I cannot but think that there is a field for the dry fly-fisher in America, even of a different nature than that which invites him when in southern England, and it would be interesting to learn what anglers of resource and experience who are readers of *FOREST AND STREAM* have to say about it.

Favorable Conditions for Trout Fishing

I HAVE a letter before me from one of the camps in the vicinity of Lake Edward, which speaks in glowing terms of the conditions of weather and water now obtaining there. Clear, bright, balmy atmosphere by day, with chilly nights, are the prevailing weather conditions, while since the subsidence of the heavy rains referred to in my last letter, the water has fallen to about its normal condition, and correspondingly colder than usual at this time

of the year, owing largely, no doubt, to the influence of the recent rains. Log fires are built every night and morning in the club houses, and campers out of doors sleep at night with a fire in front of the open tent or lean-to. My correspondent remarks that while the gorgeous sunset arrives all too early in the evening to presage the termination of the day's sport, the sunrise is none too early for the diligent fisherman. He thus intimates that the early morning fishing for trout is good at present, as well as the evening fishing. Personally I have seldom found this to be the case at this time of the year, my best success in morning fishing, except in summer, having invariably been after the rays of the sun have warmed the surface of the water after a cold night. Even in salmon fishing I have never found the very early morning fishing to be of much account, and hence have entirely given up rising before daylight to reach the pools as soon as it is light enough to see the fly upon the water, a practice still indulged in by many anglers. On the other hand, I well remember returning to camp one morning at half-past eight, after an hour and a half's fishing, with three salmon in the canoe, weighing respectively thirteen, fifteen, and seventeen pounds. Judging from my earlier experiences, I should have done no better if I had fished the same pools that morning from half-past three to seven o'clock as well.

But to return to the letter already mentioned, which reports the trout as rising very freely at present, the writer of it seems to anticipate quite an early winter. Not only is the weather cold at nights, but many dead leaves, he says, are already upon the surface of the water in shady pools, often becoming entangled upon the angler's cast of flies. This certainly shows the season to be further advanced in the north than it is at Quebec.

From other sources I learn that several members of the Nonantum Fish and Game Club are having fine trout fishing upon their preserve, among the number being Mr. R. H. Brown, of New Haven, president of the club. The best sport here is reported from the dam at the outlet of Commissioners' Lake, and from Big Ear Lake and a deep bay behind the club house. The members of the Metabetchouan Club now in camp at Lake Kiskisink have been making good catches at the outlet of the lake, in the lily-pads, and also in Briggs' pool and in the Metabetchouan River.

Many fishing parties are at present encamped upon the limits of the Triton and Tourilli clubs, and a rather remarkable feature of all the reports from these and other preserves is the frequent reference to the unusually large number of moose and caribou seen in the woods and crossing the different lakes. If big game is as plentiful everywhere this autumn as it is in the Lake St. John country, we are surely about to enter upon a most successful hunting season.

Bright and Dark Flies.

One of the guides who was attending a friend and myself upon a recent angling expedition, became quite pronounced in his criticism of our choice of flies. While the weather was bright, we used bright flies, and when the sky was overcast and there was more or less darkness upon the face of the water, we changed our casts and employed darker flies. Though it was patent to all that the brighter of the natural insects frequented the surface of the water in the sunlight, and vice-versa, and though we were enjoying very good average sport, the guide, who had always been accustomed to follow the old rule of bright flies for dark weather and darker ones for bright days, continued to shake his head, doubtless believing that we were throwing away our chances of greater success. It is quite astonishing to me that so many fishermen should still adhere to the old-time practice in their selection of flies, altogether irrespective of the promptings of nature, as illustrated by the character and the color of the flies which appear upon the surface of the water. So long ago as 1867, the late Mr. Burgess, in his "Angling and How to Angle," was evidently under the impression that the anglers of his day were learning better. "Old anglers," he said, "used to affirm that in dull weather a bright fly should be used, and in bright weather a dull fly. Modern anglers know better than this, and practice has confirmed their knowledge. Bright insects belong to sunny weather, as philosophy and reason have pointed out." It is not so many years since I found myself fishing with a black dose or dark fairy for salmon in bright weather and with a silver-doctor on cloudy days, and I continued the practice until I was persuaded by wise friends and careful observation that I was flying in the face of nature by using bright flies when none but dark ones were on the water, and dark ones when all the natural ones upon the water were bright. It is reasonable, of course, to make use of bright flies in any weather under such exceptional circumstances as when the water is so heavy and dark that none others could be seen by the fish, and for night fishing there can be no doubt that large silver-grays are the best flies for salmon, and that equally bright flies are necessary to secure trout by night. But this is quite in accordance with the rule already laid down, for with the settling down upon the water of the shades of night, come also the white moth, and other light colored insects.

Chub are Plentiful.

I suppose that it does not matter very much to many anglers whether chub are plentiful in Canada or whether they are not, for if anglers come so far north at all, they may just as well have trout fishing as fishing for chub. But I am led to refer to the abundance of chub in Canadian waters because of the enthusiasm which I saw displayed the other day by an English angler who was enjoying what he considered magnificent sport with these despised Canadian fish. They were rising to his flies with an avidity worthy of a better fish, and though they gave rise to no very protracted battle, yet their first rush after feeling the hook was not unlike that of a trout. With this first show of resistance, however, their struggles ceased, and they came quickly to the net. The best of this sport is the rapidity with which the fish rise to surface lures. Wherever they are found they are usually plentiful, and it is by no means uncommon to find them from a pound to two pounds in weight. If the sport were more cultivated, specimens could undoubtedly be found of from two to four pounds each, but because trout are also usually

found where chub abound, the rising of the latter to the angler's flies is considered to be more or less of a nuisance, and when it can be seen that one of them is rising, an effort is usually made to snatch the fly away from it. I remember the late Mr. Cheney passing rather a favorable judgment upon the flesh of a Canadian chub which had been carefully cooked immediately after having been caught out of a cool stream, and the famous fishculturist was far from declaring it so unfit for food as some authorities have done. In this connection, one recalls Canon Kingsley's statement that a most accurate imitation of the chub may be made by taking one of Palmer's patent candles, wick and all, stuffing it with needles and split bristles, and then stewing the same in ditch water.

If Canadians do not prize the chub, or outouche, as it is called by the French-Canadians, as an article of food, they make considerable use of its flesh for bait. The smaller specimens are used whole for spinning and trolling, and the white flesh of adult fish is cut up into squares and employed in bottom fishing for ouananiche, pike, pike-perch, touladi or namaycush, and large brook trout.

Even Kingsley, too, admitted that in spite of the contempt in which they are generally held, they afford very good sport. There is certainly trouble enough taken to catch it, and all the early fishing books, as well as many of the more recently published guides for British anglers, devote considerable space to directions for taking it. It will be borne in mind that Walton, on account of its shyness, speaks of it as "the fearfulest of fishes," and I well remember how, as a boy, hour after hour was often vainly spent by me upon the banks of a tributary of the Trent, not far from Dove, endeavoring to seduce the chub from its clear pools with gentles, worms, and paste. I had not then attained to the dignity of a fly-fisher, and it was indeed a prize to catch a chub.

The distribution of the chub, both in Canada and the Northern States is very wide, the fish being often found in waters of such elevation that its existence in them would scarcely have been suspected. Trout waters in which none of these chub are to be found are much more highly esteemed by anglers and fishculturists alike than those containing them; for not only have the chub an unenviable reputation as eaters of the spawn of better fish than themselves, but they are fond of disappointing the trout fisherman by seizing his flies. This latter can usually be avoided by imparting a fairly rapid movement to the cast, and by keeping the flies pretty well upon the surface of the water, since it is usually some little distance below the surface that they are taken by the chub, and then when almost stationary, as in the case of fly-fishing for whitefish.

Fishing Personals.

Mr. and Mrs. Walter Brackett, of Boston, only left for home a few days ago, having spent the whole summer upon their salmon river.

Mr. John P. Elton, Mayor of Waterbury, Conn., has sold his share in the St. Marguerite Salmon Club.

A share in the same club was recently purchased by the Rev. Dr. Henry Van Dyke. The price is understood to have been in the neighborhood of \$1,200.

Vice-Admiral Douglas and party are now fishing the Montmorency River at Beaver Meadows.

Colonel Andrew C. P. Haggard, D. S. O., is once more in America. He has gone to Maine, where he will visit some of the more popular of the fishing waters, which he may describe for the Field and for Blackwood's Magazine. He will also revisit Quebec.

Much regret is expressed by the many friends of Mr. Geo. E. Hart of Waterbury, that illness prevents him from paying his intended fall visit to the Lake St. John country.

Mr. A. W. Hooper, of New Haven, is at present in camp at Commissioner's Lake, with other members of the Nonantum Club.

Lady Erskine, Mr. and Mrs. W. M. Macpherson, and Mr. and Mrs. Edson Fitch, are camping on the preserves of the Stadacona Fish and Game Club.

Colonel Starkey and friends, of England, have had a very successful salmon season this year upon their river, the St. Anne des Monts, in the county of Gaspé.

General W. W. Henry, U. S. Consul at Quebec, has been re-elected president of the St. Bernard Fish and Game Club.

A Monster Cod.

A fisherman off the Gaspé Coast in the Gulf of St. Lawrence caught a codfish last week which weighed 74 pounds. I have heard reports of larger specimens, but have never seen them; but the fish here reported was seen by a reliable party who has given me the details.

The recent capture of an octopus is also reported from the Gulf of St. Lawrence, but fortunately the creeping horror was not a large one. Still it took a fisherman some time to kill it. E. T. D. CHAMBERS.

Lake Champlain Pike.

EAGLE LAKE, Ticonderoga, N. Y., Sept. 1.—*Editor Forest and Stream:* The great scarcity of pike in this lake this year is a source of wonder to many. During the long drouth in spring and early summer of 1903, large specimens of this fish were found floating about the waters lifeless. There seemed to be no cause for the mortality, but it is now believed to have been caused by the growth of worms in the liver of the fish, similar to those reported in FOREST AND STREAM lately as having attacked the pike in New England waters. It is thought that they may have eaten small fish in the shallows already affected by this parasite. At any rate, almost no pike have been taken by trolling, where from twenty to fifty specimens weighing from 5 to 20 pounds each are usually taken with the spoon every season. Many who expected the cool nights would bring on the fishing, have been forced to seek their favorites on the sunken islands and other known resorts of this pirate of the waters. Up to date, 3½ pounds for a pike caught by a hotel guest is about the record. Only two years ago the writer saw several specimens running from 37 to 42 inches in length, and weighing from 17 pounds upward, caught in the same lake. The scarcity of bass and perch is not so marked, catches of the former of from ½ to 3

pounds each are common. The record was made by Mr. Edward Runge, of Island Cottage, who landed a fine small-mouthed bass weighing 5¼ pounds. Mr. Runge is a great lover of angling, and has caught many fine bass this season. He was pulling up anchor near the bridge, and had allowed a cane pole and line baited with a large crawfish to trail after the boat. The great bass seized and bolted the bait, jerking the rod overboard. It was recovered just in time, and an exciting game of scientific work without a reel took place. The angler called for help to aid in landing the fish, but none came, and he finally succeeded in getting his prize on board by the aid of a net.

This lake contains perch often weighing 1½ pounds, of most excellent quality. There were formerly quantities of suckers which almost filled the tributary brooks in springtime, and old farmers tell of their success with the spear and snare in pursuit of these large fish, which are a favorite early in the season with some country people. The catches were often measured by the bushel. Not one of these peculiar fish has been observed here for years. They have been exterminated by man and fish enemies.

The presence of some young lake or brown trout under the lily-pads in the outlet, has started a discussion regarding the stocking of Eagle Lake with landlocked salmon and trout like Weld Pond, mentioned in your issue of August 13, 1904. It has the same surrounding mountains and tributary brooks of cold water which would shelter the young salmon and trout. There are abundant cold springs close to the shores and running into the lake, forming places suitable for large speckled trout, and the supply of shiners, crayfish, and minnows is very great. The depth of the lake is about 50 feet in places, and there are various reefs and shoal rocks affording resting places for adult fish. Best of all, this is natural trout water, and the bass, pike, perch, and sunfish were introduced by residents fifty years ago. The lake is 3½ miles by ¾ of a mile. It is believed by some that the small-mouthed bass are "running out" by close interbreeding, to use a local expression. The climax has been reached, and the question now is, shall the lake be restocked with bass and pike or be restored to its proper place as trout water. The friends of the latter plan assert that there are enough of the pike and bass here now, and that the attention toward salmon fishing will diminish the drain upon the lesser fish and allow them to regain their numbers. The summer residents here are numerous, there being twelve cottages, small and large, besides a hotel and boarding-house. All are anxious for the future best interests of the angler, and those in charge of the State fish hatcheries should detail an expert to study the case of Eagle Lake, Essex county, as was done in the case of Weld Pond. Several of our neighboring small mountain lakes have been recently stocked with State fish, and are now yielding fine catches of brown and rainbow trout of large size. Old Lake Pharaoh has always been famous for splendid redmeated speckled trout. PETER FLINT.

A California Frog Ranch.

Owned and Run by a Woman who Gets a Good Income From It.

A WRITER in Out West describes interestingly a frog ranch owned by Miss Edith Stege in Contra Costa county, California: Richard Stege, father of the present owner, is said to have been the first man to cultivate frogs in California for the market. The idea came to him from observing the boys spend their holidays catching frogs about the marshes on his place, and learning that an afternoon's work would yield them a dollar or two. Since his death a few years ago, his daughter has been the sole occupant of the family home and proprietor and manager of the entire estate, froggery included.

The frog-ponds cover more than six acres, and are four in number, besides the small pools where the tadpoles are kept. It is necessary to keep them carefully divided according to size, since the frog is one of the most cheerful of cannibals. Anything of his own kind, from a tadpole up, is fair game for the larger frog that can catch and swallow it. Indeed the eater does not insist on swallowing the whole of his victim. If a part of it can be brought within reach of the digestive fluids, the banquer is content to let the rest of his meal dangle out of his mouth till room has been made for it inside. In spite of every precaution, one of the larger frogs will occasionally be found of a morning in the midst of the pollywogs and wearing that placid smile which betokens that a sufficiency of pollywogs are most satisfactorily in the midst of him. This poaching is accomplished in spite of tight board fences more than three feet high inclosing each pool.

The pools in which the tadpoles are kept are lined with cement and are not more than one foot deep. As they grow to sufficient size, they are skimmed out with a long-handled dip and put in with their larger relatives. These pools are deeper, and the bottoms are of mud, in which the frogs bury themselves during the winter. All the pools are carefully drained to prevent overflow, and all of the water may be drawn off within a few minutes, if at any time necessary. The ponds are covered with green lacework of the algæ so thickly that it looks like a single leaf, but underneath the water is fresh and pure.

While they remain at home, it is not necessary to feed the frogs, large or small. They forage for themselves, a part of their diet consisting of insects which venture unwarily near, but the principal reliance of the adults being upon the larvæ, found in the muddy bottom, and young fish and spawn. The tadpoles are more inclined to a vegetable diet, the chief dish being supplied by the algæ. The frog, by the way, has teeth in his upper jaw, the tadpole having a horny beak instead. When the frogs have to be shipped long distances to the market, they are put into barrels, with plenty of green moss, the water changed on them every day, and their hunger satisfied with a diet of oatmeal and liver, or oatmeal and dried blood. By this method, they are shipped as far as the Hawaiian Islands with very small loss—perhaps a couple from a shipment of many dozen.

The native California frog is small of size, though

delicate of flavor. Frog raising had not been a business for long, before it occurred to the experimenter that an increase in size would be desirable. Accordingly, frogs of the largest and choicest brands were imported from as far east as Baltimore and Florida. These stood the journey well and thrived exceedingly under the change of climate. Some of them, brought from the east eight years ago, are still to be found in the Stege ponds, twelve years being the average life of a frog. The "thoroughbreds" may be distinguished by their yellow throats, with a pale green about the mouth, and a purplish green upon the back. But among the many varieties which swim about the pools and sun themselves in the grass, epicures pronounce just the right cross between the larger eastern and the small California to be the finest eating. The combination of size and flavor is asserted to put the finest product of Paris to the blush.

Race suicide is far removed from any practice of the frog, and the breeder profits greatly by the size of the frog families. The female spawns from 2,000 to 8,000, of which perhaps 10 per cent escape the dangers from the many hungry enemies and reach maturity. The eggs appear on the surface of the water as a sticky scum, large clusters of them being gathered together with a gelatinous envelope. This mass presently separates into individual globules, which turn black as they increase in size. When the tadpole at last emerges, his first food is the envelope which has protected him. At this stage he has gills, and extracts the necessary oxygen only from the water. Later on he loses his gills and must come to the surface at frequent intervals to get his supply of air. During the first part of his career, he has a tail which serves him as both rudder and paddle-wheel. In these earliest days, it not uncommonly happens that the larvæ of the dragon-fly, or some other of his aquatic enemies, just miss getting him whole, but succeed in snapping off his tail, in which case he is able to grow another one rapidly. But a little later, he loses his tail for good, and is obliged to discover the use of the legs that are beginning to sprout. He is the most comical sight when he has ceased to be wholly tadpole and has not quite become a frog—with some tail, a great deal of hindleg and a very little foreleg.

The owner of this ranch does more active work at the frog business than any of the men in her employ. When a large order comes in, she puts on her rubber boots, short skirt and "jumpers," and goes to work with the net. Most of the frog-catching is done at night, a boat carrying a lantern with a large reflector, a dip, and some one who knows how, being all the essentials. The light being thrown on the water, one inquisitive Monsieur Crapaud after another comes up to investigate, the net is placed over him, and his leap for escape lands him a safe captive. Of the knack required in using the net, the expert owner of this ranch says: "If you try to dip under the frog, as you would with a fish, he will escape every time. You must put the net down over him and when he jumps it will be right into it. Sometimes they are difficult to catch because they have hidden in the deep mud. The only way then is to drain off the water and go after them. That is what we have to do to catch the small frogs when they are of sufficient size to go with the larger ones."

Last year—which was counted a poor one—the Stege ranch sold to San Francisco markets 2,600 dozen frogs' legs, netting a profit of more than \$1,800. The price of frogs varies, according to the season and the size of the frogs, from \$1 to \$8 a dozen. They are shipped alive to hotels and restaurants. Lately the "poulette," in which all the muscular part of the frog is used, has come into fashion, and the once popular "fried frog's legs" are less esteemed.

A Kineo Fish Story.

NEWELL MITCHELL, one of the Indian guides who are located here, went on a fishing trip in quest of lakers, and when he returned to shore he had a 17½-pound togue to show for his skill as an angler. This is not the largest togue ever taken in Mooshead by any means, as there is a record of a 26-pounder, but it is sufficiently large to be worthy of mention, for it is a number of pounds larger than the average togue which is landed here in the course of a season. As a rule, so the experienced guides and fishermen say, more are taken that tip the scales at less than eight pounds than exceed the 10-pound limit. But even then the man who can successfully land even an 8-pound togue has accomplished something of which he may well feel proud.—Rumford Falls (Me.) Times.

The Kennel.

Pointer Club Trials.

THE fifth annual field trial of the Pointer Club of America will be held at Barber, North Carolina, commencing December 12. Entries to all stakes, with the exception of the Members', will close on November 1. The events to be run are the Derby, All-Age, Free-for-All, and Members' stakes, and with the exception of the latter will be open to the world. Members' stakes to close before starting. The entry fee to the Derby and All-Age stakes will be \$10, and an additional \$5 to start; Free-for-All, \$10 to enter and \$15 to start. A silver trophy, value \$50, will go to winner of first money of each event. The adoption of an open race system is a new departure for the club, as well as the holding of their trials in the South, and good results are anticipated. C. F. LEWIS, Secretary.

Points and Flushes.

Mr. C. H. Keith, of Nutley, N. J., has these pointer puppies for sale from his thoroughbred bitch Cornish Dolly by Joe Gray, combining the best blood of both American and European pointer stock. They were whelped July 20, 1904.

YACHTING

THE INEFFICIENCY OF RACE COMMITTEES.

MANY cases of incompetency, indifference, and flagrant violations of rules on the part of those in charge of yacht races have come to our notice during the past season. It is time the situation received more than passing attention.

If a yacht club is to thrive and prosper and be a factor in the sport, it should have plenty of racing events, for it is this that keeps up the enthusiasm of the members. The racing, to be beneficial, must be of the cleanest sort, and to this end only the most efficient and reliable men, who really have the interest of the sport and their club at heart, should be put in charge.

Good men to serve on race committees are hard to find, for those who are qualified for the work in many cases do not care to serve. Frequently men accept an office in a club when they are not conversant with the duties of the position. Then again there are men whose vanity is touched when an office is offered them, and they agree to serve when they have not the remotest idea of doing any work.

But that capable men are to be had there is no question, and this is demonstrated to the satisfaction of those who have ever done any racing in Massachusetts waters; for there the events are invariably well handled. The Eastern men are not different from those elsewhere, only a little more enthusiastic and painstaking. There is a marked contrast in the way the Massachusetts clubs, both large and small, handle their races when compared with the racing organizations in New York and on Long Island Sound.

It is not an unusual thing to see more starters in a single class on an Association race on Massachusetts Bay than there are in all the classes of a Sound event. This is true in cases where the clubs under whose auspices the races are given are of the same size and strength. This is not entirely due to the efforts of the race officials, but they have much to do with it.

An interesting letter was received at this office not long since from a well known New York racing yachtsman, who is a member of numerous clubs in this vicinity, and this is the first season for some time past that his boat has not been seen in the Sound races. He decided to cruise this year, and went East around the Cape. When he was sailing into Marblehead harbor a launch came alongside with an Eastern Y. C. race official on board, and he was invited to participate in a race that was to be held that day. The owner of the New York boat was forced to refuse, as he had been sailing all night and the boat was loaded down with dunnage. He consented, however, to join the Eastern Y. C. fleet on their cruise, an invitation for which had also been extended. He did not get a prize on any of the squadron runs; but he was deeply impressed with the clean-cut way the Race Committee went about their work. The boats that raced were all properly classified, whether cruising or racing craft, and everything was carried out without the slightest hitch. After each race and within half an hour of the time the Regatta Committee's boat reached the harbor, a launch was sent through the fleet and the owner of every boat that had raced received a complete type-written summary of the run, with the corrected times and all other details worked out accurately. In addition, complete instructions and sailing directions for the next day's run were given out. All this is as it should be. It is absolutely refreshing to hear of a series of races, and difficult ones to manage at best, having been handled without error or effort.

To turn to the Sound racing again, the events at Larchmont have always gone off smoothly, and for this reason the club has forged to the front, and is without a peer as a racing organization in this country.

The following case gives a very fair idea of the manner in which the average small Sound club races are conducted. A club located at the western end of the Sound gives one or two races a season, and its Race Committee is composed of five men. At their annual race this year all the committeemen had arranged to be away, and they tried to fill their places as best they could. At the last moment they found an old racing man who would look after the event. As the Regatta Committee had done no missionary work beforehand, and the few entries they had secured were kept away by bad weather, the race was a marked fizzle. This club has been carried on for three years by its commodore. He was a good natured chap and a hard worker; the rest of the officers and committeemen saw this, and they let him do all the work.

Those who read in these columns the account of the Lipton cup races at Chicago, must have been taken aback by the gross mismanagement of the earlier races of the series. We mention this to show how general and wide-

spread is the evil of mismanagement, and that it is not confined to any particular section or club.

The ocean race for the Lipton cup given by the Brooklyn Y. C., would have been a very successful event had the affair been properly managed. The conditions governing this match stated that no boat would be allowed to start if she violated the conditions outlined. This being the case, it was distinctly the Regatta Committee's duty to see that all the competitors conformed in every detail to the rules; and if any boat violated any rule she should not have been permitted to start. Yet this committee allowed Newasi to start and sail a 330-mile race, only subsequently to disqualify her for carrying a professional navigator after she had finished second. The owner of the boat, some days before the race, notified the chairman of the committee that he was to employ a pilot. The decisions of almost all race committees are final, as in this instance. Newasi's owner spent a good round sum putting his boat in condition for the contest, and then, after having sailed a capital race, was disqualified, simply because the Race Committee had neglected to do its duty in the first place.

Newasi's owner is rated as one of the cleverest amateurs in this country. He has been a boat sailer from boyhood, and his racing career has been an absolutely clean one. He never wilfully violated a sailing rule or regulation, and unless advised by someone in authority, he would not have carried a professional in the ocean race, when he knew that he would be protested, and thus jeopardize his chances of winning a prize. The Regatta Committee rendered its decision without giving Newasi's owner a hearing, and allowing him to explain and clear up a most trying situation. Such methods give a very bad impression.

This was not the only instance in which this committee was derelict in its duties. Newasi went outside Nantucket Shoals because the Regatta Committee failed to notify her owner that they had reversed their decision on this point at the eleventh hour. She lost four or five hours by going the extra distance, as the breeze was lightest at that juncture. Most of the boats cut across the shoals. When the boats reached Marblehead, no member of the Brooklyn Y. C. Race Committee was on hand. The times were taken by an Associated Press representative and some Boston Y. C. members who happened to be there. The lights at the finish line were not placed as the sailing regulations directed, and in trying to finish, the winners narrowly escaped bad accidents, for they crossed the line in the night.

Boat owners with large vested interests should come to the fore now, stop complaining about the poor racing, and instead see that efficient men are placed on race committees, men who have the time and inclination to do some work for their clubs, men who are popular and who can go among owners of both the racing and cruising craft and cause them to enter and start their boats. Special classes are easily arranged, and there should be classes for auxiliaries and cruisers, and good, useful, and substantial prizes for all.

We believe great improvement may be achieved by a change in this direction. Some good, healthy reorganization on the part of many of the race committees would infuse the sport with new life and vigor.

British Letter.

THE rumor that Napier Minor has been disqualified for the British International cup turns out to be quite correct, and the cup has been awarded to Trèfle-à-Quatre, and is now consequently held by France. It appears that after the race, M. Brasier, in whose name the French boat was entered, lodged a protest against Napier Minor on the ground that as she had been beaten in the eliminating race by Napier II., she was not qualified to run. It will be remembered that in the said race Napier II. won by several seconds, but came to grief herself through being twisted round too suddenly owing to her helm being put hard over, and she started some of her plates leaking so badly that the pumps could hardly keep her afloat. Under the circumstances Mr. Edge determined to run Napier Minor, and she won easily enough, but the International Commission for the British International cup decided—and quite rightly—that Napier Minor had no *locus standi*, and Trèfle-à-Quatre was declared the winner. Although one naturally feels that the cup has been won, not by the fastest boat, but on a mere technical point, there can be no doubt as to the wisdom of the Commission's decision, as in all races, especially in those which partake of an international character, nothing in the shape of irregularity should be permitted. Moreover, races for motor boats are, or should be, not mere tests of speed, but also of reliability of construction and seaworthiness, and in these latter qualities Napier II. appeared sadly deficient. She started some of her bow plates shortly before this while running from Southampton to

Cowes, and could not bear the strain imposed upon her hull by a sharp turn in smooth water. The chances are that, had she raced against Trèfle-à-Quatre, she would have come to grief before the finish, and the ultimate result would have been the same. Some people seem to think that Mr. Edge has a grievance because he was not allowed to win the race with his other boat, but if the conditions barred him from winning with her, there is nothing more to be said. If motor boat racing is ever to become a real sport—which it certainly is not at present—owners must be satisfied to be represented by one boat, as in yacht racing; but while there is no doubt a great future in store for motor engines, as applied to yachts and launches, it is more than probable that the flimsy, unseaworthy type of cockleshell which is to-day called the racing motor launch, will die a natural death in a very few years. It has absolutely nothing to recommend it beyond its extreme discomfort. Of course, like the racing motor car, it is a necessary evil, and, like the fast car, it is merely a stepping-stone to improvements in motors for useful and practical purposes. Racing motor launches are practically nothing more than trade advertisements in this country, and very few private owners will give the exorbitant sums required for these costly and uncomfortable craft.

In the cross channel races from Calais to Dover on August 8, the motor boats were favored with ideal conditions. The sea was as smooth as glass, so that fast times were done by the racers. England, France and Belgium were all represented, and there were six classes in all, and a race for fishing boats with motors. In the large racer class, Mercedes IV. was an easy winner, beating Napier Minor by over 5m. Titan II. was 4m. astern of Napier Minor, and Trèfle-à-Quatre had some trouble with a valve, and was left behind. A Belgian boat, Princess Elizabeth, won the race for small racers. There were thirty-seven boats entered in the various classes, but only twenty-one actually started. Mercedes IV. made the passage in 1h. 7s.

It is a pity that the weather was not finer for the race round the Isle of Wight given by the Royal Portsmouth Corinthian Y. C. on August 6, for it would have been interesting to see how Ingomar would have done over such a course. However, it rained so hard that out of an entry of thirteen, only three boats came to the line—the yawls Brynhild, Therèse, and the schooner Adela. Therèse was in receipt of 25m. from Brynhild, but so well did she sail in the fresh breeze that she finished only 1½m. astern of her.

The weather during Clyde Week was rather paltry and fluky, but on the whole the handicaps worked out well, and the racing in the 52ft. and ex-52ft. classes was keen and close. On the first day, August 9, Valdora just beat Ingomar for first prize, and the American schooner took second prize from White Heather by a very few seconds. Maymon and Camellia were the winners in the 52ft. class, and Gauntlet won first prize in the ex-52ft. class by 19s., Viola taking second prize. There was no race for the big boats on August 10, the principal match being a handicap for yachts over 50 but not exceeding 100 tons. The 65-footer Zinita was fluked out of a winning position by Creole, and Tutty was similarly robbed of second prize by Palmosa. On August 11 the race for the Town cup produced a good entry and excellent sport. There was a fresh breeze and the finishes of the first seven boats on handicap time was wonderfully close. Therèse took the cup with 1m. 5s. to spare from Rosamond, which beat Ingomar for second honors by 8s. Maymon won the cup presented by the fourth Earl of Desart, Camellia taking second prize and Lucida the third. Ingomar did not race on the closing day at Clyde, as Mr. Morton F. Plant had given a cup for the handicap class. Zinita won this event pretty easily, although she did not make a particularly good show to windward. Valdora and Therèse took second and third prizes.

At the regatta of the Royal Southern on August 13, Ingomar took first honors, and in the last two matches she sailed under the burgee of the Royal Albert Y. C. at Southsea on August 15 and 16, she took a second and a first. The Nicholson cutter Merrymaid, which has been much improved by some trifling alterations, won the Albert cup on the first day, but on the second Ingomar had all the luck of a fluky day, and won her last race for the season, White Heather taking second prize. Her owner has every reason to be satisfied with her performance, as she has won nineteen prizes in all, including two prizes for the best time over the course. Her record reads: Twenty-four starts, twelve firsts, four seconds, and one third, and the two special prizes just mentioned. This is a very fine record for a schooner that has had to sail against so many smart cutters and yawls, and one which a few years ago would have been looked upon as quite impossible to attain.

E. H. KELLY.

A Beacon for Plum Beach.

NOTICE is hereby given that a triangular white beacon surmounted by a lantern cage has been erected about one hundred feet from the point of Plum Beach, on the easterly side of the entrance of Manhasset Bay, Long Island.

Commencing September first, and in future during the yachting season, the Manhasset Bay Y. C. will maintain a red lantern upon this beacon, the purpose of which is to mark the extreme point of the beach, which at night, and particularly at high water, is very hard to locate.

The beacon was erected through the courtesy of Mr. S. H. P. Pell, who is a member of the club and owns Plum Beach.

EDW. M. MACLELLAN,
Secretary.

Atlantic Y. C.

Sea Gate, L. I.—Sept. 1-3.

The series of four open races was started by the Atlantic Y. C. on the afternoon of Thursday, Sept. 1. Prizes were offered under the usual conditions, to winners in each event, and also to the craft making the best record on points for the entire series. In the system employed the first boat gets 16 points, the second 11, the third 7, the fourth 4, the fifth 2, and the sixth, 1 point.

First Race—Thursday, Sept. 1.

The first race on Thursday was sailed under ideal conditions. A whole sail breeze from the S.E. blew from the start to finish. There was plenty of windward work for all classes. Eleven craft entered, all but one of which finished. The winners on corrected time were Maydic, Bagheera, Naiad and Ogeemah.

Starters in classes M and N had a reach to Craven Shoal buoys, a beat to Buoy No. 6, about a mile to the E. of West Bank Light, and a run home to the start, off Sea Gate. The distance was covered twice, aggregating 14 knots. The smaller craft sailed the regular Association course, leaving all marks to port. It was a reach to Ulmer Park, a run with spinnakers set to the Marine and Field Club, a close reach to Fort Hamilton, and a beat home. The course was sailed twice, aggregating 2 knots. The summary:

Sloops—Class M—Start, 3:00.			
	Finish.	Elapsed.	Corrected.
Maydic	5 30 45	2 30 45	2 30 45
Red Wing	5 33 32	2 33 32	2 30 49
Sloops—Class N—Start 3:00.			
Bagheera	5 42 00	2 42 00	2 41 01
Bobtail	5 42 42	2 42 42	2 42 42
Sloops—Class P—Start, 3:05.			
Naiad	4 26 54	1 21 54	1 21 54
Bonito	4 22 50	1 22 50	1 21 56
Smoke	Disabled.		
Sloops—Class Q—Start, 3:05.			
Ogeemah	4 30 55	1 25 55	1 20 31
Spots	4 32 12	1 27 12	1 25 18
Careless	4 34 50	1 29 50	1 29 13
Trouble	4 35 12	1 30 12	1 30 12

Second Race—Friday, Sept. 2.

In the second race, sailed on Thursday, there were, besides the boats competing in the initial contest, D. S. Wylie's Lizana and Max Grundner's Mary. Spots did not start, making an even dozen craft entered in the event. The breeze was light from the S.E. The winners on corrected time were Maydic, Bobtail, Lizana and Ogeemah. The competitors sailed the courses as covered the first day, and with the wind in the same quarter, each leg offered the same proposition as encountered. The struggle among the boats sailing the outside course was ended after one round. There was a slight mix-up of starting signals. Ogeemah was the only craft going over at the proper time, and the race committee decided to time her at the signal on which she crossed and not disqualify the others. The summary:

Sloops—Class M—Start, 3:00.			
	Finish.	Elapsed.	Corrected.
Maydic	4 43 36	1 43 36	1 43 36
Red Wing	4 58 33	1 58 33	1 57 07
Sloops—Class N—Start, 3:00.			
Bobtail	4 42 46	1 42 46	1 42 46

Trouble	5 25 11	2 20 11	2 20 11

*Time from 3:10.

Third Race—Saturday, Sept. 3.

Additional starters in the third event on Saturday besides those already mentioned were S. E. Vernon's Vivian II., and D. D. Allerton's Miss Judy. Spots was again an absentee. The winners on corrected time were Maydic, Bobtail, Lizana and Miss Judy. A fine wholesail breeze from the S.E. favored the racers. Courses were sailed with all marks left to starboard. Boats in classes M and N went twice out to West Bank light; from there to Craven Shoal, and home to the start, off Sea Gate. The first leg was a close reach; the second a run, and the third another reach home. The whole distance was figured at 15 knots. The smaller craft sailed the regular Association course, and was a run to Fort Hamilton, a close reach to the Marine and Field Club mark, windward work to Ulmer Park and a reach home. Twice around the course, figured 7 knots, Ogeemah protested Mary, and Trouble took the same action against Careless. Both protests were on the "starboard tack" grounds. The standing on points for the series prizes at the end of the third day was as follows:

	Finish.	Elapsed.	Corrected.
Maydic	5 11 00	2 11 00	2 11 00
Red Wing	5 14 37	2 14 37	2 11 43
Vivian II.	5 16 17	2 16 17	2 13 34

Sloops—Class N—Start 3:00.			
Bobtail	5 15 23	2 15 23	2 15 23
Bagheera	5 17 02	2 17 02	2 15 58

Sloops—Class P—Start, 3:05.			
Lizana	4 24 10	1 19 10	1 15 58
Bonito	4 27 25	1 22 25	1 20 37
Naiad	4 27 01	1 22 01	1 21 07
Smoke	4 26 27	1 21 27	1 21 27

Sloops—Class Q—Start, 3:05.			
Miss Judy	4 25 20	1 20 20	1 20 04
Ogeemah	4 30 47	1 25 47	1 20 23
Wraith	4 32 47	1 27 47	1 24 16
Mary	4 30 12	1 25 12	1 20 40
Careless	4 32 59	1 27 59	1 27 22
Trouble	4 34 45	1 29 45	1 29 45

Southern Y. C.

Lake Pontchartrain, La.—Saturday, Aug. 27.

The triangular cup race between Chewink III., Calypso and Invader, sailed over the course of the Southern Y. C., at New Orleans, was won by the first named after a closely finished contest.

At the start there was a very light air, Chewink and Invader finding soft spots, so that they barely held steerage-way and they were compelled to take handicaps of 4m. 30s. and 5m. 12s. respectively. Calypso seemed to sail better than ever before in a light weather, and crossing the starting line with good way on she ghosted ahead fast. A change had been made in her ballasting, seemingly for the better, and she was also using live weight, about a thousand pounds of lead having been left ashore and her crew of seven was increased to fourteen heavy men. The wind continued light and baffling, and at times there was none at all. When half way over the second leg of the 5-mile triangle Calypso was thought to have a lead of about 6m. She had tacked out into the lake and Chewink had been permitted to split tacks and stand in shore, until fully 2 miles separated them. Invader was third boat, and she held a position in tacking between the two. It was a toss up where the next breeze was coming from, there being indications both to N. and S. It came from the S., off shore, and the result was that Chewink had an easy lay, after getting it first by some time, for the next stake. Chewink beat Calypso to it by 4m., and Invader was exactly 4m. behind the second boat. On the reach over the next side of the triangle to the home stake Chewink gained just 1s. on Calypso, while Invader fell back more than 2m. When the yachts were on the second leg of the triangle there was a second shift in the wind, and this time it came from the opposite direction—that is, N. It came in the shape of a howling rain squall with a velocity of close to 30 miles an hour. Again Chewink was to windward. She was so far ahead that time was taken to reef, while the skippers of the other two chanced carrying full sail through it, a desperate stern chase, truly. Chewink rounded the next turn and squared for home just 2m. ahead of Calypso, and the latter got there 7m. 15s. sooner than Invader, which boat was now being handled with eased peak. She had the most difficult performance at this time, as she had a longer way to beat up in the teeth of the squall and through steeper water to fetch the outer mark. All three yachts finished the 10 miles

in impressive style, Chewink leading Calypso by 1m. 12s. and Invader by 7m. 6s.

As usual after the race the crews of the competing yachts, the Regatta Committee and invited guests dined together in the best of fellowship. It is to be hoped that these friendly contests will continue a while, for the advent of these yachts has certainly brought the southern yachting fever to a register of high degree, and the growing interest in the sport is something to be proud of, indeed. The summary:

	Elapsed.	Corrected.
Chewink III., Hardy, Glenly & Hardy.....	3 35 17	3 33 17
Calypso, S. F. Heaslip.....	3 35 34	3 35 34
Invader, Palestine-Viguerie Syndicate.....	3 40 23	3 37 53

L. D. SAMPSELL.

New York Y. C.

Glen Cove, L. I. Sound—Tuesday, Aug. 30.

The 70-footers Yankee, Rainbow, and Virginia sailed the first of a series of sweepstake races on Tuesday, Aug. 30. Yankee won, beating Rainbow 4m. 29s. and Virginia 11m. 36s.

The Regatta Committee was on board the steam yacht Free Lance, which boat was turned over for their use by Mr. F. Augustus Schermerhorn, the owner. The start was made off Mott's Point, where Free Lance anchored at 12:30. The breeze was fresh E.N.E., and course signals were soon displayed. The boats covered a 21½ mile triangle. The first leg was N.E. 10 miles, the second W.S.W. 7½ miles, and the third S.W. 4 miles. This gave the boats a beat, a spinnaker run and a close reach.

The three contestants came to the line with jackyard topsails aloft, but this gave them too much sail for comfort, and all substituted working topsails. Mr. Harry Maxwell was at the wheel on Yankee, while on the other two boats the owners were in charge.

The preparatory was given at 1:15, and 10 minutes later the starting signal was heard. Yankee was first away, 11s. after the gun,

BRENTON'S REEF CUP.

Virginia following 4s. later. Rainbow held back and took full advantage of the two minute time limit. When she did cross, she was handicapped 11s.

All the boats tacked inshore. Yankee opened up the gap on her competitors steadily, and Rainbow pulled up on Virginia and crossed her bow at half-past two. As the boats gybed around the first mark they were timed as follows: Yankee, 2:51:15; Rainbow, 2:56:20; Virginia, 2:59:55.

Booms were eased off to starboard and spinnakers were set to port. On the run to the second mark off Parsonage Point, Yankee beat Rainbow 38s., and Virginia 2m. 3s. The times at the second mark were: Yankee, 3:14:15; Rainbow, 3:46:58; Virginia, 3:15:58.

Reaching jibtopsails were set for the close fetch to the finish line. Yankee continued to increase her lead, and finished at 4:05:15. The summary:

	Finish.	Elapsed.
Yankee, J. R. Maxwell.....	4 05 15	2 40 04
Rainbow, C. Vanderbilt.....	4 11 33	2 44 33
Virginia, W. K. Vanderbilt.....	4 16 55	2 51 40

Edgewood Y. C.

Narragansett Bay, R. I.—Saturday, Sept. 3.

The first of a series of three fall club regattas was held by the Edgewood Y. C. Saturday afternoon, Sept. 3. Not much interest was displayed in the first event, for, although the weather conditions were perfect, there were but five entries. These were in two classes and both put up some very pretty racing, despite their thinness.

Only two of the 30ft. cats entered. Mblem led Elizabeth over the starting line by 10s. and maintained a lead throughout, finishing 33s. ahead. The two boats were well handled and it was a nip-and-tuck affair from start to finish. Three 15-footers formed the other class, and they also made a scrappy little race, Seamory winning out by a little less than a minute. The 30-footers were sent 4 miles to windward and return, while the little fellows had a course a trifle under 5 miles. The wind was almost due S. and a rattling two-reef breeze at the start, but before the finish it lightened to some extent, and the 30-footers were able to shake out their reefs and finish under full sail. The summary:

30ft. Cats—Start, 3:00—Course, 8 Miles.		
	Finish.	Elapsed.
Mblem, G. E. Darling.....	4 36 38	1 36 38
Elizabeth, W. D. Wood.....	4 37 11	1 37 11

15ft. Cats—Start, 3:05—Course, 5 Miles.		
	Finish.	Elapsed.
Seamory, Scattergood.....	4 36 30	1 31 30
Don, Langdon	4 37 25	1 32 25
Lucy, Smith	4 41 18	1 36 18

F. H. YOUNG.

Rhode Island Letter.

Providence, R. I.—Sept. 3.

WITH all the talk of another challenge for the America's cup for next season, and the gossip of the challenger to be built during the coming winter for Sir Thomas Lipton, people in Bristol are beginning to be interested. Of course, the main interest in Bristol, aside from the sport of the race itself, is in the expectation of an order for a new defender being placed with the Herreshoffs, in the event of a challenge being sent over here and accepted. As usual, the Herreshoffs themselves are saying very little about the matter, but it is understood that they are prepared to begin work should an order be received, and whether the boat should be built under the rule in use for several years past or under the new rule adopted by the New York Y. C., it is said that the Bristol designer has the lines of both types pretty well in hand, and would be prepared to undertake the task without delay. Should a new boat of the Reliance type be desired, she will be likely to prove some five minutes faster on a 30-mile course than the last cup defender built.

Indian Harbor Y. C.

Greenwich, L. I. Sound—Saturday, Sept. 3.

The fall regatta of the Indian Harbor Y. C. was sailed on Saturday, Sept. 3. The Regatta Committee, composed of Messrs. Frank Downe Jones, Charles E. Simms and Thomas J. McCahill, were on board Mr. W. R. Proctor's steam yacht Margaret. The start was scheduled for noon, but lack of wind made a two-hour postponement necessary. The wind finally came in from the E., then veered to S.E., and finally steadied itself in the S., from which quarter it blew a good sailing breeze.

Margaret established the starting line off Great Captain's Island, and the preparatory was given at 2:30. The three 70-footers were sent away 5m. later. Mr. J. Roger Maxwell had the wheel on Yankee, and Mr. W. K. Vanderbilt, Jr., steered Virginia. In the absence of Mr. Cornelius Vanderbilt, Mr. Newberry D. Lawton was in charge of Rainbow. Mr. George A. Cormack and Mr. H. De B. Parsons were also on board. The seventies crossed on the port tack. Yankee led, followed by Virginia and Rainbow. All three soon took the starboard tack, but Rainbow soon went back to the port tack again. Yankee and Virginia caught the S.E. breeze first and drew away from Rainbow.

Virginia led at the first mark, and Yankee was 20s. astern. On the second leg Yankee passed Virginia, and from that time on was never headed. She beat Virginia 3m. 50s. and Rainbow 7m. 55s.

At 2:45 the 36-footers started. Spasm drew well ahead, and beat Mimosa III. over 3m. over the 15-mile course. Anoatok finished third, 35s. behind Mimosa III.

In the 36ft. class for yawls, the cruiser Escape tried conclusions with the smart racing craft Memory. Memory beat Escape 7m. 54s. elapsed time.

Nike had no competitor in the 30ft. sloop class, and she took a sailover.

Eight starters in the raceabout class made matters lively. These boats covered a 10-mile triangle, and Rascal was the winner; Busy Bee was second.

There were four starters in the 25ft. sloop class. Snapper beat Maryola 5m. 32s. Heron was third. Firefly had a run of ill-luck and finished last, which is rather unusual.

Wa Wa beat Owatonna 1m. 13s. in the Indian Harbor one-design class. Anawanda was third.

In the 18ft. sloop class Louie Bell had no competitor, and she withdrew.

Two Chesapeake Buckeyes sailed in a special class. Dorothy II. won by 2m. 46s.

The cruising yawls Maya and Peggy sailed a match race, and Maya won easily from Peggy by 8m. 23s.

The summary follows:

Sloops—70ft. Class—Start, 2:35—Course 22 Miles.		
	Finish.	Elapsed.
Yankee, J. R. Maxwell.....	5 45 12	3 10 12

Stamford Corinthian Y. C.

Stamford, Conn., Saturday, August 27.

The annual regatta of the Stamford Corinthian Y. C., was sailed on Saturday, August 27. The winners were Mimosa III., Cricket, Adelaide and Louise Bell. The boats covered a 12-mile course.

There were four starters in the 36ft. class. Sapho and Mispah did not finish. Mimosa III. and Anoatok, sailed a close race and only 7s. separated them at the finish.

Cricket sailed a smart race and won from Tartan. Snapper was a poor third.

Adelaide beat Hiawatha handily in the 25ft. catboat class and Louise Bell defeated Minion in the 18ft. catboat class.

At the start the wind was W. but veered to the S. and freshened later. The summary:

Class M.—Sloops not over 36ft.—Start 2:05

	Elapsed
Mimosa III., T. L. Park.....	3 17 25
Anoatok, W. G. Brokaw.....	3 17 32
Sapho, James Ferris.....	Did not finish
Mispah, Mansfield Thomas.....	Did not finish

Raceabouts.—Start 2:10.

Cricket, Howard Willets.....	2 55 30
Tartan, A. H. Pirie.....	2 56 00
Snapper, G. Ward.....	3 10 20
Rascal, L. C. Hopkins.....	3 14 15
Rana, Howard Willets.....	3 14 20

Hobo, T. L. Park.....	3 19 00
Buoy Bee, R. L. Wainwright.....	3 15 30

25ft. Cabin Cats—Start, 2:15.

Adelaide, L. Scofield.....	3 39 45
Hiawatha, Harry Dayton.....	3 50 00

Open Cats not over 18ft.—Start, 2:20.

Louise Bell, J. M. Williams.....	1 55 30
Minion, Will Gillespie.....	2 01 45

Moriches Y. C.

Cape Cod Y. C.

Provincetown, Mass.—Thursday, Sept. 1.

On Thursday, Sept. 1, the scene of Cape Cod's yachting festival was changed from Wellfleet to Provincetown, where the Cape Cod Y. C. held the first of a series of three Y. R. A. open races. There was a good whistles breeze, S.S.W. at the start and backing to a little E. of S. toward the finish. Warrior got the start in the 22ft. class, but Peri II. took the lead before the windward mark was reached and held it to the finish. In the 18ft. class Arbecka II. got the start, but Hayseed went into the lead soon after and was never headed by Miladi II. second and Again third. In the handicap class Pocahontas was the leader, but Usona won on corrected time by 29s. In the summary of this class, only the elapsed times were given. In the special handicap class Meemer got the start. Wasaka led on the windward work, but Meemer more than made it up on the reaches, and Meemer was first across the finish line. Both were scratch boats. The summary:

Class E—22-footers.		Elapsed.
Peri II., George Lee.....	2 20 49	
Clotho, Cheney & Lanning.....	2 32 51	
Warrior, S. C. Winsor.....	2 35 06	
Medric, H. H. White.....	2 44 26	

Class I—18-footers.		Elapsed.
Hayseed, H. L. Bowden.....	2 51 56	
Miladi II., F. R. Adams.....	2 53 45	
Again, L. B. Goodspeed.....	2 56 59	
Arbecka II., F. P. Bowden.....	2 57 14	
Kittiwake II., H. M. Jones.....	2 57 21	
Mirage II., I. W. Olmstead.....	2 57 22	
Menace, I. H. Hunt.....	Withdraw.	

Handicap Class.		Elapsed.
Pocahontas, D. R. Merrill.....	2 52 29	
Usona, A. L. Lincoln.....	2 53 07	
Graydog, Fred Grosse.....	3 08 07	

Special Handicap Class.		Elapsed.
Meemer, R. C. Nickerson.....	2 30 04	
Wasaka, S. R. Anthony.....	2 30 05	
Early Dawn III., J. E. Doherty.....	Withdraw.	

Friday, Sept. 2.

The second race of the Cape Cod Y. C. was sailed in a moderate and somewhat unsteady breeze. In the 22ft. class Peri II. got the start and led all around the course, with Clotho in second place. It was another day for Hayseed in the 18ft. class, with Again a good second. Sentinel got the start in the handicap class, but Usona went out ahead of her soon after, and led to the finish. In the special handicap class Meemer got the start and led to the finish line, but Early Dawn sailed close enough to get first on corrected time. The summary:

Class E—22-footers.		Elapsed.
Peri I., George Lee.....	2 11 30	
Clotho, Cheney & Lanning.....	2 12 01	
Warrior, S. C. Winsor.....	2 16 05	
Medric, H. H. White.....	2 16 15	

Class I—18-footers.		Elapsed.
Hayseed, H. L. Bowden.....	2 26 12	
Again, L. B. Goodspeed.....	2 30 04	
Arbecka, F. P. Bowden.....	2 32 47	
Kittiwake, H. M. Jones.....	2 32 55	
Menace, J. H. Hunt.....	2 33 12	
Miladi, F. R. Adams.....	2 34 01	
Mirage, J. W. Olmstead.....	2 35 59	

Handicap Class.		Elapsed.	Corrected.
Usona, A. L. Lincoln.....	2 26 08	2 26 08	
Sentinel, George Crawford.....	2 27 25	2 26 20	
Arawak, A. H. Baker.....	Withdraw.		
Early Dawn, J. E. Doherty.....	2 06 36	1 59 36	
Meemer, R. C. Nickerson.....	2 03 02	2 03 02	

Saturday, Sept. 3.

The closing race of the Cape Cod Y. C. was sailed on Saturday, Sept. 3, in a S.S.W. breeze. The breeze was fresh at the start, but flattened soon after and freshened again at the finish. Peri II. got the start in the 22-footers and had the race well in hand until the breeze flattened, when Clotho passed her. A mishap with Clotho's spinnaker gave Medric the lead and she held it to the finish. The 18-footers went over the line in a bunch, Arbecka II. having a little the best of the start. Hayseed again pulled out a lead, however, before the windward mark was reached, and won her fifth consecutive race in the Cape Cod Bay series. In the handicap class Arawak got the start, but Usona passed her before the windward mark was reached and led to the finish. In the special handicap class Meemer and Wasaka had another warm contest all over the course. Meemer finished first, with Wasaka second; but Early III. dawn took first on time allowance. The summary:

Class E—22-footers.		Elapsed.
Medric, H. H. White.....	2 21 55	
Opitsah V., S. H. & H. I. Foster.....	2 23 16	
Clotho, Cheney & Lanning.....	2 23 46	
Peri II., George Lee.....	2 24 44	
Warrior, S. C. Winsor.....	2 25 08	

Class I—18-footers.		Elapsed.
Hayseed, H. L. Bowden.....	2 41 10	
Arbecka II., F. P. Bowden.....	2 44 18	
Kittiwake II., H. M. Jones.....	2 46 18	
Mirage II., J. W. Olmstead.....	2 49 14	
Menace, J. H. Hunt.....	2 49 26	
Again, L. B. Goodspeed.....	Disabled.	

Handicap Class.		Elapsed.	Corrected.
Usona, A. L. Lincoln.....	2 42 41	2 42 41	
Arawak, A. H. Baker.....	2 47 59	2 44 57	
Sentinel, George Crawford.....	Disabled.		

Special Handicap Class.		Elapsed.	Corrected.
Early Dawn, J. E. Doherty.....	2 19 25	2 12 25	
Meemer, R. C. Nickerson.....	2 15 25	2 13 25	
Wasaka, S. R. Anthony.....	2 16 50	2 16 50	

Frontenac Motor Boat R. A.

Frontenac, N. Y.—Saturday, August 27.

The successful regatta of the Frontenac Motor Boat Racing Association which was held here Saturday afternoon, August 27, is sure to prove a decided impetus to the new sport in the Thousand Islands region where it has grown so popular. Five thousand persons witnessed the day's interesting events in which a large fleet of fast boats contested, including some of the best in the country.

Among the boats here for the races was Vingt-et-Un II. which has recently been purchased by Mr. Willis Sharpe Kilmer of Binghamton. A lively contest was expected when she was to meet Adios, recently purchased from H. J. Leighton of Syracuse by Mr. S. H. Vandergrift, but early in the regatta Vingt-et-Un II broke a water pipe leading to her cylinders, and was out of the races for the remainder of the day.

The first event was a handicap race for boats of more than 60-rating, according to the rules of the American Power Boat Association. The entries were Picton, owned by Mr. R. K. Miller of Clayton, Roma owned by Mr. Louis Hunt of Brooklyn, Too Easy owned by Mr. W. S. Kilmer of Binghamton, the Vingt-et-Un II also owned by Mr. Kilmer, Papoose owned by Mr. Fitz Hunt of New York, Priscilla owned by Mr. H. A. Richardson of Dover, Del., and Radium owned by Dr. E. E. Campbell of Alexandria Bay. It was won by Too Easy in 1h. 5m. 7s. Priscilla made the best time over the 19½-mile course, covering it in 57m. 26s. It was in this race that Vingt-et-Un II broke down. Roma and Radium also had accidents with their machinery and had to withdraw.

In the second race, which was a handicap event for boats with a rating of less than 60, Capt. Henry S. Johnston, of Clayton, won in his Teal, a 25ft. boat, with three-cylinder 7-horsepower Leighton engines, which covered the course of nearly twenty miles in 1h. 20m. 47s. Kitten, owned by Mr. George Hall, Mayor of Ogdensburg, was second. Ye-Na-Diz-Ze, a boat of the canoe type, was third, and the others failed to finish.

In the grand free-for-all, Adios carried off the honors of the day. She is a 55ft. boat of Leighton manufacture, fitted with 8-cylinder 120-horsepower engines. Her nearest competitor was Priscilla, which she allowed to follow her around until the last lap, when she crept ahead, and using only five of her eight

cylinders, sped over the finish, having covered the course in 57m. 5s. Priscilla was 27s. behind her.

In the evening at Hotel Frontenac the annual dinner of the Frontenac Motor Boat Racing Association was held, at which the silver trophy cups, valued at \$2,000, were presented to the victorious boat owners. Plans were made at this meeting for races of a still more extensive nature to be held next summer. The summary:

Race I.—Handicap.			
Picton.....	60.84	2 20 14	4 01 10
Roma.....	61.95	2 21 14	4 01 10

Papoose.....	78.30	2 35 18	3 37 10
Vingt-et-Un II.....	79.35	2 36 01	3 38 25
Priscilla.....	79.35	2 36 01	3 38 27
Radium.....	80.55	2 36 49	3 39 27
Race II.—Handicap.			
Kitten.....	45.01	4 00 00	5 29 00
Sure Thing.....	46.35	4 02 45	5 29 00
Teal.....	47.85	4 05 28	5 26 15
Ye-Na-Diz-Ze.....	49.05	4 07 34	5 38 20
Putsey.....	53.10	4 13 54	5 38 20
Put-Put.....	55.20	4 16 54	5 38 20
Race III.—Free-for-all.			

Entries: Adios, Priscilla, Papoose, Radium, Too Easy, finishing in that order. Time, 57m. 5s. Course, 19½ miles.

SAM COOK.

Boston Y. C.

Boston, Mass.—Friday, Sept. 2.

THE Boston Y. C. held a squadron run from Hull to Provincetown, on Friday, Sept. 2, where the yachts joined the fleet of racing yachts contesting in the Cape Cod bay circuit. The best of cruising weather was experienced, the yachts having a light S.W. breeze. It was calm in spots but held fairly well on the whole and the yachts made very good time. In all of the classes the yachts were remarkably close for so long a run. The sloop Golden Rod led the fleet into port and won in her class. In the second class L'Aiglon was a winner, with Jingo only 2m. behind. A little over a minute separated Kcewaydin and Thelema at the finish of the third class. The summary:

First Class.		Elapsed.	Corrected.
Golden Rod, G. E. Bruce.....	5 40 55	5 40 55	
Katonah, W. W. Williams.....	5 48 22	5 41 30	
Diamond, F. W. Gowing.....	6 15 30	6 01 50	
Magnolia, E. P. Boyton.....	6 20 37	6 06 57	
Elaine, A. W. Chesterton.....	6 24 35	6 10 55	

Second Class.		Elapsed.	Corrected.
L'Aiglon, F. W. Hodgson.....	6 12 05	6 12 05	
Jingo, G. B. Doane.....	6 14 05	6 14 05	
Opitsah, S. H. Foster.....	6 19 53	6 16 10	
Cynthia, C. L. Pond, Jr.....	7 06 33	6 40 32	

Third Class.		Elapsed.	Corrected.
Keewaydin, T. W. Souther.....	6 49 35	6 49 35	
Thelema, A. C. Jones.....	6 50 46	6 50 46	
Gringo, W. H. Brown.....	6 53 54	6 52 54	
Quill, J. F. Cole.....	7 18 55	7 14 49	
Jack Rabbit, W. H. Bradbury.....	7 19 09	7 15 03	
Ruth, H. C. Hartshorn.....	7 29 02	7 16 44	
Sue, T. W. Powers.....	8 13 54	7 32 54	

Saturday, Sept. 30.

A special race of the Boston Y. C. was held in Provincetown Harbor on Saturday, Sept. 30. The Regatta Committee of the Boston Y. C. invited the committee of the Cape Cod Y. C. to be its guest on the Boston Y. C. committee boat Confidence, and the both races were conducted from the same boat. The starts of the Boston Y. C. race so closely followed those of the Cape Cod Y. C. that it was as if there were only one event. Golden Rod did all the leading in the first class, but lost to Elaine on time allowance. L'Aiglon won from Jingo in the second class and Gringo was the winner in the third class. The summary:

First Class.		Elapsed.	Corrected.
Elaine, A. W. Chesterton.....	2 24 45	2 05 45	
Golden Rod, G. E. Bruce.....	2 05 52	2 05 52	
Shiessa, Alfred Douglass.....	2 25 01	2 12 21	
Diamond, E. H. Gowing.....	2 37 28	2 14 40	
Third Class.		Elapsed.	Corrected.
Gringo, W. H. Brown.....	2 26 42	2 26 42	
Thelema, A. C. Jones.....	2 28 25	2 28 25	
Aspenet, E. W. Remick.....	2 53 30	2 45 50	
Ruth, Miss Edith Scott.....	3 02 17	2 49 30	
Sue, T. W. Powers.....	Withdraw.		

Seawanhaka Corinthian Y. C.

Oyster Bay, L. I. Sound—Saturday, Sept. 3.

NINE of the 15-footers started in the race for the cup offered by Mrs. Thomas A. Youngs on Saturday, Sept. 3. The conditions governing the match stated that a woman must be at the stick during the race. Baron, sailed by Mrs. A. E. Matheson, won, defeating Chipmunk, handled by Miss Mary Youngs, by 2m. 1s. The boats sailed over one of the inside courses, a distance of 10 miles.

After the race for women, the raceabouts and 15-footers sailed again, this time handled by men. Sabrina won in the one-design class and Merrywing beat her two competitors in the raceabout class. The summary:

Seawanhaka 15-footers—Start 11:05.		Finish.	Elapsed.
Baron, Mrs. A. E. Matheson.....	2 29 46	3 24 46	
Chipmunk, Miss Mary Youngs.....	2 31 47	3 26 47	
Cayenne, Mrs. W. A. W. Stewart.....	2 35 03	3 30 03	
Brownie, Miss Elizabeth Hoyt.....	2 36 10	3 31 10	
Sabrina, Miss Edith Landon.....	2 37 35	3 32 35	
Fly, Mrs. E. W. Burnham.....	2 40 02	3 35 02

Erie Y. C.

Erie, Pa.—Sunday, Aug. 28.

THERE was a lively ten minutes up at the Erie Y. C. on last Thursday afternoon. A hurricane from the west preceded by a heavy black cloud that almost turned day into night, struck the city. The larger boats that were lying at anchor in the basin, dragged their anchors and ran down the smaller boats, but not much damage was done.

The new yacht Wasp, captain Benms, was over in Misery Bay, the captain and his party being ashore at the time, the safest place for them just then; but they boarded the yacht in a hurry and no doubt prevented her from going to the bottom.

This gale only lasted about ten minutes and was then followed by one of the heaviest rains I have ever seen, but it only lasted a quarter of an hour. No great amount of damage was done here but this is about the only city in the lower lakes that escaped both damage and loss of life.

CABIA BLANCO.

Beverly Y. C.

Wing's Neck, Buzzard's Bay—Monday, August 22, 1904.

THE 35th regatta of the Beverly Y. C. was sailed off the club house on Wing's Neck on Aug. 27, 1904, in a light S.W. breeze. The day had been set apart by the club for a reception to the New Bedford Y. C., and the race was therefore postponed a half hour in the hope that the visitors might arrive in time to see the start. The wind, however, which had been light at the head of the Bay, proved to have been still lighter off New Bedford, so the New Bedford Y. C. fleet made extremely slow progress, and when at 1:30 they were not in sight, the judges decided to start the race without waiting for them. The judges were Messrs. F. E. Cabot, F. A. Eustis and P. B. Chase.

There were only two entries in the 30ft. class, and Praxilla won easily. Young Miss had already won the championship, and Mr. Whittemore therefore took this occasion to try out an

old mainsail which the Herreshoffs had re-cut for him with the intention of improving it. He found that it had not been much improved. In the 21ft. class Terrapin was sailed by Mr. Joshua Crane, Jr., and easily beat Illusion, but was protested by the latter boat for the position she took at the start. The question raised is a delicate one, and has been appealed to the full committee. In the 18ft. class Jap again won, and in the 4th class Cats Allison 2nd was the victor. Maori, who finished second, was protested for not rounding one of the marks, and disqualified. Miss Dabney, in Fiddler, defeated the whole 15ft. class.

The times of the Beverly Y. C. race in detail are given below. About 2:30 the first boat of the New Bedford fleet arrived and crossed the line, thus winning a hearty salute from those present, and a cup which the Beverly Y. C. gave to the first of the New Bedford boats to reach their anchorage. The second boat was only a few hundred yards behind. For the next hour the visitors arrived rapidly, and about 3 o'clock they all came ashore and were entertained at lunch.

Wellfleet Y. C.

Wellfleet, Mass.—Monday, Aug. 29.

On Monday, Aug. 29, Cape Cod's annual series of Y. R. A. open yacht races was opened by the Wellfleet Y. C. A great amount of interest was taken in the races, people coming from all parts of the Cape, from Buzzard's Bay to Provincetown, and also from Boston. Conditions were somewhat fluky, the wind going from W.S.W. to N. E., and it was light throughout the race. In the 22ft. class Medric had the weather berth at the start, and she led all around the course, with Clotho second. Mirage II. had a fine position in the start of the 18ft. class, to weather of all, and in such a position that every boat to leeward was blanketed.

Reaching to the first mark, Again got a lead, while the other boats were luffing, and was first around the mark. Just before the windward mark was reached, Arbecka II. passed Again. After the mark was turned, Hayseed took the lead and held it to the finish. In the first handicap class, Marvel won out after a close race with Arawak. In the second handicap class Usona did the leading. Areyto led Early Dawn III. around the course in the second handicap class. The summary:

Class D—25-footers.		Elapsed.
Areyto, L. D. Baker.....	1 58 35	
Early Dawn II., J. E. Doherty.....	2 01 43	

Class E—22-footers.		Elapsed.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

UNQUA-CORINTHIAN Y. C. MEETING.—The annual meeting of the Unqua-Corinthian Y. C. was held at the club house at Amityville, L. I., on Saturday evening, August 27, and the following officers were elected: Com., Francis A. Williams; Vice-Com., Charles P. Mollineaux; Rear-Com., Edward Bleeker; Sec'y, George Booth; Treas., Marshall A. Woodman; Board of Governors—William R. Bleeker, Judge E. P. Foster, Fred. B. Daltzell, J. H. Ruwe, Delancey T. Smith, and Rufus J. Ireland.

SEASIDE PARK Y. C. OFFICERS.—At the annual meeting of the Seaside Park Y. C., held at the club house on Barnegat Bay, on Saturday evening, the following officers were elected: Com., Mayor Weaver; Vice-Com., Joseph T. Richards; Rear-Com., Frank W. Thacher; Recording Sec'y, Herman Muller; Financial Sec'y, Llewellyn Collings; Trustees—John D. Johnson, Joseph Cross, Alexander Middleton, H. T. Weber, and J. C. Rainear.

SCHOONER HILDEGARDE MEETS WITH ACCIDENT.—The large iron schooner Hildegard, owned by Mr. E. R. Coleman, of Philadelphia, Pa., struck a submerged wreck or an uncharted rock off Naskeag Point in Eggemoggin Reach, on the Maine coast. The yacht was on the way from Bar Harbor to Newport. After striking, she made water fast, and the sailing master, Captain Cyrus Masters, beached her on Hay Island to prevent her sinking. The owner and his guests were landed at Sargetville. A diver examined the vessel's bottom and made temporary repairs so that she could be towed to New London, Conn., for a survey and overhauling. Hildegard was designed by Mr. A. S. Chesebrough and built by the Harlan & Hollingsworth Co., at Wilmington, Del., in 1897. She is 103ft. waterline, 135ft. over all, 26ft. breadth, and 16.9ft. draft. Several of the yachts that participated in the Eastern Y. C. cruise struck on the same place that Hildegard did, but were not seriously damaged.

MANCHESTER Y. C. ANNUAL MEETING.—At the annual meeting of the Manchester Y. C., held at the club house, Manchester, Monday, August 29, the following officers were elected: Com., S. Parker Bremer; Vice-Com., Edwin A. Boardman; Rear-Com., Augustus P. Loring, Jr.; Sec'y, Norman F. Greeley; Treas., H. B. Pearson; Meas., David Fenton; Executive Committee—Edward S. Grew, S. Parker Bremer, Edwin A. Boardman, Horace B. Pearson, F. W. Fabyan, A. Farwell Bemis, George W. Wigglesworth, T. K. Lothrop; Regatta Committee—George W. Mansfield, chairman; Reginald Boardman, Charles E. Cotting, Jr.; R. De B. Boardman, Horace B. Pearson; Board of Judges—George W. Mansfield, William A. Tucker, S. Parker Bremer, Edwin S. Grew, Arthur Woods.

SLOOP YACHT SIBYL SOLD.—Mr. H. T. Noyes, of New York city, has purchased the sloop yacht Sibyl from Mr. T. M. R. Meikleham, through the agency of Mr. Stanley M. Seaman, New York. The same office has also chartered the sloops Sasqua to Mr. G. F. Schmidt, of New York city, and Carrie to Dr. Bugbee, of St. Luke's Hospital.

NEW BROKERAGE FIRM.—Mr. Ernest E. Lorillard, formerly manager of the brokerage department of Messrs. Cary-Smith & Ferris, and Mr. Frank H. Walker, formerly manager of the brokerage department of Messrs. Gardner & Cox, have formed a co-partnership for the purpose of conducting a general yacht brokerage business. Their offices are at 41 Wall street, New York city.

INGOMAR'S ENGLISH RECORD AND RATING.—The following note about the American schooner Ingomar is from the London Field of August 20:

"The American schooner Ingomar, brought over by Mr. Morton F. Plant, Commodore of the Larchmont Y. C., has now finished her season, and will shortly sail across the Atlantic on the return voyage. The Ingomar was flying nineteen winning flags when she arrived in Southampton Water on August 18. These included two special prizes for the best time over the course, twelve first prizes, four seconds, and one third prize in twenty-four starts. This, we should say, is the best annual record ever made by an American yacht over thirty registered tons when racing in European waters."

We publish a list of the events in which Ingomar participated:

CATBOAT DOT SOLD.—The catboat Dot that was owned and raced so successfully by Mr. Charles T. Pierce, has been sold to the Cunningham Brothers of Yonkers, N. Y.

Yachting Fixtures for 1904.

Members of race committees, and secretaries, will confer a favor by sending notice of errors or omissions in the following list, and also changes which may be made in the future.

SEPTEMBER.

8. New York, autumn cup, Glen Cove.
10. Seawanhaka, L. I. Sound Y. R. A., fall, Oyster Bay.
10. Larchmont, club race, Larchmont.
11. Mass. Y. R. A., rendezvous at Hull.
17. Manhasset Bay, L. I. Sound Y. R. A., fall, Sand's Point.
24. Riverside, L. I. Sound Y. R. A., fall, Riverside.

Canoeing.

Officers of A. C. A., 1904.

Commodore.—C. F. Wolters, 14 Main St. E., Rochester, N. Y.
Secretary-Treasurer—John Sears Wright, 519 West Ave., Rochester, N. Y.

ATLANTIC DIVISION.

Vice-Commodore—L. C. Kretzmer, L. C. Schepp Building, New York.
Rear-Commodore—W. A. Furman, 846 Berkeley Ave., Trenton, N. J.
Purser—M. Ohlmeyer, Jr., 201 Palisade Ave., West Hoboken, N. J.
Executive Committee—H. L. Pollard, 138 Front St., New York; N. S. Hyatt, Ossining, N. Y.; H. C. Allen, 64 Prospect St., Trenton, N. J.
Board of Governors—R. J. Wilkin, 164 Montague St., Brooklyn, N. Y.
Racing Board—H. L. Quick, Yonkers, N. Y.

CENTRAL DIVISION.

Vice-Commodore—H. W. Breitenstein, 511 Market St., Pittsburg, Pa.
Rear-Commodore—Frank D. Wood, Buffalo, N. Y.
Purser—Frank C. Demmler, 526 Smithfield St., Pittsburg, Pa.
Executive Committee—Jesse J. Armstrong, Rome, N. Y.; H. C. Hoyt, 26 S. Goodman St., Rochester, N. Y.
Board of Governors—C. P. Forbush, 164 Crescent Ave., Buffalo, N. Y.
Racing Board—Harry M. Stewart, 85 Main St., East, Rochester, N. Y.

EASTERN DIVISION.

Vice-Commodore—Henri Schaeffer, Manchester, N. H.
Rear-Commodore—H. M. S. Aiken, 45 Milk St., Boston, Mass.
Purser, Edw. B. Stearns, Manchester, N. H.
Executive Committee—B. F. Jacobs, Jr., West Medford, Mass.; D. S. Pratt, Jr., Wellesley Hills, Mass.; Marcus Butler, Lawrence, Mass.; William W. Crosby, Woburn, Mass.
Board of Governors—Paul Butler, U. S. Cartridge Co., Lowell, Mass.
Racing Board—Paul Butler, U. S. Cartridge Co., Lowell, Mass.; H. D. Murphy, alternate.

NORTHERN DIVISION.

Vice-Commodore—Chas. W. McLean, 303 St. James St., Montreal, Canada.
Rear-Commodore—J. W. Sparrow, Toronto.
Purser—J. V. Nutter, Montreal, Canada.
Executive Committee—C. E. Britton, Gananoque, Ont.; Harry Page, Toronto.
Board of Governors—J. N. MacKendrick, Galt, Ont.
Racing Board—E. J. Minet, 125 Vitre St., Montreal, Canada.

WESTERN DIVISION.

Vice-Commodore—Burton D. Munhall, care of Brooks Household Art Co., Cleveland, O.
Rear-Commodore—Chas. J. Stedman, National Lafayette Bank, Cincinnati, O.
Purser—Geo. A. Hall, care of Bank of Commerce, Cleveland, O.
Executive Committee—Thos. P. Eckert, 31 West Court St., Cincinnati, O.; Dr. H. L. Frost, 10 Howard St., Cleveland, O.
Board of Governors—Henry C. Morse, Peoria, Ill.

How to Join the A. C. A.

From Chapter I., Section 1, of the by-laws of the A. C. A.:
"Application for membership shall be made to the Secretary, and shall be accompanied by the recommendation of an active member and by the sum of two dollars, one dollar as entrance fee and one dollar as dues for the current year, to be refunded in case of non-election of the applicant."

A. C. A. Membership.

The following have been proposed for membership to the A. C. A.: M. C. Berrien, Daniel P. Mitchell, Louis G. Kaempfer, Clifford E. Dunn, Freeman P. Land, William A. Ayen, New York city; R. D. Vreeland, F. D. Vreeland, Paterson, N. J.; Walter W. Forbush, Ulysses S. Thomas, James J. Cranus, Buffalo, N. Y.; Clarence E. West, Syracuse, N. Y.; C. A. Edson, Skaneateles, N. Y.; Lacie Lyons, New Orleans, La.; Edwin H. Coane, Jr., Philadelphia; Henry L. Kehrl, Newark, N. J.; H. F. Fisher, Toronto, Ont.; J. Cam Douglas, Smith's Falls; John Monahan, Brockville, Ont.; William Seekings, Brockville, Ont.; Jos. Champagne, Brockville, Ont.; J. H. Rushton, Jr., Canton, N. Y.; Porter B. Van Deusen, B. E. Wilson, A. H. Vayo, Rochester, N. Y.; C. S. Cooper, Rome, N. Y.

New Publications.

The Trail of Lewis and Clark.*

FROM the pen of Mr. Olin D. Wheeler, who has done so much to make known the resources of the Northwest, has just been published by G. P. Putnam's Sons an interesting and valuable work on the Lewis and Clark expedition. The two beautiful volumes come with a special fitness in this year of 1904, and the study is the most complete and most valuable that has yet appeared.

Mr. Wheeler is particularly well qualified for the work that he has undertaken. He is an old resident of the West, traveled over it in the days before the railroads, and is a good frontiersman—able to care for himself wherever he may be. More than that, he has always been deeply interested in the early West, is familiar with its literature, and wields a practiced and a graceful pen.

It was when Mr. Wheeler was looking up material for a chapter on Lewis and Clark to appear in the 1900 issue of Wonderland, the beautiful annual published by the Northern Pacific Railroad concerning the region tributary to that line, that he became impressed with the necessity for a commentary on the journey of Lewis and Clark

*The Trail of Lewis and Clark, 1804-1806. A story of the great exploration across the Continent in 1804-1806; with a description of the old trail, based upon actual travel over it, and of the changes found a century later by Olin D. Wheeler. Two volumes, with 200 illustrations. G. P. Putnam's Sons, New York, 1904.

fuller than had yet appeared. With this in mind, he began to gather the material for such a work, and since then he has followed over much of the route traversed by the heroic explorers of one hundred years ago, has identified their trail in its entirety, located the different natural features of the land which they mention, and sometimes has been able even to place their very camping sites.

The work is a study in its best sense, and is not an edited reprint of the explorers' narrative. The author tells the story in his own words, but illustrates it by all the material that is accessible. The original manuscript journals of Lewis and Clark have been studied, as well as the other accounts, and these are quoted, commented on, and explained by the author, out of the wealth of his knowledge of the West of early and of later days.

Besides going over the trail of the explorers, Mr. Wheeler has visited the tribes that they visited, and from these tribes has gathered much traditional information about the explorers' visit. In one case he spoke with an old woman who, as a child, distinctly remembered the coming of Lewis and Clark to her people; and also found among the Blackfeet an aged man, more than one hundred years old, who appears to have been one of the misnamed party of "Minnitares of Fort de Prairie"—really Piegan Blackfeet—with whom Captain Lewis had the fight in what is now northwestern Montana.

The question of the death of Captain Lewis is extensively gone into, and it is pointed out that it is altogether probable that instead of committing suicide in 1809, as has been believed, Captain Lewis was murdered for his money at the lonely tavern in Tennessee.

In finding out for us what became of certain members of the expedition, concerning which we knew nothing, Mr. Wheeler has performed a good service to history. Dr. Coues, in his edition of Lewis and Clark, knew but little about the subordinate members of the party. Mr. Wheeler brings together much additional information that has come to light since the Coues' edition was published, and has himself discovered what became of William Bratton. He has much to say about the wife of Chaboneau, the Shoshone captive among the Minitari, who practically guided the expedition westward, and who, all through the long journey, proved herself as good a "man" as there was in it. This was Sacagawea, Bird Woman, to whom it is proposed soon to erect a monument, although the Geological Survey has already named after her a noble peak in the Rocky Mountains. The history of the baby that Bird Woman carried on her back across the continent is known, and something of him Mr. Wheeler tells.

The first volume of the work deals with the Louisiana Purchase, the organization and personnel of the expedition, its start, its winter at Fort Mandan, and its journey up the Missouri River to the Three Forks. The second volume tells of the westward journey from the Three Forks to and down the Columbia River; the history of Fort Clatsop; the start back and the journey of the two commanders of the expedition to the mouth of the Yellowstone, and then down the Missouri to St. Louis.

As we go through the volume, we find material of the greatest interest. The untouched West, its inhabitants, brute and human, the slow development of the country, at first only in the direction of the fur trade and then, about forty years ago, beginning to move more rapidly, are described fully and with real feeling. Many fac-similes and many verbatim quotations are given from the journals of Lewis and Clark, and these excerpts tell us more of the real men than we could ever learn by reading their edited narratives. Maps of the route from start to finish, with all the side trips that were made, help us to a very complete and intelligent comprehension of the most important journeying ever undertaken in America.

The task of finding fault with good work that has been done is notoriously an easy one, and the writing of two large volumes presupposes an occasional slip or error. Mr. Wheeler says that Arikara seems to be a Mandan word. This is a mistake. The tribal name unquestionably comes from the Pawnee word A-ri'-ki or U-ri'-ki, meaning a horn, and the tribal name for this section of the Caddoan family is thus the precise equivalent of the name of the main Pawnee tribe, which comes from Pā-ri'-ki, meaning also horn.

The illustrations and maps which adorn the pages of "The Trail of Lewis and Clark" are many and beautiful. Some of the illustrations are in colors, and all are spirited and possess the true flavor of the old West. Each one serves its especial purpose, and none could have been omitted without detracting somewhat from the value of the book.

Mr. Wheeler has given us in "The Trail of Lewis and Clark" a model of what an American historical study should be, and every one who is interested in the early history of the western country, and desires to be informed as to the happenings of those historic days which began a century ago, must have this work at his hand for continuous reference. That it must be in all public libraries goes without saying.

An Unfortunate Influence.

Ol' Mistuh Jones, he 'low'd dat he
Wus as sure of heaven as a man could be;
An' he sniffed aroun' an' he put on airs,
An' he wouldn't 'ten' to his own affairs;
An' he acted in such a haughty way
Dat de neighbors 'lowed dey wished he'd stay
To home, instid of his braggin' aroun',
'Cause we couldn't all travel whah he was bound.

But de very worst about Mistuh Jones
Wif his braggin' in dem contemptuous tones,
Was de way dat some of us went an' did.
We got so reckless we done backslid.
An' we had our doubts, as sure as fate,
'Bout gettin' in past de pearly gates.
An' some of 'em said dat dey didn't much care
If ol' Mistuh Jones was a-goin' there.

Always Reliable and Superior.

UNITED STATES CARTRIDGE COMPANY LOWELL, MASS.

Agencies: 497-503 Pearl Street, 35-43 Park Street, New York.
114-116 Market Street, San Francisco.

petition was open to all citizens of the United States. Distance, 1000yds. Twenty shots. Any rifle and any position without artificial rest.

The light was dull and there was a gusty wind, consequently there was a dearth of high scores. The match was won by Dr. George E. Cook, of the Manhattan Rifle and Revolver Association. The leaders in this contest were as follows:

Dr. Geo. E. Cook, Manhattan R. and R. Assn.....	88
Lieut. Wm. A. Tewes, First New Jersey.....	85
Capt Wm B Martin, Second New Jersey.....	83
Capt C B Winder, Ohio.....	83
Harry M Pope, Massachusetts.....	83
Lieut K K V Casey, New York.....	81
J E Murray, Ohio.....	81
Lieut C S Benedict, Ohio.....	81
Maj Arthur Rowland, First New Jersey.....	79
Lieut. W. H. Richards, Ohio.....	78
Corp Stewart W Wise, Massachusetts.....	76
Lieut J W Smith, Ohio.....	74
A E Perkins, Pennsylvania.....	74
Lieut Arthur E Wells, New York.....	74
Lieut H L Smith, First New Jersey.....	73
Lieut W C Gannon, Fourth New Jersey.....	73
Pvt Howard Gensch, First New Jersey.....	73

Some of the other scores were: Serg. A. Van Kelst, Second Troop, New Jersey, 69; Sergt. W. L. Farr, Second New Jersey, 68; Pvt. P. J. O'Hare, First New Jersey, 66; Lieut. M. A. Rice, First New Jersey, 65; Sergt. J. R. Williams, Second New Jersey, 64; Corp. C. L. Silvester, Second New Jersey, 62; Pvt. Theodore Gabriel, First New Jersey, 54; Sergt. H. E. Williams, Second New Jersey, 50; Commissary Sergt. F. Phillips, First Troop, New Jersey, 46; Capt. J. Madison Hare, Third New Jersey, 38; Capt. W. S. Price, Third New Jersey, 30.

The all-comers' revolver match, open to everybody, five shots at 50yds., military revolver, with not less than 4lbs. trigger pull, entrance 50 cents, entries unlimited, was won by Lieut. R. H. Sayre, of New York. The five prizes were won as follows: Lieut. R. H. Sayre, 130; Col. Thomas Anderton, Massachusetts, 125; C. F. Armstrong, 124; Maj. S. J. Fort, Maryland, 122; Maj. G. B. Young, District of Columbia, 121.

The inter-club match was for teams of five men from organizations affiliated with the National Rifle Association. Ten shots per man; distance, 200yds. Any military rifle. This contest was won by the Ohio State Rifle Association. The scores follow: Ohio State Rifle Association—Capt. C. B. Winder 44, Lieut. J. C. Semon 46, Lieut. W. H. Richards 43, H. E. Simon 43, Lieut. C. S. Benedict 47; total 223.

Manhattan Rifle and Revolver Association—Dr. George E. Cook 48, John Corrie 41, H. E. Evans 42, G. H. Hudson 47, C. F. Armstrong 43; total, 221.

Ohio State Rifle Association (second team)—Lieut. J. W. Smith 43, Lieut. E. B. Harter 44, Sergt. W. Z. Roll 45, Sergt. C. E. Orr 43, Corp. Wayne Frye 44; total, 219.

Third New Jersey—Sergt. A. H. Pfeil 44; Sergt. W. L. Hall 43, Sergt. J. A. Hobart 41, Corp. A. W. Muller 43, Capt. W. S. Price 46; total 217.

First New Jersey—Corp. Gabriel 40, Pvt. P. J. O'Hare 41, Pvt. H. Gensch 45, Lieut. Smith 46, Lieut. W. A. Tewes 44; total 216.

New Jersey State Rifle Association—Capt. A. H. Graff 43, Capt. W. B. Martin 42, Capt. F. Phillips 40, D. Young 42, J. L. Kuser 42; total 209.

Italian Shooting Association, New York—Ettone Minervini 42, C. De Felice 38, Edward De Lienna 41, Luigi Reali 45, Giuseppe Brandi 42; total 208.

Massachusetts Rifle Association—Thos. Anderton 41, T. K. Keller 42, R. S. Hale 37, G. T. Humphrey 45, H. M. Pope 43; total 208.

Squadron A—Sergt. G. De W. Williamson 42, Pvt. H. Bayard 33, Lieut. R. H. Sayre 43, Ord. Sergt. G. P. Herrick 40, Vet. Sergt. A. D. Shepard, Jr., 46; total 204.

Fourth New Jersey—Lieut. W. C. Gannon 45, Pvt. W. J. Wright 39, Sergt. R. G. Smith, Jr., 39, Sergt. F. J. Reiners, Jr., 40, G. A. Lidell 37; total 200.

Ohio State Rifle Association (third team)—Capt. C. S. McKenzie 41, Pvt. J. E. Murray 42, Corp. Ross Frye 40, Sergt. C. B. Chisholm 36, Lieut. Benjamin South 40; total 199.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association at Four-Mile House, Reading Road, Aug. 28. Conditions, 200yds., offhand, at the 25-ring target. Payne was declared champion for the day, with the good score of 228. Mr. Odell seems to be getting back into his old form again. He raised his record to-day by scoring 225, his former record being 224. He is well pleased with his new muzzle-loading Schoen barrel, and he declares it shoots just where he holds. The Topf trophies were awarded to the winners to-day, and consisted of four fine medals of artistic design, and are a credit to Mr. Dietrich, the maker of them. Our semi-annual 100-shot championship match takes place next shoot, and two weeks later the annual prize shoot takes place. Drube and Hofer tied for high score on the honor target, with 67 points each. A light wind blew all day, varying from 4 to 9 o'clock. The scores:

Payne	228	225	218	217	214	Drube	208	200	194	...
Odell	225	218	216	216	213	Freitag	200	195	193	190
Hofer	220	213	194	193	187	Hoffman	197	191	190	189
Bruns	215	206	205	203	196					

Presque Isle Rifle Club.

ERIE, Pa., Aug. 27.—The club had a fine day for the shoot to-day, and a visitor made the high score. He is Dr. A. C. Wheeler, of Le Boeuf, a former Erie man, and an old club member. Scores:

A C Wheeler.....	80	76	73	229	J Bacon	73	67	63	203
J Stidman	77	75	71	223	G C Rahm	59	59	59	177
S C Long	71	70	67	208	W W Jordan.....	58	56	56	169
J G Germann.....	79	65	61	205

Nov. 1-3.—St. Louis Mo.—World's Fair shoot; live birds and targets. Alec D. Mermod, Mgr., 620 Locust street.
*Western Pennsylvania Trapshooters' League tournaments. C. G. Grubb, Sec'y, Pittsburg.

DRIVERS AND TWISTERS.

The New Britain, Conn., Gun Club announces a tournament to be held on Sept. 17.

As a consequence of Sept. 5 being a holiday, we are forced to postpone publication of a number of trapshooting reports till next week.

The Secretary, Mr. G. A. Rober, writes us that the Manning, Ia., Gun Club will hold a two-day tournament for amateurs on Sept. 27-28. Some trophies and \$100 will be added.

At the Du Bois, Pa., Gun Club tournament, Sept. 1 and 2, the high averages of the two days, 375 targets, were as follows: J. A. R. Elliott, 363; W. H. Heer, 361; E. D. Fulford, 359; Mr. Millen, 349. Mr. Elliott made a run of 136 on the second day.

The five high averages for the Peters cup, in the competition of the Grand Forks, N. D., Gun Club, for the season of 1904, were as follows: W. M. Ferguson, 86; R. Frazee, 83; E. C. Cooper, 80; C. A. Hale, 76; Dell Baughman, 79. The Hunter Arms Co. medal was won by Harry McNichol, with an average of 75 per cent.

The Bristol, Conn., Gun Club tournament and sheep bake will be held on Sept. 21. Shooting will commence at 9:30. Targets, 1½ cent. There are twelve events on the programme, 10, 15 and 20 targets, a total of 190 targets, \$15.85 entrance. Guns and packages addressed to the Secretary, E. R. Burwell, will be delivered on the grounds free.

Mr. Geo. L. Carter, of Lincoln, Neb., writes us as follows: "I am requested to advise you that the Broken Bow, Neb., Gun Club will give a tournament on Sept. 29 and 30. There will be about \$200 added money, and the dates are those just preceding the opening of the prairie chicken shooting season in this State. I anticipate a splendid tournament. G. J. Campbell is president and J. A. Elliott is secretary."

Mr. A. A. Schoverling, 2 Murray street, New York, writes us as follows: "All-day target shoot of the Mullerite Gun Club, on grounds of Richmond Gun Club on Wednesday, Oct. 26, 10 A.M. Special 100-target event; 100 shells for this event, given away by management. Also all-day shoot of the Richmond Gun Club, Concord, S. I., on Wednesday, Sept. 28. Programmes later. Targets thrown from Tribune trap, run by electric motor. Special events."

Mr. Edward F. Markley, Secretary, writes us that "the Independent Gun Club team, ten men, of Easton, Pa., and the Allentown, Pa., Rod and Gun Club, will shoot a team match Saturday, Sept. 10 on the grounds of the latter club at the Duck Farm, near Allentown. As this is the second race of a series of three to be shot, great interest is being taken in it by the local shots. The Allentown team, having won the first match, the Independent team are making great efforts to put a team out that will bring home this race."

The programme of the Afro-American Trapshooters' League target handicap to be held at St. Louis, Mo., Sept. 22-23, enumerates a long list of merchandise prizes. The events are at 10 and 15 targets on the second day, with one, the Grand Afro-American Handicap, for the Hunter Arms Co. championship trophy, at 50 targets, \$11 entrance, optional sweepstakes, \$2.50. Several of the events have \$2.50 added money. Sept. 22 is practice day. Targets, 2 cents. Lunch and shells obtainable on the grounds. T. H. Cohron, secretary, Pleasant Hill, Mo.

BERNARD WATERS.

St. Paul Rod and Gun Club.

St. PAUL, Minn.—The club shoot held Aug. 27 was favored with good weather conditions. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	15	15	15	15	15	15	15	15	15	15

Springfield, Mass., Shooting Club.

SPRINGFIELD, Mass.—The Springfield Shooting Club held a practice shoot on their grounds, at Red House Crossing on the afternoon of Aug. 31. Only a few members turned out, although the day was perfect for shooting. The tie in the badge contest between Janser and Douglass will be shot off at the next practice shoot.

Scores in badge contest, 25 targets, distance handicap, follow: Janser, 16yds., 18; Douglass, 22yds, 18; Kites, 21yds., 15; Snow, 16yds., 15.

Scores in regular events, all shooting from 16yds., follow:									
Events:	1	2	3	4	5	6	7	8	Shot
Targets:	10	10	10	10	10	25	10	10	at. Broke.

MISFIRE.									

MISFIRE.

WESTERN TRAP.

Wyeth Trophy.

St. Joseph, Mo., Aug. 31.—As there was a match on here between Wm. Clayton, of Kansas City, and Mr. Gorman, of Topeka, Kans., for the Wyeth trophy, a one-day target shoot was pulled off at the same time.

Twenty of the Northwest Missouri and Northeast Kansas shooters came together, and a good shoot was held, which was remarkable for large and even scores. Each set the pace—and a hot one it was, 172 out of 175. Timberlake was at his best and scored 168; Dougherty 167, Arnhold 166, Cunningham 166, Scovill 166, Monton 166, Moine 163, Gorman 161, Zim 159, Klinehaus 156, Stout 150, Kleinbrodt 140, Montgomery 136.

The live bird race for the championship and the Wyeth trophy was at 100 birds. The first 25 showed both in very equal form, and one bird only escaped from each, making a tie. In the second 25 Clayton made another 24, but, as it proved here, Gorman was outlucked in the draw and he lost 5, 3 of them out of 4 in succession. As Clayton missed but one out of his last 50, there was no hope for Gorman, though he missed but 3 out of his half.

Reference to all the matches shot here for this trophy will disclose some wonderful scores by all who have shot on these grounds. While not seeking to take any of the laurels from the shooters, there is evidence sufficient to cause the thinking shooter to realize that there is something wrong with the birds. They are handicapped in some way—long confinement, dark, slow traps, lack of wind, or some cause for not being more deceptive.

In Other Places.

It is claimed that the biggest little shoot on earth will be that of the fourteenth annual tournament of the Clinton, Ont., Gun Club, to be held in October. There will be \$350 guaranteed.

Starting in with the fall months, as there is no chicken shooting in Indiana, similar to Northwestern States, the members of the gun clubs in the towns of Crawfordsville and Indianapolis met and tried for supremacy at the traps. Crawfordsville, widely known for many reasons, one of which being the home of Mayor Ed. Voris, a democrat in a republican town, won out with 20 targets to spare.

Elmer Shaner was in Kansas City first of the week. Reports have it that he was in conference with the Schmelzers, with the view of holding a big shoot on their grounds this fall. He and his estimable wife were in St. Louis last week resting from their labors connected with the Interstate shoot at Hot Springs, S. D. They paid a visit to the only World's Fair, and then hastened on to his other field of labor, Huntington, W. Va.

The Jamestown, N. D., sportsmen have organized a local game protective association, and have offered a reward of \$50 for information which will be sufficient to convict violators of the State game laws.

Algona, Wis., is getting into line late in the season, having just organized a new gun club with officers, viz.: President, Jas. Sheldauer; Secretary, W. H. Machia; Treasurer, Frank Bohman. A start is made with twenty-six members. The new men are desirous of becoming so well versed in the use of the shotgun as to be enabled to successfully compete with other clubs.

Secretary L. Meyers, of the Concordia, Kans., Club, reports that Shaner's outfit has arrived, and that on Sept. 28 and 29 there will be a gathering of prominent trapshooters for the Interstate tournament. Bear in mind this is Wm. Heer's town.

Nichols Park was opened at Jacksonville, Ill., last week. One of the prime features was a tournament, and it proved a strong drawing card. There were a number who shot at targets for the first time, and those are the men who can be relied upon to help build up a gun club at this place, the home of the once famous State.

At Springfield, Tenn., on Aug. 27, there was a team match between Ewell Gun Club and the Tracy City team. With eight men on the side and 100 targets each, Ewell won with 628 to 571.

There is much more trapshooting this season than for several years past in "old Missouri." Last week the shoot at Clark was well attended by many shooters from Huntsville, and these boys captured many prizes. Denny Holland, of Moberly, came off with the Hunter Arms Co. medal with 246 out of 275.

The Homer-Ogden Club shoot Thursday last resulted in a tie shoot, and was finally won by Postmaster McKinley, over Clark. The prize was a cup donated by the Hunters Arms Co.

The Bloomington, Ill., shooters received an invitation to shoot with the Mason City on Sept. 1. Mr. Carothers accepted, and went home with highest honors.

Saturday last there was a shoot at St. Cloud, Minn. Outside friends were guests, and some good scores were made.

The Hollenbeck Gun Co. has an offer out to locate in any town where stock is forthcoming. Mansfield, O., has been considered the most prominent bidder. Only \$30,000 is required.

The Lafayette, Ind., Gun Club was organized in 1885, and has given one or more tournaments annually; so the tournament on Sept. 8 and 9 will be the eighteenth. Thompson, Muller, Blistain and Livenguth have been the pushers for many years.

The mayor of Peoria has extended an invitation to the Hollenbeck Gun Co. to send a representative to that city to look over the ground, with a view of locating its factory there.

A movement has been started which, if carried out, will re-awaken interest in shooting at the traps in the city of Painesville, O. The gun club will come to life through a new organization, and new grounds will be secured and traps reset, and then target shooting may be indulged in with profit and pleasure.

The Third Ward Gun Club, of Two Rivers, Wis., has extended its life by filing corporation papers for a period of fifty years.

Joe Marks carried off the prizes for best marksman at the Highland Park shoot, Detroit, Mich., last week.

Little Rock, Ark., is active in the shooting line. Tuesday has been set apart as ladies' day, and the members can invite their best girls to shoot at that time. All desiring to become members should correspond with the secretary. There will be a big shoot held there in September or October, open to adjoining States.

Trapshooting is on the increase in California. Last week the Millwood Gun Club held their meet and smashed up many of the clay saucers.

The Fergus Falls shooters held a shoot last week in August as a "good-by," as ducks and chickens are now too enticing.

A late organization of trapshooters is that of the Gulf Coast Trapshooters' and Game Protective Association, which has been organized by clubs from the cities of New Orleans, Biloxi, Miss.; Mobile, Ala.; Meridian, Lowell and Hattiesburg, Miss. Tom Chamberline, of Mobile, President; T. O. Goodbrod, of Mobile, Secretary; Maurice Kaufman, of New Orleans, Tournament Manager. The objects are to foster trapshooting and protect fish and game.

The Lima, Ill., Gun Club met last Saturday. The Gold medal was handed to Dr. Worley, on his score of 19 out of 20 targets.

In casting up the scores made during 1904 by the members of the Waco, Tex., Club, it was found that Harvey Merrill won the medal for highest average. J. A. Dryden came next.

The Owosso, Mich., Gun Club has held the required number of contests to decide the prizes for 1904. The silver cup went to J. Roosevear; W. S. Beebe won pair of boots; Chas. Ching, the gun case. Owosso is quite a trapshooting center, and matches will be held every Thursday until October.

There is a new club, the Industry Gun Club, at Muncie, Ind.

It would not seem as though the trapshooting season should close in Texas with the coming of September; yet the National Club, of Laredo, report holding the last shoot of the season last week, which resulted in Mr. Fly holding the Alexander medal and Jackson the booby prize.

Kenosha and Waukegan, Ill., gun club members have been exchanging hospitalities, and last week the Kenosha boys did the entertaining, and did it well.

Much interest was centered in the result of the match held Labor Day, at Taylor, Tex., as there was a team match between Austin and Taylor at 100 targets per man.

Mrs. Johnson won honors at the last shoot of the Minneapolis, Minn., Gun Club tournament.

T. E. Hubby has been traveling in the territory of New Mexico. He was last heard from on his return to El Paso, from which point he went out to Fort Bliss to shoot with army officers.

The Crawfordsville, Ind., shooters beat the Lebanon boys easily, as 211 is to 176 in their last match. Another is scheduled for three weeks.

Should like to hear from Mr. Shaw as to the Kansas City shoot.

The member of the Indianapolis Gun Club making best score on Labor Day was awarded a sole leather gun-case. Other prizes were awarded.

The Elwood, Ind., Gun Club and the New Paris Gun Club shot a match at Elwood on Labor Day.

Out in South Dakota there was a club shoot held in which the Vermillion proved too strong for the Spirit Mound boys. Other clubs, viz.: Fairview and Meckling, are holding a contest for a fine Winchester shotgun.

Renovo Tournament.

RENOVO, Pa.—The second annual tournament of the Recreation Gun Club was held on Aug. 23 and 24. The trade representatives in attendance were Messrs. J. A. R. Elliott, Frank E. Butler, E. D. Fulford, Luther Squier and J. R. Hull. In the high average of the two days, Mr. Elliott was first, Mr. Fulford second. Of the amateurs, Mr. Clyde Dechant was high for the two days.

The Du Bois five-man team won the loving cup with a score of 171 out of a possible 200.

Aug. 23, First Day.

The team contest, four men, 50 targets, had scores as follows: Du Bois Team—Quinn 43, Guinzburg 47, Sullivan 41, Quinn 40; total 171.

Renovo Team—Kepler 37, C. Dechant 47, J. Smith 28, Sawyer 43; total 155.

Williamsport Team—Everett 43, Dimick 42, Flock 41, Johnston 41; total 167.

Ewell Gun Club.

CARTER'S CREEK, Tenn., Aug. 30.—While reading about trapshooting all over the country, it may be of interest to some to know that away down in this good section of middle Tennessee we are not entirely out of the game.

The Ewell Gun Club was organized about three years ago, and now has a membership of twenty-five. On July 4, 1903, we gave our first all-day public shoot, and on that occasion had sixty-five shooters and five hundred visitors present. On July 4, 1904, we gave our next shoot, with seventy-two shooters and eight hundred

visitors, including many ladies, making the shoot in every way a great success.

Recently, after some correspondence with the gun club at Tracy City, this State, a team match was arranged; eight men on a side, 100 shots, 15 the man, the mountain boys to make us a visit and shoot the match on our grounds. The down train on the morning of Aug. 25 brought the visitors in. They were strangers to a man, but proved as fine a set of boys as one would care to meet. Their club was only recently organized, and they shoot wonderfully well for their practice. The match was shot in the forenoon, and some practice shooting done after dinner. The scores for the match are as follows:

Tracy City Team	Ewell Gun Club
Targets:	Targets:
Dr Hayes	25 25 25 25
T J King	21 19 18 22
W H Foster	17 19 20 18
C E Werner	18 16 18 18

BABB.

Montreal Gun Club.

MONTREAL, Aug. 29.—Following are the scores of the winners at the regular practice shoot of the Montreal Gun Club at their grounds, Saturday, the 17th. Mr. N. P. Leach was a visitor and took a hand in with the boys. The conditions were bad for good scores—bad light, worse background, and the wind blowing almost a gale, which made McDuff's (W. T. Lyne) average of over 96 per cent. a remarkable one. Five expert traps were used:

Events:	1	2	3	4	5	6	7	8	Shot
Targets:	20	10	10	15	10	10	5	5	at. Broke. Av.
McDuff	20	8	10	15	10	10	4	...	80 77 .962
Leach	16	6	12	60 44 .733
Redmond	16	10	...	12	9	9	5	4	75 42 .866
Kearney	14
Canalish	5	5

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Aug. 31.—The victorious contestant at the shoot of the Rochester Rod and Gun Club to-day was Mr. Harry M. Stewart, who scored 24 out of 25 from scratch. But others with handicaps scored the full 25 in the contest for the Hunter Arms Co. trophy.

Norton, Donovan, Devine and Borst tied for the point. The scores follow:

Score. H'cap. Total.	Score. H'cap. Total.
Borst	22 8 30
Devine	18 10 28
Donovan	20 7 27
Norton	22 4 26
Stewart	24 0 24
Clark	22 2 24
Weller	21 3 24
Adkin	18 2 20
Coughlin	13 7 20
Rickman	14 5 19

SIDE LIGHTS OF TRADE.

At the fall tournament of the Du Bois, Pa., Gun Club, Sept. 1 and 2, J. A. R. Elliott won the professional general average, and Mr. Millen, of Du Bois, Pa., won the amateur general average. They used Winchester factory loaded shells.

PUBLISHERS' DEPARTMENT.

World's Fair Scenic Route.

BECAUSE of its magnificent mountain, river and cañon scenery, its famous battlefields, and points of interest, and because of its superior equipment and physical condition, providing all the comforts and safeguards of twentieth century travel, the Chesapeake & Ohio is unquestionably the most attractive route between the Atlantic Seaboard and the Mississippi Valley. World's Fair and through tickets by this route allow stop-over at Virginia Hot Springs and Greenbrier White Sulphur, the two most fashionable and famous mountain resorts in the country. Solid trains Washington to St. Louis, with New York connection via Pennsylvania Railroad.—Adv.

Proctor's.

Another instance of Mr. Proctor's enterprise was shown recently in the presentation at the Fifth Avenue Theatre of "The Climbers," the play which, more than any other, was responsible for the great vogue of Clyde Fitch, its author, when originally produced at the Bijou Theatre by Amelia Bingham. It was not intended that this play should be diverted to stock company use for two seasons, it being the intention to present it by special company during that time. Mr. Proctor secured its use for a single week, and it will be done at the Fifth Avenue Theatre during the week of Aug. 29, after which it will revert to the combination, which will present it during its road tour. For this single week's engagement Mr. Proctor has prepared special scenery from the original models, and in every particular the production is as carefully made as though it were intended for a run. That is part of the Proctor plan. Whatever is done is done thoroughly and as carefully as though the production of a week was the offering of a season. In many instances of late, authors have declared that the revivals of their plays for a single week have exceeded the original productions in point of merit.

BAKER GUNS SHOOT HARD and are SAFE.

They are noted for this wherever known, and that is almost everywhere. Ask the man who owns one. Fine Trap and Medium Field Grades, \$25.00 to \$200.00 and up. Inquire of your dealer or send for full descriptions.

FOREST AND STREAM

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1904, BY FOREST AND STREAM PUBLISHING CO.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, SATURDAY, SEPTEMBER 17, 1904.

VOL. LXIII.—No. 12.
No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

THE FOREST RESERVES.

PERHAPS the most important economic problem of the western half of the continent to-day is that of irrigation. For twenty-five or thirty years settlers have been leading the water out of the streams and moistening their garden patches or fields, and for hundreds of years before that the Indians of the Southwest practiced the same irrigation, supporting themselves by agriculture. As the West settled up, and more and more people took water from the streams and spread it over their fields, it became evident that under natural conditions there was not water enough to go around—not enough to support a considerable population. So it is that within the last two or three years the Government has been giving more and more attention to this subject, and plans have been made and are being carried out for the storage of waters by the nation on a colossal scale. Years and years ago it was pointed out that many of the streams running from the eastern flanks of the Rocky Mountains often went dry in late summer, because all the water had been taken from them for this purpose, and now irrigation by private persons on streams running from the west flanks of the mountains has gone far enough to show what will happen to the rivers in many cases unless their waters are stored and controlled.

At the foundation of the whole question of water supply and water storage stands the great question of forest preservation, or as we have spread out before us in the western country, the Forest Reserve system. The growth, the prosperity, nay, even the continued habitability of the whole arid region of the West, depends on the management of the Forest Reserves. The farmer cannot grow his crops, nor the cattleman range his stock, nor the miner run his mill without water—without a supply of water on which he can depend throughout the season. This is gradually coming to be understood, though it seems to have taken people a long time to comprehend it.

With water, agriculture and other industries can flourish. The splendid crops of many portions of the further west testify what water will produce from the most arid soil, and even the once hopeless Idaho deserts, with their crops of sage brush and greasewood, now produce splendid crops of sugar beets, which in their turn call for factories and a constantly growing population. The importance of these facts is gradually coming to be recognized by farmers, miners, and by western people generally, but too often selfishness or stupidity interferes with the proper preservation of the forests.

The three great dangers to which the forests are exposed are fire, the lumbermen, and the grazing of stock. In many parts of the West the present season has been one of terrible drouth, and in consequence of destructive fires; the lumberman, with his portable saw mill, we have always with us, and the sheep and the cattlemen are always anxious to drive their herds into the Reserves.

It is not long since we published bitter complaints from residents of Wyoming that the domestic stock was not allowed on the Forest Reserves, and that much of its grass was therefore going to waste. Recently we have learned that a tract of country in the Teton Forest Reserve has been badly injured by cattle. Along parts of Pacific Creek the grass has been eaten off as completely as if sheep had grazed over it, and the valley is full of cattle for a long distance. In August the whole country looked and smelled like a cattle yard, much of the ground being worn so bare and being so cut up by hoofs that considerable soil is certain to be washed away by the first heavy rain. These cattle are reported to belong to a man down at the lower end of Jackson's Hole, who has obtained a permit to range some 400 head of cattle up on Pacific Creek for this season.

It may very possibly be that there are portions of tim-

ber reserves where cattle may be permitted without doing much harm, but the best authorities, we believe, are of opinion that cattle should be rigidly excluded from the Forest Reserves, certainly from any Reserves where young timber is growing. It seems especially unfortunate that these cattle should have been turned into the heart of what is now the finest game preserve in the West.

In many portions of the Teton Forest Reserve the game conditions are extremely gratifying. Elk are abundant, and perhaps nowhere outside of the Park can one see so many. A party last month riding upon the ridge running west from Two Ocean Pass, just north of Buffalo Fork of Snake River, passed within fifty yards of a band of cows and calves which were estimated at from 400 to 500. Deer and bear appear also to be numerous. The country at the head of Buffalo Fork is full of elk, and there are plenty of beautiful meadows with fine grass where they range in winter. But there are no elk and no game of any kind on Pacific Creek where these cattle range. The game laws are fairly well enforced, and the feeling of the bonafide settlers and guides has recently changed greatly in favor of these laws.

Of course we all dislike to see the game crowded out by domestic stock; but this perhaps is a sentimental view that would not appeal to the utilitarian. What should appeal to everyone, however, is the fact that the introduction of cattle means the destruction of the seedling trees, the cutting up of the soil and its washing away by heavy rains, and is thus the beginning of a process of denudation in the mountains, the full effects of which are to be seen in the southern Rockies, where the mountain tops are as dry and as desert as the valleys below.

MARTIN J. HEADE.

ANOTHER familiar and prized name has been taken from the roll of FOREST AND STREAM's contributors. Martin J. Heade, the Didymus of these columns, passed away at his home in St. Augustine, Fla., on September 4. The sense of personal loss is keenly felt, for Mr. Heade was one who from a casual correspondent had on close acquaintance come to be a personal friend, regarded with affection and esteem. His was a character that commanded respect, a personality that endeared.

Mr. Heade was born in 1819, at Lumberville, Pa., near the home of Bayard Taylor. His father, a prosperous farmer, encouraged the boy's taste for art, and sent him while still in his teens to Italy for study. He passed two years in Rome, and spent some time in England and France. Returning to America he had studios in Providence, Boston, and New York, and afterwards made extended visits to Central and South America. His later years were passed in St. Augustine, where his studio in the Ponce de Leon was well known to winter visitors.

Mr. Heade began his artistic career as a portrait painter; but, writes Tuckerman, in the "Book of Artists," "the love of travel was strong within him, and few of our artists have roved more about the world." The tropics, with their gorgeous vegetation, appealed to him most strongly, and his name came to be identified with tropical landscapes. In this field he achieved fame; the Emperor of Brazil was so pleased with his paintings that he bestowed a decoration upon the artist. A painting rich with South American vegetation, and singularly true to nature in atmosphere and general effect, was the subject of unstinted praise by Agazzi and other explorers of the Amazon. While in South America he made a fine collection of birds and butterflies, many of which afterward were transferred to canvas in elaborate and authentic studies. He was no less successful in painting the quieter and more familiar scenes of the New England coast country—Point Judith and the marsh lands with their hay-ricks; and again he turned with like success to studies of still-life, putting on canvas the Florida magnolia and the Cherokee rose with a vraisemblance so perfect as sometimes to be astonishing in the illusion.

Nor did his skill diminish with the advance of age. The last year of life found him at the easel painting landscapes characterized by the same wonderful atmospheric effects that had won admiration for his earlier work, and fixing on the abiding canvas the evanescent floral beauties of a Florida springtime. A picture sweet in the memory of those who saw it was that of the artist in his St. Augustine home, thus painting northern marsh land and

southern flower, and joying in the possession of faculties unimpaired and a hand which had not lost its cunning. Pleasing, too, was the picture of the artist and his friends, the hummingbirds, whose confidence year after year he won in such degree that they came fearlessly to perch on his hand and drink the sweetened water he kept on hand for them. Other wild birds on the grounds shared in some measure the same confidence. The last contribution Mr. Heade sent, published in our issue of August 6, recorded his experiences with the hummingbirds this year. From youth Mr. Heade had a decided taste for field sports, and in his day was a noted shot. He was an intelligent and sympathetic student of natural history. He was a frequent contributor to the press; the pen-name "Didymus" has been looked for by readers of this journal for a quarter century.

THE LESSON OF SHAM BATTLE.

THE recent sham battle, held on the historic ground where some decades ago shams were at a risky discount, gravely matured into sham victory and sham defeat. The sham conflict is said to have resulted in many benefits to the art of war. The daily press of high and low degree—than which there is no higher authority extant on all the refined technique of great military fights without fighting—generously proclaims that the recent conflict between the Blues and the Browns has taught many valuable war lessons in strategics.

Who can dispute that word of wisdom? Strategics! Comprehensive in its import, convincing in its acoustic properties, all of war without war. For the man of peace who is learned in the ways of war, the word strategics is a safe word at all times. It enables the peaceful war critic to use his whole war curriculum en masse. The average citizen will never know precisely the particular details of the lessons which the strategics embody, if indeed he would not be satisfied to consider them as being too profoundly occult for his comprehension.

The daily press, however, seems to have missed the distressing counterblast of doubt consequent to the doubtful compliment concerning strategics that our redoubtable Colonels and Captains and other mighty chieftains higher, lower, and intermediate, who are trained professionally and nicely in the art of war, should learn so much that is valuable in strategics from the action of a sham battle seems incredible. One's prejudgment would have been that the chieftains had a prior knowledge of war strategy according to their prior training and the requirements of their military profession. To admit that our accomplished military officers learned valuable lessons in such manner, unavoidably imputes that, though warriors, they knew not war.

Nevertheless, the sham battle truly provided a material object lesson concerning the strategics of peace. It conclusively proved that men, taken from their every-day vocations and hurried into a sham battle, were physically unfit for such arduous effort.

The real history of the sham struggle is not a history of lessons in war. It is a lesson in how a commissary department should be managed, and how men should be prepared by seasoning exercise for tasks which require strength, quickness, and endurance.

The history of the sham battle consists mostly in a recountal of the hardships and sufferings imposed on men physically unprepared for the strenuous activity of a military campaign. Thousands suffered from exhaustion consequent to over-exertion, to insufficient food, water, and sleep. A press dispatch of September 10 states:

Corps Headquarters, Gainesville, Va., Sept. 10.—One-half of the militiamen who participated in the four days of maneuvering were too badly used up to participate in the review at Wellington today. The review closed the annual army maneuvers for the Atlantic Division, the reviewing officer being Lieut.-Gen. Chaffee. The review was witnessed by a large number of people, who had been attracted to the zone of the war game.

The matter of physical preparation, as it concerns the people, seems to be viewed as a negligible quantity by the people themselves. They will recklessly and thoughtlessly engage in difficult tasks, such as mountain climbing, big-game hunting, etc., without proper physical preparatory training. And yet no one of them would for a moment seriously entertain the idea that a horse fresh from the farm was in proper condition to engage in a race or even do active road work which required speed, endurance, and power.

THE SPORTSMAN TOURIST

A Story of the Second Bull Run.

Editor *Forest and Stream*:

Two armies made up of the troops of the regular army are about to hold a mimic war over exactly the same ground on which two real armies held a real one forty-two years ago this month. One of these armies will be commanded by General Bell, the other one by General Fred. D. Grant.

By the way, in passing, General Grant is an old acquaintance of mine. He and I both at one time belonged to the same troop, F of the Fourth Cavalry. He was sent to it when he left West Point as its second lieutenant. As soon as he came to us he wanted very much to hunt buffalo. We took him out and found him all the buffalo he wanted, and left a lot of them just where we found them that neither he or we wanted. But that has nothing to do with this story.

In September, 1862, Generals Pope and Lee faced each other on the same ground that this mimic battle is to be fought over, and fought a real battle there that lasted part of three days. This was the second battle of Bull Run, or Manassas, as it is generally called.

Late in the afternoon of the third day, Stonewall Jackson undertook to turn our left, and came within an inch of doing it, too; but Sykes' regulars and our division—the Pennsylvania Reserve, "Governor Curtin's Regulars"—were sent to the left on the double quick. Then we charged, and Jackson quit for supper. It was supper time, anyhow. Had Jackson succeeded in what he had tried to do, this second Bull Run would have been a repetition of the first. He would have driven us into Washington again. This is a matter of history.

When we made that charge, I went a little too far, and not getting back quick enough, stayed there. They took me prisoner. I and about a dozen others who had been taken in at the same time that I was, were sent to the rear under a guard of cavalry with a sergeant in charge of it. We were marched back for a mile or more; then came to a creek that had steep banks thickly covered with bushes on our side of it. The cavalry tried to cross it in several places, and finding that they could not, at last the sergeant told us to cross here and wait for him; he would cross up above, he said, where his artillery had crossed in coming in here.

I crossed, but did not wait for him. I did not want his escort any longer. Just as I had forced my way through the bushes after crossing, I found a man close to my elbow; he and I were the only two here; the rest had crossed up above us.

"Let us get out of this," I said to him; "I don't want to go to Richmond."

He did not either; but he did not know which way to go, he said.

"I do," I told him. "Come on." After looking up the creek to see if that cavalry had crossed yet, and not seeing them, we started off down the creek on a run, but keeping in close to the brush. I had not gone far before I was halted. "Halt there, you Yanks, and come back here!"

"Go to hades and stay there!" I answered, but kept on running.

A whole volley was fired at us, but none of the shots came near.

"Get across the creek," I told my partner, "they cannot cross here after us." And crowding in through these bushes again we got across to the side we had started from, then kept on down the creek, still close to it. I did not want to get out into the open ground. There were several parties of Confederate troops in sight, but all some distance off yet. There was danger of the cavalry riding down on the other side and firing through the bushes at us; but they would have to fire by guess; they could not see us, so I took the lesser risk. We kept on down the creek for over a mile, then I called a halt. It was getting dark, but the moon would soon be up. "What kind of a scout are you?" I asked my partner. He said he had never done any scouting.

"Then stop here while I do some now. The Confeds must have a picket out here now somewhere; I want to find just where. We don't want to run on top of it."

I kept on across, going more carefully than we had been going. That picket line should be close, I thought; but after going a few hundred yards further and not seeing any signs of it, I stopped and began to examine the country as well as the light would permit. Off to my left, and in the rear of where I was now, was what I took to be a low hill, and I thought I saw houses on it. Stooping down I looked along the sky-line, and now saw that there were several mounted men on the hill; but they seemed to be at rest—an outpost, probably. I had got through their lines without knowing it.

I had told my partner when leaving him that if I did not find the picket I would whistle, then he could come on; but I was afraid to do any whistling here; those men might hear me. So I went all the way back, and both of us started on again, and went nearly another mile, still close to the creek. Then I stopped again. The creek was now running south; if I followed it I might get inside of their lines again before I knew it; so I struck off to my left, leaving the creek behind. I wanted to get out on the battlefield and find out just where I was. Less than another mile brought us out on the field at about the place we had made that charge a few hours ago. Neither of us had a gun; they had been taken from us; but there were plenty of them here. I picked up a

Springfield rifle and its cartridge-box which some wounded man had dropped, and loaded the rifle, and felt safer. Then going on I soon came to another gun that I wanted more than the Springfield. It was a Sharps rifle that had been dropped by a man out of our brigade; and now I knew just where I was. These Sharps were carried by the "Bucktails," or Kane Rifles, who were our sharpshooters. I took the Sharps and gave my partner the Springfield. I turned this rifle in afterwards to the company that it belonged to; they hated to lose one of these guns.

Keeping on now, I soon met our stretcher bearers, who were looking for the wounded, and an officer with them told me just where to look for my regiment, which had been sent out on picket. I had been going straight away from it, but I turned in the right direction and soon was halted with the challenge of "Who comes there?"

"Friend without the countersign," I answered.

"What regiment do you belong to?"

"The Eighth Reserve."

"Well, it is right here. Come on in."

I walked in and found the whole regiment lying in line just behind the pickets, and hunted up the colors; our company was one of the two color companies.

"Where have you been all night?" asked the lieutenant in command.

"Over across the line. I had an invitation to take supper with Stonewall Jackson, but his supper was not ready when I got there, and so I did not wait."

"Well, I have you marked killed, Johnny."

"Then mark it off. I am not killed—only half scared to death this time. But they sent enough shots at me to-night to kill half a dozen men had they been hits."

My partner was still with me. I had him lie down there until next morning, then he hunted up his own Iowa regiment.

As it afterward turned out, I had all this running for nothing. Had I stayed where I was, I would have been let walk home next day; for while we were on the retreat to Washington, and just below Fairfax Court House, the prisoners who had been taken when I was joined us. They had been paroled on the field. One of them told me that the sergeant had reported that two of us had tried to escape, but that he had shot us both.

I was not in his company long enough to get his name; but if he is still living and should see this, it may serve to inform him that it was the moon he shot, and not us.

In the summer of 1887 I attended the G. A. R. encampment at St. Louis, and stayed there a week seeing the city, though I had seen it often before, and one afternoon while walking down Broadway, a man wearing the Grand Army button ran up to me and seizing my hand called me by name. I did not know him from a crow, and said so.

"Well," he said, laughing, "just go down there a few hundred yards and see if you can see anything of that Reb picket line, then give a whistle and I'll come on."

I knew now who he was, and hunting up a beer saloon (they are not hard to find in St. Louis), we sat in there for the next hour comparing notes.

He was a farmer out near Cedar Bluff, Iowa, and asked me to go home with him and stop all winter. I did not go. Had I taken advantage of all these invitations I have been given at one time or another, I might have put in half of my time in visiting.

I once rode my horse about 150 miles in twenty-two hours to hunt up a doctor to cut off a cowboy's arm after he had tried to blow it off with a shotgun, dragging the gun by the muzzle. When he was cured and ready to go home, he wanted me to go with him to the Ozark Mountains in Arkansas, but I could not get away. Again, an old planter down in Texas wanted me to stop a year with him; he could not get his negroes to work unless I was around; I had them scared half to death, telling them I would put them in jail down in town. I was acting deputy sheriff then.

CABIA BLANCO.

An Ideal Vacation.

THERE were four of us. We were chums, and we had arranged to spend our vacation on Charleston Lake, a picturesque little body of water nestling among the hills, about twenty miles beyond the Canadian border.

One of our number was private secretary for a Wall street banker; another was an officer in an electric company, a third was a prominent young lawyer, the fourth (the writer) a reporter on the staff of a daily paper. Uncle Russell, Edison, Judge, and Greeley, respectively, were the pseudonyms which we had long familiarly applied to ourselves. We agreed that we would recognize none other during our outing.

The Judge had been at Charleston Lake, and he became so eloquent over its attractions that we readily adopted his suggestion to spend two weeks camping upon its islands or along its rock-bound shore.

Our first view of the majestic St. Lawrence as we stepped from the train at Morristown, a sleepy little village, was impressive. We had read of its vastness, but we had been unwilling to admit that it could possibly surpass our noble Hudson, either in extent or grandeur. In a few moments the superiority of the latter had faded away, like a fog before a gale. We looked across the wide expanse of deep blue to the Canadian shore rising green and indistinct in the distance; we turned our gaze

in a southwesterly direction, and the horizon of our vision was again shut off by a vista of foliage.

"Is there a bend in the river just above here?" I inquired of a man at work upon the wharf.

"Nope," he indifferently replied, as he stooped to continue his work. "Thousand Islands," he grunted, in evident disgust because of my ignorance.

"The Armstrong," Edison observed, as we stepped aboard the ferry. It was a combination car, freight, cattle, and passenger steamer.

"See that boy over there?" It was Uncle Russell who spoke. "I overheard him ask his father if this is the boat that went to the bottom of the river a few years ago."

We were interested. We looked over the guard rail at the blue water surging around the vessel's hull as she plowed her way toward Brockville on the Canadian shore.

"We would drown in there as quickly as in the restless, dirty brown water at Coney," Edison remarked.

"Why don't you inquire about the diving ability of this boat, Greeley?" observed the Judge, turning to me.

"Hi, there, Cap!" I called to the only member of the crew in sight. "It has been reported that this boat made a peculiar and unexpected trip to the bottom of the river a few years ago."

"Humph!" the sailor replied. "She went down in one hundred feet of water, if that's what you want to know."

"What caused her to sink?" the Judge asked, before I could frame a question.

"Dunno," he replied. "Never was explained. She just sank about two hundred feet from Brockville dock. When raised and pumped out, her hull was sound and port-holes closed."

"I hope she will not take another such freak while we are on board," Uncle Russell nervously observed.

As we crossed the gang-plank, a dirty, ragged, uncouth tramp attracted our attention. He carried a red carpet bag, faded and much worn.

"Go on," the Custom House officer said to him, with a wave of his arm. Possibly he was afraid of vermin. The tramp had every appearance of being very much alive. When he had shuffled himself a few yards away, the official apparently relented. At least he called him to return. The tramp complied, with evident reluctance. When the carpet bag was opened we were unable to restrain an exclamation of astonishment. It was filled with jewelry. He was a professional smuggler in disguise.

Our way was by train to Athens, the nearest station to our vacation Mecca. We saw a very antiquated looking engine and train of two cars when we arrived at the station. If the number of letters upon a locomotive tender would constitute an important railway line, then the road over which we were about to travel would be one of the most important on the continent. "B. W. & S. S. M. R. R.," we read in unison. A boy was seated on the platform near-by munching peanuts. "What do those letters stand for?" Uncle Russell asked him.

"Brockville, Westport, and Seldom See Money," the youth promptly replied.

Later on we learned the name of the road from our tickets. The engine was old and weatherbeaten; the sheet iron covering over the boiler was disfigured with numerous indentations, which bore silent testimony to the battering and exposure it had endured during its many years of service. The smoke-stack was crowned by a mammoth hood about four feet in diameter. The tender contained about two cords of wood. No coal could be seen. Our trip was eventful. The road abounded in curves and other eccentricities. Edison sarcastically remarked:

"Its builders avoided every big tree that stood in the way. It was cheaper to build around them than to cut them down."

Ballast was as scarce as snow in August on a Nevada desert. We were becoming accustomed to the rolling and lurching of the car, when the train suddenly stopped. Pushing our heads through the open windows, we saw the train crew, assisted by some of the passengers, rapidly replenishing the supply of fuel from a wood-pile. We had got comfortably settled again, when a screech of the whistle, followed by a grinding of the brakes, convinced us something had gone wrong. We hastened to the platform. "What's the matter, Cap?" I asked the brakeman. "Rails spread?" "Hot box?" "Cow on the track?" "Wash out?" the others asked simultaneously.

The brakeman made no reply. We followed him down the steps to the ground. When he turned his eyes to the rear of the train we did likewise. We saw a man running away from the train as though a band of Apache Indians were close upon his trail.

"Somebody run over?" I inquired.

"Naw," a passenger said, "his hat blew off."

We looked at each other in silent amazement. Very accommodating road, we thought.

"Is he the President of this country or the owner of the road?" the Judge asked the passenger, who was evidently willing to be communicative.

"Why, he is the editor of the Athen's Reporter," the passenger responded. "Have you never heard of Bethnel Loverin? They stopped the train last week at a crossing a little further out here while the newsboy sold a cigar to a farmer who was hoeing corn in a field near-by."

We were obliged to remain in Athens over night, or hire a wagon to transfer us to our destination. We chose the former. There had been an election that day, and in

the evening the victors celebrated. We mingled with the men, old and young, who surrounded a huge bonfire. We had just reached our hotel, when our attention was attracted by a cry of distress coming from some distance down the street. Arriving upon the scene, we discovered a farmer had overturned his wagon into a deep ditch, and he was underneath the debris. A man with a voice that penetrated the still atmosphere of the night like the bellowing of an angry bull, and who was frequently called Mort, appeared to be superintending the work of extricating the imprisoned person. Aided by the dim light of a lantern, he worked rapidly and with vigor, talking incessantly as he proceeded.

"Here!" he shouted, "Get hold of this wheel. You fellows take that wheel there. When I give the word, all lift together."

A delicate looking individual—Doctor, the men called him—was nervously moving in and out among those who had gathered at intervals, stating what, in his opinion, should be done. Mort suddenly turned on him.

"Shut up, you darn fool!" he shouted. "What do you know about getting a man out from under a wagon? You may be able to saw his leg off, or give him some dough pills, but you are in the way here."

The Doctor subsided.

In a few minutes the wagon was removed and the man lifted from the ditch. A sack of flour which he was taking home had burst, and he was covered with it. When it was ascertained that he was unhurt and drunk, Mort's exasperation knew no bounds.

"You drunken loafer!" he shouted, "I got out of bed when I heard you call for help, and I have worked here nearly half an hour to rescue you. You might have lain in the ditch until doom's day, had I known you were drunk!"

In his utter disgust he shoved the staggering man into the ditch, picked up his lantern, and started homeward, still muttering in his anger.

From the brow of a slight elevation we obtained our first view of Charleston. The highway ran down a gradual incline to the water's edge. Little islets studded the lake. Some were clothed with a luxuriant growth of evergreen, ash, and willow; others contained dark gray granite rocks, with intermittent patches of moss clinging closely to the crevices, contrasting strangely with the rich green of the shrubbery, while here and there a huge boulder, scoured by innumerable storms, and bleached by the rays of a scorching sun for centuries, barren of any vestige of verdure, glistened in the distance above the rippling water, white and solitary. We were in ecstasies over the picture presented.

We had leased for two weeks an island cottage, and we quickly arranged for the use of a boat. We had provided an ample stock of miscellaneous provisions, and were well furnished with fishing tackle and bait. We had two Winchesters and an abundance of ammunition. We were at first inclined to grumble because of the meagre furnishings of our cottage. The rusted stove, rude chairs, rustic table, and sleeping bunks filled with boughs of evergreen, were uninviting, accustomed as we were to city comforts. Later we congratulated ourselves because we had no furniture to keep in order or utensils other than our scanty outfits to clean.

Profitable from a healthful standpoint, and supremely enjoyable our outing proved to be. Our days from early dawn until eventide were fully occupied rowing, fishing, bathing, shooting, or in exploring some of nature's marvelous and beautiful creations. When one became monotonous, we substituted another. We obtained many beautiful specimens of fish, catching them in the quiet of secluded bays and inlets with hook and line. When wearied of this pastime, trawls were brought forth and put into use. Bass and pike weighing from two to six pounds were secured. Some we ate; the surplus we gave to picnic parties and to farmers living upon the lake shore. We wasted much ammunition endeavoring to shoot a loon, finally being successful. We also shot a magnificent blue crane, which measured, with wings extended, over four feet from tip to tip. Both birds were expressed to New York to be mounted.

Upon a clear day we ascended Blue Mountain, which rises heavenward a thousand feet or more. Its sides are interspersed with crags and deep ravines, and covered in many places with a thick growth of shrubs and trees. Fallen timber which strewed the ground made our ascent more difficult. It was the blueberry season, and the bushes were heavily laden with that fruit. Upon our return we quickly filled the dishes which we had. The heat was oppressive, but the landscape view which we obtained from the summit amply repaid us for our exertions.

Nestling at our feet the lake appeared a miniature pond, the islands little patches of gray or green upon its surface of deep blue. Twenty-five miles away to the east, with the aid of a glass, we could see the church spires of Brockville gleaming in the sun, and about the same distance southward those of Gananoque. We followed the sinuous course of the lake's outlet through the hills and valleys as it wound its way like a thread of silver toward the majestic St. Lawrence. Many villages and farm dwellings came within the range of our vision. They appeared like little block buildings such as children amuse themselves with. The beauty of the scene will never be obliterated from our memory.

Near the end of the second week, our supply of condensed milk became exhausted. Edison suggested we buy from a farmer, whose home was on the shore near-by. We had not shaved since we left New York, and we were an uncouth, sunburned looking group when we appeared in the farm-yard. The farmer was milking, and did not discontinue his work when we approached. He looked us over carefully, I observed, and, I imagined, with some suspicion.

"We are not tramps," I said to him, "although in appearance we may be more disreputable than the average hobo. We are camping on the lake yonder. We have no milk. Will you sell us some?"

As he peered at us from underneath his shaggy eyebrows, I detected the glimmer of a twinkle. "I have ten cows to milk," he said. "If you'll each milk one, I'll be gummed if I'll not give yer some milk."

Milking cows was new to us. It seemed simple. We believed we were competent to do the work suggested, and accepted his proposition.

"Which one shall I milk?" I asked, as with pail and stool in hand I stood before him.

"Try that one over there," he said, pointing to a spotted cow lazily chewing her cud in a corner of the yard. Her left side was toward me. I placed the stool on the ground and sat down, putting the pail between my feet. She stepped about a yard away from me. "Whoa there!" I exclaimed.

"You're not driving a hoss," the farmer called to me. "Never say 'Whoa' to a cow. Say 'So, Boss.'"

I shifted my stool and again got ready to begin operations. I reached out my hand. Bang! I saw a hoof shoot out and backward. My pail, badly indented, rested against the fence about ten feet away. I was upon my back sprawling upon the ground. The cow was running wildly around the yard.

"You tarnation fool!" the old man shouted, "don't yer know better than to try to milk a cow from the left side?"

I acknowledged my ignorance. Why it is necessary to sit down on the right side, I do not know; I can vouch, however, that it is very essential. It was long before my comrades ceased laughing over my discomfiture. In the midst of the excitement—amusement it was for the old man and my chums, and while I was brushing the dust from my faded clothes—a roar of laughter came from the house. I turned and got a glimpse of pink and frizzes wiping dishes at the kitchen window. This increased my mortification.

My second effort had a more successful termination, but my wrists ached, and my fingers were so cramped and knotted that several minutes elapsed before I succeeded in straightening them out.

The next day I suggested we offer to exchange some fish we had caught that morning with the farmer for a chicken. "Roast chicken," I said, "will prove a pleasing substitute for fresh fish."

"Did you ketch them fish?" the farmer asked, when we had explained to him the exchange we wished to make.

"Where do you think we got them?" the Judge inquired.

"Dunno. I didn't think the suckers round here were tame enough to let you fellers ketch them."

We joined in a laugh at the farmer's good-natured raillery.

"See here," he said, "you dawggawnd city chaps are spilin' for somethin' to do. You help me to git in the field of grain this afternoon and I'll give you yer supper and a chicken ter boot."

Rowing and bathing had hardened our muscles, and we grappled with the work vigorously. During the afternoon we overheard the old man tell his daughter, "If these tarnation city chaps can eat the way they work, you'll need lots of grub or they'll clean the table for you."

The last sheaf was in the barn when the supper horn was blown. We were tired and ravenously hungry when we sat down at the farmer's table. The supper was a marvel.

"I have eaten at Sherry's and Delmonico's and other high priced restaurants," the Judge said, in afterwards discussing the meal, "but I have never, since I left my mother's home, eaten such palatable victuals as were placed before us this evening. That cream pie was a wonder. I shall never forget it."

"Take these fellers into the parlor, Carrie," the farmer said, when we could eat no more, "and give them some music. I am going to milk."

"Don't you want them to help you?" the young woman innocently inquired.

"Greeley is anxious to get better acquainted with that spotted cow which tired to shake hands with him last night," Uncle Russell remarked.

"I have no desire to renew my acquaintance with her," I asserted, as they all joined in a hearty laugh at the memory of my experience.

Our hostess proved no mean pianist, and we whiled away a pleasant hour singing and enjoying the musical entertainment which she provided.

We were loath to break camp and return to city life and the stern realities of business.

When in a barber shop in Athens, I noticed Edison lingering around a photographer's cabinet of pictures on exhibition near the door, but I attached no importance to his absence when he disappeared for a few minutes.

Last week, when in his room, I saw his watch lying on a table. Inside the cover was a photo. It was the farmer's daughter.

I have already arranged for a week's vacation at Christmas. It is my intention to see Charleston Lake in winter. Whether I shall merely call at the old farmhouse or extend that formality into a visit of two or three days' duration, will depend entirely upon the reception the old man—or, to be more specific, his daughter—shall give me. Of course my contemplated trip is a profound secret, not even Edison or my other comrades having been apprised of it.

GREENE BUSH.

NEW YORK, August, 1904.

The Necessity of Forest Reserves.

Editor Forest and Stream:

The article by E. P. Jaques, entitled, "Rebuild the Earth," in your issue of September 10, deals with a question too long delayed in this country. We cannot agree with the writer that his theory for storage of water for irrigation purposes would be practical, but do most heartily agree with him regarding our present destructive methods of handling our lands.

We should not lose sight of the fact that Palestine of Biblical days was a "land of flowers and honey." To-day it is a desert, made so by man in his thoughtlessness and ignorance in the manner he handled the forests and agriculture lands.

The downfall of Spain dates from the time that agriculture was interfered with by drouths and floods. Germany, France, and all the older European countries have discovered that the methods pursued in the past cannot be continued without ruin to the whole country.

Our natural resources have been so immense that we have failed even to consider the future. Agriculture depends upon water supply—a water supply which can be counted upon in advance. As we have cleared our lands, our streams have diminished in size in summer and become torrents in winter. We are to-day producing deserts on a small scale, but they are surely growing.

Our forests have acted as our reservoirs; as we destroy these our water supply becomes more interfered with. It

is well to attempt to reclaim the arid West, but while doing this, we should also consider the East, and conserve our water supply by regulating the cutting of wood land. Better do this to-day than to be compelled to irrigate or reforest in another generation to come.

No, I cannot agree with the writer of the article referred to in his theory of dam building throughout the country. Such dams would necessarily occupy the valleys, viz., the best agricultural lands; such dams would require constant watching and repairs; they would always be a menace to those living below; it would be difficult to secure control of such sites for dams.

To my way of thinking, much more certain results could be secured by forestry. Stop the indiscriminate cutting of timber, reforest waste lands, especially the steep mountain lands; this method would use only the lands of least value. Such reservoirs would require no attention except to keep out fire; they would not be a menace to inhabitants in the valleys, but would furnish perpetual recreation and outing places.

As our forests disappear, we are beginning to realize their true value. Cities are after park lands; States are after lands for economic reasons to-day which were practically given away a generation ago. The National Government is taking up forestry and irrigation because our scientists to-day see that past methods pursued mean ruin for the future.

We must protect our water supply. We can only do so by reserving small and large areas of forest lands. Every State should own such land and lend every possible assistance to the National Government in the establishment of forest reserves.

C. P. AMBLER.

Minnesota Forest Reserve.

ST. PAUL, Minn., Sept. 2.—*Editor Forest and Stream:* The townsit boomers are abroad again in the land. We read every few days of petitions being signed by the Indians to have the 231,000 acres of forestry land "opened up to settlement," and in a few weeks it will be in order for the townsit boomers to threaten us with another Indian war at Leech Lake, if the Indians are not speedily placated by the opening up of the aforesaid forest reserve "to settlement."

It is evident that for years to come the advocates of forestry reserve in Minnesota will always have the townsit boomers with them.

When a few years ago the reserving of the entire Chippewa Reservation as a forest reserve was advocated, the townsit boomers jumped into the political frog-pond and by loud and frequent peeping so influenced our Minnesota delegation at Washington, that it mistook the noise of a half dozen industrious frogs for the plaints of the entire northern part of the State. And they heeded them, and the outcome of the matter was the Morris bill, which forever and a day settled the forestry question as far as the Chippewa Reservation is concerned. It was a compromise bill, and the townsit boomers were there present and solemnly pledged themselves as satisfied with its provisions.

The boomers got what they wanted—the reservation was "opened up to settlement" and they and the Winchester farmers were happy. But do they remain content, and are they inclined to keep the bargain they entered into? No. They cry for more. Stir up the Indians. Have them sign petitions. Open up the lands for settlement, be they sandy or swampy or covered with timber. The crying need of the boomers is more land, so disregard the treaty entered into in connection with the Morris bill and "open up" the lands. The townsit boomer is not easily pleased. His wants are far-reaching.

They have some reservoirs at the head of the Mississippi and these are secured by dams, and certain flowage lands are necessary in connection with this reserve of water.

The purpose of these dams is to hold water in reserve that it may be gradually fed into the Mississippi and insure navigation at St. Paul. It is said that the water reserve now in hand would insure navigation at St. Paul for one hundred days during the dry season. Think of it! The townsit boomers, the same old crowd that fought every move made by the advocates of the Minnesota Forest Reserve, have the impudence and audacity to demand that the dams be discontinued and that the flowage lands be "opened up for settlement."

How close and dear to the heart of the boomers are the poor settlers standing in line, Winchesters in hand, waiting for the boomers to find them a place to rest their weary heads.

The boomers fooled the Minnesota delegation a part of the time, but repetition is not likely. The idea of reforestation has come to stay in the State of Minnesota. The forest reserve flag is flying over the Chippewa Reservation and it will "stay put," the boomers to the contrary notwithstanding.

I question, in the face of public opinion, how far our delegation at Washington would care to go in this matter of again placating the boomers.

Of course, Judge Morris is now out of it all, but yet, no doubt, sees what is going on and recognizes the gloved hand of the boomers, his former constituents, in the Indian petition and other press items. If the Judge would express himself (being on the bench it may not be right that he should do so), I certainly would like, for one, to hear what he personally thinks of the present actions of his friends, the boomers.

But one thing is certain, with such a wise and far-seeing man and such an advocate of forestry as President Roosevelt in the Presidential chair, the boomers will have to stir up a first-class Bear Island Indian uprising to attract his attention in this matter of opening up more lands "to settlement" on the Chippewa Reservation.

CHARLES CRISTADORO.

A Simple Mosquito Bar.

I WAS fishing in a section where the mosquitoes were almost unbearable, and where mosquito nets at night are unknown. By accident I found a piece of wire-netting about 8 by 10 inches. This I sewed lengthwise on a flour sack near the bottom, and cut out that part of the sack covered by the wire-netting, and the affair was ready to be put over the head. Breathing is easy, and the stiff netting keeps the screen in suitable position during sleep, and the wearer is immune from "skeeters."

M.

Rebuild the Earth.—II.

BY E. P. JAKUES.

The Voice in the Hills.

FILLED with the possibilities of the situation, I wandered away one balmy afternoon in autumn to where the hills were as nature made them, except for a wire fence stretching here and there across them. Now and again I note fine reservoir sites. Here is a section of land with six ravines crossing it (most of them have three or less), each of the six is a reservoir site, and the water of the entire section would be held on less than five acres of ground. Five hundred dollars would do the grading, and five hundred more would make a perfect roadway on two sides of it. Indeed, the opportunities to improve on nature are very great. But I will lie on this sunny slope, with that tussock of grass for a pillow, and think it over.

Ah! it is a pleasant place to rest, fanned by the soft south wind, the buffalo grass plain stretching beyond, a glint in the yellow sunlight. But see! What a change has come across the face of nature! That ravine, last instant dry, has become a long, winding lake of sparkling water. Its slopes are studded with great oak, maple, walnut and ash trees, the growth of perhaps a hundred years. But no! less than half of that time has passed since the seed was sprouted. Such things grow quickly where land, water and culture are combined. There, too, is a railroad grade that must have been made in the last few minutes. "No, not a railroad, just a common country road that has been there for more than a hundred years. All roads are graded to a level now. For the first hundred years they were just common embankments of earth which were washed down by the rains and became rough from heavy traffic in wet weather, but now they are crusted by the new process cement to the consistence of steel, and resist the erosions of water and traffic alike. Those objects you see flitting back and forth there, fleet and silent as feathers racing before the wind are motor cars, some of them capable of carrying several tons of freight. But most of them are pleasure cars with a capacity of two, four or six passengers. No, they are not run by gasoline power, but by a powder that was invented to take its place when gasoline became too costly. The powder is smokeless and odorless, and explodes under pressure with a force just according to the resistance. Unconfined, it will burn but not explode. The outward thrust of the piston rod places a new charge of powder and the return explodes it. The charge is easily regulated to any power required up to the full capacity of the engine. It is very cheap, and the work of a single man for a day will produce enough to run a long railroad train one hundred miles. Yes, the railroads all use it on account of cheapness, safety and inexhaustible supply. Long-distance travelers and freight are mostly carried by rail. Horses are never used except for amusements. They are kept for exhibition and pets only, and are bred purely for speed and intelligence. The engine is used to drive the carriage on the road or the plow in the field, and for running all classes of machinery.

"In your day you built stand-pipes and pumped water into them to get pressure. Now we impound the water in the high lands and use it to water the lands further down the slope. Between each two streams that lead from mountain top to ocean is a divide or higher ridge of land that slopes away to the ocean, parallel to streams, only on a much higher level. This ridge also slopes to either stream. Down each of these divides is a main pipe-line which taps the highest reservoir in the mountain tops. Along the slopes of these watersheds are hundreds of gullies leading away to the streams on either hand that have been worn deep by the floods of past ages. These gullies are turned into reservoirs by our system of road grading and the water that falls on each water shed is retained there; when the slope of the main pipe-line brings it below any of these reservoirs they are tapped by switch lines, so that the water in them can be used anywhere on the watershed or in the valley below. It is possible to use water from that reservoir on land three hundred miles away and almost at a moment's notice, too. No, it is neither impossible nor incredible, but just as natural as it is for water to run down hill. Of course the perfecting of such a system is the work of centuries, but its benefits are felt as soon as the first reservoir is finished. Its tendency is to reduce the damage done by floods by just so much, and however small the scope of land redeemed, it increases production just so much. The work was originally begun by stockmen of this slope, who threw dams across the ravines to make pools for stock water. Later land owners were annoyed by the overflowing of their richest lands in the small creek bottoms by water that came down through ravines from the hills; then the idea occurred to some to raise barriers in the ravines and impound the floods. When the hot winds and drouth of July and August came, those impounded waters held immediately above their growing crops proved their salvation. It proved a great success, for it was the certainty rather than the mere guess.

"Whenever conditions permitted, others adopted the same plan, and for a time it was kept up with good results; but the opportunities for individual effort in that line were very limited, and when it came to combined action it was well nigh impossible. According to your histories, what your age was pleased to call its leaders seem really to have been anchors. Even in individual effort there were many lapses. After years of successful operation came years of complete abandonment. Excessive rains for several years rendered irrigation unnecessary; the reservoirs drained too much territory, and the dams were poorly constructed; neglected, they were washed away. Then would come a series of dry seasons, and the dams would be partially rebuilt with no rains to fill them. The few would be discouraged by the jeers of the many, and the work would lapse altogether. If individuals were slow to grasp the situation and act upon it, your social forces were a great deal slower.

"The study of the growth of irrigation is a very interesting one, for it includes the history of the growth and development of man. Its history is about as old as the history of man. Systems seem to have been evolved, successfully used for centuries, and then discontinued and forgotten only to be re-evolved as something entirely new. Away back in those dark ages the political body was made up entirely of socialistic organizations. No

matter what they were called, be it tribe, clan, sect, party or church, they were all socialistic orders; they were all organized for mutual benefit to their members. 'Tis true, they expected these benefits to come at the expense of the other orders, for at that time there was no thought of good coming to man except at the expense of some other man; so firmly fixed did this idea become, that there was no effort in any other line. Around each larger socialistic order were smaller orders, and forming part of the first, made up exactly as the larger orders were. Each tribe or order had a working class whose duty it was to furnish a grub stake for chiefs and medicine men. This was the foundation on which all clans rested. Without a grub stake the sages would have been weak, indeed, though they laid claim to supernatural power, and held sway by being majestically mysterious. Some of the clans, it was claimed, were made up entirely of the laboring classes, though it was noticed that the sages of this class, once they had a firm grip on their following, ceased to labor and lived just like the sages of the other clans—out of the labor of their following. Every advance came from the workers. In their efforts to wrest a grub stake from the grasp of nature they came in practical contact with the problems to be solved, and gradually gained in knowledge. From knowledge thus gained, all education

MARTIN J. HEADE.

had its source, though the sages laid claim to being the fountain head of all knowledge. Had there been no necessity for a grub stake, there had been no education; all advancement was made by labor; not with the aid of its sages, but in spite of them. But the course of a ship that is dragging an anchor is necessarily slow.

"Supplying the needs of the world came to be less than pastime, but invention and experiment took the place of the costly wars of your time. The soldier is no more. The inventor who supplies needful things, the actor who amuses, or the writer who supplies interesting books, are the heroes of this age. Brave men there are in plenty when there is need for them. Indeed, I think the thoroughly manly man is more common to-day than ever before.

"Not all attempted inventions were successful; but few efforts were without results of some kind. As, for instance in the last half of the twenty-ninth century one of our brightest geniuses started out to build an air ship. He failed, but ended up by building a submarine vessel, so that now it is as easy to explore the bottom of the ocean as in your day it was to sail upon its surface.

"Oh, yes, for very many years it was supposed that there was only water enough to irrigate a small fraction of the great plain east of the Rocky Mountains. Events have proven otherwise. Look at the face of nature, gashed and seamed in all directions by the rushing floods. Where floods have been they will come again. For thousands of years water has been carried from the ocean inland by the winds. There they fell in rain and rushed back down the rather steep incline to the ocean again. The great erosion that has taken place is among the great wonders of the West. Had there been something to retain the waters the vast slope would have been a well watered country through all time. But they were quick to go and slow to return, hence the withered condition of the largest body of all fertile land on earth. Try to keep a shingle roof damp under a blazing sun by pouring water upon it, and it requires a constant stream. Place a sponge upon the roof and saturate it, and an occasional application does the trick. The reservoirs act as sponges, and hold the water for a much longer period. Using water for irrigation does not lessen the amount of water in existence. Spread upon the land it does its work, evaporates, and returns in rain or seeps through the soil to the streams, whence it may be diverted and used again and again. Imagine all the water brought inland by the winds to be trapped and held where it fell. There would

be no less water come inland the next year, and a double amount of moisture would be the result. When the sponge of atmosphere, earth and reservoirs are filled to their utmost capacity, the water left to flow back to the sea will be in exact ratio to the water brought inland by the winds. When the work of grading was first taken by townships and county organizations it was very slowly and grudgingly done, for they were doubtful of results, and felt they were laboring for the future without possible gain to themselves. Many mistakes were made. Often work commenced at the wrong end of the ravines, and the first rain would wash away the grade. Lapses generally followed these disasters, and but for individual effort the work had never been carried to success. From individual performances it was demonstrated that results were immediate. Reservoirs were constructed, crops saved from flood, and later irrigated from the surplus, all in the same year. When State and nation took up the work, a new trouble arose. Each large appropriation was surrounded by such a swarm of grafters (I think that is what they were called in that age) that the very earth trembled beneath their tread, and it was seldom that a single dollar seeped through them and reached the work it was intended to perform. When there was a large fund, irrigation congresses were of daily occurrence. Costly engineers were employed to formulate plans, when the road overseers would have begun the work at once. When any of these plans were completed, it was a sure sign there was nothing left with which to carry them out.

Large corporations took up the work; but against this there was a general outcry, as well there might be, for they not only appropriated all results, but the resources of nature as well, to their own use. The work of the corporations, however, was practical, and had great educational value. Slowly the work proceeded, and slowly the waters accumulated. Older systems of irrigation were benefited as well as the new. Streams maintained an even flow through rainless periods, and supplied the ditches; irrigation wells became less liable to exhaustion, and rainfall increased. The very climate changed. Blue grass spread from Kentucky to the Rocky Mountains. Nor did the benefits end with the irrigated district. Rivers came to have a regular flow, but overflows no longer occurred. The lower Mississippi country was redeemed as well as the bottom lands along all streams. The rivers were improved and made into fine waterways, but they are only used for pleasure and fishculture. The waters became pure and clear as crystal from being filtered through the soil. Fish thrived amazingly; the reservoirs were used for propagation as well as the streams, and to-day the fish business of this once great desert is more important than that of the Atlantic Coast.

"The Government owns most of the land now, and rents it direct to the user, though some individuals still retain title to their land, it is rather cheaper to rent from the Government. The rent amounts to the same thing as an individual owner who pays taxes for protection, and prevents any possible monopoly of land. No, it is not the old single-tax idea, as all classes need protection for their property and pay taxes in proportion to the amount of property protected, no matter what the property consists of. Everybody has leisure these days. The question is not of how to live, but of how to amuse oneself. Exploring the fields of invention is a favorite diversion, and great inventions result. Even now a man is at work on a system through which he expects to make the entire earth habitable by tempering all climates. He expects to force the hot air from the equator through pipes to the poles, and cold air from the poles to the equator, tempering the whole. He maintains that once the pipes are laid and the current started, the flow will be eternal. I confess that results seem quite as problematical to me as this irrigation scheme evidently seemed to the people of your age. The knocker, however, is not tolerated in this age. There is no r—m—"

The voice died away in an indistinct murmur. In straining to catch the words, something snapped like the breaking of a thin glass globe; the long line of graded road faded out. The flitting tram cars ceased to flit. Where the great oaks were was only blue-stem grass. The voice was only the crooning of the wind through its nodding stems. I was back in the grafter's age—the early twentieth.

[TO BE CONTINUED.]

A Doctor's Hurry Call.

In response to a hurry call, Dr. Rowland Cox, Jr., of New York, made a 74-mile trip to Eagle Lake. Much of the journey had to be made in a canoe, and the doctor established a record which old guides say it will be difficult to break. A guide who had been sent out from camp early that morning telephoned the doctor late in the afternoon from Chesuncook Lake that a young woman was critically ill at Eagle Lake camp, and he was wanted there. Preparations were immediately begun for the journey, and at 8 o'clock in the evening the doctor, accompanied by two guides, left for the northeast carry by special steamer. A few hours' rest was obtained, and at 3:30 o'clock the following morning the party was astir, and at 4:45 had taken its canoe across the two-mile carry, launched it in the west branch of the Penobscot, and was ready for the long trip. The distance from this point is 54 miles by lake and river, and the route is down the west branch to Chesuncook Lake, across Chesuncook Lake to Umbazooksus Stream; up this stream to the lake of the same name, across Mud Pond carry, two miles, to Chamberlain Lake; down this lake to the dam; across the dam into Eagle Lake to the camp, which is known as "Zeigler's old camping ground." Ordinarily two days are counted on to make the distance, and "fair winds" are depended on, but the doctor and his guides covered the distance in twenty-two hours, an average speed of over four miles an hour. He reached the camp at 6 o'clock Tuesday evening, in spite of nasty head winds on Chamberlain Lake (eleven miles) and Eagle Lake (seven miles). Making allowance for stops and delays, which include the two-mile Mud Pond carry, the speed was nearly five miles an hour for thirteen consecutive hours, a record which seems incredible. The young woman's illness proved not to be serious, and it was not necessary to bring her out, as had been expected. The doctor left the camp the following morning, reaching Kineo the next night.—Kineo (Me.) dispatch in New York Herald.

NATURAL HISTORY

Some Animals I Have Studied.

VII—Fishes.

I AM not at all assured that fishes possess much intelligence; though, being so very unlike ourselves in all particulars, and living as they do in almost another world, our opportunities for constant, comprehensive observation are too crude to give us the right to positively assert that they lack wisdom, despite their very small brain in a very large head—but an article on "Hearing in Fishes" (FOREST AND STREAM, p. 421) induces me to relate some of my experience with them, and to include the article in this series.

Although I am not aquatic, nor even amphibious, I believe I can claim greater familiarity with fishes in their own element than most men, for I have an intense admiration for them, and for water, and I know no greater pleasure than in the close study of them, in all possible conditions. While I am an indifferent fisher, I know no one who can at all compare with me in getting acquainted with fishes, taming them, training them, and associating with them intimately. I can go to a river or lake where the fishes are free and shy, and in three or four days, without the use of drugs or traps, or aught but food and kindness, I will have a little group of them (generally small ones, I confess) so confiding that they will eat in my hand, or follow me wheresoever I wish, that a fish can go. They seem to "fall in love" with me and to actually like to be handled. I had one pet perch, in Illinois, about four inches in length, that would swim into my hand, held barely below the water's surface, and allow me to carry her to the house, a distance of two hundred feet, and back, at a fast walk, without making any effort to wriggle off—although, when she showed signs of discomfort, I always hurried back to the pool, or quickly placed her in a tub of water at the house. She would revive in a minute and swim on to my hand again. Sometimes she would force herself upon my hand when I held it dry above the water. Whenever I stood by the pool she would come up immediately and look into my eyes as intently as might any land animal.

The pool was small, not more than ten feet in diameter, and two or three deep (but with a depth of mud underneath that I would not like to tell of if I knew), yet it contained more than a thousand fishes of several species, from an inch to ten inches in length, all apparently at peace with each other, if I except two voracious —* which were constantly popping up and snapping the smaller catfish on the surface.

Their motions were hawk-like—they were quicker than any house cat. They struck the surface with a resounding whack! as if from above instead of below, and went under again with a "bock!" out of all proportion to their size; the out-and-under motions and the snapping up of their prey all occurring as quickly as I could snap my fingers. They not only were continually snapping up catfish, but killed, as if for sport, when they were satiated—if they ever were that. In their formidable jaws a 2½-inch catfish was cut in two pieces as easily as a shingle-knife slices off a hot shingle, and so suddenly that no human eye could follow the act. I was sorry I had ever added them to my collection. I tried to catch them, but they would not bite a hook, even when baited with one of the "cats" they had killed. For that matter, none of my fishes would bite a hook, no matter how baited, nor pay the slightest attention to it. Some of the larger ones had been caught with hooks. Did they warn all the others? Did they describe the angler's outfit in words, or instill in them a fear of it by their own terrified avoidance of it? "But fishes are dumb!" declare the too-practical naturalists. So that settles it, as to the first query. The second query suggests the true explanation then? Yes—but the trouble about that, is that not one of them ever showed any fear. Not the least. They simply behaved as if unaware of the hook's existence. They would not budge even when it fell on their backs, or touched their very noses. Yet remove the bait and throw it in, or hold it in the hand, and it is immediately seized. What are we to say about that? I, for one, give it up. I have a theory, however, but it is too unscientific to offer. These fishes, crowded as they were, were not very fastidious in their appetite; they would eat anything a chicken would. They were especially fond of hornets and hornet grubs, or larva. I found a small hornet's nest (I say small, because along the Wabash, high up in the shellbark hickories, there were numerous nests as large as flour-barrels) one day, and kicked it, having mistaken it for a rotten hickory stump. It was an unfortunate accident all around, but the inhabitants would accept no apology; so I retreated, rather hurriedly—after about ten seconds' delay—for I realized I was needed at home. But I came again, with stratagem, captured the nest, took it to my fish pool, tore it to pieces and threw it in. The fishes, big and little, fairly piled on to each other to get at the contents.

Whenever I appeared on the bank with a biscuit (perhaps not a fish in sight at first), in a few seconds the whole surface of the water would be covered with a struggling, shining multitude of fishes, sometimes entirely hiding every bit of water, and even heaping together two or three deep at the edge next to me. "Stop right there, now, romancer!" exclaims some indignant scientist. "You have betrayed yourself! Such a small pool could not keep alive a single day a fraction of the amount of fishes you imply your pool contained!" Well, I dislike to seem to disagree with science, but I am stating only facts known to all of my neighbors there. There must have been some mysterious aerating quality about the porous banks of the pool, or in the mud beneath; but however

that may have been, the water always remained at nearly the same level, and never acquired any unwholesome odor, although it had no outlet above ground. I "started" stocking the pool early in spring, and never lost a fish, except from violence, all summer and fall. I left there early the following winter. I am sorry I cannot better explain why the fishes lived. But they did, and so happily that I continued adding to their number as occasion offered. It gave me a rare opportunity for studying fish manners and habits. In very hot weather they suffered a little, as there was no shade, even the shores being almost level with the water, although the pool was cut in the south bank of a ravine (it was at the top of the bank or ridge, not at its base). At daylight, before the sun appeared, I often found them arranged all around the edges of the banks their bodies half out of the water, cats, perch, silversides indiscriminately mixed, enjoying the dewy air. Sometimes the larger cats would slowly push a few of the perch entirely out of the water. The latter would make no resistance, but lie on one side contentedly until nature warned them they had been out of water long enough to be dangerous to health, when, "spat!" they would flap back. I was surprised to find that perch are less afraid of leaving the water than cats, although I have known the latter to live more than a day in a dry dishpan in the shade. I learned a lot of surprising things. I had always doubted the ability of fish to hear. I received proof that mine could—or that sound vibrations affected them, either in the water or out of it, and I don't care whether it is called hearing or not. It matters not to me whether sound enters their "chamber of Corti" through the top of the head, or through the tail; it gets there, all right, which amounts to the same. Not only did they hear, but they seemed to distinguish between a few sounds. One sound frightened them at any and all times and under all circumstances, causing a regular piscatorial panic—and an insignificant sound at that! It was simply the hawking sound a man makes when clearing his throat after breathing dust or when aggravated with a cold. Why they feared this sound or were pained by it I know not. But every fish of every size would vanish at the sound, whether loud or moderate, even if feeding at the time. In a few minutes they would come up looking about wonderingly, and under they went again quick as a flash every time the sound was repeated. I made a number of experiments to determine what they could hear and how different sounds affected them; but, wonderful to tell, this seemed the only sound that could startle them more than once the same day. They quickly became used to all other sounds, seeming to prove they remembered. Indeed, I have established in my own mind that fishes hear, remember, understand a few things, and possess the passions of love, hate, fear, joy and curiosity—all very limitedly compared with mammals. The perch shows all this much more plainly than any other fish I have had the privilege of studying. I have also found that some varieties see in air perhaps as well as in water, instead of being unable to see at all in air, as many people suppose. Nor can I convince myself that they are so near-sighted in water as scientists believe, no matter how unfavorable to long sight the structure of the eye may appear to the savants. If any naturalist reader would care to learn all the particulars or evidence tending to prove the long sight of fishes, and will ask me through this paper, I will endeavor to carefully write my experiments (and accidents), which have caused my belief, and which I believe will convince any person that fishes see some distance.

I found that a crayfish or crawfish in shallow water could quickly nip off the tail of a catfish fifty times bigger than himself! This astounded me, for the crayfish is very delicate, and sometimes loses one or more of his powerful "pinchers" at a blow so slight as to cause a small fish no discomfort whatever. Besides, it is a very cowardly "insect." Its nippers are, in themselves, one of the greatest wonders in animal creation—possessing prodigious power, yet connected with the body by a ridiculously small, hair-like member. It appears that the nipper is so constructed, like a mighty engine, as to need only nourishment and moving impulse from the body, or boiler, to make it appear the main thing. My catfishes invariably were sundered about one-third their length from the tip of the tail—at a very fleshy part. Sometimes the fish would struggle violently to get back into deeper water, where the enemy would have been just nothing to him, but he seldom could get away in time; though, occasionally, he was fortunate enough to disarm (literally) or smash his despicable foe, whether by skill or accident I never could determine. My opinion is, that in such a situation, he is too excited and terrified to exercise any intelligence, if he possesses it—like a man in a nightmare—and I am sure, from my own observations, that a man's helpless horror under the grip of the incubus is no evidence of a lack of courage or wisdom, nor even of a want of goodness.

I found, too, that the mink is a great destroyer of fish, choosing the larger and finer ones with unerring cunning, and, reversing the custom of the crayfish, cutting off the head end, for the blood, rather than the flesh, is what is sought by the mink; and as fishes possess very little flowing blood, a great many are required to satisfy the mink. After his repeated plunges into the pool have so alarmed the prey that they keep down, however, he will eat some of the heads he has strewn about the shores, if he is still hungry. I say "shores" instead of "shore," because he carries a fish straight across, instead of returning to the bank from which he entered the pool—if the pool is small.

At first the fishes neither fear nor resist him, nor make any effort to get out of his way—that is, in a crowded pool like mine. But, seemingly attracted by the queer appearance of his bushy, trailing tail, or intoxicated with the odor of it, pursue him, even nibbling at it, thus giving the smiling scoundrel an easy job to take his

pick. He crosses and recrosses the pool, generally in a straight line, as if he had no other object than to get across, and each time he picks up a fine fish in, or slightly past, the middle of the water. I had opportunities to observe all this as leisurely as my wrath would allow, for the minks were numerous there, and bold, until I shot at one with a revolver, so close that the fire seemed to swallow his whole body! (I wish all exchanges of FOREST AND STREAM would, if the publishers consent, copy this note about the mink, in the interest of fish preservation, for I do not believe our fishing brethren are fully aware of the awful destructiveness of this wily rodent. Of course, there are other destroyers, notably the raccoon, but the latter eats the flesh and the bone, and is content with very small fishes often left slowly perishing in pools that are drying up; besides, he seems to prefer crayfish, which are, I suppose, everywhere regarded as a nuisance, and are in no danger of extermination so as to "throw nature out of balance.")

I intimated that some of my fishes, having been taken with the hook, might have told others; yet I have known the sporting fishermen to catch a fish in a clear stream, where it could be easily observed, throw it back, hook it again, and even toss it back and retake it the third time! Does this indicate that all fishes lack sense, or simply that some of them are "feeble-minded," or that there are professional "dare-devils" among them, as among men?

L.R. MORPHEW.

[TO BE CONTINUED.]

About Katydid.

Nor in many years have I heard the katydids so clamorous as this year. I suppose it simply means that there are more katydids. The note of this insect is certainly not musical, and yet it has a charm of its own. Of a fall night what more reposeful than those drowsy iterations of "Katy did—Katy didn't?" Insomnia appears to be a growing trouble in these days of nervous haste and worry. Well, if I were a doctor and a man came to me and said he couldn't sleep, I would recommend him—if the season were the fall—to get close to woods full of katydids. There I'll guarantee he'd sleep. At first he might think the insects a nuisance, and calculated only to aggravate his malady, but gradually they would work their spell upon him, and even while declaiming against them, or meditating a flight back to town, he would fall into the arms of Morpheus. We can imagine how that man would speak of the katydids in the morning.

Perhaps, though, he would not be justified in giving the whole credit to them for his cure. There is another insect—the snowy tree cricket, to wit—which is usually found singing, or stridulating, if you please, alongside of Katy. The notes of the two are not dissimilar, but those of the cricket are softer and mellower and heard at a distance are not unlike the jingling of sleigh bells. Some poet, indeed, has called them "musical moonlight." While, then, Katy dominates the night, the snowy tree cricket serves admirably the part of an under-chorus, and to the two combined should be given the credit for that blessed balm which superinduces sleep.

But there is a question for some naturalist: Why do those insects sing rather in the night than in the day? It may be answered, because they prefer to. But that will not do. There is a reason for everything, and naturalists above all men should be engaged in finding it out. The locust sings during the day and the katydid during the night. Why?

NEW YORK, September.

The Ignis Fatuus.

IN the nature of things I should suppose that many of the readers of FOREST AND STREAM have, in the course of their woodland experiences, "met up" with the *ignis fatuus*, jack-o'-lantern, will-o'-the-wisp, or whatever it may be called; yet I do not recall ever to have seen any mention of this phenomenon in your columns. Indeed, the literature of the *ignis fatuus* is rather limited in quantity. I have examined several cyclopedias and such other sources of information as were at hand, but I have found very little on the subject.

Many years ago, when I was a boy, coming home one night from meeting at Hopewell church in company with several others, we saw away across a low, flat interval a light moving along. It was in all probability a lantern in the hand of some one returning like ourselves from church; but somebody remarked that it might be a jack-o'-lantern. This led to some conversation among the company as to the nature of this meteor, much of it very profound of course, as might be expected of a lot of untaught rustics on a subject upon which more learned men have not even yet been able to agree. Many anecdotes of the delusive nature of the aforesaid jack, how he had led persons who had presumed to follow him into swamps and wildernesses to their complete undoing, were related. This was my first knowledge of the *ignis fatuus*.

Nor have I been able to add much definitely to this small fragment of doubtful information. One of the cyclopedias which I consulted describes the will-o'-the-wisp as a luminous meteor, appearing during summer and autumn nights on marshy land, near stagnant water, in graveyards, and other places where decomposition is going on. It is an unsteady bluish light, usually seen a few inches above the surface of the ground, sometimes stationary, but commonly moving with great rapidity. It appears brightest at a distance, and recedes from the observer as he tries to approach it; thus travelers have frequently lost their lives through being deluded by it into dangerous bogs. This author does not attempt to explain the cause of the *ignis fatuus*; but

*I leave out the name of the variety, because I never knew it. They were scaleless, smooth, slimy; form much like "mud-cat," but without spurs. Each eight inches long.

another writer says that it is likely phosphoretted hydrogen, as this, escaping into the air, is known to burst into a flame. He says it is produced by the decay of animal matters, and if thinly diffused here and there over the surface of a marsh, may present the changing, flickering light in question. Carburetted hydrogen, he adds, bubbling up through marshy ground, may be set on fire by phosphoretted hydrogen, and thus add to the extent and permanence of the flames.

Many years after the Hopewell meeting incident, I was living on the outskirts of a large town on the Allegheny Mountains. My house stood at the foot of a gently sloping hill, a shoulder of which rounded off and meeting a similar slope formed a nook, what country people call a draft, a water-course, and from a swampy spot at the upper part of this draft a tiny stream of water issued and found its way down a small valley densely covered with bushes and overhung by trees. This spring-head and its little run of water were just across a field at the back of my house. Some apple trees grew in this field. From my upper windows, or by walking twenty paces from the door, the marshy spot might be seen. About the spot *ignes fatui* were sometimes observed.

One summer evening I remember several of these meteors, three or four of them, were there at the same time. They were bobbing up and down and flitting about the place, just as on a hot day one has seen several butterflies hovering over a muddy spot in the road. They did not appear to explode, or die out, or go away, but remained at the place as long as we cared to watch them. If it were to do again I think I should walk over there and investigate the matter at shorter range; but I did not feel much interested in it at the time, and the uncanny reputation of the thing somewhat interfered. But I remembered distinctly that on going up to bed, I looked out of the window at the top of the stairs and the jack-o'-lanterns were still there. The weather was very warm, and the sash had been taken out of this window for better ventilation. But as I was looking

out, one of these meteors left the marsh and came sailing across the field directly toward me. If I remember rightly, another one went sailing away among the trees in the orchard. Some light breeze may have sprung up and thus carried them away. But of one of them I am as positive as I am of anything that ever happened me in my life. This one came straight on toward me until, when it was not more than twenty feet away, I suddenly put in the sash, which stood just at my foot, for I thought that the meteor was going to come into the room; and so I have no doubt it would have done, being borne on the light indraft. It came close to the window, and then being deflected, as I suppose by the reaction of the current of air, it sailed along the side of the house, turned the corner, and passed on down the street and finally disappeared.

Now I had a close, though a very brief, look at this particular jack-o'-lantern. It was not bright and shining like a flame, but a round, well-defined ball of light, resembling a small globe of ground glass inclosing a jet of gas. It was white, but not bright; I think its illuminating power must have been very little. It did not move swiftly, but simply floated along on the light wings of the gentle breeze, just as we see the "witches" of thistle down floating along on an autumn day. This is not adding much to the natural history of the *ignes fatuus*; but perhaps some one can give us more.

T. J. CHAPMAN.

IN an account of a residence in Cuba in the '40s, John Glanville Taylor relates an amusing *ignis fatuus* incident. He is writing of the mountains near Gibara:

"The highest peak of La Silla, and the summit of the Colorado are both remarkable for the exhibition of a very curious phenomenon which takes place on two or three of the coldest nights in the year, generally in the beginning of February; and it is the appearance of a bright light, said to be of a conical shape and considerable size. Though it appeared one of the years I was a resident in Cuba, I had not the good fortune to see it,

the peaks not being visible from where I was staying. I never heard any philosophical explanation of this, nor am I aware whether or not similar appearance has been elsewhere observed. So I have merely classed the apparition with the *ignes fatui*, which I, as well as of course so many of my readers, have observed dancing about in the bogs of Clare and Galway, and which have frightened many an honest Paddy returning from fair or wake, as much as the light in question does the 'Montunos' of Cuba, of whom I have heard some very amusing stories. Among them, of an Englishman returning from Holguin in company with a 'Montuno,' when, as they turned at full speed an angle of the forest road, one pitch dark night, behold! high aloft loomed out the towering crest of the Cerro, now of a sudden brilliantly illuminated by the mysterious beams of the phantom light! However much the seasoned nerves of the Englishman might have been disturbed by the apparition, it upset the Spaniard in more ways than one, as he threw himself headlong from his horse, and, straightway falling on his knees, besought the Englishman, as there was no Padre at hand, to confess him, and before his companion, now bursting with irrepressible merriment, could say a word, poured out a torrent of accounts of yet unwhitewashed sins, a recapitulation of which, however much it enlightened my acquaintance as to the personal failings of the Montuno, could not be attempted, for something of the same causes which have influenced (as is hinted) my Lord Braybrooke in his selections from the life and diary of Mr. Pepys. I have some idea, also, that perhaps these large caves themselves may have something to do with the generation of the gases which produce this effect. I have once witnessed an exhibition of *ignes fatui* on a large scale in Ceylon, where they are looked on by the Singhalese mountaineers of the most ignorant class with the utmost horror, though, as a matter of course, at the same time believing them, as they do, to be 'Yakshyos,' or living devils, and what is more, their own friends and relatives deceased; so in none of these three cases cited does ignorance seem to be bliss!"

GAME BAG AND GUN

Excusable Regicide.

"ROUGHING it" is an expression which we have long associated with the worst kind of hardships undergone for the sake of sport. But modern enterprise has made that phrase a misnomer when taken in the sense in which it was formerly understood. A number of years' experience camping out and hunting in the West have convinced me that every reasonable comfort can be enjoyed without sacrificing the principal object which lies nearest the heart of a thorough sportsman—good hunting.

The last outing I had in the West, was in Wyoming, in the Jackson Hole country, and I realized then how thoroughly a guide, who enjoys the comforts of life himself and has the real love of sport, can contribute to the success of a hunting trip. A guide who likes to make himself comfortable will generally think of what is necessary for the comfort of those who engage his services.

Early in October I started out from St. Anthony, Idaho, with my guide, Ed. Sheffield, on one of the most pleasurable and successful hunts I have undertaken. A couple of days' drive and we reached Shives' ranch, at which place we got ready the pack outfit. A day's loaf at this spot while everything was being got in readiness was very pleasant, as it gave me a chance to stretch my limbs and to admire the grand perspective which no words can possibly describe in a way that would bring the natural picture to the eye. The Teton peaks, covered with perpetual snow and dazzling bright, furnished an attraction which never palled on the mind, and they were ever visible from the plain but tidy ranch. Flocks of ducks frequented the ice cold stream near by, which cut its way through the virgin soil.

The horses having been corralled during the day's wait, everything was arranged for the morning start. The next day I rose bright and early to commence the final stage of the journey. When the last pack had been "cinched" and everything was in readiness, we began our last day's journey to the hunting grounds. It was a long monotonous ride—much of it through thick timber with no stop for lunch or rest, because the heavily laden beasts could not lie down with their packs on and we did not care to delay them. At length, after crossing a rocky ravine and a swift running stream and climbing a steep ascent, we arrived at Two Ocean Pass. There we found an ideal spot to camp. In a short time everything was unpacked, and the two tents were pitched. The tired beasts that had borne the brunt of the day's work tumbled over and rubbed their backs in the dust and snorted with delight.

The next day I started out on horseback with my guide, Sheffield, while the ranchman, Shives, I had engaged as cook and general helper, remained behind and minded camp. We took several dogs along with us, because they might be useful in rounding up lions or "cats," as they frequently call the cougar or wildcats in that section. The day passed without result, except that I lost my Seitz spy glasses, which hung on to the pommel of my saddle by a leather strap, this had evidently caught on something and snapped. When the guide heard of the loss, he exclaimed with great confidence, "We must find them to-morrow." I was somewhat inclined to be skeptical about his being able to recover the lost property, but I assented to his going out next day with a little dog he called "Maiden," a cross of a black-and-tan foxhound and a bloodhound, and as intelligent a little animal as I ever saw. He

came back in a few hours with the glasses, and I was curious to learn how he managed to discover them. While following our trail of the day before, he stopped to call the dog which fell behind him and stood yelping at something which he had passed; when he examined the object, it proved to be the glasses. They were not immediately in the line of the trail but had rolled down hill and were some dozen feet away from it. I wonder if that dog overheard our previous conversation and knew what we wanted!

Although for a couple of weeks the climate had been cool and exhilarating, often freezing at night, still we had as yet no snow. Snow was wanted, because it makes the hunting good and when traveling the impress of the foot is practically noiseless, and does not alarm the game. Moreover, when the snow accumulates in deep drifts it drives the elk and deer out of the higher elevations down into the lower country, where they collect in large numbers and become bolder.

One evening on the way back to camp the guide was explaining to me why he thought that we would be apt to find bull elk with the best heads separated "from the bunch of cow elk." The old bulls, it would seem, after a time are driven off by the younger bulls, which in turn take charge of the herds of cow elk. The conversation was suddenly interrupted, for, on a knoll, about 300 yards away, we saw two fine bulls all by themselves. To dismount and take aim with my Mauser after gauging the distance, was a matter of a few seconds. The furthest of the two bulls was a stately monarch, and he had a set of antlers which tempted me as much as a crown could have tempted Caesar. The first shot fortunately took effect behind the shoulders and made him sag on his knees, but he immediately recovered and started to run. The next shot was over him and, before I could fire again, the other bull ran in between and blanketed him, receiving the ball. They both then stood still several seconds, while two more messengers of death sang a doleful dirge on their errand of destruction, and then they both disappeared over the hill.

The atmosphere in that country is naturally very blue; but there was a tinge of blueness in the air at that time which I am sure was not natural. Sheffield said he was not the cause of it, and I know that I was not to blame. I have heard of somebody swearing until the air became blue, but this does not seem to be one of those cases.

However, we were both convinced that the first bull was hit twice at least, and more than likely would not go a great ways. It was inexpedient to follow him up at that time, because he was still fresh and strong. It seemed best to go back to camp and come out the next day and track him, because he would be liable to run only a short distance and then lie down to rest and become stiff and incapable of running any great distance. On the other hand, if pursued, he might continue to run while his strength held.

With anxious hearts we returned to camp, noting with apprehension the lowering clouds that were beginning to darken the sky. The indications of a storm which would cover the ground with snow were not welcome at that particular time, as much as I had desired it previously. Fresh snow will obliterate the tracks and destroy the scent on the ground. If that should happen, I had small expectation of securing my trophy. The next morning the guide looked into my tent and said that everything was covered with snow. I immediately went out to see for myself. There, sure enough, it lay several inches deep. It covered the trees, bending the branches under their weight and transform-

ing, as if by magic, the rugged landscape into a fairyland. It was beautiful—but it was disappointing.

After breakfast we set out, taking one of the dogs with us. When we reached the spot where the elk had been shot the keen-scented dog began to sniff the tops of the sage brush which stood about two feet high. We followed him as he confidently pursued his way through the sage brush and timber, until finally, ascending a small knoll, I espied just over the crest the tops of the antlers spread out like the branches of a tree. The noble elk was stretched out in beautiful and stately repose, his neck supported against a fallen tree, which held up his antlers, as if determined that even in death they should not be defiled by touching the ground.

At last my trophy was won, and I had something to show to admiring friends. A post mortem examination upon the carcass of this monarch of the Rockies, conducted by a coroner's jury composed of my guide Sheffield and the ranchman Shives, resulted in a verdict of excusable regicide, caused by two bullet wounds inflicted by a "tenderfoot."

The remaining days of the hunt passed most pleasantly, and I added one more trophy to my collection, but not so handsome a one as the first. Nor does that one appear to as great advantage, although it has been handsomely mounted, as it did in its natural surroundings, resting upon the head of the finest animal this continent has produced.

E. F. R.
NEW JERSEY.

A New Rocky Mountain Club.

BOSTON, Sept. 12.—*Editor Forest and Stream:* The Rocky Mountain Country Club, mentioned in my last letter, is so unique in character that I think your readers will like to know more about it.

The club grounds are located at the base of the Rocky Mountains at Centennial, Wyoming, which is thirty-five miles distant from Laramie, and is 8,000 feet above sea level. Mr. Isaac Van Horn, a well-known State street banker and broker, with large business interests in Wyoming, and who has traveled over the whole West from Canada to Mexico, became fascinated with the natural attractions of the Medicine Bow forest reservation, and his vivid descriptions of what he had seen have so interested several of his neighbors in Brookline and Boston that they decided to take the necessary steps to form a sportsmen's club. The location is on the edge of the last bit of virgin country in the wild west. There the cowboy still flourishes, the hunter of big game and the pioneer trapper are lords of the woods and the mountains. Not only deer and elk, but the highly prized big-horn, or mountain sheep, are there yet.

The president of the club is the eminent corporation lawyer of Boston, Marquis Fayette Dickinson; the vice-president, Gov. Fenimore Chatterton, of Wyoming; Mr. Van Horn is treasurer. Among the trustees are such men as Henry M. Whitney, of Boston, and Irving F. Baxter, United States District Attorney of Nebraska; while among the members are several Boston and western men of large means and important business interests. The entrance fee is \$100, and the annual dues are the same amount. A round trip ticket from Boston will cost about \$200, and the expense of living on arrival will not be less than \$25 a week.

One of the most delightful features is the admission of ladies, who are expected to play a very important part in the diversions. Mrs. Van Horn is a skillful horseback rider; Mrs. B. Frank Bennett, of Brookline, whose husband is a charter member, will be quite at home in

following the hounds. The president's daughter, Miss Jean Dickinson, took the highest honors last spring at the Brookline riding school exhibition, both for riding and for skill in handling a horse.

Work on the buildings is just beginning. The location was selected by J. C. Olmstead, brother of the late Frederick Law Olmstead, and Frederick H. Bond, Jr., is the architect. The dormitory will have forty suites, most of them with baths, so visiting members and their friends will have all the comforts of civilization although in the heart of the wilderness. The limit of membership is fixed at 250, but of course only a small percentage of that number will be at the club at any one time. The chairman of the polo and hunt committee is F. Percy Williams, of Cheyenne, who has a pack of the finest wolf-hounds obtainable, is familiar with the grounds, and can break a broncho as well as any cowboy.

The objects of the club, as described by Mr. Van Horn, are to provide "a restful spot in the Rockies where, in congenial companionship, gentlemen of the East and of the West may find rest, sport, and pleasure." Every one who has tasted the delights of the chase will wish the members the fullest success in this novel scheme for utilizing the bounties of nature in the far away Rockies. At the same time it is to be hoped that they will not forget the more humble sportsmen confined in stores, offices or work shops, who must, perforce of conditions, seek the recreation of field sports in near-by localities, and in ways that involve very moderate expense, and only for short periods of time. They consider themselves fortunate if able to take the dog and gun into the covers for a half day's shooting a week, or for one or two days in a month. They are not less circumscribed in the enjoyment of angling. For such, in every State, the proper care, protection, and propagation of game and fish in near-by covers and waters are what count. Our more fortunate friends can aid mightily in this work, not only by contributing of their means, but by their influence in forming public sentiment in favor of salutary laws and their strict enforcement.

In Massachusetts there are many conspicuous examples of men who, though accustomed to make large outlays to secure field sports for themselves, are always ready to do their share toward fish and game protection in their own State. I have no doubt the same is true in other States.

Mr. Van Horn informs me that on the reservation are fine trout streams, and that the work of stocking them was begun three years ago, 1,000,000 fry having been deposited each year.

The members are looking forward to the enjoyment of royal sport on the completion of the buildings next year. The enterprise has certainly been inaugurated under the most brilliant auspices. CENTRAL.

Boyhood Days in Illinois.—II.

(Concluded from page 215.)

ONE morning late in March the following spring, Uncle Tom came in and said: "It is time to sow oats, the blackbirds are coming." After breakfast I went out and saw a line of blackbirds flying straight north; the stream of birds was not over fifty feet wide, but it reached from the horizon on the south to that of the north, and continued without intermission for three whole days. I do not know whether they flew at night or not, but this was a sight that could be witnessed every spring for many years. But as the country settled up the birds seemed to stop with us, and while they came in droves, the great stream of birds going north was seen no more. And if they happened along about the time the farmer was sowing his oats, it was a race to see whether the farmers got their oats in the ground, or the blackbirds got it. Scare-crows would have no effect on them, and shotguns were almost unknown, so the children were brought into play to keep the birds away until the oats could be covered with the harrow.

A few days later the wild geese came, harrowing the sky, and they came by the thousand and alighted all around us to feed, and then hurried away to the far north. The ducks came, too, and every slough and creek and pond was full of them, and many of them stayed with us for weeks.

Then came the wild pigeon. That was a sight that few men under fifty years of age can remember, and no man will ever see again. They came by countless thousands and were days and days in passing; and they came every year, without any seeming diminution in their numbers, until about 1865, when they ceased to come all at once and altogether, and I have never seen one since. Had they dwindled down in numbers, year after year, and finally ceased to come altogether, I could understand that man in his destructiveness had caused their extinction, but as they stopped coming all at once I have always been at a loss to account for it. Did they take some other route, or were they suddenly exterminated by some disease, or other catastrophe?

About five miles from our house the pigeons had a roosting place. It was in a wite oak timber, which covered about a thousand acres. They did not nest there, but simply rested on the journey. I visited that roost many a time when every tree seemed so full of birds that it would be impossible for another bird to find footing on it. I never killed one of these birds, and I never knew any one else to kill or disturb them. When the first snow fell that fall, my father took the old rifle and the old white horse, early in the morning, and went into the woods to hunt for deer and came home along in the afternoon with a fine buck tied on the old horse. The deer was skinned and dressed; and what we could not eat fresh was salted down, like pork or beef. The hide was tanned and I reveled in long strings of yellow buckskin for whip lashes and shoe strings, which I often put to other uses.

It has always seemed strange to me, that my father did not hunt more; there was such an abundance of game of all kinds around us. Each fall when the first snow fell we had a deer, and on pleasant days in winter he would take the old rifle and go into the woods and bring home a great bunch of red squirrels. And on cold frosty mornings in winter he would sometimes bring in two or three prairie chickens with their heads shot off, and that was the extent of his hunting.

Never but one deer in a winter. He seemed as careful and saving of the deer as he was of our own cattle. But that was not the extent of the prairie chickens that we had. He made traps out of lath, with a spring door at the top, and sprinkled corn in and around them, and we often took out from six to twenty chickens the next morning. But we never kept more than three, the rest being turned loose, and the way they would get away from that neighborhood, when turned loose, was a sight. These traps were about fifteen inches high, and the four sides were just the length of a lath, and they were always set in the field among the corn shocks.

But if he would trap chickens, he would never plow a nest under when he found one in the field, but always left a good strip of land unplowed and allowed the hen to sit and hatch undisturbed.

The prairie chickens were so abundant then, that it did not seem possible that the supply could ever become exhausted, and their booming in the spring mornings was like low rumbling thunder. I have seen them by thousands at a time, after they flocked in the fall; and when the fields or prairie was covered by one of these large flocks and you put them suddenly to flight, the sound was something terrific. But the country settled up rapidly and, before I cast my first vote, the pigeons and the prairie chickens were gone. Geese and ducks were seldom seen. The deer had crossed the Mississippi, and in the place of all these were corn and hogs. And from rambling through Elysian fields I turned to the drugery of the farm.

A. D. McCANDLESS.

Guns and Gun Feats.

KELLER, Wash., Sept. 1.—*Editor Forest and Stream:* I have been very much interested in the discussion of the merits of rifles.

My active experience with rifles dates back to 1853; it was then that I resighted the first rifle I used to any extent.

And as to squirrels, I have been after them since I was big enough to follow my father when he went squirrel hunting, for I used to turn them for him, and when he would knock one out of a tree I would be the first one to light on it like a duck on a June bug.

During my time I have used or resighted nearly every kind of a rifle that has been manufactured. Among those I have resighted were two express rifles; they were Decimals, 5, and the charge was 5½ drs. Curtis & Harvey's Diamond grain powder, and 300-grain bullet. They were brought to Idaho by Messrs. Croasdale and Alex. Barrington, with whom I went out on their first hunt for big game. They secured sheep, deer and elk, and were well pleased with the hunt. When we were in the woods I got them to compare their sights with those I had put on the Winchester I was using, and they had me resight their rifles. Then Mr. Barrington had me make a set of sights, and these he sent to the London Field, which praised them editorially.

As to the merits of the different rifles, breechloader or muzzleloader, if I were going to shoot for my life or money, up to 300 or 400 yards, I would, with fair conditions, shoot a muzzleloading rifle with a round ball. Quite a number of years ago Mr. Alvord shot a 200-yard match in California, and he used a match rifle with telescope sight, and made an 80-inch string at 100 shots, measured from the center of the bullet hole. I do not believe such shooting was ever done with a breechloading rifle.

I have often attended shooting matches where it took center to get sixth choice. The shooting was done with muzzleloading rifles at 40 and 60 yards, 40 offhand or 60 with rest. The six choices were, first four took the four quarters of the beef; the fifth took the hide and tallow, and the sixth took the lead.

During the Nez-Perce war, the Indians at the first fight secured fifty-four Government Springfield carbines. There are few better rifles made, and I think that all that saved most of us at Cottonwood was the fact that they had been using any kind of old rifles, most of them Winchester model '66, and they had been used to holding over at anything like long range, and they had not got used to the way the carbines shot, as most of their shots passed over our heads.

After the war was over, three of us sent to the Sharps Manufacturing Company and bought three long-range rifles; they cost us \$90 each there, and when we got them together, with loading equipment and some ammunition, they cost us, laid down in Lewiston, \$135.50 each. We used them for a few years, but I never liked them; they were too big and too long, shot too much ammunition, and the recoil was heavy after they got a little dirty, as soon occurred if one was among game.

The most accurate shooting breechloader I have used or resighted was the .38-55 Marlin, with metal-patched bullet. This would come nearer shooting the bullets into one hole than anything, and had it not been too heavy, I should have kept it as long as I wanted a large caliber rifle. With it I have barked eight squirrels without a miss; and I shot it at six deer and probably 100 grouse, and never shot at a thing with it I did not kill, although I had to shoot one deer twice. I had it fitted with a Malcolm telescope sight, which I found to be perfect for rest shooting, but rather slow for the mountains. I sold the rifle but kept the sight, which I will fit to a .22, for there is little big game left, and all the shooting we now do is with a .22. Few hunters have any idea what a rifle a .22 is. I went hunting on Labor Day six years ago, and shot nine times with a Marlin .22 long rifle cartridge and killed six grouse, all shot through the head, and two deer, one shot through the head and the other I broke its back. There were five of us out, and the other boys got two Franklin grouse.

The next Labor Day I went out alone, and I killed four sharp-tail grouse at three shots and six blue grouse at six shots, and a buck that dressed 182 pounds, at 175 yards; and this with a .22 Stevens Favorite. Both these .22 were sighted with the Lyman peep sight and a silver front sight filed down till very thin, not half the thickness of a dime.

With the atmospheric conditions favorable, I do not think there is a cartridge made that will make a better target up to 500 yards than the .22 long rifle.

In regard to revolvers, I have never been without one

since 1853, and I have killed all kinds of game with them. I never found any other cartridge revolver that shot as accurate as the old Colt Navy .36 caliber with the round ball. I never could understand how it was you could load them with the round ball and then shoot them, and they would shoot where you held them; then load them with the same amount of powder and the conical ball and they would shoot 6 inches high in 20 yards, and it is the same with the S. & W. revolvers of to-day. I have had the S. & W. .32-44 and the .38-44, and the .44 target, and they all will shoot 6 inches higher in 20 yards with the conical ball than they will with the round ball.

Yesterday I was out and I shot twice at grouse; one shot was about 40 yards, the other not quite so far; I hit both heads.

As to the sights, there is nothing that compares with the Lyman peep sight; and if a man's eyes are normal, he can file the hind sight down till it has the hole in the peep half filled out, and he will have the quickest sight ever used, and one that is as near perfect as it is possible to make it; for then when you put the bead on the target you have the same as three dots in a row, and they are a great help in keeping from canting the rifle to the right or left. I used mine that way till my eyes got so old that I could not see the front sight. Now I have to use a small aperture, so that I can see but one front sight. When it gets so that I cannot hit the head of a grouse on average of six out of ten, then I'll have the telescope on my rifle; but as long as I can beat the rest of the boys without the telescope, I shall be content to use the Lyman peep sight. LEW WILMOT.

Editor Forest and Stream:

There is no one who is so qualified to testify in the affirmative as the one who does a thing. The one who tries and fails has no evidence. The person who did not see a thing that others saw is a poor witness. I can get the affidavits of two or three dozen men in this city to the statement that a stranger calling himself Bogardus (not Captain Bogardus), on our common, repeatedly tossed an empty can some 15 feet high and hit it five times with balls from a .22 repeater before it touched the ground. Yet one of your contributors recently mentioned this feat as an impossibility, as he put it, a pipe dream. We were not all dreaming. We could hear the balls hit the can, and the punctured cans were in evidence. He broke bluerocks with one barrel of his shot-gun, then broke the largest piece with the second barrel, stating before the trap was sprung just what he would do. Likewise he nipped a small piece out of first one, then the other, side of a target; and took a piece out with one barrel, then broke the target with the second, after telling us what he would do. Now who will say the feats we saw him perform were impossibilities? G. W. CUNNINGHAM.

Editor Forest and Stream:

We gun cranks and yarn-spinners are a queer lot, after all. When we get into a gabfest over some question of shooting or of natural history, in the free-for-all columns of FOREST AND STREAM, some of us wax mighty "tetchy," and read into one another's letters meanings that cannot be extracted from the text. Then we jump the other fellow good and hard and demand to know what he means by his insinuations. This peculiarity has cropped out noticeably in the "myth-busting" symposium. A fellow can't ask an innocent question without being accused of doubting some other chap's statements. Recently I said that the debate between several correspondents had left me puzzled, and I asked why the wind of a rifle bullet that kills a squirrel or injures a man will not blow out a candle? Mind you, I believe that the wind of a bullet will blow out a candle, but there are others who assert the contrary.

Now Caba Blanco says I have fired a broadside at him and comes back at me with facts concerning the effects of cannon balls, which I never dreamed of questioning. Queer that he did not see that I was talking only about the candle-snuffing feat, and did not even suggest a doubt of M. D.'s statements. I cannot see where there is the least ground for disagreement or debate between Caba Blanco and myself. If he will show me that a rifle bullet hitting the wick of a candle does not put out the flame, it will still be up to him to explain why, before calling on me to answer questions that are irrelevant to the subject. Suppose I have or have not dodged three-inch shells or been around where ten-inch guns were fired; what has all that to do with candle-snuffing? Nobody need answer that question—it answers itself. Just for a novelty, let us stick to the point and refrain from drawing far-fetched inferences. QUIEN SABE.

Editor Forest and Stream:

Now that the squirrel-barking case is reopened, permit me to say, with all due respect for the decision heretofore rendered, that the testimony of competent witnesses like Messrs. Frazer, Rushton and Barnes, is entitled to more consideration than most of the testimony on the other side. Mr. Frazer's observations of the vital tenacity of squirrels confirm my own, some of them being almost exactly parallel to the case I cited in my original "myth-busting" article in the Evening Post, around which this controversy rages. It appears to me that Mr. Frazer has demonstrated by the scientific method that the legendary feats of marksmanship are fanciful exaggerations, and that the cases of squirrel barking cited by a few correspondents as of their own experience were probably accidents or imperfectly observed facts. The testimony of those who tell what their grandfathers told them is negligible, and I do not think the sentimental faith of the admirer of an entertaining writer of reminiscences can be treated as evidence at all.

It is strange that none of the faithful, who came so valiantly and clamorously to the rescue of the squirrel-barking legend, has had a word to say in support of the candle-snuffing story. And yet the assertion that Kentucky riflemen habitually snuffed candles at fifty yards *without extinguishing the flame* is made as positively as the other. Audubon says in so many words that he saw the thing done. Is not his evidence as conclusive on the one point as on the other? If we are bound to accept one story because Audubon told it, we cannot reject the other.

I see as yet no sufficient reason for believing that the riflemen of Kentucky habitually either barked squirrels or snuffed candles. It seems to me that the preponderance of expert and positive evidence is against the legends, and I submit that the "myth-busters" have the better case.

Let me say that I do not doubt the sincerity of anyone who has taken part in the debate, and I trust that none will consider my argument as a personal reflection. It must be remembered that Audubon wrote long after the events; that his temperament was artistic, and that it is quite conceivable that his imagination was stimulated by the effort to recall to mind the remarkable feats of skill he had witnessed in his wanderings. The romance of the woods impressed him strongly, and it might well be that it affected his writings, and led him into unconscious exaggerations of the picturesque. Absolute accuracy in reminiscence is very rare. Its absence does not connote conscious inaccuracy.

ALLEN KELLY.

So He Got to the Wedding.

"HELLO! Is this Judge Kenworthy?"

"Yes, and are you Charles Hughes, of Utica, New York?"

"I am sir, and I wish to plead guilty to a violation of the game laws of this State."

"Very well, Mr. Hughes; I will fine you \$50, and warn you not to repeat the offense."

This conversation over 200 miles of wire constituted the trial of a rich Eastern attorney last Sunday before Justice of the Peace Kenworthy, of Willits. The unique trial by telephone was evolved in the fertile brain of Chief Deputy Vogelsang, of the Fish Commission, who had arrested Hughes on an eastbound train for killing deer in Mendocino county in violation of the game laws.

The defendant had been camping near Willits for several weeks. It came to the ears of the Fish Commission that he had shot deer before the season opened. They could not prove this, however, but one of the deputies succeeded in finding a doe hide near Hughes' camp. A warrant for the arrest of the sportsman was issued, but he could not be found in Mendocino county. Vogelsang learned that the man was coming to this city, but could not find him here.

A Mendocino county deputy heard from one of the lawyer's friends that he would start for the East on Saturday's overland train. Vogelsang knew that his quarry's name was Hughes and that he was probably on the train, so the officer got aboard. Hughes got wind of the fact that he was followed, and instead of showing his through

ticket, paid a cash fare to Sacramento. Members of the lawyer's party said the man's name was E. J. Lovett.

By process of elimination, Vogelsang finally spotted his game, and, with the aid of the conductors, made him acknowledge his identity. Officer, prisoner, and the prisoner's friend alighted at Sacramento and spent Saturday night at the Golden Eagle Hotel. Hughes said he was due in Buffalo, N. Y., to attend a wedding in which he was to be best man, and could not possibly return to Mendocino county. Vogelsang decided to do the best he could for his victim under the circumstances, and evolved the idea of a telephone trial.

Justice of the Peace Kenworthy, of Willits, who had issued the warrant, was called up by telephone and the matter explained to him. Attorney Craig, of Willits, was engaged to represent Hughes, and the trial by telephone took place as previously mentioned.

Hughes paid Vogelsang \$50 and received a receipt in return. Sunday night he again set out for the wedding in Buffalo. The experience cost him \$28 for a Pullman for himself and friend to Chicago, \$3 for a ride to Sacramento, \$5 for room and breakfast for himself and friend at the Golden Eagle, and \$50 fine. He was greatly pleased at Vogelsang's courtesy in not making him return to Mendocino county, and complimented the Fish Commission on its vigilance.—San Francisco Call, Sept. 7.

SEA AND RIVER FISHING

In Colorado Waters.

DENVER, Colo., Sept. 9.—I met Judge D. C. Beaman yesterday, just back from the Gunnison with Judge Maxwell and a large bunch of other expert fly-casters, including John M. Walker and "Parson" Tom Uzzell. "Oh, we got a few little ones, but not a single big fellow. Fact is, the water is too high and muddy for good fishing. None of us got anything worth mentioning. However, the stream is running down and I am willing to be plucked of the beard for a false prophet if you do not hear good reports from all along the Gunnison in ten days or two weeks." If such men as these score goose eggs, it is useless for others to make a try. But, as Judge Beaman says, the promise of the best sport of the season is in sight within two weeks, and it will likely hold fair clean up to October 31, when the law descends on all anglers.

We out here are now in the midst of the most gorgeous weather brewed in the whole country. Down on the plains, where is situated Denver, the trees are still green and the grass simply exudes color; up in the mountains, however, Col. Frost has been putting in some bold strokes with his color brush and mahlstick, and the effect is stunning. Like the prevailing shades of feminine fashion the waning summer, the forests are donning delicate champagne tints, mode browns, and those browns that mix with reds and sepias. The result is gorgeous; one with half an eye for landscape forgets his rod and fly a goodly part of the time and goes mooning after some of the shades painted of no artist's hand save Dame Nature's.

And more's the pity, since nearly all have had their vacations and returned to grind at desk and counter and private office. However, business—blessed, lucky business—took the writer to Lake Alicia last Saturday, and he, being forehanded, took with him his lancewood and book of flies—merely as a matter of good faith. The object of the trip was soon despatched, but the writer is leaving Colorado for a siege of several months, and the temptation to "linger and wallow in the lap of nature" was not to be resisted. Let the reader project his astral body through a few hundred miles of space and come with me. We arrive at Thomasville, a pretty little station on the Colorado Midland, and, having already advised a certain Mr. Engelbrecht of our coming, there are in waiting trusty saddle horses, with safest of stock saddles well cinched to their round little bodies. There is some baggage; this is slung upon the backs of patient and surefooted little Rocky Mountain "canaries." Half a dozen compose our cavalcade. As we pass through the principal street of the town we raise a cloud of dust, causing a couple of vagrant dogs to follow and testify their displeasure with sundry yips and barks. Before us lies a mountain trail straight up eight miles. 'Tis the only way to reach Lake Alicia. The sun is simply "corking hot," but none seem to feel it, so pure and sweet and bracing is the atmosphere, like a mouthful of crisp champagne. A climb of two hours brings us to our destination, around which is clustered a number of rustic cottages, accommodating a little colony of some thirty pilgrims. We arrive near the dinner hour, and the cheerful voice of our host bids us "wash up and come to dinner." No need to ask after appetite. We follow to the dining room, wondering sub-cutaneously if indeed there will be enough to go round—considering our own great capacity. Fresh eggs, fresh butter—just think of keeping ten cows up at that altitude of 9,250 feet—fresh vegetables and fruits of all kinds. And don't forget the fried trout, caught in the morning hours from the lake by some of the early rising guests. Only a mile from the lake is Fool's Peak, a wise man's paradise, 14,240 feet high. During the afternoon we ascend to its summit and squint over into the backyard of Routt county, 150 miles away. We then turn our gaze on Pike's Peak, 200 miles distant; Mt. Sopris, 60 miles away; Snow Mass, aptly so named; the Crested Butte range; Maroon Peaks near Aspen; and those literary sentinels of the Rockies, Mounts Princeton, Yale, and Harvard, east of Leadville.

The trout in the lake become very active as the sun crawls over the divide, and if you are so inclined you can break a spear—or your rod, for that matter—with some really interesting fighters of that glacial body of water. A large catch you will not get, if measured by number, but there are some big lunkers there, and well worth the effort as we found. Sometimes it is the fly,

at others the deep troll or a bleached minnow. Our first effort was rewarded with a quartet whose combined weight marks the five-pound notch—good enough sport for any gentleman. Eight o'clock A. M. at this season is early enough to go rowing, the mornings being eaten of a keen desire to imitate the Arctic zone.

Within two miles of fair Alicia is what is called a box cañon, one of the most imposing feats of nature to be seen anywhere in the whole State. There are several caves within easy reach of the "ranch," and a visit to these helps consume the time till the trout are again "at home" to anglers. How deep these caves are we never learned; they are just the kind of homes we used to people with bogies and hobgoblins and "things" when we were in short pants. Is it any wonder that after spending three whole days up here with "God's own things," we return to the plains at the foothills with chest inflated, head up, and neck arched, ready to take up the gauge of battle again? Colorado's mountains of gold may make a few men wealthy; there is even greater treasure here—health and happiness for all who seek.

Taken all in all, the passing fishing season has been rather disappointing. Little snow fell during the winter, and many Solomons presaged a dry summer. Instead, we have had nothing but rain and cloudbursts. The rivers were never so full and never so muddy. Colorado streams are full of trout, and it is indeed a "scrub" who cannot make a somewhat fair killing in a day's outing; but the season's average catches have been away below normal. Never before during a four years' residence have I been unable to take as many as, or more good sized trout than, I wanted. This season, however, I have come perilously close to being "skunked" more than once. And my plaint is the plaint of hundreds of others. Too much water, too much roil, too much natural food. No lack of trout. But they could not be tempted, in some cases; in others, could not be got at. Some of the best pools on the Gunnison, on the Eagle, and on the Laramie and the North Platte, have not been ruffled by a fly the whole season because of high water. But I am advised of a general recession of waters now, and small flies and bleached minnows ought to do the business in the big streams till the middle of October at least.

Speaking of the last named two streams, Messrs. Bryan Haywood, Harper M. Orahoad, J. C. Bailey, and George Orahoad, all crackerjacks with the fly, are just back from a five days' circuit of the two rivers. "Nary a nothing," says Bryan to me, says he; "but the water will be fine next week, and you will have the sport of your life if you time your visit the middle of the month." So with ginger and blue quills, march browns, alders and golden-ribbed hares' ears, No. 12 and 14, we—that is, our wife and ourselves—are promising ourselves a five days' wagon drive from Laramie to John and Jack Hunter's two places on the North Platte, thence to King's ranch at Binghamton, thence along the Wood's Landing road to Wood's Landing on the Laramie, stopping at divers places long enough for morning and afternoon casting; last back to Laramie. The other half of "we" is provided with overalls, elk-soled boots, well hobbled with soft nails, a sweater and perfect tackle. She has never cast a fly, her knowledge of these "critters," beyond "shooing" a certain pestiferous brand outside the pale of the screen doors every summer, being nil. But there are no roses in her cheeks; she wakes each morning reluctantly and begins the day with the plaint, oft-repeated, "Oh, I am so tired." This is to be our real honeymoon outing, though marriage is an old song with us, and, thank God, its music is the sweetest we wot of; our wanderings promise to take us to all sorts of out-of-the-way places between here and Southern California. We have set no limit to our tramp—just going to keep going like a pair of sure-enough runaway kids till the roses bloom in her cheeks, till she is no longer "so tired," till her eyes grow brighter with the fire of youth, till her facial contour again assumes the curves and dimples of young maidenhood. Of the incidents of this trip I may have more to say in the columns of FOREST AND STREAM from week to week, if ye discriminating editor does not consign my stuff to the tender mercies of the office cat and the blue pencil.

I fear there is more of rumination and anticipation in this potpourri than of news. But the anticipation of returning to nature's fold makes my thoughts wander. Never before in Colorado's history have so many arrests

and convictions been made and had for violations of game and fishing laws, and there are still four months to run. My memory is not so weak but I can hark back to the time when I read a book by a game hog now reformed. The scene of his carnage was Florida, and he proudly burdened his song with boasts of going forth to kill and destroy and maim game and fowl and fish daily. That was more than a score of years ago, when Florida's supply of game and fish seemed to me inexhaustible. But the acts of this prince of game hogs and his disciples soon wrought so that the legislators of the "Flowery land" had to safeguard their game and fish in many ways to save the seed. Colorado has come near to the same fate. Even the passage of four years has reduced the goodness of the game grounds, of the fishing streams. Our last Legislature saw the writing on the wall and made some really good laws. They were stringent, particularly against "foreigners" and sporting goods men have been known to inveigh and allow as how many eastern sports have refused to seek big game here because, forsooth, they had to pay a license of \$25 for the privilege of shooting a single deer with horns in a season. Doubtless some of the sporting goods men have failed of sales, which is only matter of individual concern. But there is another side to the question—one that concerns vitally the people of the State and the country at large. While the figures are not complete, the present year's work not being ended, a comparison is cause for gratification and encouragement. Game and Fish Commissioner Woodard gave the figures to me. During 1903 there were twenty-six arrests and convictions under the game law and three under the fish law. This law went into effect on July 12 of that year, but it was practically inoperative because of lack of physical equipment until 1904. During 1904, and up to September 1, there have been forty-three arrests and convictions under the game law and thirty-one arrests and twenty-nine convictions under the fish laws. Mr. Woodard is confident that fully as many more arrests and convictions will be secured before the close of the year. Some idea of the difficulty of the task of the State's game wardens may be obtained from the fact that the entire work is done by fourteen paid game wardens (five chief wardens and nine sub-wardens), scattered over a territory almost as big as New England and New York combined. Wisconsin, with one-fifth the territory to patrol, has sixty-seven paid game and fish wardens; Illinois 162.

As to the working of the "one man, one deer" law: in 1902 621 deer with horns, which means a male deer of a year old or over, were shipped out of the State from Debeque, Rifle, Newcastle and Glenwood Springs. In 1903, since the new law went into effect, 80 deer were shipped out of the State. As a result of the stoppage of the wholesale slaughter of these animals, the number of one-year-old deer is already on the increase, says Mr. Woodard. And it is said that before long elk will be found again in the mountain fastnesses.

"Of course it is a hardship on the New York State fellow who used to come here and bag three deer to be allowed to kill only one," said Mr. Woodard. "But he is only party of the second part, and a very secondary part, too. What we are after is the conservation of the game of the State. The resources of Colorado are, first, precious metals; second, agriculture; third, game and scenery. The way the devastation of game has been going on, the only thing we'd have to offer the sportsman wayfarer in a few years would be scenery; and no one would come thus far to shoot the grandest inanimate scenery. So these laws were made; and they appear to be pretty good, too, though perhaps at fault in some details. If, however, they preserve and perpetuate our big game they will have served a most useful purpose. That is what we are trying to do."

W. F. Givens, of Florence, game warden, has made the record so far. His salary is \$100 a month and one-third of the fines imposed. The records show that his income since June 1 has been between \$300 and \$400 a month. He takes his wagon, starts down stream, and lets no guilty one escape, whether he be in possession of undersized trout or caught casting after 8 P. M. He is credited with nine arrests and nine convictions in one week. Charles A. Purington, in the Loveland district, arrested eight "awell" anglers from Denver, and convicted seven of them after the hardest kind of legal battling. "The other fellow," not yet convicted, is a bright star in the local angling firmament, and he avowed his determination

to spend \$1,000 to escape conviction. Meanwhile the trout taken from his reel lay on ice in cold storage, and measure less than six inches, while the legal size is seven. He would give much to escape the stigma, but it seems that he is "cinched." A good lesson is needed.

Last year 2,896,000 young trout were planted in all Colorado streams. Before the close of the planting season of 1904, Mr. Woodard promises that the 6,000,000 mark will have been reached. Which seemeth a good presage for ye angler of 1905. J. D. C.

Newfoundland's Free Salmon Fishing

BEFORE me is a list of named salmon rivers that may be leased in Quebec and Canadian Labrador, the prices for the right to fish varying from \$50 for one stream to as much as \$1,250 for like rights on another. Even then salmon fishing has been very poor this year. Experts like Mr. Merston and Mr. Chambers have stated in your columns that salmon fishermen on the Restigouche and Cascapedia have been greatly disappointed, as well as anglers who have cast flies on streams in Quebec and Nova Scotia.

Yet for a round-trip fare of about sixty dollars from New York to St. John's and return, including over 1,100 miles of travel on the island in excellent sleeping and dining cars all the way, I found excellent salmon fishing at five or six different and widely separated points last month, in eastern, central and western Newfoundland. This fishing was free as the air. One may leave New York Sunday noon, passing through Portland, St. John, N. B., Truro, N.S., and along the superb Bras d'Or Lakes to North Sidney, Cape Breton, where the steamer Bruce will carry him ninety miles to the western terminus of the Newfoundland Railroad, and Wednesday before noon he may fish the pools of the superb Codroy River, about thirty miles from where he landed on the island. Such anglers as Lord Leighton and W. D. Reid took very heavy salmon from those pools in June and July; but they were not very plentiful. However, the fish were numerous in the Humber, Gander, Exploits, Grand and St. George's rivers. Heavy salmon were also taken from Harry's Brook, but the water was too low, and big fish were scarce.

Harry's Brook is formed by the spilling out of the waters of St. George's Pond, a splendid mountain lake

A SECTION OF FIRE-SWEPT FOREST AT CRABBE'S, NEWFOUNDLAND, JUNE 30, 1904.

about fifteen miles long and two miles wide. Since I left that stream, I have reports from it that the rains have made abundant depth of water, and that the salmon fishing is magnificent. In the foot of the lake, just before the water feels the current of the stream, and over a space of five hundred feet each way, large fish were lying on the 30th and 31st of August and September 1. About 400 salmon were there, some of enormous size—30 to 35 pounds each.

As a rule, the best salmon fishing in Newfoundland means living under canvas. The sportsman should not risk failure by going when the water is low or while the fish are not running or lying in pools. He is almost sure of good sport with the salmon; but it is much wiser to write to the guide and have him telegraph when the stage of water is right, and the fish are "on hand." But the fishing is there, and with reasonable conditions may be enjoyed in royal measure. Here is specific mention of a very few results of the fishing, taken almost at random. Some of this fishing was personally seen by me; the rest is vouched for by reliable men:

Mr. C. A. Walker and party of three, during the first week in August, secured 176 salmon in one week on the Upper Humber. Mr. Walker caught the largest, which weighed 22 pounds.

On Friday, the 22d July, nine salmon were caught at South Branch Codroy by a party who left Tompkins by morning train and returned in the evening.

Sir Brian Leighton, on Saturday, June 18, took five salmon, one 20 pounds. On the same day a 10-pound salmon was caught in Stephen's Pool, and a 20-pound one in Grendell's Pool, and parties from Philadelphia were getting all the fishing they wanted at Fischell's Brook. Twenty-five salmon were also taken between the mouth of Gambo and falls, weighing from 20 to 22 pounds each.

On June 10, at Robinson's Brook, Mr. Sears captured a 28-pound salmon, and Mr. McDougal, of Bank of Nova Scotia, Halifax, captured a 24-pound salmon and two 10-pound ones. Besides these, several other large fish were taken.

Vice-Admiral Douglas, of the B. N. A. fleet, secured good fishing during the first week in July on Codroys.

First salmon for season at Crabbe's was taken on June 27.

Salmon were very thick on all the west coast rivers from July 1.

At Crabbe's from July 7, trout and salmon were very plentiful in the rivers.

Mr. Mott took six salmon at Stephen's Pool, South Branch, on June 27.

A great many salmon were going up the river at Gambo on July 8.

Thirty-six salmon were caught at the mouth of Klity's

Brook week ending Aug. 8, weighing 8 to 12½ pounds.

A 25-pound salmon was taken at the Forks, Little River, on July 28.

Major Ashburnham caught three salmon on June 7 at Little River, weighing 10 to 12 pounds.

At Bay St. George, I took from one stretch of deep, clear, green water about three hundred feet long and sixty feet wide, salmon, grilse, brook trout and sea trout. That was on July 9 and 10, 1904. The fish were leaping every few moments. Peter Benoit, of Stephenville, who

JAMES FOLEY, THE SKIPPER.

must be the best guide on the West Coast, had charge of our camp. In addition to his own services, he supplied excellent tents, boats, cooking utensils, and a strong boy to help him, all for \$3 a day. The weights of the fish were more than satisfactory—I was delighted. Four kinds of game fish from one pool! That was the kind of sport "Pete" showed to me. Two hours on that one deep, steady run of water repaid me for all expense and trouble.

At North Sidney, Cape Breton, we found a conductor of the Interecolonial Road who had brought thirty-five fine salmon from Newfoundland. At Rosa Blanche, on the south coast of the island, trout eleven inches long were offered for ten cents a dozen, with no buyers. I took sea trout near the pier at Placentia, in salt water, until I was ashamed, and stopped. Twelve-inch sea trout were selling for 15 cents a dozen. A seven-pound codfish there cost eight cents; they are not sold by the pound. Here is a picture of James Foley, the skipper of the smack that I boarded there. I saw a 28-pound salmon sold to a hotel

LANDING A YOUNG SALMON OR GRILSE AT MURPHY'S FALLS.

landlady in Placentia for \$1. Think of that, ye Camp-Fire Club diners in New York!

The ouananiche were plentiful in Red Indian and Grand lakes. Salmon were being taken at Glenwood, Grand Lake and Gambo, and parties returning from Long Harbor River in Fortune Bay told me the salmon were running very large there. In short, the fish were plentiful and the fishermen very few, with a bewildering choice of salmon waters, all free. On the upper west coast, at Bonne Bay and River of Ponds, and even at the Codroy, right on the line of the Newfoundland Road, fish after fish had been taken that weighed twenty pounds or over. The names, weights and dates of these catches were in most cases supplied, are before me as I write this, and are not included in the catches already mentioned.

The trout fishing was absurdly good. Trout are as

common in those lakes as shiners are in the States. For example, at Harbor Grace, Louis Williams and four others brought seventy-two dozen trout on the train, a shameful killing. All catches of trout are counted by the dozen. Right near Whitbourne in eastern Newfoundland, Mr. P. D. Park caught 182 trout as fast as he could take them off the flies. His comrade got eighty-five. And this is one of the catches selected at random. At the Narrows on Bottom Brook, in spite of the rising to the flies of the myriads of salmon fry, I repeatedly landed enough beautiful brook trout in four or five minutes for a full fish meal for four hungry campers. Trout are not appreciated in that island, being regarded as we do perch and sunfish; only they are far more numerous.

Anglers who live at St. John's, Newfoundland, have had excellent sport this season on the Salmonier Stream, taking salmon, very fine grilse, and trout. This river flows south by west on the Avalon Peninsula into St. Mary's Bay. It is reached from Holyrood Station, thirty-three miles out from St. John's, where the railroad passes along Chapel's Cove, a salt-water arm of Conception Bay. On July 1, 1904, for miles along that beach was a row of dead caplin (the small salt-water fish used by the cod fishermen for bait), at least two feet wide (and often four feet) and from six inches to two feet high. They had been cast ashore and killed by the surf, and were being carted away for bait, food, fertilizer and oil.

The drive by wagon from Holyrood to Murphy's on the Salmonier is seventeen miles over a fair country road. Mr. Murphy can care for sportsmen, and will guide them to the "lower pools," as he calls them, about three miles down the river, where an angler is absolutely sure, at the proper season and stage of water, to get royal salmon fishing. A picture is sent to you herewith of two men landing a grilse (a young salmon three years old) at the little pool near Murphy's "hotel."

The lower pools are locally known as Pincent's Falls pools. Three men have camps there, permanent houses. Their names and addresses are Jim Roach, Salmonier, Newfoundland; Mr. Hurley, also at Salmonier; and Mr. Welsh, Peat House, Salmonier Road. Each one will guide and board anglers. I know of no other spot where

ON BAY OF ISLANDS.

the accommodations are so good and all ready during the entire salmon season, and where excellent sport is absolutely sure to be had from about July 1 to September 1. Further down and right at the little village of Salmonier, there is again most excellent fishing at a place called Sandy Point. From the lower pools one may pass by canoe down the stream, with two or three small portages, enter salt water, go around Hareot Bay and Point in less than two hours, and enter and go up the Rocky River to the line of the railroad at Whitbourne, fifty-seven miles out from St. John's, with good salmon fishing all the way in the fresh water. A Mr. Finley, with two friends (three rods), took this trip on July 1 and 2, and came into Whitbourne with 52 fine salmon. But anglers who fish the Salmonier should select guides through Mr. Murphy, who can be addressed at Holyrood, or write to one of the owners of the three camps at Pincent's Falls.

The only two drunken men that I saw in Newfoundland were Salmonier guides. But anglers who may think of visiting the island for the salmon fishing, should be absolutely sure beforehand that there is enough water in the rivers selected to allow the fish to run up, and that they have commenced running, or they may deplore the trip, and come away saying there is no salmon fishing in Newfoundland. For example, in July, 1903, a party visited the falls just above Willow Steady on the upper Humber River, and three anglers took only one grilse in two days. But at the same place, a picture of which I will send you, Mr. Arthur Whitman and Mr. Jones, fish merchants of Halifax, and a Mr. Morrow, a hardware dealer of the same city, took sixty superb salmon in six days. Twenty of these fish were landed on July 11, 1904. Thirty-five of the catch were heavy, the largest weighing twenty pounds. Their head guide was Oliver Benoit, of Nardini's Crossing. Forty-one leaping salmon have been counted there in one minute by a held watch.

I make no attempt to describe the wildness and beauty of the scenery. It is unique, and "must be seen to be appreciated." When such mountains as Blomidon at Bay of Islands rise over 2,000 feet and show patches of snow in July that are a mile long, no words can describe the scene. But I pay my tribute of respect to the mosquitoes and black and sand flies. Let no angler live there under canvas without a good supply of fly repeller.

There are abundant forests, whose varying shades of green delight the eye, and views of dense tufts and areas of ferns and wild flowers, even that supposedly semi-tropical blossom, the orchid, blooming beside the railroad track. But there are very wide areas of blackened timber. Some of my sportsmen friends who may be interested in blackened timber, are furnished here with a view of a little section of burned woods at Crabbe's, Newfoundland, on June 30, 1904.

L. F. BROWN.

On Staten Island Waters.

THE July morning broke in all its glory; the dawn breeze sprang up and scattered the dewdrops from the bushy heads of timothy, while hundreds of sparrows twittered in the hemlocks that shaded the rear of the house. The level rays of the sun fell in a golden flood across the floor and danced in fantastic fret-work on the opposite wall. This was long before the advent of the so-called alarm-clock; but what enthusiastic angler ever slept out his allotted time?

Downstairs we found father and grandfather with the fishing baskets and rods. My brother carried the lunch-basket, while I buckled to the old store water jug. We boarded the first car bound for the Port. We took a short-cut through the old rolling mill grounds, and went down over an old, almost effaced, gravel path, the remains of the old colonial post road; for before the advent of steam cars the traffic was conducted from New Amsterdam to Philadelphia largely by water to Elizabethport, called by old timers to this day the P'int (point), and from there by stage-coach to Philadelphia, the colonial capital. Old Eleck the boatman was waiting our arrival, and slowly we rowed out into the Sound, which lay tranquil and glassy as a mill pond on a quiet day. Far as the eye could see, huge banks of horse-mussels, shining and black, stuck out from the banks in countless thousands; large clumps of seaweed floated with the tide, rising on its gentle undulations, with here and there a little ruffle of the surface marking the place where the dawn breeze reached down and touched the surface of the Sound, while the southing of the tide under some shelving bank lent a freshness to the scene, and the eddying spray brought the odor of brine, full of life and vigor, to our nostrils. That was a life worth living! Ever and anon, in tender reverberations across the meadow, drifted the love call of the summer yellowleg, or the call of the golden-breasted meadowlark; crickets chirped, and heavy green-headed horseflies buzzed by, dodging the broad-winged dragon flies. Little knots of beach birds and sandpipers flitted past from time to time, rising ahead of the boat and skimming along just over the water to alight further on and repeat the same performance again and again before rising and disappearing over the meadow, all the time tremulously calling, "peek, p-e-e-k, p-e-e-k!" Rounding a point of land, a flapping on the bank attracted our attention to a huge blue heron, which rose clumsily on the wing, flying, as it seemed, elbows first, with legs hanging down like the stems of two old Dutch pipes, as he called rapidly, "Qu-a-a-k, qu-a-a-k," and circled broadly back across the meadow behind the skiff, where he could pursue his piscatorial pastime unmolested.

And now rose the sun over the blue hills of Staten, bringing with it the fresh morning breeze, rippling the surface from shore to shore, while myriads of swallows were seen skimming over Sound and meadow. In came the oars and up went the sail, and in a few seconds, heeling over to catch the breeze, the skiff skimmed along over the water like some animated thing, dashing the spray from under her forefoot and creating a drowsy lapping under her counter. The skiff, painted green with a white gunwale, was the boat par excellence for such trips; tight as a handbox, sturdy and staunch, with a centerboard let through the ceiling, not sufficiently high to rise above the first thwart, for these boats, some twenty feet over all, have an exceedingly light draft, even when loaded; clinker-built, with a 6ft. beam, and as neat as the inside of a watch-case. For the skiff is the oyster-man's house. He is in it from 4 in the morning to 7 at night. It becomes his pride, his hobby, and when his day's dredging is done, and all the seed sold, then it's "smoke-ho!" and he looks forward to his race home with his fellow dredgers with pleasure. In the race his cull boy takes a hand, too; every skiff carries a cull boy to cull the dead oysters from the seed as it is hauled up and dumped on the cull board.

Old Eleck was known from Sandy Hook to Robins' Reef as one of the best in his line. The journey down was utilized in rigging up the tackle, so that as soon as we hove to off Smoking Point, where at mean low water we would have some thirty or thirty-five feet of good tide-water under our keel, we might begin work without any impediment. The lunch was stowed forward and covered with canvas—chicken, ham and tongue sandwiches, fruit and watermelon; while the well in the stern was bailed full of clean salt water to keep our fish fresh.

"Looks laik a good day f'r feesh," says old Eleck. "We'll try 'r luck off Smoky P'int the fust o' flood, 'en then move up tu Fresh Kill; seems a laikly spot f'r bass." We hove to around the upper shore of Smoking Point, let go our anchor, and five lines baited with shedder crab quickly sank to the bottom. Grandfather got the first strike, and landed a good sized kingfish; father came next with a 3-pound weakfish; then my brother took a fine weakfish out of the wet; then old Eleck and I—I came last. Old Eleck would never use a rod and line; it was beyond his bounds of propriety. He "cud'nt git it used tu them squirley line pullers [reels], en ez tu holdin' a pole—he jest cud'nt du it; ef he got a bite on th' pole, he cud hook 'em, but he'd be swizzled ef he wudn't lay th' ole thing daown an' yank in han' ov'r han'!" And so he did "yank 'em" in hand over hand, as fast as he could bait.

It seems strange to me now, after I've had years to reflect over it, that we, having the latest improved tackle—we always tied our own silk-worm gut leaders, calculated to deceive the most fastidious fish—had no better success than old Eleck, whose line was a heavy cotton trot-line, such as carpenters and masons use as chalk-lines, and a heavy sinker of some six ounces. No leaders garnished Eleck's line; no, sir, no "new-fangled contraptions" for him. He liked the good old ringed hooks, made of thick wire resembling a heavy cod-hook. These he preferred to set at right-angles and close to the line, and when baited with rich shedder crab, the cast resembled somewhat the limb of an apple tree in fruit, all ready for the members of the squeteague family to pluck. They plucked it, and came back for more. He rarely missed a strike. I have seen him baiting my line for me, meanwhile holding his own between his teeth, get a strike, raise his head suddenly, lay my line aside, and yank another fish out of the wet. This I have seen him do more than half a dozen times. There was a story of old John, Eleck's father, an old seadog, tanned until his hide resembled

gunnysack, who was in the habit of imbibing pretty freely of the cheering but inebriating decoction commonly known as "corn-juice." One day, when in this condition, he lay asleep in the stern sheets of his skiff, close to the gunwale, a bass struck the line wrapped round his finger; old John struck, lost his poise, plunged overboard, seized his line in his teeth, swam back, clambered in and landed a monster bass; then baited up and lay down to finish his nap. I have never been able to verify the truth of this story, but take it for what it is worth. It was told to me by men over thirty years of companionship with whom has not led me to doubt their statements. Whenever the name of old John was mentioned, the story followed; it was as fixed a landmark as any shore beacon. Eleck inherited none of these proclivities from his paternal ancestor; water suited him inside and out, and he was as kind, truthful, and abstemious a companion as one would care to meet. He was always very circumspect in talking of "th' ole gent," and it reflects credit upon him or his memory. Doubtless Eleck inherited his father's ability to catch fish with his eyes closed. Suffice it to say he did.

I find that weakfish prefer a large bait; they want a mouthful, and I, for one, say give it to them. Eleck used large baits and caught fish with his primitive tackle. True, the fish were school fish and feeding on the run, therefore not having time to scrutinize the tackle. I have had better success with large baits and in using shrimp, for there are times when they literally turn their backs upon shedder crab, yet fall a victim to shrimp. At such times as this use plenty—eight or ten on the hook. In chumming with shrimp, always squeeze them before tossing them (the chum) overboard; otherwise they will swim back and lie under the boat and you will sacrifice not only good bait, but your day's pleasure.

We fished that day off Smoking Point, Tuff's Point, the old Blazing Star Landing, Fresh Kills, Shell Point in Prall's River, the Southeast Reach and the Northwest Reach behind Buckwheat Island. Fishing the flood tide and high water slack, we moved to the South Reach of Fresh Kills, where midway between the mouth and the first bend a small creek empties into it with a succession of eddies and foam patches, underneath which at mean low water there is a hole or pot with a depth of twenty-one feet. Anchoring above this, we cast over into it. Father got a tremendous strike, and, after tiring him out, landed a 5-pound striped bass. While this performance was in progress, grandfather was having a fight, and landed the companion to father's bass, also a 5-pounder. My brother hauled in a fine kingfish, while Eleck and I got the proverbial "fisherman's luck." We then moved over to Shell Point, in the lee of Dunker's Island, and caught porgies and sea bass. From here we hauled off into the Southeast Reach of Prall's River, and took more bass and weakfish. We then moved up behind Buckwheat Island, where we took more weakfish and porgies, while father landed a 3½-pound eel.

Thus ended the day, with 101 weakfish, bass, kingfish, and porgies; of these last we had but five. The neighbors came in for their share, while the sweetest morsel of all was the eel.

The sail home was a repetition of the sail down, save that the declining sun colored the sky a glorious coral pink, and the water, taking its coloring from the sky, and reflecting the sedge banks, made a beautiful medley of violet, purple, crimson, pink, gold, pale yellow, Vandyke, green of various shades, burnt sienna, sepia, and madder; while the sun glowed like molten metal as it sank in the murky sea fog. Swallows flew over, and occasionally a flight of black ducks rose and disappeared over the meadow, where occasionally they breed even at this late day.

And all this has passed away. Grandfather scored his last catches back in the '80s, and we who are left struggle daily in the heated thoroughfares of the city. Old Eleck no longer rides the tide or sails on the reaches. The skiff is a thing of the past. But still the tide flows on, and eddying waves cast their foam upon the meadow banks, while the shore birds flit along the sedge or sail to their nests in the gloaming; and all that is left to us is the recollection of the days that were. As I sit here writing, I have but to close my eyes, and memory carries me back over that vista of years, and the morning seems as fresh, the sky as bright, and the brine as crisp as of yore; and the enjoyment—well, the recollection is almost as sweet as the realization. And so, with the immortal poet, I say:

"Old men forget,
Yet shall not all forget,
But they'll remember with advantage
What feats they did that day."

G. W. BEATTY, M.D.

Fish and Fishing.

Successful American Anglers.

THE September influx of American anglers is by far the largest of the present season. Some of the clubs that had scarcely any guests during the spring fishing season are now quite crowded, and from the reports so far received, it would seem that the fall fishermen are enjoying the best sport of the year. While neither the spring nor summer fishing was what might have been expected, nothing could be more favorable than the present conditions of both weather and water.

Messrs. A. W. Hooper, of Boston, and R. H. Brown, of New Haven, are among the members of the Nonantum Fish and Game Club who have had some very successful fishing on Lake Commisnaire. The Metabetchouan Fish and Game Club have been entertaining a house full of guests during a good part of the season. Since the departure of Senator Edmunds and party, there have been visits from Mr. White, president of the New England Watch Company, of Waterbury, Conn., and party, and Mr. Taylor, of Waterbury, among many others.

Distinguished parties have been fishing on the preserves of both the Triton and Tourilli Clubs. Among others who have had good sport on the waters of the Tourilli Club, may be mentioned Dr. Robert T. Morris, of New York; Hon. Chas. Fitzpatrick, Minister of Justice of Canada, and party; Lady Erskine and Lieut. Erskine, of

England; Glen Ford McKinney, of New York; Dr. Elbridge Adams, of Rochester, N. Y.; Mr. and Mrs. W. B. Oliver, Baltimore, Md.; Dr. Edward Martin, Philadelphia, and Dr. F. McKernan, Dr. Samuel Lloyd, and Dr. Robert B. Lohran. On the Triton tract the other day, Judge Swayne, of Toledo, O., who had a private camp on Lac des Passes, killed three trout in succession running from four to six pounds each.

At Lake Edward some exceptionally good trout fishing has been had during the last few days by the Rev. W. W. Boyd and son, of St. Louis, and also by a number of officers from the British flagship *Ariadne*; at least two of whom—Messrs. Willoughby and Compton—were also lucky enough to kill a caribou each, though the open season for these animals only dates from September 1.

In many other localities along the line of the Quebec and Lake St. John Railway there are at present many anglers encamped.

Fisheries of the Yukon.

Inspector Stewart, of Dawson City, has sent to Ottawa a report upon the fisheries of the Klondike, from which it may be seen that the far northwest corner of the continent offers many attractions to the angler. These are not, however, taken very much advantage of by residents of the Yukon, who, as a general rule, have "other fish to fry." Grayling appear to be abundant. They are caught in the Klondike River and in the eddies along the banks of the Yukon River. They make their appearance there about April 1, remaining until June, to reappear in the month of September and run until the close of navigation, or about the middle of October. Their usual weight is about half a pound to a pound and a half, and they are very plentiful in some sections and command a good price at some seasons of the year, especially in April, when they sell for a short time for a dollar a pound. There is a good demand for them at Dawson. Whitefish, the great lake trout, king salmon and dog salmon are also quite plentiful. In consequence of the low temperature of the water inhabited by the great lake trout and the whitefish in the Yukon, both fish afford good sport to the angler.

E. T. D. CHAMBERS.

The Kennel.

The National Beagle Club of America.

CAMDEN, N. J., Sept. 7.—The Fifteenth Annual Field Trials of the National Beagle Club of America will start on October 31, 1904.

The judges will be Thomas Shallcross, of Providence, R. I., and Thomas Griffith, of Redlands, Md.

The trials will be held at Wheatley Hills, L. I., on the estate of the late William C. Whitney, where the trials have been held in previous years.

The following gentlemen constitute the Field Trial Committee: Charles R. Stevenson, chairman, 106 Market street, Camden, N. J.; Henry Dickson Bruns, M.D., New Orleans, La.; Ernest Gill, Baltimore, Md.; Samuel Frothingham, Lenox, Mass.; Harry T. Peters, New York city; A. J. Purinton, Palmers, Mass.; George B. Post, Jr., New York city; George F. Reed, Barton, Vt.; William G. Rockefeller, New York city; William Saxby, Stony Brook, L. I.; D. F. Summers, Downingtown, Pa.; Bradford S. Turpin, Roxbury, Mass.; Charles F. Brook, Sandy Springs, Md.; Harry Payne Whitney, New York city; James W. Appleton, New York city; C. Staley Doub, Frederick, Md.; James McAleer, Bellevue, Pa.; John Caswell, Prides Crossing, Mass.

CHAS. R. STEVENSON, Secretary.

New England Beagle Club.

WORCESTER, Mass., Sept. 10.—The Eleventh Annual Field Trials and the First Annual Dog Show of the New England Beagle Club will be held at the Grafton Country Club, Grafton, Massachusetts, beginning Monday, November 7, 1904.

The dog show will be held under American Kennel Club rules, and will be a four-point show.

All classes, including the winners, will be divided for 15 and 13-inch dogs and bitches.

The judging will commence Tuesday evening, November 8.

First prizes will be silver medals; seconds, thirds, and reserves, appropriate ribbons.

Entries for the dog show close Tuesday, November 1.

The field trials will begin with the Derby Stake on Monday morning at 9 o'clock, and the other classes and stakes will follow as usual.

Entries for the field trials close Friday, November 4.

CHETWOOD SMITH,
Chairman Field Trial Committee.

Pacific Advisory Committee.

BERKELEY, Cal., Aug. 31.—At the meeting held on August 30, the following resolution was passed by the Pacific Advisory Committee of the American Kennel Club, and the committee requests the favor of its publication in the columns of your valued periodical.

PACIFIC ADVISORY COMMITTEE, A. K. C.,
J. P. NORMAN, Secretary.

EXCERPT FROM MINUTES OF MEETING OF AUGUST 30.

The following extract was read from a letter appearing generally in the sporting press, purporting to be signed by Norman J. Stewart, secretary of the Western Kennel League: "At the same time it became known to us that the A. K. C. intended fighting the League in its own territory. We were told that A. K. C. shows would be held in every town which at present gave W. K. L. shows. In one case, at least, money (the amount, I believe, was \$300) and a guarantee of fifty dogs from San Francisco, was offered to some fanciers of the North to get up a show under A. K. C. rules in opposition to the W. K. L. club in the town. It is always hard to get information of such offers, as they are naturally made sub rosa, but it is only fair to assume that similar offers were made to other fanciers in other towns."

The chair called for the personal assurance of each

member as to the truth of the allegations contained in the foregoing as affecting each personally, and after each member had denied that he had, either privately or in his capacity of member of this committee, offered any monetary subsidy or consideration to aid any show to be held in the North under the rules of the American Kennel Club in opposition to shows held under the rules of the Western Kennel League, it was moved and seconded that the statement published in the sporting papers over the alleged signature of Norman J. Stewart, Secretary of the Western Kennel League, that the American Kennel Club, or anyone having authority to speak for the American Kennel Club, had offered any monetary subsidy to aid in holding a show in the North under the rules of the Amer-

ican Kennel Club in opposition to shows held under the rules of the Western Kennel League, was, in so far as this Pacific Advisory Committee of the American Kennel Club or any of its members are concerned, an utter fabrication, devoid of any foundation in substance or in truth. Carried.

Points and Flushes.

THROUGH the courtesy of the publisher, Mr. H. B. Donovan, 124 Victoria street, Toronto, Canada, we have a copy of the Canadian Kennel Club Stud Book, Vol. VII. It contains registrations No. 6,527 to 7,058, and winnings

for the year ending August 31, 1903. The information it contains concerning the advantages of membership in the Canadian Kennel Club is worthy of perusal and consideration. Mr. Donovan will gladly furnish particulars to applicants.

Spratt's Patent, 450-456 Market street, Newark, N. J., will send gratis to applicants a colored map of the World's Fair grounds at St. Louis. The location of the buildings, railroad terminals, entrances, streets, etc., are accurately portrayed. The map is a Rand, McNally production, therefore its accuracy is unquestioned. An index facilitates reference to any point desired.

YACHTING

Walker Cup Races.

THE second annual series of races for the Walker cup, held under the auspices of the Country Club, of Detroit, began Tuesday, September 6.

The 21ft. restricted class was adopted only last summer amid a hurricane of opposition from some of the leading yachtsmen, on the grounds that it had been abandoned in the East, and for that reason must be very faulty, indeed. But the members of the Country Club are an ambitious lot of enthusiasts, and once a start has been made, will not stop except for good reasons. They argued that the class as set forth in their restrictions was radically different from that used in the East, and produced a more wholesome type of boat. The result was that the club finally adopted the class, and later succeeded in having the Inter-Lake Yachting Association become its sponsor. Having gained its point, the members became very active, and when the starting gun was fired for the first race, Detroit was represented with five boats, as follows: Spray, designed and built by Parker, of the Marine City Boat Works, of Marine City, Mich. She was sailed by her owner, Mr. H. T. Schmidt. While she is undoubtedly one of the fastest boats of her size and type ever built, it is a singular fact that she was the first sailing vessel ever built by Mr. Parker's concern. Ste. Claire was designed by Messrs. Tams, Lemoine & Crane, and was built by Wood at City Island. She is owned by Commodore Franklin H. Walker, donor of the trophy, and was sailed by Mr. Sydney Russell. She was the only keel boat of the five. Pirate was designed and built by Mr. Joe Poulliott, of Detroit, and was practically an improved Little Shamrock. She is owned by Mr. E. Leydon Ford, and was sailed by Mr. Henry Moran. Eyota was designed by Messrs. Burgess & Packard, and was built by Bryan, of Wyandotte, Mich. She is owned by Mr. Kenneth Stevenson, and was sailed by Mr. Roll Potter, of Toledo. Ventura was designed by Mr. Chas. L. Seabury, and built at Morris Heights. She is owned by a syndicate headed by Mr. John H. Smedley, Jr., and was also sailed by him. In addition to these five, there were two other entries, Yo San, ex-Little Shamrock, of the Columbia Y. C., of Chicago. She is owned by Commodore Fred. Price, who also sailed her. Yo San is a Small Bros.' creation that was turned out last year as a competitor for the Lipton cup races. After the Chicago races she was shipped to Detroit, where she entered the Walker cup races and succeeded in capturing the cup. The other entry was Rooster II., of the Lakewood Y. C. of Cleveland. Rooster is a Crowninshield production of two years ago, and was built by Lawley. She was purchased last spring by Messrs. W. F. Nash and Geo. Hall to compete in the Detroit races. These seven boats made a magnificent fleet, and, being well matched, furnished some of the best racing ever seen on fresh water. The weather man assisted in the festivities by dishing out his choicest brand.

First Race, Tuesday, Sept. 6.

Course, windward and leeward; three miles to the leg, twice around. Velocity of the wind, from six to nine miles an hour. Direction, E.-N.E. Start, 2:30.

Skipper Moran got Pirate over first, but according to the judges was a trifle previous, and they ordered him back. This was not entirely to his liking, so he filed a protest, on what he claimed a technicality. With Pirate sent back, Ste. Claire got the best of an indifferent start, with Ventura 2s. behind, followed 23s. later by Spray. Pirate gybed and recrossed the line, having lost 1m. 10s., with Rooster just ahead of her. By gybing, Pirate damaged Yo San and Eyota's start somewhat, much to the chagrin of the two skippers. The fleet got away on the starboard tack, and were doing well in the light breeze. Yo San was the only one that did not take kindly to the weather conditions, so her skipper put her on the other board, and took a long leg toward the Canadian shore. Ste. Claire soon worked out to weather with Spray on her lee quarter, where she hung for a long time. Seven minutes after the start, Rooster went about on the port tack, and the entire fleet, with the exception of Spray, followed suit. Pirate was looking very high, and apparently outfooting the entire fleet. After Spray came about, she again went after Ste. Claire and hung on remarkably well, but young Russell held his advantage, and Spray finally went off on the other board. The fleet had split tacks, with Spray, Rooster, and Ventura on the starboard tack, with the others on the port. Rooster came about, and Spray crossed her bow, but Nash passed between Spray and Ventura, Spray immediately coming about with her on the port tack. Yo San held her port tack for fully 30m., when Price put her on the starboard tack. Ste. Claire came about, followed by Pirate and Eyota, and mixed it up with Rooster, just crossing her bow, the latter coming about to windward of her wake. In the heat of the excitement, the fact that Pirate was a contender had temporarily been lost sight of, it being conceded that Ste. Claire had the lead by a safe margin.

Spray and Rooster went about to the port board, and then it was seen that Pirate on the starboard was considerably ahead, having done some great work while on the other leg. She was to windward of Ste. Claire, and seemed to be doing better work as the breeze freshened, which was now blowing about eight miles an hour. Just a short distance from the mark, Ste. Claire came about, and Pirate crossed her bow at least 200 yards to the good. Pirate went about and beat it up with Spray right at the stake. Schmidt had gained a little, and Pirate just managed to cross his bow, coming about on his weather and giving her back wind. Pirate gybed around the stake, 16s. ahead of Spray, followed 15s. later by Rooster. Ste. Claire was next 2m. 35s. behind the leader. Mainbooms were eased off to starboard, and spinnakers were gotten out slowly by the three leaders—Pirate, Spray, and Rooster—who were all in a bunch. After about 10 minutes of sailing, Spray began to pull away from the bunch, and got a fairly good lead. Rooster and Pirate indulged in a luffing match, which was cleverly taken advantage of by Ste. Claire, which boat pulled up on the leaders and made the run in 18s. less actual sailing time than Spray.

Spray hauled on the wind for the completion of the first round, just 1m. 25s. ahead of Rooster. Pirate was 10s. behind Rooster, with Ste. Claire 26s. behind Pirate. Yo San had done some excellent work, both on the beat out and the run home, and rounded just 19s. after Ste. Claire. Ventura and Eyota were completely out of it, and rounded about 6m. after the leaders. The boats started off on a port tack toward shore, but the breeze took a shift toward S., and began freshening rapidly. Skipper Schmidt had previously taken advantage of this, but when the others saw the importance of this move, it was too late in the day. He made the stake on a long and short hitch in magnificent style, and gybed around the mark 5m. 5s. ahead of Pirate. The wind had again become fluky, and Schmidt finally set a balloon and spinnaker to port. Pirate was the second boat around, and she got there 1m. 50s. ahead of Ste. Claire, with Rooster following 1m. 25s. later. Eyota, Yo San, and Ventura rounded in the order named some five or six minutes later. Another shift backed Spray's headsails, and she had to take in her spinnaker. The wind continued hauling, and a little later Spray doused her balloon and set a No. 1 jib, coming home close-hauled on the port tack. It was a victory more for the skipper than for the boat, and was won on his good judgment. One of the pleasure fleet got in Ventura's way, which hindered her quite a bit. A race had been scheduled between Pats, a Seawanhaka boat, and Red Coat, another of the famous scows, but owing to the former's late arrival, this had to be postponed, and accordingly the first of a series of three will begin to-morrow. Summary of the first race. Start, 2:30:

	Finish.	Elapsed.	Per Cent.
Spray, Schmidt	5 16 15	2 46 15	100
Ste. Claire, Russell	5 20 05	2 50 05	85.7
Pirate, Moran	5 21 20	2 51 20	71.4
Rooster II., Nash	5 23 12	2 53 12	57.1
Eyota, Potter	5 25 10	2 55 10	42.9
Yo San, Price	5 25 36	2 55 36	28.6
Ventura, Smedley	5 31 05	3 01 05	14.3

Judges—C. D. Mower, official measurer New York Y. C.; Commodore F. H. Osborn, Columbia Y. C.; Commodore John Davis, Windsor. Timers—John W. Dyar, Vice-Commodore C. G. Jennings, C. H. Hodges, Country Club.

Second Race, Wednesday, Sept 7.

Wind, velocity from six to eight miles; direction, S. by E.; course, quadrangular, three miles to a leg, once around; start, 2:30.

Wednesday's race was sailed in a breeze varying from six to eight miles an hour, which held quite true. With the wind S. by E. the first leg of the 12-mile square laid N.E. gave the boats a broad reach; the second S.E. a beat; the third S.W. a close reach, and the fourth N.W. a spinnaker run.

The start was an excellent one, only 16s. being required to get the first four over the line. Ste. Claire got the best of the start, being over 5s. after the gun, followed 3s. later by Pirate, 2s. later Ventura went over, followed 11s. later by Yo San. Eyota got a poor start, being 1m. 20s. behind Ste. Claire. With ballooners drawing finely, the fleet were off with started sheets for the mark, with main booms to port. There was little excitement on the first leg, except to note how closely they hung together. Ste. Claire maintained her lead and hauled around the mark only 15s. ahead of Ventura, the second boat. Pirate rounded 4s. later, and was followed 16s. later by Spray and YoSan, who rounded as one boat. Eyota, although getting a poor start, managed to pull ahead of Rooster on the way down and was next to the last boat around, 52s. behind Ste. Claire, and having made up 22s. on the leader in the three miles of reaching. They hauled around the mark on the starboard tack for the windward leg, with Ste. Claire gradually drawing away from the bunch; she was clearly outpointing and outfooting the fleet. Potter in Eyota quickly saw that he was not holding his own,

and put his boat about on the port board and split tacks with the fleet. Yo San had done the same thing a moment before. Little attention was paid to Eyota, the main interest being centered in the fleet proper, but when the second mark had been arrived at, Potter put her about and showed his boat to be an excellent second, and well to windward of the rest of the fleet. Early on the leg Ste. Claire opened up a gap, and Ventura sagged way off to leeward. Pirate had Spray right behind her, with Rooster trailing astern. Spray split tacks and went off on a port board, holding it for some minutes. After some 20 minutes on the starboard board, Ste. Claire came about and crossed Pirate and Rooster's bow a quarter of a mile to the good. Spray and Ste. Claire converging on opposite tacks, the former crossed with a quarter of a mile lead, but Spray had Pirate by a slight margin when they came together. From this time on, Pirate began to act badly, and gradually dropped back. After several short tacks, the leaders came together for the stake, Ste. Claire and Spray on the port tack and Eyota on the starboard. It was then seen what had been accomplished by Eyota, and she rounded just 1m. 2s. after Ste. Claire, and 2m. 50s. ahead of Spray. The third leg was a close reach on the port tack to the last mark, and was a parade, in which Ste. Claire was the leader, and having gained 1m. 19s. more over Eyota on this run, rounding 2m. 39s. ahead of the latter. Spray picked up on this leg, and rounded 1m. 42s. after Eyota, and 4m. 21s. after the leader. Pirate slipped by Rooster on the way down, though the Cleveland men did their best to prevent it. Good work marked Ste. Claire's race, and after rounding the last stake for the run home, had her spinnaker and balloon drawing in 10s. Rooster evidently got things mixed up with her light sails, for after fussing around some time, sent a man aloft, during which Yo San slipped by her. The last leg—a beautiful spinnaker run—suited Ste. Claire admirably, increasing her lead every second. When Ste. Claire crossed the finish line a winner she was given a great send-off from the spectators, and as Eyota crossed second, she was also handsomely remembered. Spray crossed third, Pirate fourth, and Yo San fifth. Following is the summary:

	Finish.	Elapsed.	Per Cent.
Ste. Claire, Russell	4 43 15	2 13 15	185.7
Eyota, Potter	4 49 15	2 19 15	128.6
Spray, Schmidt	4 50 25	2 20 25	171.4
Pirate, Moran	4 53 11	2 23 11	128.5
Yo San, Price	4 56 21	2 26 21	71.5
Rooster II., Nash	4 56 30	2 26 30	85.7
Ventura, Smedley	5 01 43	2 31 43	28.6

In the special race between the two Seawanhaka boats, Pats and Red Coat, the former did the trick by about 3m. She was handsomely sailed by Mr. Lorimer, of Chicago; while Red Coat was sailed by her owner, Mr. Russell Alger, Jr., of Detroit. Had the breeze been a little stronger, it would have been more to the liking of the two. Following is the summary:

	Finish.	Elapsed.
Start, 2:20.		
Pats, Lorimer	4 42 48	2 22 48
Red Coat, Alger	4 45 12	2 25 12

Third Race, Thursday, Sept. 8.

Course, triangular, three miles to the leg; wind, N.; velocity at start, 15 miles and freshening.

The third and deciding race for the Walker cup was in every sense of the word the best of the series. The two preceding events were sailed in light breezes, which always favor certain boats. There were many in the fleet that were hoping for a good stiff breeze, especially Rooster, who, since her advent on fresh water, has demonstrated herself to be a heavy weather craft. The course was a triangular one, the first of the series, and was decidedly acceptable to many. The cup looked very much like Ste. Claire's property, owing to the fact that she had won one first and one second, and she had only to come in second in to-day's contest to secure the coveted trophy. Accordingly, to-day's race was more bitterly fought than the other two races, in the hope that Ste. Claire would finish worse than a second, which would mean another contest, and a chance for another race, which might turn the tide in another boat's favor.

The start, like that of the two previous days, was scheduled for 2:30. The conditions were much better for a spirited race than on the two previous days. The breeze was fully 15 miles an hour, with a prospect of considerably more before the conclusion. The start was the prettiest seen here in many years. Ventura, Ste. Claire, and Pirate came up to the line abreast, timed to the second, with Ventura to windward. Ventura gybed not a boat's length back of the line and sailed nose and nose parallel to the starting line, while the last five seconds were being counted. At the gun they gybed and crossed the line, Ste. Claire and Ventura at 2:30:05, Pirate 1s. later, Spray 4s. later, Rooster 7s. later, Yo San 8s. later, and Eyota 10s. behind. It was the first time the fleet were ever together in such a wind and sea. Ste. Claire pulled away on the reach, and the fleet with one tack tied in strung out for the first leg. The four miles were made in 22m. Ste. Claire rounded at 2:50:35, and started

off on the port tack. Yo San rounded at 3:00:10, and Spray at 3:00:32. The last boat around was Rooster, who made it at 3:02:06. Ventura lost her spinnaker halliard, but hung on far behind. Rooster carried away a halliard, and Eyota parted a stay, both dropping out. It was a disappointment to see the two out of the race, especially the former, who considered it her weather. She had been doing excellent work up to the time of the accident, despite a bad start. Spray had two reefs tied in, which seemed to be too much for her. It is the general belief that had Schmidt not been so precautious he would have done better. Ste. Claire, the best and most consistent performer of the fleet, met her equal and was clearly outsailed on this leg by Yo San, the Chicago craft, the latter being on the starboard tack. Yo San had the great Detroit craft headed and forced her in stays. Spray fell down badly on the beat to windward. Yo San turned the stake at 4:14:10, Ste. Claire 4:14:10, and Pirate at 4:17:35. Ste. Claire was up with her spinnaker in 15s. and had made up Yo San's lead. The Chicago craft was very slow in getting out her light sails, and from the time Ste. Claire slipped by her it was her race. After considerable loss of time with her spinnaker, Yo San finally set a jib, giving up the attempt to make her light sail work. The wind was now so strong that it required two men on the outer end of Ste. Claire's spinnaker boom to hold it down. She crossed the finish line at 4:42:30, Yo San crossed at 4:43:47, and Pirate at 4:49:10. Ventura, the last of the fleet to finish, coming along in a crippled condition, but game to the very last, crossed the line at 4:58:10. Thus ended the greatest race—in fact, the greatest series of races—ever sailed in the lower end of the lakes. Ste. Claire had won the cup, with two firsts and one second. The great surprises were the second place winners, especially Yo San and Eyota, who prior to the races had done practically nothing. Rooster was a decided disappointment, and she was figured a factor. In the special race for the Seawanhaka boats, Pats won again, thus completing the series with two straight wins. At no time did the Detroit boat, Red Coat, have a possible chance of winning. In the first race the winner won by 3m., but in to-day's race she won by over 20m. Pats also beat the winner of the Walker cup, Ste. Claire, by 7m. 7s. Races are to be held by this club Friday and Saturday, the result of which will appear in the next issue of FOREST AND STREAM. C. W. SCHMIDT, JR.

"The Inefficiency of Race Committees."

Editor Forest and Stream:

A portion of article headed "The Inefficiency of Race Committees," which appeared in issue of Sept. 10, contained some such glaring misstatements of facts in regard to the management of ocean race by the Regatta Committee of the Brooklyn Y. C., that we do not consider same can be passed without answer.

The owner of Newasi never notified the chairman of the Regatta Committee that he intended to employ a pilot, and the first the chairman heard of his having done so was when protest was filed against the Newasi.

The third paragraph of printed conditions of the race read:

Crew limited to five, all amateurs. One professional may be carried as steward or cook, but must do no work on deck, nor assist in any manner in navigating the vessel.

We note your article does not state that the consent of the Regatta Committee was obtained for this one boat to violate the printed conditions of the race.

When the Regatta Committee, the morning of the race, made the rounds of the boats, and asked for the names of those composing the crew, the owner of Newasi failed to give name of Capt. Chase, the professional pilot, which may be readily verified by looking at newspaper accounts of the crews, published the morning after the start. The name of another man was given, however, who we believe did not start. The Race Committee could not possibly have had any interest in this concealment, or change of crew. Furthermore, the chairman of the Regatta Committee, at the request of the other members, asked Newasi's owner to call on him, and explain matters if possible. The owner of Newasi may not have considered this an official hearing, because not held at the clubhouse; but the owner having acknowledged to me that he did carry a professional pilot directly contrary to printed conditions, there was no alternative but disqualification, which no one regretted more than the Race Committee.

Regarding the cutting across the shoals. This was referred to in the instructions merely as a caution, and was discussed the evening before the start, at the clubhouse, by all the captains, without being referred to the Regatta Committee for an official decision. The committee took no part in the discussion of this matter.

While there may have been cause for complaint in that no member of the Race Committee was at Marblehead at the time of the arrival of the first boats, it should be borne in mind that the race was a particularly fast one, and the committee made an error in calculating the time.

If we are to be criticised, the statement of facts on which the criticism is based, must be correct.

D. G. WHITLOCK,

Chairman of Regatta Committee, Brooklyn Y. C.

[Our statement that the owner of Newasi notified the Chairman of the Regatta Committee that he was to carry a pilot was based on information given us directly from Newasi's owner.]

RECENT SALES AND CHARTERS.—Messrs. Macconell & Cook have sold the sloop Valhalla II. to Mr. S. W. Ferguson. The boat's rig will be changed to that of a yawl, and auxiliary power will be installed. The same agency has chartered the sloop yacht Phoebe to Lieutenant W. J. Hawkins, U. S. A., and also sold the launch Wanoka to Mr. W. B. Ellis, of Freehold, N. J.; and the knockabout Raduga to Mr. H. B. Miller, of Groton, Conn.

CAPE MAY CUP RACE.—The schooner Atlantic, owned by Mr. Wilson Marshall, won the 212 nautical mile race for the Cape May cup. She beat Endymion, owned by Mr. George Lauder, by 1h. 5m. 2s. The start was made Saturday, September 10. The official times were: Atlantic, 30h. 33m. 10s.; Endymion, 30h. 33m. 18s. A full account of the race will appear in our next issue.

Seawanhaka Corinthian Y. C.

Oyster Bay, L. I. Sound—Saturday, Sept. 10.

THE annual fall regatta of the Seawanhaka Corinthian Y. C. was held on Saturday, Sept. 10. Owing to the light N.E. wind that prevailed, ten of the thirty-four starters were unable to finish.

The course for the 70-footers was from the starting line N.N.W. 3 miles to and around markboat; thence E. by N. 1/2 N. 4 miles to and around markboat; thence S.W. by S. 4 1/4 miles to the starting line; distance 11 1/4 nautical miles.

Yankee got the start. Virginia was next, and Rainbow last. The first leg was a beat, and Virginia took the lead not long after the start, and was first around the outer mark. The next leg was a reach, but a shift of wind enabled the boats to carry spinnakers part of the way. The third leg was a spinnaker run, and Virginia held her lead until well up to the finish line, when she ran out of the breeze and was passed by Yankee, which boat won by 11s. Rainbow was a bad third, and was beaten 7m. 18s.

The four starters in Classes L and M covered course No. 2, from the starting line, N.N.W. 3 miles, to and around markboat; thence E. by S. 1/2 S. 2 1/4 miles, to and around markboat; thence S.W. by S. 2 1/2 miles to the starting line; distance 8 1/4 nautical miles.

Rondinella and Maydie, two cruising boats, had no chance in the light air with Mimosa III. and Spasm. Mimosa III. won, beating Spasm. Maydie was third.

Nike had no competitor in Class N, and she was forced to take a sailover.

The ten raceabouts went twice over course No. 3, from the starting line N.N.W. 2 miles, to and around markboat; thence E. 1/2 N. 2 1/4 miles to and around markboat; thence S.W. by S. 2 1/2 miles to the starting line; distance 6 3/4 nautical miles.

Maryola opened up a big lead on her competitors, and gave Tartan, the only other boat to finish, a bad beating.

In the 25ft. class Heron, cleverly sailed by her owner, Mr. Philip Le Boutellier, won her first race of the season, beating Firefly by the narrow margin of 13s.

Wa Wa won easily in the Indian Harbor one-design class. Kenoshi was second. Cayenne ran away from her four rivals in the Seawanhaka one-design 15ft. class, and was an easy winner. In Class R, Pommerean had a sailover. The summary:

Sloops—Class H—Start, 12:50—Course 1 1/4 Miles.	Finish.	Elapsed.
Rainbow, C. Vanderbilt	5 08 50	4 18 50

Beverly Y. C.

Mattapoisett, Buzzard's Bay—Saturday, Sept. 3.

THE Beverly Y. C. sailed its 360th regatta at Mattapoisett on Sept. 3, for prizes which were presented by the gentlemen of Mattapoisett. The race was open to all yachts, and classes were provided for everything below 30ft., and also for all the regular restricted classes. The 15-footers, however, allowed the Mattapoisett one-design 15ft. boats, which were designed last year by Messrs. Burgess & Packard, of Boston, to sail with them. The judges were Messrs. F. E. Cabot and Charles Whittemore.

The race was started at 1:30 in a fair breeze from S.W. to S. In the 30ft. class, Arabian appeared for the first time this season. Mr. Robert Winsor, Jr., having just returned from Europe. Praxilla won and Arabian got second, defeating Young Miss by a small margin. Krieker was first in the fourth class cats, and Hindoo won among the one-design 18-footers. In the combined class of 15-footers, under the condition prevailing, there seemed to be very little choice between the two designs, for the Burgess and Herreshoff boats were sandwiched in about evenly. Ranzo, a Herreshoff boat, took first place, and Ceyx, a Burgess boat, took second place, and so on down. Among the 15ft. cats, Wren was the winner.

The course for 30-footers was from the judges' yacht, leaving black can buoy at Nye's Ledge, to buoy No. 13 off Bird Island on port, red buoy No. 2 (Angelica), red buoy No. 6 on starboard, to judges' yacht, 13 miles.

The course for fourth class cats was from the judges' yacht, leaving black can buoy at Nye's Ledge, to red buoy, S.W. Bird Island, on port, red buoy No. 2 (Angelica), red buoy No. 6 on starboard, to judges' yacht, 11 1/2 miles.

The course for 18-footers and 15-footers was from judges' yacht, leaving red buoy No. 6 on port, to flag buoy (inside Angelica), black buoy No. 2 and stakeboat on judges' yacht on starboard and repeat, 7 1/2 miles.

Wing's Neck, Buzzard's Bay—Monday, Sept. 5.

THE Beverly Y. C. sailed its 361st regatta off the club house on Sept. 5. The race was open to all yachts under 30ft. waterline length. Mr. F. E. Cabot acted as judge.

As there was but one entry in the 21ft. restricted class, that boat, Terrapin, was classed with the next larger class of the same rig, which made her sail against the 25ft. jib and mainsail boat Thorana, designed by Hanley and owned by Mr. T. B. Wales. The race between these two was exceedingly close, Thorana winning by only a few seconds. In the 30ft. class, Young Miss was first, Arabian second, and Praxilla third. Jap was first in the 18ft. one-design class, and Hindoo second. In the regular fourth class cats, Mr. Jameson's Krieker took first place, with Maori second, but a long ways behind. In the third class cats, in which there had been no entries all the season, Quissetta and Helena had a race, in which the former won by a very large margin. In the 15ft. one-design class Peacock was first, and Mr. Sargent's Vim was second, with Miss Dabney, in Fiddler, third. Peacock has not appeared in many races this year, owing to Mr. Winsor's absence in Europe. In the fifth class cats, Vim won by a good margin, and in the smaller jib and mainsail class, Mr. Stone's No. 8 beat the old 999. The many protests which were made have not been definitely settled yet. The summary follows:

30-footers.	Elapsed.
Young Miss, D. L. Whittemore	2 28 01
Arabian, Robert Winsor, Jr.	2 29 14

Beverly Y. C.

Beverly, N. J.—Monday, Sept. 5.

THE fall regatta of the Beverly Y. C. was sailed on Monday Sept. 5. Six classes filled, and there were twenty-five starters. A good full-sail breeze held all through the race, and the water was smooth, making ideal racing conditions, and fast times possible. Fiona won in the catboat class, Priscilla finished second, and Peerless third. Priscilla was disqualified for fouling one of the mark buoys.

In the one-design class, No. 6 won. Dorothea beat Pumpkin handsly in the jib and mainsail class.

E. H. Cortright won by 1m. 20s. in the Lark class, and No. 14 got first in the class for mosquito boats. Spark won the launch race. The summary:

Catboats—Start, 1:30.	Finish.	Elapsed.
Fiona, John W. Perkins	3 36 43	2 00 43
Peerless, H. Craythorn	3 39 50	2 09 50
Priscilla, P. C. Clark	3 40 28	2 10 28

Duxbury Y. C.

Duxbury, Mass.—Saturday, Sept. 10.

THE last regular race of the Duxbury Y. C. was sailed on Saturday, Sept. 10, in a light N.E. breeze. Miladi II. won in the 18ft. class with Again a close second. Ocean won in the handicapped class. The summary:

18ft. Special Class.	Elapsed.
Miladi, F. R. Adams	2 32 35
Again, I. B. Goodspeed	2 33 50
Menace, H. Hunt	2 34 38
Kittawake, H. M. Jones	2 34 42
Aspenquid, C. M. Foster	2 37 40
Osprey, A. Train	2 42 30
Domino, C. C. Clapp	2 43 10

Handicap Class.	Elapsed.	Corrected.
Ocean, H. Kellogg	2 45 40	2 24 40
Fanny D., E. Seymour	2 49 45	2 45 09
Old Honesty, H. Clapp	Withdrew.	

Kittawake V. won the championship of the season in the 18ft. class and also won the cup offered by Commodore C. C. Clapp for the series of three days' racing in Duxbury Bay. Challenge won the season's championship in the handicap class.

Y. R. A. of Massachusetts.

Boston, Mass.—Sunday, Sept. 11.

THE Y. R. A. of Mass. celebrated the closing of the racing season by a rendezvous at Hull and a yachting parade from Hull to City Point, on Sunday, Sept. 11. There was a light E. breeze and a smooth sea, all that could have been desired for the purpose, and the yachts turned out to the number of about 200. It was mostly cruising yachtsmen's day, for owners of these yachts came forward more readily than did the owners of racing yachts, of which there were very few in the parade.

Upon signal from the Association flagship, anchored off the Hull station of the

Atlantic Y. C.

Sea Gate, L. I.—Monday, Sept. 5.

THE last of the series of four races arranged by the Atlantic Y. C. was sailed on the afternoon of Labor Day, Sept. 5. Twenty-three boats started in the different classes. The winners were Vivian II., Bobtail, Naiad, Miss Judy, Delta, Kelpie and Colleen. Prizes for the best showing on points for the series were won by Maydic, Bobtail, Naiad and Ogeemah. Prizes were also offered for each individual regatta. Regardless of two protests yet to be decided, the records of the different boats for the entire series were as follows:

Maydic, 3 firsts; Red Wing, 2 seconds; Bobtail, 3 firsts; Bagheera, 1 first; Naiad, 2 firsts, 1 second; Lizana, 2 firsts, 1 second; Bonito, 2 seconds; Ogeemah, 2 firsts, 2 seconds; Miss Judy, 2 firsts; Spots, 1 second; Mary, 1 second; Karma, 1 third; Delta, 1 first; Kelpie, 1 first; Colleen, 1 first.

The closing race was held in a light fluky breeze, which blew from the N.W. Starters in Classes M and N went once over a 12-mile course. It was a close reach from the start off Sea Gate to West Bank Light. Then came a dead beat to Old Orchard Shoal Light and a reach home. The other boats sailed twice over the Association course. It was close hauled work to Fort Hamilton, a run to the Marine and Field Club, a broad reach to the mark off Ulmer Park and a close reach home to the start off Sea Gate.

Naiad led the smaller boats from start to finish. Miss Judy also sailed well. Of the craft going outside, Maydic and Bagheera got becalmed off the second mark and were very late in finishing. Vivian II. was the first boat home. The whole series was a success, and is likely to become an annual feature. The summaries follow:

Sloops—Class M—Start, 3:00.

Ocean Race—Sept. 3-5—240 Miles.

Arthur F. Luke's schooner, Corona, won the ocean race of the Atlantic Y. C., which started on Saturday, Sept. 3. Geo. Lauder's Endymion, the other contestant, was defeated by 7h. 10m. 5s elapsed time, and 7h. 13m. 36s. corrected time. The course led from Scotland Lightship to Fire Island Lightship, thence to the North East End Lightship off Cape May and back to the starting point.

Each competitor took her own finishing time when Scotland Lightship bore due E., magnetic. Corona finished at 8:27:43 Sunday night, averaging 7.6 knots for the course. Endymion was becalmed off Sea Bright, N. J., at about the same time her opponent passed the lightship. She finished at 3:38:43 Monday morning, having averaged 6.3 knots. The summary follows:

Ocean Race for Schooners.			
	Start.	Finish.	Elapsed.
Corona.....	Sept. 3.	Sept. 4.	31 23 43
Endymion.....	1 05 00	*3 38 48	38 33 48

Lynn Y. C.

Lynn, Mass.—Monday, Sept. 5.

THE annual Y. R. A. open race of the Lynn Y. C. was sailed off Bass Point, Nahant, on Monday, Sept. 5, in very light and fluky breezes. For the greater part of the time the yachts did little more than drift. In the 22ft. class Clotho had the best of the start, but Opitsah V. went out ahead on the windward leg and led to the finish. In the 18ft. class Bat had the best of the start, but on the windward leg Moslem II. took the lead. Bat passed Moslem II. again before they reached the starting line and led on the second round of the course. Winniahdin got the start in the Lynn Y. C. one-design 15-footers and led all around the course. L'Aiglon led from the start in the handicap class. Vera II. took a sailover in the Y. R. A. 15ft. class. The summary:

Class E—22-footers.			
	Start.	Finish.	Elapsed.
Opitsah V., S. H. & H. I. Foster.....	Sept. 3.	Sept. 4.	31 20 10

Bristol Y. C.

Narragansett Bay, R. I.—Saturday, Sept. 10.

THE fall regatta of the Bristol Y. C., held Saturday afternoon, Sept. 10, proved a failure, owing to lack of wind. There were twenty-six boats entered in the event, enough to have provided some very interesting sport in several of the classes. But only six boats finished, two of these were launches, while the four sailing boats given time covered only half of the two rounds with this unsatisfactory finish. The winners were the 15-footer Minnow, the Herreshoff launch Neon and the knockabout Oriana, the latter getting a sailover prize. Most of the other boats drifted about the bay until the five hour time limit had expired, and about dark were towed home.

In the 36ft. sloop class there were three entries, the Hera, Senator Aldrich's Lady Mary and Commodore Comstock's Cornelia. Hera's owner, Mr. James M. Garland, of the New York Y. C., followed the boats during the afternoon in his steam yacht, Barracouta, and about dark towed a long string of the becalmed racers back to the clubhouse. In the second class, the 20ft. sloops, there were Vice-Commodore C. F. Tillinghast's Little

Rhody and Priscilla and Julacoa, and these had the same luck that attended the rest of the fleet, and did not finish. The third class had the Micaboo, Aliee and Procyon. The fourth class had Oriana and Redwing, the latter being caught in the tide in addition to being becalmed. None of the five cats that started were able to finish.

The only sailing race that was finished was the 15ft. one-design class, in which Minnow, sailed by Miss Frances Lippitt, finished half the regular course 27s. ahead of Wenonah. With the launches, Nat Herreshoff Jr.'s Neon finished more than 20m. ahead of Dr. Church's Dixie. The summary:

First Class—Start, 1:40.			
	Start.	Finish.	Elapsed.
Lady Mary.....	1:40	Did not finish.	
Cornelia.....	1:40	Did not finish.	

Second Class—Start, 1:43.

Newport and Conanicut Y. C.

Narragansett Bay, R. I.—Monday, Sept. 5.

THE Newport Y. C. and Conanicut Y. C. held a joint regatta on Labor Day for prizes offered by Commodore Scannevin, of the former club, and it proved one of the most interesting events of the season for small boats. There was a fair N. W. wind, enough to make good racing, and there was a good number of entries in each of the four classes. The winners were Skraeling, Wenonah, Thrysa and Vesper II.

The race in the cat class was very good, the two Vespers, between which there has been a great rivalry all summer, being very close in the first part, but Vesper II. winning out by a good margin. The 15-footers also put up a good race. Miss Grosvenor, of Providence, sailed her boat, Eaglet, but while she is generally among the leaders, on this occasion she was the last in her class to cross the line, young Mr. Wetherell's Wenonah finishing first, with a 4m. lead over Mr. E. D. Morgan's Whisper. The prettiest race of the day was between the knockabouts, several of which came over from Jamestown. Mr. Willoughby's Skraeling had an easy victory, coming in over 8m. ahead of her nearest competitor, the little 15ft. Wenonah making the next best time over the course.

The course was from the starting line off Goat Island at the N., to and around the dolphin at the S. end of the island, thence to and around a mark ½ mile N. of Taylor's Point, passing S. and W. of Rose Island, thence back to starting point. Distance, 6 miles. The summary was as follows:

Class for Knockabouts—Start, 10:50.			
	Start.	Finish.	Elapsed.
Skraeling, Willoughby.....	10:50	12 23 50	1 33 50
Rowdy, Smith.....	10:50	12 32 10	1 42 10

One-Design 15-footers—Start, 10:53.			
	Start.	Finish.	Elapsed.
Wenonah, H. Wetherill.....	10:53	12 32 45	1 39 45
Whisper, E. D. Morgan.....	10:53	12 36 55	1 43 55

First Class Cats—Start, 10:56.			
	Start.	Finish.	Elapsed.
Thrysa, Kimber.....	10:56	12 45 16	1 49 16
Faleonita, Kerr.....	10:56	12 54 57	1 58 57

Second Class Cats—Start, 10:59.			
	Start.	Finish.	Elapsed.
Vesper II., Plummer.....	10:59	12 47 04	1 46 43
Vesper, Fraser.....	10:59	12 54 37	1 54 37

Larchmont Y. C.

Larchmont, L. I. Sound—Monday, Sept. 5.

FORTY-NINE boats started in the fall regatta of the Larchmont Y. C., that took place on Labor Day. The breeze was light and variable from start to finish, and racing was hardly satisfactory or conclusive. The winners were Yankee, Weetamoe, Spasm, Tern, Alert, Rascal II., Una, Dorothy, Jeebi, Flim Flam, Arizona, Cotton Tail, Scud, and Atlantic.

The Regatta Committee postponed the start 45m. in the hope that the wind would freshen. The preparatory was given at 12:30, and the 70-footers were sent away at 12:35. At this time the wind was E. of N. All three of the 70s were swinging their largest club topsails. Rainbow was first away. Yankee was next and Virginia was last. Soon after the start the wind veered to N.W., and some of the boats set spinnakers; but they were not carried long, as the wind soon shifted again. Yankee was favored by the fickle breeze, and drew into the lead. After the shift in the breeze, the first leg turned out to be a close reach after all. The second leg gave the boats a little windward work, and another shift of wind made the last a close reach. After Yankee took the lead she was never headed, and she beat Rainbow 9m. 31s., and Virginia 13m. 57s. The boats were to have covered the 15-mile triangle twice, but were stopped at the end of the first round, as the breeze was so paltry.

The sixties were the next boats to start at 12:40, and both these craft raced with working gafftopsails. The strong ebb tide carried Neola over the line before the gun, and she was forced to return and recross. The boats had a 2m. interval to cross in, and Neola was handicapped 52s. This gave Weetamoe a good start, and she won. Neola made a very fair showing, as she finished only 2m. 9s. behind her rival. The sixties covered the 15-mile triangle once.

At 12:45 the three starters in the 30ft. class were sent off. Spasm found the light air to her liking, and beat Anoatok 1m. 9s. Minosa III. did not have her share of luck, and was beaten by 12m. 20s. These boats covered the smaller triangle of 11 miles once. In Class M for yawls, Tern sailed a remarkable race, and left her two competitors far astern. Tern is a full-bodied cruising vessel, yet her performances, particularly in light weather, are truly remarkable. Escape, another cruising boat, managed to defeat Memory, a racing craft, easily.

Alert and Nike, the two starters in the 30ft. class, were both carried over the starting line by the ebb tide before the gun. Alert sailed a good race, and won by over 3m.

Of the eight starters in the raceabout class, two were swept over before the starting signal. Rascal II. showed up to good advantage in the fluky conditions, and won, beating Busy Bee by 3m. 36s. Tartan was third.

Una won, as usual, in the 25ft. sloop class. Rogue was among the number that were ahead of the gun, but she managed to finish in second place. Grasshopper was a poor third, and Heron withdrew.

Dorothy won easily in the Larchmont one-design class, beating Vaquero II., the only other boat to finish, 1m. 5s. In Class Q, Jeebi beat Una by 1m. 5s. Luto II. was a poor third, and Skip did not finish. Flim Flam had no difficulty in winning in Class R. Mystral was second, some 6m. 59s. behind.

Arizona scored a victory over her only competitor, Chichioker, in the Manhasset Bay one-design class. Gloomy Gus pushed Cotton Tail hard for first place in the Horseshoe Harbor one-design class, but the latter won out by a small margin. Scud carried off first honors in the Hempstead Harbor one-design class. Wif Waf was 1m. 11s. behind.

The big auxiliaries Atlantic and Vergemere were started at 1:30. Atlantic was first over the line, but Vergemere crossed with better headway, and soon passed the black three-master. Atlantic recovered her lead, however, and was ahead at the first mark. Atlantic made substantial gains on the windward work on the second leg. She continued to increase her lead, and won by 4m. 3s. Atlantic allowed Vergemere 3m. 3s. The summary:

Hempstead Harbor Class—Start 1:1

Stuyvesant Y. C.

Flushing Bay, L. I. Sound—Sunday, Sept. 11.

THE fall open regatta of the Stuyvesant Y. C. was held Sunday, Sept. 11, over the club courses: Port Morris to Gangway Buoy for Classes A, B and C; Stepping Stones Light for Classes D, E, G and H, and College Point Buoy for Class F. Wind N.E., very light and fluky.

Winners as follows: Class B, Clytie, Morrisania Y. C.; Class D, Pearl, Williamsburg Y. C.; Class F, Anna A, Stuyvesant Y. C.; Class G, Mavis, Hudson River Y. C.

Classes A and C, not finishing within the time limit of six hours, will be re-sailed Sunday, Sept. 25, at which time a special race between Ripple and Jack Rabbit will be sailed for a cup held from last year, which was never decided, owing to accidents to both boats.

The Hudson River boats Frank and Mavis were delayed over an hour by delay in opening the N. Y. C. R. R. bridge on their way over, but started on their arrival, Mavis winning and Frank only losing by a few minutes. Summaries:

Class A—Cabin Sloops—Start, 11:40—Gangway Buoy. Length. Finish. Doctor, Williamsburg Y. C. 35.01 Bedouin, Stuyvesant Y. C. 32.06

Doctor ran on Sunken Meadow while waiting for start; was hauled off a half hour later and started over the course. Bedouin finished 5:52.10, over time limit for class. No race.

Class B—Cabin Sloops—Start, 11:40—Gangway Buoy. Clytie, Morrisania Y. C. 25.06 5 26 27 Columbia, Stuyvesant Y. C. 27.06 5 42 03 Exile, Morrisania Y. C. 25.08 5 41 16 Spider, Stuyvesant Y. C. 22.02 Jack Rabbit, Stuyvesant Y. C. 26.04 May L., Stuyvesant Y. C. 25.06 5 42 12

Spider sailed around College Point Buoy and was disqualified. Jack Rabbit did not sail over full course.

Class C—Cabin Sloops—Start, 11:40—Gangway Buoy. Teddie, Jr., Stuyvesant Y. C. 25.10 Whiteaway, Stuyvesant Y. C. 27.06 Alva, Stuyvesant Y. C. 28.00 Allegro, Stuyvesant Y. C. 24.06

Time limit 6 hours. Teddie, Jr., crossed line at 5:40:09; others not timed. No race.

Class D—Cabin Sloops—Start, 11:45—Stepping Stones. Pearl, Williamsburg Y. C. 24.00 4 06 55 Ripple, Stuyvesant Y. C. 23.00 4 38 24

Pearl wins by 31m. 29s.

Class E—Cabin Cats—Start, 11:45—Stepping Stones. Spray, Williamsburg Y. C. 20.00 No class. Sailed over.

Class F—Open Cats—Start, 11:50—College Point. Anna A., Stuyvesant Y. C. 17.06 2 42 45 Frank, Hudson River Y. C. 19.09 2 46 58 Sadie L., Stuyvesant Y. C. 13.06 2 44 54

Frank delayed in starting till about 1:05. Anna A. wins by 2m. 9s. over Sadie L.

Class G—Start, 11:45—Stepping Stones. Leonora 29.06 Did not fin. Mavis 24.04 1/2 Not timed.

Mavis delayed in starting till after 1 P. M., but finished well within time limit for class.

Class H—Open Cats—Start, 11:45—Stepping Stones. Ping Pong, Morrisania Y. C. 20.09 5 30 21 Flash, Jr., Orum Y. C. 22.04 Flash, Jr., did not cover course. Ping Pong finished after time limit. No race.

Quincy Y. C.

Quincy, Mass.—Monday, Sept. 5.

A CLUB handicap race of the Quincy Y. C. was sailed on Monday, Sept. 5, in a fluky S.W. breeze. The summary:

Class A. Elapsed. Corrected. Josephine, F. H. Smith 1 40 58 1 17 52 Marvel, I. H. Whittemore 1 43 50 1 20 07 Hustler, H. W. Robbins 1 47 47 1 23 25 Moondyne, W. H. Shaw 1 46 52 1 24 33 Dorothy III, F. F. Crane 1 47 27 1 25 16

Class B. Thelma, F. V. Cheney 1 46 51 1 17 40 Swallow, A. S. Hamlin 2 02 30 1 33 23

One-Design Class. Betty B., R. R. Bolles 1 14 30 Ella S., G. F. Swift 1 14 51 Irene M., M. Ziolkowski Withdrew.

Motor Launches. Eleanor, Gould & Hamblett 1 14 53 0 49 13 Marjorie, A. H. Taber 1 10 18 0 58 38 Iona, P. Catarius 1 07 08 1 07 08

Saturday, Sept. 10. The last race of the Quincy Y. C. for the season was sailed on Saturday, Sept. 10, in a fluky E. breeze. Josephine won in Class A, Miji in Class B, Usona in the 21-footers, Ethel in the one-design class and Eleanor in the power boat class. Championships for the season were awarded to Marvel, in Class A, Usona in the 21ft. class, and Betty B. in the one-design class. The summary:

Class A. Elapsed. Corrected. Josephine, F. A. Smith 1 14 34 0 58 05 Marvel, I. M. Whittemore 1 17 14 1 00 18 Moondyne, W. H. Shaw 1 18 34 1 02 38 Hustler, H. A. Robbins 1 20 33 1 03 13 Dorothy III, F. F. Crane 1 19 48 1 03 57

Class B. Elapsed. Miji, M. M. Cannon 1 33 45 Patrice, G. G. Saville 1 38 45 Disabed.

21ft. Class. Usona, A. L. Lincoln 1 15 20 Harriet, A. A. Lincoln 1 13 14 Enigma, G. W. Sargent 1 26 06

New York Y. C.

Glen Cove, L. I. Sound—Thursday, Sept. 8.

The New York Y. C. held its races for autumn cups on Thursday, Sept. 8. The Regatta Committee was on board Mr. J. L. Mott's steam yacht Candida. Commodore S. Nicholson Kane was assisted by Mr. A. Cary Smith and Mr. Paul E. Stevenson. Mr. Newbury D. Lawton, one of the regular members of the committee, was aboard Rainbow with Mr. George A. Cormack.

Candida established a starting line off Mott's Point. The preparatory signal was given at 12:20, 50m. later than the time scheduled. The breeze was of good strength and held true from the S.S.W. throughout the race.

At 12:25 the 30-footers started. Spasm led over the line, with Mimosa III, next and Anotok last, handicapped 4s. Mimosa III, soon took the lead, and was never headed. These boats were to have covered a triangle of about 12 miles, but the second mark must have gone adrift, as it could not be located by the racing boats, so they kept on, and rounded a mark off Centre Island. Mimosa III, beat Spasm 26s. Anotok did not finish.

The seventies and the sixties started on the same gun. Weetamoe was first over, followed, as named, by Yankee, Rainbow, Virginia and Neola, which boat was handicapped 17s. These boats covered a triangle of 21 1/2 miles. The first leg was a spinnaker run, the second leg a reach, and the third leg was a beat. At the first mark, Yankee was leading, but all three gybed around the mark within 7s. of one another. Weetamoe led Neola 1m. 27s. On the second leg Neola closed up on Weetamoe. Virginia and

Yankee sailed a close race, but the former was 20s. ahead at the second mark, off Shippin Point. The times at the second mark were: Virginia, 1:53:06; Yankee, 1:53:25; Rainbow, 1:53:50; Weetamoe, 1:58:10; Neola, 1:58:25.

Rainbow tacked over toward the Long Island beach, leaving Virginia and Yankee to fight it out alone. Virginia got Yankee under her lee and kept her there. Rainbow sailed beautifully, and won, beating Virginia 2m. 17s., and Yankee 4m. 42s. Weetamoe drew away from Neola a little, but the latter boat won by 1m. 1s. The summary:

Sloops—Class II. Start. Finish. Elapsed. Yankee, J. R. Maxwell 12 30 26 3 23 24 2 52 58 Rainbow, C. Vanderbilt 12 30 37 3 19 53 2 48 16 Virginia, W. K. Vanderbilt, Jr. 12 31 18 3 21 51 2 50 33

Sloops—Class I. Weetamoe, H. F. Lippitt 12 30 15 3 26 22 3 06 07 Neola, G. M. Pyncheon 12 32 00 3 37 06 3 05 06

Sloops—Class M. Spasm, E. B. King 12 25 18 3 13 42 2 48 24 Mimosa, T. L. Park 12 26 47 3 14 45 2 47 58 Anotok, W. G. Brokaw 12 27 00 Did not finish.

Jamaica Bay Y. C.

Rockaway Beach, Long Island—Monday, Sept. 5.

THE annual Labor Day regatta of the Jamaica Bay Y. C., that took place in Sept. 5, was a success. Sixteen sailboats and fourteen launches participated in the event. The winners were Baby Roger, Ariel, Pauline B., Lochinvar and Alert. The summary:

Sloops—Class C—Start, 2:04. Ianthe 6 50 18 4 46 18 Baby Roger 6 48 35 4 44 35 Kissinet Disqualified. Jennie Dit not finish.

Manchester Y. C.

West Manchester, Mass.—Thursday, Sept. 8.

AFTER having been twice postponed, the Y. R. A. open race of the Manchester Y. C. was sailed off West Manchester on Thursday, Sept. 8. The breeze was N.E., light at the start and steadily increasing to the finish. Peri II. was across the starting line first in the 22ft. class, with Medic on her weather quarter. Peri II. led at all the marks and, in the increasing breeze near the finish, increased her lead. The 18-footers were bunched at the start. Otter led at the first mark, but on the next leg Arrow took the lead and held it until they were on the beat to the finish, when she lost the lead to Bat, mostly on account of being shy one man in her crew. In the 15ft. class, Cigarette had the start and led about halfway over the course, when Niebelung took the lead and held it to the finish. Tarpon led in the handicap class, but lost to Peachierine on time allowance. The summary:

Class E—22-footers. Elapsed. Peri II., George Lee 1 28 00 Medic, H. H. White 1 30 4

Class I—18-footers. Bat, C. F. Adam 2d. 1 37 00 Arrow, E. A. Boardman 1 37 26 Boo Hood, Reginald Boardman 1 37 56

Moslem II., B. D. Barker 1 38 43 Otter, A. D. Irving 1 38 55 Arbeka II., F. P. Bowden 1 39 41 Hugl, A. E. Chase 1 39 55 Fudge, C. H. W. Foster 1 42 48 Privateer II., Alden & Carlton 1 43 38

Class T—15-footers. Niebelung, E. G. Loring 1 57 48 Cigarette, Morton Prince 1 59 52

Handicap Class. Elapsed. Corrected. Peachierine, David Fenton 1 41 38 1 26 38 Tarpon, E. S. Grew 1 31 54 1 29 24 Khalifa, R. F. Tucker 1 33 32 1 33 32

Seaside Park Y. C.

Seaside Park, Barnegat Bay—Saturday, Sept. 3.

THE annual open race of the Seaside Park Y. C. for the championship of Barnegat Bay was held on Saturday, Sept. 3. There were nine starters. The wind was S.E. and puffy, and there was a lump of sea. The course was from Barnegat drawbridge, 10 miles to windward and return.

Hummer got the start, followed by Romp and Ruhama. Helen was the last to start. Humma sprung her mast and withdrew. Alfarata won by 37s.

The judges were Messrs. C. J. Rainear, A. L. Gaudy, Thomas Cameron, Thomas Shibe and Herman Muller. The summary:

Start. Finish. Elapsed. Corrected. Alfarata, H. Marshall 1 18 52 3 45 01 2 26 09 Merry Thought, W. Smith 1 18 19 3 45 25 2 27 06 Volsung, M. Swayze 1 16 03 3 52 24 2 36 21 Romp, F. O. Bailey 1 15 34 3 49 00 2 33 57 Ruth, V., J. Sprague 1 17 47 3 50 40 2 32 53 Empress, F. W. Thacher 1 16 48 4 00 15 2 43 27 Helen, M. Maupay 1 19 19 3 58 12 2 38 53 Ruhama, C. W. Rainear 1 15 53 4 15 00 2 59 02 Hummer, Capt. Bailey 1 15 22 Disabled.

Merry Thought was second. The dispute relative to third position between Volsung and Romp will be determined when the former is remeasured.

All communications for FOREST AND STREAM must be directed to Forest and Stream Pub. Co., New York, to receive attention. We have no other office.

Edgewood Y. C.

Narragansett Bay, R. I.—Monday, Sept. 5.

THE second of the fall races of the Edgewood Y. C. was held Monday afternoon, Sept. 5, in an extremely light wind that provided hardy more than a good drifting match. On this account a special short course was given, a triangular course near the clubhouse, sailed three times over by the larger boats, giving a distance of 6 miles, while the 15-footers went twice over. Of the two 30-footers entered, Mblem got the lead at the start, and although Elizabeth soon afterward passed and opened up a good stretch of water between, she was not able to hold up in going to windward in the light air, and steadily dropped behind, Mblem finishing 5m. ahead. With the 25ft. cats Mae Hope and Rival No. 1 made a fairly close race, the former winning by 2 1/4m., which was too much for the Rival's allowance to overcome. With the little fellows, Modox and Seamory held together fairly well over the two rounds, the former winning by a trifle under 3m. The summary:

30ft. Cats—Start, 2:55. Finish. Elapsed. Mblem, G. E. Darling 4 12 10 1 17 10 Elizabeth, W. D. Wood 4 17 19 1 22 19

25ft. Cats—Start, 3:00. Mae Hope, D. C. Stranger 4 35 25 1 35 25 Rival No. 1, C. May 4 37 57 1 37 57

15ft. Cats—Start, 3:05. Modox, H. Possner 4 42 50 1 37 50 Seamory, H. Scattergood 4 45 44 1 40 44 Don, J. Langdon 5 02 27 1 57 27

South Boston Y. C.

South Boston, Mass.—Saturday, Sept. 10.

A CLUB race of the South Boston Y. C. was sailed from City Point to Hull on Saturday, Sept. 10, in a light E. breeze. Arbutus was the winner in the first class, and Vexer in the second class. The summary:

First Class. Elapsed. Corrected. Arbutus, W. L. Young 2 38 40 2 20 15 Tantrum, C. G. Jones 2 43 32 2 20 24 Emma C. Heard, S. D. Perkins 2 47 32 2 28 18 Eclipse, A. F. Leary 2 54 27 2 29 57 Owaissa, W. Kelley 3 04 35 2 40 20 Thialfi, Dr. Soule Dit not finish.

Second Class. Vexer, J. F. Cashin 2 39 05 2 13 22 Myrtle, P. J. Moran 2 47 08 2 16 11 Marguerite, Wilbert Soule 2 42 26 2 17 09 Evelyn, Edward Eaton 2 54 30 2 28 47 Nancy Hanks, G. W. Lane 2 59 07 2 32 20 Hawk, W. G. Doyle 3 06 05 2 38 51 Clarada, W. H. Gowey 3 16 52 2 46 59 Louise, Lee B. Johnson Dit not finish.

Corinthian Y. C.

Marblehead, Mass.—Sunday, Sept. 11.

THE Corinthian Y. C., of Marblehead, wound up its racing season with a handicap race from the clubhouse to Boston Lightship and return, on Sunday, Sept. 11. A chronograph was offered by Commodore John O. Shaw for the winning yacht, and other prizes were offered by the Regatta Committee. There was a light E. breeze, and the yachts raced in thick fog all over the course. Sauquoit got the start and had a lead of about 10m. on Opitsah V. at the lightship, but on the return Opitsah V. cut down this lead to 10s., thus getting the Commodor's prize easily on corrected time. The summary:

Elapsed. Corrected. Opitsah V., S. H. & H. I. Foster 4 52 35 4 32 07 Fudge, C. H. W. Foster 5 52 45 4 48 27 Medric, H. H. White 5 09 14 4 48 46 Sauquoit, T. K. E. Chase 6 24 16 5 19 58 Carina II., H. S. Wheelock 6 12 00 5 32 19 Niebelung, E. G. Loring Withdrew.

YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

RIVERTON Y. C. OFFICERS.—At the annual meeting of the Riverton (N. J.) Y. C., held on September 6, the following officers were elected: Com., William R. Ellison; Vice-Com., E. B. Showell; Treas., H. J. Mitchell; Sec'y, T. H. Walnut; Meas., John H. Reese; Finance and Executive Committee—H. J. Mitchell, J. C. S. Davis, C. W. Davis, C. C. Rianhard, and H. H. Cooke; Regatta Committee—H. J. Mitchell, J. H. Reese, and H. H. Cooke.

SALES AND CHARTERS.—The following transfers have been made by Mr. A. J. McIntosh: Auxiliary yawl Granatsa, owned by Mr. N. M. George, chartered to Colonel W. C. Skinner, of Hartford, Conn.; steam yacht Charavi, Mr. Walter Hauxhurst, to Mr. E. M. Fulton; steam yacht Augusta, Mr. John B. Herreshoff, to Mr. Robert Murray.

The motor boat Express, formerly owned by Mr. Morton F. Plant, has been sold to Mr. George B. Wilson; motor boat Ripple, from Mr. John Hays Hammond, to Mr. George R. Branson; motor boat Kara, from Mr. Walter R. Herrick to Mr. Charles W. Billings; sloop Vabasso, from Mr. William Bell Waite to Dr. Chalmers Sargent; knockabout Corona, from Mr. John E. Beggs to Mr. R. S. Richardson; knockabout Helene, from Mr. F. J. Schussel to Mr. E. F. Darrell; sloop Valiant, from Mr. F. Herbert Smith to Mr. W. H. Parsons, Jr.; yawl Dream, from Mr. W. Winslow to Mr. George Chapman; knockabout Sunshine, from Mr. J. Langdon Schroder to Mr. A. H. Morris; motor boat Kismet, from Mr. Frank Waterman to Mr. H. G. F. Martin.

VENETIA PURCHASED BY MORTON F. PLANT.—The British-built steam yacht Venetia has been purchased by Mr. Morton F. Plant from Mr. F. W. Sykes, of Leith, Scotland. Venetia was designed by Messrs. Cox & King, and built by Hawthorns & Co., Ltd., at Leith, in 1903. She is 196ft. long, 27.15ft. breadth, and 15.65ft. depth. She has five bulkheads, is fitted with electric lights, and her registered tonnage is gross 588.84, net 229.57, and by the Thames measurement 664. Her engines are of the triple expansion type, with cylinders 16in., 26in., and 42in. in diameter by 27in. stroke.

Yachting Fixtures for 1904.

Members of race committees, and secretaries, will confer a favor by sending notice of errors or omissions in the following list, and also changes which may be made in the future.

How to Join the A. C. A.

From Chapter I., Section 1, of the by-laws of the A. C. A.:
"Application for membership shall be made to the Secretary, and shall be accompanied by the recommendation of an active member and by the sum of two dollars, one dollar as entrance fee and one dollar as dues for the current year, to be refunded in case of non-election of the applicant."

A. C. A. Amendments.

BROOKLYN, N. Y., Sept. 7.—*Editor Forest and Stream:*
In accordance with Article XII. of the Constitution of the American Canoe Association, I beg herewith to give notice that at the next meeting of the Executive Committee, the following amendments to the constitution will be proposed, viz.:

Article III. Strike out "Secretary" in the fourth line.

Article V., Section 1. Strike out "dash" after secretary in second line, and insert "a."

Section 2. Beginning after "Committee" in third line to read as follows:

"The terms of office of the Commodore, Secretary, and the Treasurer shall be for one year from the first day of October in the year in which they are elected."

Article VI. Section 1. Strike out the word "Treasurer" in the ninth line.

Section 3. Strike out the word "Secretary" in the fifth line on page 8. Strike out the word "Secretary" in the second line on page 9. Strike out the word "Secretary" in fifth line and add to the section the following:

"They shall by ballot elect a member of the Association to act as Treasurer of the Association, whose term of office shall be as provided in Article V., Section 2."

Article VII. Strike out the word "Secretary" in the twenty-third line.

Article IX., Section 1. Strike out the whole of the section, and insert a new section to read as follows:

"It shall be the duty of the Secretary to keep a record of the proceedings of the Association and of the Executive Committee; to print annually under the supervision of the Board of Governors, the Association Year Book, and to attend to such other duties as may from time to time be assigned by the Commodore."

Section 2. Strike out all the section, and insert the following new section to read:

Section 2. "It shall be the duty of the Treasurer to receive all moneys due the Association from every source; to pay all proper bills on the written approval of the Commodore and a member of the Board of Governors; to make no other payments unless ordered by the Board of Governors; to collect all fees, dues, etc., and to pay to each purser on approved order the amount due his respective division; keep a record of all moneys received and paid, and render a written statement of the same to the Board of Governors at each stated meeting; report to the Board all names of those members who have not paid dues in accordance with the by-laws; present an annual report for audit at least fourteen days before the annual meeting in October; furnish the Secretary copies of the list of members of the Association, and to each purser a list of members of their respective divisions, and such other duties as may from time to time be assigned by the Board of Governors."

Section 3. Strike out the word "Secretary" in the first line on page 10, and also the word "Secretary" in the first line and in the third line on page 11. Strike out the word "Treasurer" in the fifth line on page 10.

The following amendments are also proposed in the By-Laws:

Chapter I., Section 1. Strike out the word "Secretary" in the second and fifth lines.

Section 2. Strike out the word "Secretary" in the fourth, seventh, eleventh and nineteenth lines.

Chapter V. Strike out the word "Treasurer" in the seventh line.

Chapter VII. Strike out the word "Treasurer" in the first, fourth and ninth lines.

Chapter VIII. Strike out the word "Secretary" in the fifth line.

Chapter X. Strike out the word "Secretary" in the sixth line, and strike out "and" in the same line, and after "Silver" in the seventh line insert the following: "And after Treasurer the same letters supported by a key in silver."

Chapter XI. Strike out "Treasurer" in first line.

Chapter XII. Strike out "Secretary-Treasurer" in eleventh line and insert "The Vice-Commodore of the division in which the Commodore resides."

ROBERT J. WILKIN.
A. C. A. 47.

New York C. C.

Bensonhurst, L. I.—Saturday, Sept. 10.

The fall regatta of the N. Y. C. C. was held over courses in Gravesend Bay on Saturday, Sept. 10. Besides the canoe events, cups were offered by J. C. Erskine and Commodore D. D. Allerton for first and second boats in a race for the new one-design class of the Marine and Field Club. Gamma and Beta were the only boats to finish the 3½-mile course in the light wind blowing. The event for decked sailing canoes was won by Mab, after sailing a course of 1½ miles. The summaries follow:

Sloops—Class RR—Start, 4:22.	Finish.	Elapsed.
Gamma, A. H. Platt.....	6 20 00	1 58 00
Beta, Snedeker & Camp.....	6 25 00	2 03 00
Alpha, Holcombe & Howell.....	Did not finish.	
Delta, J. J. Mahoney.....	Did not finish.	
Decked Canoes—Start, 5:30.		
Mab, F. B. Palmer.....	6 12 17	0 42 17
Bronco, D. B. Goodsell.....	6 15 57	0 45 57
Aziz, H. H. Smythe.....	6 20 13	0 50 13
Zaidee, F. C. Moore.....	6 33 23	0 53 23

One man, single blade, paddling, ½ mile—Won by G. H. King, Knickerbocker C. C.; G. H. Morrissey, New York C. C., second. E. S. Fales, D. B. Goodsell, F. G. Palmer and R. de F. Bagley also started.

Tandem paddling, single blade, ½ mile—Won by Hattenbrun and Danburg, Undercliffe C. C.; Wright and Plummer, New York C. C., second; King and Boell, Knickerbocker C. C., third.

One man, paddling, double blade, ½ mile—Won by L. Danburg, Undercliffe C. C.; G. H. Morrissey, New York C. C., second.

Club fours, single blade, ½ mile—Won by Wright, Parsons, Morrissey and Barnes; F. Speidel, Sweet, Bigelow and C. Robinson, second; Cosgrove, Hawthorne, Rea and Bayley, third.

Gunwale paddling, ½ of a mile—Won by W. L. Inslee, New York C. C.; G. H. Morrissey, New York C. C., second; J. J. Hattenbrun, Undercliffe C. C., third.

Upset paddling, ½ of a mile—Won by W. L. Inslee; W. L. Sweet, second; J. J. Hattenbrun, third.

Tilting contest—First heat, Bayley and Rea beat Sweet and F. Speidel. Second heat—Cromwell and De Camp beat King and Harrison. Third heat—Bayley and Rea beat Inslee and Morrissey. Final heat—Cromwell and De Camp beat Bayley and Rea.

Rifle Range and Gallery.

Presque Isle Rifle Club.

ERIE, Pa., Sept. 3.—A good day for shooting to-day, and some good scores were made. Scores:

W A Parke.....	79 74 73—226	A Mount	74 69 68—211
H C Wahlgren.....	75 74 73—222	J Bacon	67 64 61—192

*Western Pennsylvania Trapshooters' League tournaments. C. G. Grubb, Sec'y, Pittsburg.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM goes to press on TUESDAY OF EACH WEEK.

The Centralia, Ill., Trapshooting Club will hold a two-day shoot on Sept. 29-30. Mr. T. W. Rice is the secretary-treasurer.

In the contest for the Morrison cup, at the shoot of the Indianapolis, Ind., Gun Club, Sept. 10, Messrs. Bell and Gregory were high guns, with a score of 46 out of 50, a 92 per cent. performance.

We are informed that, "The programme for the Waterloo, Ia., Gun Club's fall tournament has been issued, and copies may be had by addressing E. M. Storm, secretary. The shoot will be held Thursday and Friday, Sept. 22 and 23. The programme calls for 210 targets each day, and \$100 added money will be donated by the club."

The Independent Gun Club, of Easton, Pa., and the Allentown Rod and Gun Club, met in a team contest, 10 men and 25 targets each, on the grounds of the Allentown club on Sept. 10. The Independent team won by a score of 192 to 177 out of a possible 250. Each team now has one win. The deciding contest is a possibility of the near future.

The programme of the Homer-Ogden tournament, to be held at Homer, Ill., Sept. 28-29, announces that \$200 in cash and merchandise prizes will be added. On the first day ten events are at 15 targets, \$1.50 entrance, and two at 25 targets, \$2.50 entrance. The two latter are handicaps, 14 to 20yds., and constitute one event for a gold medal. Prizes for high amateur average will be given. On the second day there are nine events at 10, 15 and 20 targets, entrance \$1, \$1.50 and \$2, and one, the last, a handicap at 100 targets, \$7 entrance. The secretary is Mr. C. B. Wiggins, Homer, Ill.

The Philadelphia Record had a "special despatch" as follows: "Shamokin, Pa., Sept. 5.—In a 13-bird pigeon match on Bunker Hill to-day between Mark Jones, of this place, and George Markle, of Hickory Ridge, the latter won a \$600 purse by grassing seven birds to his opponent's six." This, as a "special despatch," is first rate; but as showing how unlucky the number 13 is for Jones—it surpasses first rate. It will be noted, however, that Markle was high average for "grassing." The despatcher, otherwise careful, was careless in omitting mention of the longest run, and other doings of excellence which would give more substance and color to such a famous contest.

The programme of the Mullerite Gun Club tournament, to be held on the Richmond Gun Club grounds, Concord, S. I., Oct. 26, provides four events, one at 10, two at 20 and one at 100 targets, entrance 65 cents, \$1.35 and \$3.50, and added money \$2, \$3 and \$20. Totals, 150 targets; entrance, \$6.85; added money, \$28. Event 4 is the Mullerite handicap, 100 targets shot in 25 target events. The management will give 100 Mullerite loaded shells who pays the entrance fee of \$3.50. Amateur making high score will receive a handsome gold medal. The added \$20 will be divided \$8, \$5, \$4 and \$3, class shooting. Targets 1½ cent. Shooting commences at 10 o'clock. The Tribune Magazine trap, run by electric motor, will be used. Team race between New York and New Jersey, if time permits. To reach the grounds, take Staten Island ferry at foot of Whitehall street to Staten Island, thence by Port Richmond trolley via Concord to corner of Serpentine and Clove roads.

BERNARD WATERS.

Norwich Gun Club.

NORWICH, Conn.—There was a large attendance at the tournament of the Norwich Shooting Club, held on Sept. 3. The presence of Mr. Gilbert, Doremus, Reynolds and other experts made it very interesting. Mr. Gilbert broke 198 out of 200. High gun prizes were taken by Mitchell, Mason, Noble, Searles and Johnson. The scores follow:

Shot	at.	Broke.	Shot	at.	Broke.
Fred Gilbert	200	198	Wells	125	96
J A Mitchell.....	200	180	Olcott	85	59
Mason	200	184	Ames	100	77
Noble	200	180	Herbert	95	76
Searles	200	178	Doremus	35	27
Johnson	200	178	Francis	55	31
Powel	200	173	Richards	30	28
Taft	200	172	Ulmer	70	49
Noyes	200	163	A Mitchell.....	70	53
Coffin	200	161	Austin	60	53
Reynolds	200	160	McCord	50	48
Edgerton	200	140	Wright	35	28
Bugbee	190	148	Beebe	45	33
Jordan	180	139	Kellog	45	31
Sanderson	180	135	Newell	55	46
Miller	180	116			

The team shoot resulted as follows: Norwich, 70; Whitinsville, Mass., 68; picked team, 65; professionals, 55.

I. P. TAFFT, Sec'y.

Avosting Gun Club.

NEW PALTZ, N. Y.—The Layton cup was the main prize at the Labor Day shoot of the Avosting Gun Club. The Layton cup, a handicap allowance contest at 25 targets, resulted as follows: Geo. Hasbrouck (12) 22, Sullivan (9) 25, W. Hasbrouck (8) 16, Snyder (2) 25, L. Hasbrouck (10) 20, W. Moore (3) 24, Upright (8) 25, Weed (9) 19, C. L. Dubois (4) 16, S. Elting (15) 22, Adams (9) 25, H. Hasbrouck (9) 23, Johnston (6) 21, Slater (2) 20, Josiah Schoonmaker (15) 25.

Shoot-off ties: Snyder and Schoonmaker 25 and divided, Schoonmaker taking cup, Snyder taking Sportsman prizes. Sullivan 24, W. Hasbrouck 21, Upright 21, Adams 21.

Sportsman contest, 25 targets: Snyder (2) 25, Layton (12) 25, L. Hasbrouck (10) 25, W. Moore (3) 25, W. Hasbrouck (8) 25, A. Slater (2) 25, H. Hasbrouck (9) 21, W. Upright (8) 20, T. Sullivan (9) 22, Adams (9) 19, Schoonmaker (15) 25, Terwilliger (12) 23, Johnston (6) 21.

Shoot-off ties: Snyder 25, Schoonmaker 25, Moore 20, Slater 20, Layton 23, W. Hasbrouck 21, L. Hasbrouck 21. Snyder and Schoonmaker divided.

Derry Gun Club.

DERRY, Pa., Sept. 9.—The Derry Gun Club held its monthly cup shoot yesterday afternoon. A large number of shooters, including Messrs. E. D. Fulford and Harry Watson, were present. Mr. Hackett, the former Derry crack, was not in his usual good form. Mr. Fulford gave a fine exhibition of shooting.

The results were as follows: Fulford 96 out of 100, Stewart 90 out of 100; Best 77 out of 100; Hackett 70 out of 100; Meyers 80 out of 85; Campbell 55 out of 75; Kelly 49 out of 60, and E. J. Kelley 38 out of 50.

In the cup shoot Myers, Smith and Kuntz tied with 47 out of 50. In the shoot-off at 10, Myers captured the cup with a straight score. Smith second with 9, and Kuntz third with 8.

Warwick Gun Club.

WARWICK, N. Y.—The following scores were made at the fifth shoot of the season of 1904 at the Warwick Gun Club grounds on Sept. 9.

The scores are very good, considering the rainy weather and wind.

We were glad to see Messrs. Elliott, Heer and Butler with us. The next and last shoot of the season will be held Oct. 14, same conditions and programme. We hope to see a number of visiting shooters present.

JOHN B. ROGERS, Capt.

Lawrence Gun Club.

LAWRENCE, Mass.—A social shoot was held on the club grounds Monday afternoon, Aug. 29. The club was honored with the presence of Mr. Fred Gilbert, of Spirit Lake, Ia., the noted smasher of clay targets. Twenty-nine men tried their skill, and a most enjoyable afternoon was spent by the shooters and many spectators. Representatives of the Boston, Dover, Haverhill and Lowell gun clubs were present.

Mr. T. E. Doremus, who is accompanying Mr. Gilbert on the New England tour, rendered valuable assistance as official scorer and general squad hustler. The grand smasher ground them out to the tune of 219 out of 225, the last 90 without a miss, and the last 25 shooting from the 20yds. mark.

Shot at.	Broke.
F. Gilbert	225 219
Gerrish	90 63
Carlisle	100 86

Donovan	18	5
Stewart	25	0
Summer	21	5
Bonbright	23	2

The contests for the Hunter Arms Co.'s silver cup have added to the shooting interest in considerable measure.

Riverside Gun Club.

UTICA, N. Y., Sept. 7.—The Labor Day shoot of the Riverside Gun Club had a good attendance. The weather was ideal. An unusually large crowd of spectators was present from the beginning to the end of the day's sport. The principal event was the club's championship gold medal contest. George Gangloff won it. The Jack Rabbit system of dividing the moneys proved very satisfactory.

The winners of the merchandise prizes were: George Newton, multiplying reel; D. Loughlin, fountain pen; E. Smith, box of cigars; George Emery, bottle of wine; E. Smith, silver card tray; George Newton, silk umbrella.

The next shoot will be held on Sept. 19.

Trap Around Reading.

READING, Pa., Sept. 5.—The target and live-bird shooting match held on the Spring Valley grounds, this city, to-day, between Brooke Harrison and George D. Humbert, two well-known club men, was witnessed by a large crowd of friends of both shooters. The first match was at 50 targets, Harrison winning by a margin of 4, the score being 46 to 42. The second match was at 25 live birds, Humbert to stand 28yds., while Harrison, who has won quite a few matches in the past ten years at the trap, stood at 30yds.; the match resulted in a tie, each man killing 20 birds. Harrison had 3 dead out of bounds, while Humbert had 1. The birds were a fine lot of old flyers, and the high wind from the score toward the traps assisted the birds, and made shooting difficult.

At the conclusion of the match, Stewart Lutz, of the Spring Valley grounds, served a fine chicken and waffle dinner in the spacious dining room of the club house, Messrs. Harrison and Humbert having as their guests forty of their friends.

Wilkesbarre, Pa., Sept. 5.—The monthly target and live-bird shoot of the Ashley Gun Club, of Ashley, a suburb of this city, to-day resulted in the following scores: Live birds, best out of five: Miller 5, Smith 4, West 4, Evers 3, Roth 2. Clay birds, best out of 25: Evers 20, Miller 18, Smith 17, Conrad 14, Roth 11.

Pen Argyl, Pa., Sept. 1.—The Mountain View Gun Club held one of the most successful shoots in its history here to-day.

Young was high gun in the trophy shoot, breaking 22. Summary: Trophy shoot, 25 targets: Fowler 20, Felt 20, Lobb 10, Tucker 13, Dawc 10, Frome 16, Serfass 15, Young 22, Morsh 14. West Chester, Pa., Sept. 3.—At the semi-monthly shoot of the West Chester Gun Club on the grounds east of town, this afternoon, Harvey was high gun with a string of 22 targets. The turnout of the members was unusually small, the other scores being: Ferguson 19, Eachus 16, Gill 14.

DUSTER.

IN NEW JERSEY.

Westwood Gun Club.

Westwood, N. J., Sept. 5.—The shoot of the Westwood Gun Club to-day was well attended. In event 14 first prize was a flag, event 13 was the club medal shoot. Event 12 was a merchandise event. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

WESTERN TRAP.

NASHVILLE, Tenn., Sept. 6.—The Labor Day shoot, held here under the auspices of the Cumberland Park Driving Club, was considered to be the best and most successful heretofore held. The visitors were many, and all stayed in the game from start to finish, as the entrance was targets only. The prizes were so numerous that every one present had something to show when they reached home.

The team trophy was the center of attraction, and as the Cumberland Club only won over the Franklin Club by one small target, one can imagine the high tension to which the members were brought, as the very last shot alone decided the race. The scores were 484 and 483 out of 600. Ewell Club made 445 and Tracy Club 420.

Harris was high man, 112 out of 120; Campbell, 100. Harris made the longest run, viz., 45.

Harold Money was present, and was shooting well as usual, and for same carried away a silver match box.

The special prizes were won as follows: Silver loving cup for high gun and Winchester rifle for the long run, to W. G. Harris; a bronze clock to R. B. Campbell; a set of clothes brushes to W. I. Polk.

Congress of Central Illinois.

Litchfield, Ill., Sept. 9.—The fifth shoot for the series of the Congress of Central Illinois Trapshooters was held here Sept. 6 and 7. The weather was fine and the crowd fairly large, especially the first day. John Boa was high in the professional line, with Frank Riehl second. Crosby and Spencer were present one day and made things lively.

In the amateur class, C. B. Wiggins was easily high, and in fact was high over all with 324 to his credit. Clay came second with 325. Groves third, 320. This was the first time that Cummings, the secretary, was absent. He was called home on the first day. The grounds here are the admiration of all who see them, and there is one more shoot yet to complete the year. This will come off Oct. 18 and 19. All are invited to come. It should be understood that the handicaps are not severe. The management here is the finest ever. Just come and see for yourself. The scores for the two days follow:

Shot at. Broke.		Shot at. Broke.	
Cummings, 19.....	140	Stoner, 16.....	175
Crosby, 20.....	175	Lawrence, 16.....	159

Groves, 16.....	175	Vietmeyer, 17.....	145
Hall, 17.....	175	Herman, 16.....	85

At Staunton.

Staunton, Ill., Sept. 8.—The holiday was spent, in so far as the gun club and their friends were concerned, in shooting at the trap. Over twenty shot through the day, and all expressed gratification for the able management of the projectors, Messrs. Snell, Wall and Camp. The topmost "trigger puller" and straight gunpointer was C. B. Wiggins, the well-known shooter and tournament promoter from Homer, Ill., who lost but 4 out of 180. John Boa was close after him, losing but 8. The traveling men were Messrs. Boa, Spencer, Hart Bronough and Leslie Standish, who filled the important position of cashier. The scores:

Shot at. Broke.		Shot at. Broke.	
Cummings, 18.....	180	Winans, 16.....	123
Wiggins, 18.....	180	Wall, 16.....	150
Clay, 17.....	180	Spere, 16.....	70
Boa, 17.....	180	Spencer, 16.....	171

Baggerman, 16.....	180	Meyers, 16.....	45
H. Snell, 16.....	180	Harris, 16.....	30
T. Snell, 16.....	180	Carrer, 16.....	15
Burton, 16.....	180		

At Stratford.

Stratford, Ia., Sept. 7.—With cloudy weather, though very little wind, the day set for the shoot at Stratford, Ia., was ushered in. Hence good scores were made by the seven who took part. The score made by the old man, Budd, was especially fine, missing but 3 out of 200, having one run of 99. The amateurs shot well, Hoon getting 188, Patterson 186 and Peterson 185.

F. C. Whitney was present and assisted the management in the office. The busy season being on, together with the open game season, accounts for the small attendance.

The Story and Hamilton county medal was shot off and resulted in another win for Hoon, who this time made 50 straight, and Peterson, his contestant, was not far in the rear, with 47.

At Owensboro.

Owensboro, Ky., Sept. 7.—Another Labor Day has passed, and with it has gone into history the most enjoyable shoot ever held by the local gun club. There was only one missionary present, Mr. Tom Cassity.

The Rudd House challenge medal was the most interesting match, being at 50 targets. Mr. Overstreet scored 47, while Jim Lewis was pressing him very hard with 46.

Mr. Overstreet was challenged on the spot, and the match was set for Sept. 16.

In the course of the day's events Jim Lewis shot at 220 targets and broke 208, Overstreet 199, Newman 197, Herr 192, Griffin 190, Lancaster 180, Bennett 178, Mouton 175, Brown 172, Stout 172, Dawson 169, Tanner 174. Altogether, there were fifteen others who did not shoot through.

The officers are proud of the many young shooters, who will be well to the front by next year. The shoots will be held regularly until Oct. 28, when the season will close with the annual shoot for the loving cup.

Progressive Club.

East St. Louis, Ill., Sept. 6.—The last club trophy shoot of the old Progressive Club was held on Sunday. Only the high per cent. men were out, and they were out to win, and the excitement ran high.

Huff was the best on this occasion, and he won out only after a miss-and-out shoot with Thos. Ruff and P. Baggerman.

Ivan Ruff was shooting a new gun, and was not at his best. W. H. Clay was the high per cent. man for the day and the season, also was high in the Peters trophy events. It was Huff who made the longest run—that of 40.

This club has been prosperous, and consistent in shooting, as in competition with other clubs of St. Louis, it has won the Peters trophy twelve times in succession.

On Sept. 18 there will be an all-day tournament, which will probably close the season's shooting at the Progressive grounds.

In Peoria.

Peoria, Ill., Sept. 5.—It will be of interest to note that on Sunday the members and friends of the old Peoria Gun Club met on the old grounds at the half-way place. Ida Harris came over and shot for the first time in many moons, and showed that idleness has not set him back any, as he lined out 48 out of 50, thus winning Class A trophy. George Hermann, of Bartonville, won Class B and the Peters medal with 48.

In Other Places.

The Recreation Gun Club, of Cleveland, O., announce a tournament to be held on their grounds, Oct. 28.

Webb City, Mo., after a state of quietness, has come to life, reorganizing the gun club, and has started on the tranquil life of trapshooting prosperity.

At the Staunton, Ill., Gun Club tournament, held Sept. 5, the high average was won by C. B. Wiggins, of Homer, Ill., as in shooting at 180 targets he scored 176. John Boa was second with 172.

There was a shoot at Shickley, Neb., last week. The home team scored over Edger. Each had five men, 50 targets. The winner had only ten to the good. This is the second time Shickley has won. The first match Edger lost by the small margin of 4 targets. Another match will be shoot soon.

Rollo Heikes stopped over at Canton, O., on his return from the Michigan shoots, and proved that he is fast gaining his old time form, as he broke 172 out of 180.

Sept. 15 a barge shoot, conducted by the Iceberg Gun Club, of Beardstown, Ill., will be held. All who have heretofore attended these shoots are loud in their praise.

At Union, Ia., a tournament will be held on Sept. 20 and 21.

The Springfield Gun Club, of London, Canada, celebrated Labor Day by holding a shoot. The Smith gold medal event was won by Glover on the shoot-off. McBith got first prize and Webb second. Scranton immediately challenged Glover, and the holder won again with a score of 17 to 14. In the silver spoon event Glover also won.

The best shoot yet held by the Bridge City Gun Club, of Logansport, Ind., was that of Labor Day. There were twenty-three shooters present.

Ed Voris, the well-known Indiana trapshot, took his seat as mayor of Crawfordsville on Sept. 5. He has held many cups and championships that have come through his unerring aim when contesting with the shotgun.

There will be three more contests held by the Sandusky, O., Gun Club to decide the ownership of the Cedar Point trophy. At this writing Frank Schnaitter, Jr., leads with 113. The next man is Miller, 111; Valentine, 110; Deist, 109; Couter, 106.

A very hotly contested team shoot was held at Taylor, Tex., Labor Day. The Austin Club finally landed well to the good, viz., 261 to 173. The prize was \$50 cash. J. A. Jackson, of Austin, was the top man with 46.

Harold Money did his stunt of labor on Labor Day at Shelbyville, Tenn., when he lined out 25 straight, while Tandy made 24.

The Biloxi, Tex., Gun Club held a meeting on Sept. 2, to decide as to the best manner of contesting for the Hunter Arms Co. medal. Weekly shoots are being held and considerable interest is taken in trapshooting.

The club at Aastad, Minn., held their final 1904 shoot Sept. 1, and will now turn their attention to game shooting. M. E. Bergerund won the silver cup on 43 out of 50.

The San Diego Gun Club has accepted an invitation from the Los Angeles Club to participate in the seventeenth semi-annual target tournament, to be held Oct. 8 and 9. Latest reports say that at least enough will attend to qualify in the team race.

Much interest is being awakened in the trapshooting line at El Paso, Tex. Many new and enthusiastic members have been added during this season, and they show by their presence at the weekly meets that they are not liable to drop it after a short trial.

The officers at Fort Bliss, near El Paso, have taken up the shotgun, and have organized a gun club. Last week several of the El Paso shotgun cranks were invited to lunch and shoot with them, and a royal time they enjoyed. Hubby was present and gave a fine exhibition, losing but 1 target out of 75.

When you read of a club throwing targets 75yds. for practice or in tournaments, you can gamble that the attendance will drop off until there will not be more than two or three left. Fast targets—that is, beyond 45yds.—has been the death of more clubs and has put more shooters out of the game than all other objections combined. Shooters cannot break hard targets, and will not try. Remember that beginners should be encouraged, and they must shoot by themselves, and targets should not be thrown over 35 or 40yds. Try this, and double your membership.

While shooting in the Northwestern States is practically at a standstill, there are many prospective ones in the Southwest, viz., Silver City will hold one Sept. 17 and 18; Tucson, Sept. 27 and 28; Albuquerque and San Angelo will both hold shoots in October, while Nov. 15 will usher in the big shoot at El Paso.

T. E. Hubby has become somewhat enthusiastic over the proposition to hold an Interstate tournament during August of next year at Cloudercroft, Tex.

At the last coming together of the Bay City, Mich., Gun Club Allan and Coe captured the medals.

The Lebanon, Ind., Gun Club will hold an open tournament on Sept. 26. All the neighboring clubs will be represented.

Crawfordsville, Ind., Gun Club, without the help of Mayor Voris, easily defeated Lebanon in a match at Adney's Park on last Friday, with a score of 211 to 176. Wait until they meet Indianapolis on the G. A. H. ground, then see if they don't lower their colors.

The Granville, Ill., shooters advertise a shoot to be held Sept. 15, open only to the amateurs of Putnam, Marshall and Bureau counties. The Schmeizer trophy will be included in the last three events of the programme.

A new gun club has been organized at Jacksonville, Ill. It sports the name of Nicholas Park, with James A. Groves, President, and T. H. Buckthorpe Secretary. The start is made with twenty-five members.

Shimmer was high man at the Clarksville, Ia., one-day tournament held last week, breaking 173 out of 200. H. Steege and Lee Graham came next with 170. Shillady 154, Wygle 151, Brokaw 147, Nichols 131. The Clarksville club, with Slimmer at the head, is well to the front this year as an up-to-date shooting center.

You have heard of the seven Deweys at Fergus Falls as trap shots, well they are chicken slayers as well, and on Aug. 30 they shot their last club match for the season. Imagine, six strong young farmers as they stride across a stubblefield, each armed with a Winchester pump, putting up a covey of prairie chickens, and then the result—the end of the brood. At 50 targets Charley and John 48, Byron and Morris 47, Afton and Will 45 each. Some 1,000 ducks and chickens will fall to their guns ere the snow falls. They live in the hunters' paradise.

Later information has intimated that Elmer Shaner was looking over the shooting ground with a view of preparing a report as to the feasibility of holding the next G. A. H. on the Blue River. It seems at this early date that Denver, Omaha, Kansas City and Indianapolis, all have bids in. On the previous showing made Indianapolis has them all "skinned a block," yet Chicago should not be overlooked. The location, the grounds and all things necessary are favorable to Chicago. Will the old Watson Park management get busy?

The Ho-On-Kc Rod and Gun Club are interested in rifle shooting as well as shotgun, as there are many opportunities for capturing deer where this club is situated, in the copper country near Houghton, Mich.

The first basket dinner of the Corner Rod and Gun Club, of Fort Wayne, Ind., was a grand success. The amusements were plenty and the entertainments excellent. Music by band, singing, speech making, banquet, and the finale a badger fight. Long life to the now thoroughly organized rod and gun club.

The gun clubs at Fairview, Spirit Mount, Meckling and Norway, S. D., are engaged in a contest for a fine shotgun donated by an Eastern arms company. The first shoot was won by Spirit Mount, with 91 out of 125.

Many of the target shooters of the town of Clinton, Ia., are fostering the idea of organizing a gun club. From late reports received, the scheme will materialize.

At the Kalamazoo, Mich., shoot, Sept. 1, C. A. Young was high man with 195 out of 200, and Pop Heikes was next with 191. Taylor, of Ohio, was high amateur, 187, and Kit Shepardson next with 186. The shoot was not continued on the second day for lack of patronage.

Silver City, N. M., Gun Club wish it understood that on Sept. 17 there will be a tournament held by their members.

There is a new gun club at the town of Kellogg, Minn. The officers are D. S. Paul, President; F. T. O'Flarey, Vice-President; F. W. Heuer, Secretary; Peter Schriests, Treasurer. The first shoot resulted in O'Flarey getting 8 out of 10; John Salzman 8, Collier 7, Miller 7, Plein 6, Hauer 5, Robinson 4, Paul 4, Schriests 1.

Aug. 31 was a closing day for 1904 at the Springfield, Minn., Club grounds. Geo. P. Foster won the handsome Peters trophy with 41 out of 50.

At the last shoot held by the Omaha Gun Club there were present such well-known shots as Dave Elliott, the brother of Jim, as well as P. J. Hindman and George Carter, of Lincoln, Neb.

Fred C. Whitney, of Des Moines, Ia., the expert cashier and secretary, had charge of the office at the Clarksville, Ia., tournament.

The McLean County Gun Club, Bloomington, Ill., held the regular weekly shoot Sept. 7. In the 25 target event for the medal, Crothers again won first, though he was placed on the 20yd. line. Thus his score of 23 is extra good.

Garfield Gun Club.

CHICAGO, Sept. 3.—The following scores were made on our grounds Sept. 3. Trophy winners: Thomas, Class A, on a score of 24; Kampp, Class B, on 21; Kehl, Class C, on 5. In the cup shoot, McKinnon won in Class A on 23; Kampp in Class B on 22; Ostendorp in Class C on 20.

Cup shoot, 15 singles, 5 pairs.

Chicago, Ill., Sept. 10.—The appended scores were made to-day on our grounds, on the occasion of the fifth shoot of the third series. McKinnon won Class A trophy on 25 straight, Kampp won Class B on 21, and Morris Class C, on 16. In the cup shoot, which followed, Dr. Shaw won Class A on 25 straight, Snyder won Class B on 22, and Dr. Skillman Class C on 17.

The day was not a favorable one for trapshooting, it being hot and windy, making the flight of the targets erratic and at times very difficult. Twenty-one shooters were present.

Trophy, 25 targets:

Mr. Gilbert's Brilliant Shooting.

A correspondent writes us as follows:

After Mr. Fred Gilbert's wonderful record of 392 straight at Spirit Lake, Ia., the last of July and the first of August, in the making of which he used odds and ends of shells he had at his home in that town, many of the shells having been on hand for three or

O. C. S. A. Gun Club.

UTICA, N. Y.—Labor Day shoot of the Oneida County Sportsmen's Association Gun Club was held at their grounds. Fifty-one shooters took part. There were shooters from Syracuse, Albany, Canajoharie, Little Falls, Herkimer, Ilion, Rome, Sherburne, Clinton and Norwich.

Henry Borden, of Norwich, received high average, breaking 126 out of a possible 135; Geo. Palmer, of Sherburne, second high average, breaking 114 out of 135. E. D. Fulford shot, filling up squads, breaking 213 out of a possible 230.

In the merchandise event, prizes were awarded as follows: First, Teesdale, shooting jacket; second, John Deck, 100-loaded shells; third, W. J. Jordan, hunting hatchet; fourth, W. Herman, pipe, and fifth, Wm. P. Dexter, two bottles of whiskey.

The weather was ideal for trapshooting. This club is fast coming to the front, holding some of the largest shoots in the State. The New York State Association made no mistake when they selected Utica as the place for holding the State shoot in 1904:

Ohio Trap.

Cincinnati Gun Club.

CINCINNATI.—The weather conditions were good Sept. 3. There was quite a good attendance. Among the visitors was the veteran Henry Goodman, who gave up the shooting game about two years ago, but still takes an interest in the sport and likes to renew his acquaintance with the boys.

Eighteen shot in the Parker prize gun shoot, Medico and Nye tying for high gun on 88 actual breaks.

Parker prize gun, 100 targets handicap of added targets: Medico (12) 88, Nye (18) 83, Randall (15) 87, Peters (20) 87, French (20) 80, Herman (30) 80, Jay Bee (25) 77, Boeh (40) 71, Kramer (40) 63, Keenan (40) 60, Keplinger (43) 57, United (47) 53, Wallace (68) 32, Pohlar (35) 63, Andrews (55) 41, Jack (30) 61, Maynard (18) 69, Gambell (10) 74.

The shoot arranged by Supt. Gambell for Labor Day afternoon was a success. There was a good attendance of shooters and spectators, among the latter a number of ladies. No shooting was done in the morning, although several were on hand in time for the "shooters' dinner," served from 11 to 12 by Mrs. Gambell. These dinners are always a drawing card to any of the doings of the club.

Twenty-one took part in one or more of the events, thirteen shooting the entire programme. Among those present were Z. A. Craig and La Rue, of Dayton, both of them good shots and members of the Dayton Gun Club. J. J. Faran put in an appearance early in the afternoon, having just returned from his vacation in Michigan, and started into the game in the fourth event. Captain was at the grounds, but was forced to remain on the veranda as a looker-on, owing to a severe injury to his right thumb, which prevented his handling a gun.

The programme consisted of ten 15-target events, \$1.50 entrance, three moneys, 50, 30 and 20 per cent. Once cent for each target thrown was set aside as a purse to be divided between the four low guns.

Z. A. Craig was high gun with 135 out of 150; Harig, second, 134; Grau, third, 133, and Sunderbruch, fourth, 122. Gambell had charge of the office work, assisted by Henry Goodman, and did not do himself justice at the score. The scores:

	Shot at.	Broke.		Shot at.	Broke.
Craig, 18.....	150	135	Foley, 18-16.....	150	112
Harig, 18.....	150	134	Gambell, 18-16....	150	104
Grau, 19-18.....	150	133	Bleh, 17.....	135	96
Sunderbruch, 18.....	150	132	Faran, 18.....	105	90
Barker, 19-18.....	150	129	Dewire, 16.....	105	83
Randall, 17.....	150	126	Andrews, 16.....	120	70
Medico, 18.....	150	125	Pfeiffer, 19.....	90	69
Maynard, 17.....	150	120	Don Minto, 16.....	75	63
Rybolt, 16.....	150	117	Cook	75	54
Dick, 17.....	150	114	Krehbiel	75	50
La Rue, 16.....	150	114			

September 10 was hot and close, no wind. Maynard and Herman leave on Sept. 14 for Otter Tail, Minn., near the Indian reservation, where they will do some duck and chicken shooting. From there they will visit at Emil Werk's camp near Detroit City, Minn.

Cash prize shoot: Gambell (16) 44, Peters (18) 41, Maynard (20) 37, Falk (18) 37, Kenan (16) 37, Andrews (16) 36, A. Sunderbruch (20) 35, Boeh (16) 33, Keplinger (16) 29, Wallace (16) 21.

Here He Goes Gun Club.

The Here He Goes Gun Club, of Cincinnati, has a membership limited to twenty and a waiting list of more than that number. The grounds are pleasantly located on the farm of Mr. Ed. Story, about ten minutes' walk from the end of the Elberon avenue car line. Here they have a nice little club house and three expert traps fitted with electric pull. A few of the members had a little shoot on Sept. 2. In the regular events H. Osterfeld was high with 31 out of 35. Gambell second with 30. Pfeiffer third with 24. In the first team match Gambell and Pfeiffer broke 20 and 21 respectively, a total of 41, and were tied by Osterfeld and Pohlar who broke 21 and 20 in the order named. In the shoot-off at 5 targets each, Gambell's team won with 10 straight to 8 by the other team. The second match was closely contested, Gambell and Pfeiffer scoring 19 and 24 respectively; total 43, and Osterfeld and Pohlar 22 and 20 in order given, a total of 42.

Rohrer's Island Gun Club.

The Rohrer's Island Club, of Dayton, O., had an all-day picnic on their regular shooting day, Aug. 31, to which were invited not only the members with their wives and children, but also the members of other clubs with their families. The occasion was

known as "Chicken Day," and a hot dinner was served from 11 to 12.

The shoot for the medal was held at 9:30. The scores in the medal shoot follow, eighteen members shooting, and Wm. Oldt winning the medal after three shoot offs, with Miller and P. Hanauer: Wm. Oldt (35) 27, C. F. Miller (29) 28, P. Hanauer (27) 25, Joe Hohm (30) 23, Wm. Kuntz (35) 23, C. Smyth (29) 23, W. E. Kette (34) 22, G. C. Rohrer (29) 22, J. Schaerf (30) 22, C. Ballman (32) 19, H. Oswald (30) 18, Wm. McCullough (35) 18, H. Lockwood (27) 17, H. Engle (32) 17, J. Rost (35) 17, Gus Sigrist (33) 16, H. Kroger (35) 15, F. Chambers (34) 15.

Some of the Dayton sportsmen are ready to start on their annual hunting trips for big game. Dr. N. B. Custer will spend a month in the mountains of Colorado and New Mexico.

Ed G. Sander and Lon Groweweg, of Dayton, and Bryan Stedman and Judge Shoup, of Greene county, go to New Brunswick for a month, hunting moose, caribou and deer.

Notes.

Eight members of the Hamilton (Ont.) Gun Club entered the thirteenth contest for the club trophy on Sept. 8, and Parker won the badge with the good score of 48 out of 50. After the medal shoot a team match was pulled off, Parker and Link captains. Each shot at 25 targets: Link 23, Ayers 23, Shumaker 19; total, 65. Parker 22, Steinman 24, Mrs. Ayers 18; total, 64.

The regular shoot of the Indianola Gun Club, of Columbus, O., on Sept. 3 was attended by nineteen shooters. Stanley Rhoads missed but 4 out of the 80 targets shot at and made the only straight 25 of the day. Frank Siebert did the next best work, making two 23s and a 21.

H. E. Smith is a shooter who is destined to be in the front rank if he continues to improve as he has since the first of the season.

Many of the members of the Dayton (O.) Gun Club were off dove hunting, and the attendance on Sept. 3 was very much smaller as usual, only five members taking part in the contest for the Gem City medal. W. A. Watkins, of Washington Township, was the winner, with 23 out of 30 shot at.

The Rohrer's Island Gun Club, Dayton, O., suffered from the same cause as the other gun clubs, the open season on doves and squirrels taking many of its members to the fields and woods.

Only five members shot in the medal contest, which was won by Wm. Oldt for the second time, and this time without a contest. His score was 23 out of 32. At the conclusion of the medal race three matches were shot, four men on a team, 25 targets per man.

In the first match Miller's team won with 83 to 79. The second and third matches were won by Oldt's team with 83 to 82 and 77 to 71. In the total for the three matches Oldt's team led by three targets, the score being 239 to 236. The only straight in the series was made by C. H. Cord.

The N. C. R. Gun Club, of Dayton, O., have built a clubhouse on their new grounds, and will hold shoots every Saturday until the opening of the quail season.

BONASA.

South Framingham Gun Club.

SOUTH FRAMINGHAM, Mass., Sept. 1.—Inclose clipping from Framingham Evening News, giving account of a shoot held by our club on Aug. 30.

E. W. FULLER.

At the traps of the South Framingham Gun Club on the Holliston road this afternoon, Fred Gilbert, of Spirit Lake, Ia., smashed 135 clay birds without a miss. He was here as the guest of the club and he opened the eyes of the spectators by his marksmanship, smashing birds which the spectators thought he had not the remotest chance of hitting.

The shoot consisted of nine events of 15 birds each, members of South Framingham, Boston, Greenfield, Watertown and Needham clubs competing. The summary:

Events:	1	2	3	4	5	6	7	8	9	Broke.
Gilbert	15	15	15	15	15	15	15	15	15	135

SOUTH FRAMINGHAM, Mass., Sept. 5.—To-day the final shoot of the South Framingham Gun Club was held, at its traps on the Holliston road. There were eight events, one at 10 birds, five at 15, one at 20, and the finals in the prize cup match, open to members of the club only, 25 targets.

The prize cup shoot during the season was won by W. I. Lincoln, E. W. Fuller, second, and Theo. F. Rice, third.

The third, fourth and fifth events, 50 targets, unknown angles, was won by Herbert, first, \$3; P. H., second, \$2.

The sixth event, 15 unknown, merchandise prizes, was won by Herbert, Underhill second, and Staples third.

The seventh and eighth events, unknown, merchandise prize shoot, was decided as follows: Herbert, first; Staples, second; Fuller, third; Brown, fourth, and L. E. Isham, fifth.

Interstate Tournament at Huntington.

HUNTINGTON, W. Va., Sept. 10.—The Interstate Association tournament, scheduled for Huntington, W. Va., Sept. 7 and 8, was not such as would be classed a success. The attendance did not amount to much more than a "corporal's guard." No one seemed to know just why such was the case, but the most plausible explanation was that this particular section of the country has had a surfeit of trapshooting for the time being.

The first day's attendance was so small that Mr. F. H. Merrick, President of the Huntington Gun Club, and Manager Shaner, of the Interstate Association, deemed it advisable to declare off the second day's events. Mr. C. Amos, an amateur, Mr. Harold Money and Mr. C. O. Le Compte were the only visitors present to take part in the tournament. The scores of the one day follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	Shot	
Targets:	15	15	15	15	15	15	15	15	15	15	15	15	20	at	Broke.
H Money	14	14	15	15	15	14	14	14	14	14	13	15	16	200	187
C H Amos	7	5	6	7	9	75	34
C F H Merrick	12	13	13	11	12	14	12	11	13	11	11	12	16	200	161
Dr. O Shattuck	15	13	14	15	14	11	14	14	13	15	13	13	19	200	183
C O Le Compte	14	15	13	14	13	11	13	10	11	13	15	12	15	200	169
W M Prindle	14	10	11	10	11	75	56
J M Hawkins	10	11	12	10	12	13	10	11	13	12	12	9	14	200	149
E E Sample	13	14	12	12	12	12	13	12	12	12	150	124
Lee Marcum	13	9	11	45	33
W S Vinson	13	12	12	6	12	10	8	..	105	73
F L Frazier	11	12	14	9	13	80	59
J Stevenson	9	15	9
E C Van Vleck	10	15	10

rowed one, which was the cause of his dropping below his average shooting.

Only one club member got into the prizes, Le Noir, who won the Carleton reel. We hope Fred will have as good luck using it as he did in winning it.

The way Harley Keyes smashed 19 out of 20 with his little 16-gauge was a caution. Harley says the 16 is good enough for him.

Everybody says, when speaking of the tournament, that "it was the finest yet."

MISFIRE.

A nicer afternoon for trapshooting was never made than on Sept. 10, when some twenty-five shooters gathered on the grounds of the Springfield Shooting Club to participate in the practice shoot and meet Mr. J. A. R. Elliott, who was the guest of the club. Mr. Elliott gave a very nice exhibition of shooting, breaking 117 out of 125 targets shot at, an average of 93.35 per cent.

Some good scores were put up by club members. The Somerville, Conn., Club sent up several shooters. As Mr. Elliott was in a hurry to catch a train home, he shot in each squad in each event, which used his shells up very quickly, leaving him a little time to visit with the boys. Scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	Shot	Broke.
Targets:	10	10	10	10	10	10	10	10	20	25	at.

DuBois Tournament.

DuBois, Pa., Sept. 3.—The fall tournament given by the DuBois, Pennsylvania, Gun Club, on Sept. 1 and 2, was one of the most successful shoots held in Western Pennsylvania this year. Everybody present seemed to enjoy themselves, and everything went along very smoothly. The spectators were on hand in good numbers, and among them were a few leaders who seemed very much interested in the shoot. Forty-eight shooters took part the first day, of which thirty-two shot the programme through, which called for 200 targets, but was cut down to 175, on account of darkness. J. A. R. Elliott was high gun the first day with 170 out of 175. W. H. Heer was close up with 168. E. D. Fulford was tied with Mr. Millen, of the DuBois Gun Club, each getting a third place with 165. Fourth place went to A. Sizer, of Kane, Pa., and L. B. Fleming, of Pittsburgh, Pa.

On the second day the attendance fell off a little. Still, thirty-three shooters took part, of which twenty-six shot through the programme. E. D. Fulford was high gun on the second day with 194 out of 200. J. A. R. Elliott and W. H. Heer tied for second place, only losing one more target and finishing with 193 each. Third place went to C. W. Hart, of Buffalo, N. Y., with 189. Fourth place went to A. Sizer with 187.

General average for the two days, at 375 targets, resulted as follows: J. A. R. Elliott, first, with 363; W. H. Heer, second, with 361; E. D. Fulford, third, with 359; Mr. Millen, fourth, with 349. J. A. R. Elliott made a run of 136 on the second day. Mr. Millen won the amateur average for the two days.

The trade was represented by L. J. Squier, W. H. Heer, E. D. Fulford, H. C. Watson, J. A. R. Elliott and H. P. Fessenden.

Sept. 1, First Day.

The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

In this island are men having ankles, with spurres, like to cockes; here are hogges with hornes, a riuer stored with fish, and yet so hote, that it flaieth off the skinne of any creature which entreth it; there are oisters so large that they cristen in the shells; crabbes so strong that with the claws they will breake the yron of a pick-axe; stones which grow like fish, wheeof they make lime.—PURCHAS HIS PILGRIMAGE, edition of 1613.

THE AIR OF THE FOREST.

In the popular estimation two aspects of forestry are prominent. The forest is regarded as a conservator of water supplies, and thus to be of immediate and direct value to the citizen of to-day; and it is regarded as a producer in the distant future of a crop of wood which shall bring a money return to the citizen of a later generation. The public in general is not greatly interested in posterity, which it feels has never done anything for it, and to which, therefore, it owes no debt, and for this very natural reason much more emphasis has been laid on the forest as a source of water supply, and much more interest felt in this aspect of the forest than in the crop which it is to produce. It is true that existing forests and wood lots, by judicious treatment, may be made to yield crops of fuel or of merchantable timber which will more than pay the cost of gathering them, and that by judicious treatment the value of such forests or wood lots continually increases and their yield grows larger. But after all it takes a long time to harvest a crop of trees, and the man who plants a forest can only expect that his successor will harvest the crop.

Another aspect of forestry, of immediate practical interest to us all, is the influence of the forests on the public health. We talk commonly enough of the pure air and water of the forest, but we use the words in so general a sense that they mean little except to dwellers in the city. Nevertheless there are various factors involved in the forest's relation to health which are of great importance. The water, the soil, the air and the climate of forests differ from those of the naked plain and also from those of the seashore.

The relation of the forest to the public health was recently taken up by the American Public Health Association, and the question was submitted to a committee of which Prof. Wm. H. Brewer, of Yale University, is the chairman. Prof. Brewer's eminence as a student of agricultural problems is well known, and the report prepared by him contains a well considered estimate of the subject.

In regions where the annual rainfall is less than ten inches, forests rarely occur, and more than this amount is required to a luxuriant growth. On the other hand, in warm climates no amount of rainfall will prevent forest growth. In certain localities in India where more rain falls annually than anywhere else in the world, there are luxuriant forests. Here the rainfall is often 600 inches yearly, and sometimes more than 800 inches.

Aside from the very consideration that forests conserve the rainfall is the important fact that as a rule forest waters are purer than those of an unforested region. It is probable that forests slightly increase the rainfall, but if so the increase is small. What is probable is that they equalize the rainfall.

Forest waters are purer than those from cultivated land. The undisturbed soil of the forest gives up less of the decaying matter on or near the surface, and less of the mineral matter from the soil than is taken up by waters flowing over cultivated lands, which are stirred, mixed, and manured so as to promote chemical changes in the mineral matter which is thus rendered more soluble and so more easily taken up by flowing water. For similar reasons forest waters are clearer and cleaner than other

waters; they pick up in their flow much less of the soil, and also fewer living organisms.

Besides its importance to agriculture, the conservation and regulation by the forests of the rainfall has an important relation to public health. The water drunk by the inhabitants of cities and towns comes from a wide watershed, and it is important that the flow of springs and streams should be even and regular rather than that they should be torrential at one time and feeble at another. The importance of this process to the public health can hardly be over-estimated.

That forest air is usually wholesome and that it is beneficial in many forms of disease is well understood. It is probable, however, that the curative properties of forest air have been overestimated in the past, and that much of the good attributed to the air may really be due to the more wholesome outdoor life led by the invalid who dwells in the forest. At the same time it is well understood that ozone has a curative value, and that the forest air is richer in ozone than that of cities or even of towns or cultivated fields. That the forest air is cleaner than that of cities is obvious, and the cleanliness of the air we breathe has a close relation to health. Forest climate is likely to be milder and to be less subject to rough, harsh winds. The temperature is very much more uniform than that of the open country. In hot weather it is not so hot, in cold weather not so cold, and the daily, monthly, and yearly range is distinctly less. There is also less range in the humidity.

These remarks apply chiefly to temperate climates. If in rainy countries, the forests of the tropics are not places for invalids, nor even for people who are weak.

The relations of forestry to the public health are only now beginning to be appreciated. Yet the good work of protecting and saving existing forests has been undertaken by a number of States, though for other reasons than those here given. It is evident that no hard and fast rules for this protection can be laid down, for local conditions are so unlike that different methods must be practiced in different sections. One thing, however, is clear: that in almost every State there are considerable tracts of land more valuable to the State and its inhabitants as forest than they ever could be as agricultural land. Such lands ought without delay to pass into the hands of the State, to be treated by it as may seem best for the public interests.

A PICTURE FROM PORT ARTHUR.

LAST Monday's correspondence of the New York Times from the seat of war presents the Japanese soldier in a dual character most surprising. In one we have the fighter whose fierceness, intrepidity, and dash have excited the wondering admiration of the world. The Russian Prince Radziwill, who arrived at Che-Foo from Port Arthur September 18, the Times correspondent writes, declares that the men of both armies are absolutely venomous in their antagonism. "Gen. Stoessel has addressed his garrison, saying that the present mood of the Japanese indicates clearly the necessity of resisting them to the last drop of Russian blood, because if the Japanese soldiers enter the fortress it will undoubtedly be impossible for their officers to control them and prevent a massacre."

In contrast with the fighting machine here described, turn to the Japanese soldier as an angler who goes fishing between battles. "Another souvenir of home life which the soldiers have brought into Manchuria," writes the Times correspondent at Tien-Shi-Tien, "is a fishing line in every knapsack. From the commanding general, Kuroki, down to the humblest coolie who trots after his master's horse, they are disciples of the rod. Seeing the mild-eyed boys sitting for long hours by the banks of mountain streams waiting for a three-inch minnow to bite at an angleworm, it is hard to realize them as the same fighting men who storm rocky embankments under showers of shrapnel and bring back the huge Cossacks of awesome reputation as docile captives."

Thereafter let no one say that he is too busy, has too much work to do, and has no time to go fishing. The Japs are busy, and the work they have to do is to take Port Arthur; yet they find time between whiles to go fishing.

Of angling as the strenuous man's recreation, this picture from the siege of Port Arthur is altogether unique.

SNAP SHOTS.

THE outcome of the agitation in Minnesota a year or two ago over the Chippewa Indian Reservation forest lands was the establishment of a Forest Reserve of 231,000 acres. This result was a compromise with the timber cutters, who strove to secure the opening of the entire tract for lumbering operations, meaning the destruction of the woods. The lumbermen are by no means contented with the existing conditions. They want the rest of the timber lands; and to that end are seeking to induce the Indians to petition for an opening of the reservation for settlement, which means the cutting of the timber. There is no genuine demand of this sort by the Indians. There is no popular sentiment in Minnesota in support of any such proposition. There is no support of further "settlement," save only on the part of a small body of speculators who are hungry for the profit they see in denuding the area of its forests. The true sentiment of the people of Minnesota is well expressed in the communication from the pen of Mr. Charles Cristadoro, in our last issue, in which it was declared: "The idea of reforestation has come to stay in the State of Minnesota. The forest reserve flag is flying over the Chippewa Reservation, and it will 'stay put,' the boomers to the contrary notwithstanding." Indeed, the probability is that instead of ever diminishing the reserve boundaries, Minnesota will enlarge them.

WHAT is claimed to be the highest record grouse bag for Great Britain was made the other day near Sheffield by Rymington Wilson and eight other guns, who scored 2,748 birds in a day's shooting, the best bag previously made having been 2,648. Such feats are achieved with credit in Europe, but the Atlantic lies between the grouse moors of Great Britain and the quail covers of the United States, and the ocean itself is not too vast for measure of the difference of sentiment prevailing in the two countries respecting record bags. This difference is due in large measure to the different economic conditions. In America we disapprove inordinate killing because it means excessive drain on a natural game supply which cannot be maintained artificially. In Great Britain the birds are raised as abundantly as poultry, and to kill 2,748 in a day means no more as to game supply than the killing of broilers by the poultryman. More will be provided in due time to meet the demands of another season.

STATE GAME COMMISSIONER JOHN A. WHEELER reports that prairie chickens and quail have increased in Illinois to a gratifying extent; and that a decided change of public sentiment is manifested in support of the game laws. Commissioner Wheeler has himself done much to create a feeling of co-operation between deputy game wardens and citizens. The wardens have been instructed to advise farmers and land owners through the local press and verbally, that if they will notify the authorities by telephone or wire, prompt action will be taken. If he shall continue to have the support of those who are most closely touched by the game laws, Commissioner Wheeler will find protection simplified.

THESE are the days when the invitation to the field is strong. It is in the blue of the sky, the golden effulgence of the sunlight. It is in the date of the calendar confronting us at our desks, in our offices and shops and homes. It is in the memory, which at this time comes with peculiar force, of the early autumn days of past years. It is in the knowledge that deer are reported abundant in the woods, in the rosy reports that come from the game field. These are the days when game law digests and railroad schedules are consulted; and one plans and schemes and contrives to reconcile his going away and the continued serenity and progress in his absence of the little world which centers about him. It is strange how one always thinks when he gets back home that something must have happened while he was away, and stranger still is it that nothing ever has happened.

From various sections come reports of a good game stock for the season of 1904. The Adirondack deer, the shore birds and ducks of the coast, the quail and prairie chickens of the West, are in fair supply.

THE SPORTSMAN TOURIST

Some Shingle Mill Folks.

WHEN Jones came down from Wisconsin to inspect our southern timber and decide whether it was worth while attempting to turn it into wood pulp, I was glad to hear him disclaim the slightest inherent fondness for hunting or fishing. The Arkansas Legislature had but lately traced a dead-line in the pathway of sportsmen from other States, and I knew I must lead Jones through a region replete with opportunity and temptation, guarded by the usual number of constables and deputy sheriffs. As a rule, the man who cares nothing for firearms and fishing is not especially welcome as a companion in my trips to the woods, but this was an exceptional case. Jones agreed to be good, and I trusted him.

"All I want is a glimpse of the virgin forests," said he. "But, while I am hunting for paper stock, I'd like a chance to study your natives and their manners and customs. Show me old-fashioned folks in homespun—the men with muzzleloading squirrel-rifles, the old women knitting in the chimney-corners, and the girls carding, spinning, and working the looms."

I explained to him that the homes of our primitive folk were in the hills, and that the bottom lands, because of the influx of enterprise to till their rich lands and convert their forests into good, hard cash, were no longer as in the days of the original Arkansaw traveler. "But maybe I can find some characters worthy of study," I added, encouragingly. "I've found one already," he responded cheerfully, and the reply set me to pondering, for I'm blest if it didn't sound just as though he meant me.

It was well along in December and the fall rains had given place to clear weather and heavy frosts. As is usually the case at that season, the river and creeks had spread over the low grounds, and overland travel to the point we wished to reach was entirely out of the question. I approached the subject of a canoe trip with considerable doubt, for the average Northern man has a holy horror of a dugout, and almost invariably capsize the first one you get him into. Jones eyed the craft critically, gave it a shove off the shore, and jumped in well amidships, catching his balance like an experienced log-runner. "Our Indians up home could give you fellows cards and spades in boat-building," he told me, paddling back to load in our baggage. "There's no shape to this old ark, and there's too much timber in its bottom. Get forward, there, and let me furnish the motive power. I haven't swung a paddle since a year ago last August." So I made myself comfortable on a roll of blankets with my .25 rim-fire across my lap, filled and lighted my pipe, and pointed out the course he should follow. The work of paddling did not seem to hinder Jones from looking at the trees and asking questions, while I was too thoroughly satisfied with my own job to insist on a change. Presently it developed that my companion had a fairly good eye for game. "There's a squirrel in the fork of that big tree," he announced. "Can you kill him?" I could and did, and then Jones paddled on without comment, looking guilty and remorseful, as is seemly in one who has prompted a deed of slaughter. In a few minutes I saw a coon on some drift a hundred yards to the right of our course, but said nothing, waiting to see if Jones would discover and identify it. "Lighter colored than they are up north," said he, as though taking it for granted that six pounds of flesh and fur could not be overlooked by the casual eye. "Don't shoot him—there's a wood duck under that willow ahead yonder." And then he checked up paddling, and I potted that duck with a 200-yard shot which I never expect to duplicate. "A bully little rifle!" exclaimed my non-sporting friend, surprised into momentary forgetfulness. "I wouldn't mind changing places with you a while—if this wasn't Arkansas, and I knew how to shoot."

When the sun was still an hour above the western horizon, we ran the dugout ashore on a hardwood ridge lying only a foot or two above the flood level. Jones wanted to assist in stretching our little shelter tent and getting supper ready, but I objected. "Remember what is expected of an explorer. Here's a 160-acre island with nary a Crusoe, and maybe you'll find a big crop of wood pulp ripe and ready for harvesting." He started leisurely into the interior; then retraced his steps. "I'll take the rifle—for protection, you know." "Sure," said I. "There was a bear killed on this ridge in '79." A squirrel came skurrying down the trunk of a hickory, found a comfortable seat on one of the lower limbs, and commenced chattering his astonishment at our presence. I expected Jones to shoot, but he contented himself with drawing a long and careful bead, and then tossed the rifle on our blankets. "Wish he was one of your idiotic lawmakers," he growled. "Here, let's get busy with that tent."

Next day, as we drew near the shingle mill, Jones' interest was aroused by the, to him, unique logging work going on around him. Said he, "I have seen loggers at work on six feet of snow, but never before in ten feet of water." So I gave him a discourse on the southern cypress, and the approved methods employed in getting it to the saw. When a tree is anywhere from six to fourteen feet in diameter at the ground and dwindles to twenty-four or thirty-six inches some ten feet higher up, common sense suggests the policy of chopping or sawing it above the "bulge." In the dry season scaffolding is

employed to furnish the axman footing at the proper level, generally of a most insufficient character in the eyes of an amateur. The swell butt of a large cypress is usually a mere shell. A hole is chopped through to the hollow and a slab or split board driven in, upon which the workman stands to fix another "springboard" higher up; so continuing until the right height is reached. Not every man can ply the ax while balancing on a six-inch footing, and for this reason it is customary to cut cypress when the overflow is at its highest level. Formerly, when the work was all done with the ax, the chopper would stand in a dugout, the craft swinging away from the tree as he raised his ax, and back again as the blow fell, thus giving additional force to the stroke. There is quite a knack in this sort of chopping, as anyone can easily learn by practical test; but as a matter of precaution, the first lesson should be taken where the water is quite shallow. At present a crosscut saw is employed in felling the timber, two men working together in a "John boat." Sometimes the tree refuses to fall in the direction intended, and a boat is smashed and maybe a man crippled or killed, but such occurrences are rare.

Once down and afloat, a single log is taken from the trunk, sawing it off as far up as the timber is good and reasonably clear from knots. This is done by a single man, who stands either in a boat or on the log itself, with a saw from which one handle has been removed—the blade, of course, being steadied by the water. We ran across an old fellow so employed, and halted to watch him at his labor; but he caught sight of my rifle, and would do nothing but examine and criticize it. "Party gun," he admitted, "but too dadgummed leetle in the hole. Might dew fer a bluff, though, like Ben Tidwell's six-shooter. Ever hear 'bout that? Well, Ben's the shingle-packer hyar at Bradley's, an' las' summer he gits down with the chills an' sends fer two gallons of whiskey. When she come, the boys all hinted 'round fer a drink, but Ben wouldn't hyar 'em. One night they holds a caucus an' 'cided things had ter go dif'rent, an' so the gang goes in on Tidwell an' Big Sam Springer does the talkin'. 'Ben,' sez he, 'we on'y ax what's right 'twixt man an' man. Fotch out that jug an' save yerself trouble.' Ben sizes up the crowd, sorter hesitates a minnit, an' then dives under his bunk. 'Jug's thar,' he sez, settin' it on the table; then he reaches fer a big cap-an'-ball navy six an' monkeys with the hammer. 'Which one of you all is driest,' sez he, 'kin take the fust pull.' The boys look at the jug, then at Ben. 'Tidwell's got a mighty bad color,' allows Big Sam Springer. 'Mightily like yaller janders,' sez Tom Pate. 'Mebby he'll need all this whiskey.' An' then all the fellers allowed they wa'n't much dry nohow, fust one an' then t'other slidin' fer the door; an' as the last one groes out, Ben slings the six-shooter atter 'im. 'She hain't had a load in her fer five year,' sez he, 'but she was sure a peach afore I broke the mainspring an' then bent the bar'l crackin' hick'rynuts.'"

Dave Bradley, owner and manager of the shingle mill, proved an object of interest to Jones, even as he had to me in the earlier days of our acquaintance. He would never acknowledge to a college education, but his knowledge of ologies and isms sometimes made our conversations a bit too lopsided for my own comfort, as in the old days when I used to respond "Yes'm" to my teacher's "You will doubtless remember, etc." Once I asked Bradley why he was not holding down a chair at some university, instead of hiring mill hands at a dollar a day and paying them out of the commissary at a mere 100 per cent. profit. "Emotional insanity, my dear boy," said he. "It's the old story of a whole life spoiled by the idiocy of a single moment." Which, as Jones said, was "plenty vague, and might mean either a case of mother-in-law, horse stealing, or backing the wrong poker hand." Bradley seemed to be a jolly good fellow, and if he knew the gnawing of remorse for past misdeeds there was no reading the fact in his merry eyes or detecting a false ring in his laughter. His idea of a pleasant conversation was to do practically all the talking himself, and I never knew a listener to object, because Bradley's stories were interesting. One day he sent a boy to call us to the commissary, where a trio of trappers were trading furs for provisions. Two of the three were father and son—woodsmen of the ordinary type, and, from their language, reared in the woods. They were garbed in brown duckings considerably worn, but clean and showing the darning and patching of a careful housewife, whose home might be a mere pole shanty hidden away in some cane-brake. To give a comprehensive description of the third man's appearance is beyond the possibilities of type. Jones contended that even a photograph would fail to give his strongest claim to particular notice, and I agreed with him. Whispered Bradley, "He is a skunk catcher—a specialist, as you might say. I buy the fur, but he retains the aroma, and most of the grease seems to have soaked into his clothes. I'll tell you about him after a while."

"I wanted you to see that fellow," said the mill owner, when we were again alone. "His present name is Johnson, but it was something else before he left England, and there was a chance that he might some day claim a title. You wouldn't think it, but twenty years ago he was one of the slickest gamblers that made a living plucking pigeons in our lower river towns. Grim fate overtook him one night in a card game at Helena. A young Mississippiian sat in the game, staked and lost his last dollar, and then raised a rough house. I haven't the slightest

doubt he had been robbed, but he was very foolish to start a gun play with a fellow like Johnson. They took the boy home next day for burial, and Johnson found it convenient to seek greener fields and pastures new. Two years later he was behind a roulette layout on an Ohio River boat, when a dead ringer of the Helena party slipped into a chair facing him. 'Johnson,' said he, 'I know you for a murderer and a cheat; now, suppose you prove to me that you are not a coward, as well.' 'How?' inquired Johnson, suddenly gone as pale as a sheet. 'At the next landing we will go ashore and exchange shots. It's more gentlemanly than potting a fellow across a table; but if you prefer that sort of a death, you can get it by the slightest treacherous move. Fight fair, and possibly you will live until one of my younger brothers gets old enough to take up the quarrel.' Johnson agreed to the proposition, but was only fighting for time, for his nerve had entirely fled. The boat whistled for a landing about 9 o'clock that night, and passengers and crew tumbled ashore to witness the duel; and then it was discovered that one of the principals was missing. Johnson had quietly slipped into the river, swam to the Illinois side, and struck a bee-line for the Rocky Mountains, where for a time he found safety. At Cripple Creek, the winter after the big strike, his enemy again found him, and this time there were two brothers in company. Johnson was in a saloon and went out of the back door a moment after they entered at the front. The poor devil was simply frantic with terror, and the railroad trains that hustled him along toward Arkansas were not half speedy enough to suit him. When you come to think of it, three days is a short time for transforming a spick-and-span gentlemanly gambler into such a nondescript as you just now saw; but, all the same, Johnson managed it somehow, and a greasy, ill-favored and worse flavored trapper he has been from that day to this. Not a very successful one, either, though that should not be charged against him, for he lacked the advantage of early training. Take the best of men out of their business latitude and they are no good; in proof of which statement I will tell you another story:

"Along the merging line of that which people are pleased to term a higher civilization and the semi-savagery of pioneer days, countless little social tragedies are continually cropping up, direful enough in their effect upon the party or parties concerned, though the world would count them of little moment. When Dave Parker went to the penitentiary for embezzlement, a host of former friends wondered at his downfall, but its cause was no mystery to me, and I had long foreseen some such an ending for a good man who deserved a far better fate. Dave was my partner when I first butted into this shingle business, and a likelier or smarter fellow never drew the breath of life. He was a born hustler, continually had a dozen irons in the fire, and none of them burning, and could make ten dollars to my one any day in the week. In a year or two he was running a big real estate business at the county seat, and clearing hundreds of dollars a month in commissions. His pet scheme was to sell a certain twenty thousand acre tract as a game preserve, and he eventually got in correspondence with the right party, a northern millionaire, who came down to look over the ground, and brought his daughter with him. She was an ex-society belle, grown a little too aged to hold her hand against younger rivals, but still sufficiently attractive to turn Dave's head for good and all. To do the woman justice, it was doubtless a case of mutual attraction, for my old partner was a handsome, manly fellow, with that brusque, careless courtesy of manner that somehow finds its way straight to the hearts of womankind. They were together continually for a couple of weeks, and a month after her return home Dave followed her. Just what transpired upon his forcibly breaking into the swell social circles of upper tendom, I never learned. It is easy to guess that his lack of culture caused a sensation, and caused no end of chagrin to his lady love. Anyway, she gave him an unmerciful calling down and packed him back to the swamps, and two or three days later wrote him a letter full of agonizing self-reproach for her heartlessness and begging his return. So Dave once more hit the trail for Gotham, and this time made so flagrant an exhibition of his ignorance that the lady packed her trunk and absconded across the Atlantic. The next time I saw Parker he was a bit downcast, but a long way from utter discouragement. Books on etiquette became his regular nightly study, while his days were employed, as formerly, in piling up the dollars. Then suddenly he sold out his business and disappeared, and I afterward learned she had written him from Paris, telling how bleak and lonely life had grown to her, and how she yearned for a chance to beg his pardon for the crime of desertion. Dave was away the better part of a year and acquired quite a passable knowledge of western Europe, for she led him a merry chase around the circle and never once did he as much as catch a glimpse of her golden hair. He came home dead broke and afoot, and I staked him for a fresh start in business; but he took to drinking, and went from bad to worse as rapidly as man ever did. Maybe his fickle-minded love took the trouble of sending a private detective to look him up. At any rate a letter came, and I afterward found it, with others from the same source, between the leaves of his mother's old family Bible. She was 'astounded' to hear certain facts which were not anticipated, and he must never expect to see her again, for she had gone 'way, 'way off in compliance with a self-

imposed sentence of perpetual exile. He musn't worry about her, for she was all right, only awfully lonely, and must continue so, since Fate had ordained that she must live and die an old maid. And she gave her new and permanent address at the head of the sheet. Oh, it was a peach of a letter, and what did Dave do but sit right down and write her father that he was into a safe deal that would clear him a neat fortune, providing he could get a temporary loan of \$5,000 to help carry it through. The money came by return mail, Dave hastened to his charmer and had the door slammed in his whiskey-bloated face; and that night he was pulled out of the gutter dead drunk, and every cent of his fraudulently obtained money gone. What did he do? Why, as a last proof of his love, he hoboed his way as far as possible from the lady before penning a brief confession of fraud and surrendering to the law.

"Another case in point was that of Montgomery Gray, who attempted to make something of himself somewhere else and failed because of his natural limitations. He struck the mill bubbling with the theory that civilization was a failure, and a primitive life the only one worth living, bought the first forty acres of land offered him, pitched together some rough boards for a home, and married Bob Pilkington's plump and comely daughter. All this was in accordance with his plan of campaign, but the girl was a fool to have him, for all of his city garb and manner and education. He was physically incapable of hard work, and lacked enterprise and gumption to profit by the labor of others. Malaria got him down and staid with him all the first summer. The little money he had brought with him vanished dollar by dollar, and the coming of winter found the young couple at the verge of starvation. I found some easy work for Gray to do, and none too soon, for he was shoeless and his clothing was in rags and tatters. In my stock of dry goods was a pair of cheap cotton pants that he fancied and also a nobby little derby hat which appealed directly to his taste. I had thought of giving them to him, but believed it best not to lead him into the habit of accepting charity. 'Don't sell them to anyone else,' said he on starting home Friday evening. 'To-morrow I'll have \$6 coming and possibly I can spare the \$2.25 for their purchase.' Next morning Mrs. Gray told him what groceries were needed, footing up a total of \$3.50. He was whistling as he started out at the gate—actually whistling! for the first time in months. 'Monty,' she called. 'Yes, dearest,' 'You'll have ter fetch me a pair of shoes. Bradley has some toler'ble good ones fer a dollar.' 'All right, Sally.' The derby had sailed out of his reach. 'An' 'bout ten yards of calico—somethin' in leetle figgers.' Good-by, pants! Gray halted and clutched both hands in his hair; then suddenly reassumed his cheerfulness. There was still a quarter he could call his own. Twenty yards further, and again that commanding voice: 'A bottle of snuff, Monty—don't fer-git it.' Poor devil! He sank on his knees in six inches of soft mud, cut savagely at his throat with a dull pocket knife, and his troubles came to an end then and there. 'I wouldn't have thought it of Monty,' was his wife's verdict. 'Killed hisself jes' 'cause I axed him ter buy me some snuff—an' me as good ter him as ever a woman could be!'"

S. D. BARNES.

The Sign Language.

Editor Forest and Stream:

In his account of the younger Henry in the number for September 10, Mr. Grinnell makes a statement that rather surprised me. It was that Henry, on his visit to the Mandans, first saw the sign language used there by the Pawnees who had come there to make a treaty of peace. I had supposed that long before this Henry would not only have seen the sign language, but might have learned to use it himself. It would have come useful to him very often in his business.

This sign language is known to every tribe from the Lake of the Woods to the Rio Grande. I first saw it used when a boy by the Teton Sioux, and since then have seen it almost times without number. Since first seeing it, I have often thought that whoever invented the deaf mute alphabet might have got his first idea of it from the Indian sign language. I understand, of course, that the deaf mute uses signs to represent the letters that spell his words, while the Indian, having no alphabet, uses signs for the words themselves.

When a boy I drove a team from St. Paul clear across Minnesota and hundreds of miles south and west of it. The wagon belonged to a party of young men from the East who were hunting; they and I put in nearly a year there. While we were still in Minnesota we picked up a small band of Dakotas, who kept us company that winter and the following spring, until a cavalry expedition from Fort Laramie met us and turned the Indians back home. The men in this party would often use the sign language at my request; and a boy of my own age who was with them could use it. This boy was my hunting companion, and I might have learned it from him. He did teach me to kill buffalo, while I taught him English. I did pick up a few of his signs, as the one for a camp, "one sleep," a horse running, a deer and a buffalo, and the request for a drink of water.

While I was with the Comanches I was one evening in the chief Asahabit's lodge (we had just got home after an all-winter buffalo hunt), when a Pawnee chief paid us a visit. Our chief and he put in about an hour holding a conversation in the sign language, and every once in a while in the course of the story Asahabit would make some reference to me, as I could tell by the Pawnee looking at me, and once when he looked he laughed.

After he had left, I asked our chief what all this confab had been about, and he told me that each of them had told the other all about the previous winter's hunt. The laugh had been over a turkey hunt that I had made, when my saddle mule deserted me and left me to walk home. The chief could have taught me the sign language, if I had taken the trouble to learn it; we could talk to each other in both his and my language then.

A white interpreter by the name of Clark, whom I saw more or less of for a good many years in that country, could use the signs as well as an Indian could, and often used them when he might have spoken in the Indian's tongue. He spoke several of their languages. At another time, Chief Asahabit and I were out a few miles from the Wichita agency when we met the Apache chief Eugene.

His band was at that agency then, and may be there yet. Eugene was driving a wagon loaded with rations which he had just drawn, and stopping he addressed me in English. Then he and Asahabit carried on their conversation in English. I thought at the time that they did it because I was there, but on asking Asahabit about it, he said that Eugene did not know the sign language.

"Why don't the Apaches know it? I thought all tribes did."

"Yes, many Apaches do, but he don't; he is too stupid to learn."

I knew him better than that, and on paying his camp a visit a few days after, I gave him the sign for a drink of water. He called a squaw to bring it. "Do you know all the sign language?" I asked.

Yes, certainly he did, and he seemed to be surprised at my doubting that he did. I did not tell him, though, about Asahabit's estimate of his intelligence; it would not have served to make them any better friends, and they were none too good friends as it was.

I have asked old Indians about the origin of the sign language. None of them seemed to know how old it was; it is probably nearly as old as the Indian.

CABIA BLANCO.

The Improved Wilderness.

My eye, roving over a newspaper page filled with correspondence from the summer resorts, was caught by the name of an Adirondack lake that I knew years ago—no matter how many—before it had been discovered by the crowd, and I read how the railroad has brought it out of the wilderness and developed it into an "improved" resort, with new and modern features, hotels, and all the conveniences.

That word "improved" annoyed me. To my mind the forest, the lake and stream are perfect as nature made them, and the works of man only mar them. In the years gone by, my lake was in the heart of the ancient wood, and known and loved by a few. Its waters were vexed only by the paddle, and the laugh of the loon was the harshest sound that broke its spell of silence. The forest around the lake was unbroken, unscarred by ax or fire, whispering the mysteries of the world as God made it, and a thrill with the life of the wild.

It is all "improved" now. The pulp mill vandals discovered the forest and hewed great gashes through it to the lake. The railroad followed through one of the gashes. Hotel men built hideous packing cases on the shores of the lake and invited all the world to come and be packed into the boxes and "enjoy nature." Shrieking locomotives drove the deer affrighted from his morning drink, and sent him bounding far into the woods, and yelping steamboats and coughing vapor launches banished silence from the moonlit lake at night.

Those were some of the improvements wrought in the years when I was far away and did not know that the lake had been discovered, and they struck me as a blow in the face when I stole away from the clatter of the city and thought to find peace and rest in the woods as of old. I went in by the old way, a long drive through the woods, and found the log cabin that used to shelter a few fishermen and hunters grown into a hotel full of vacation guests, mostly women. The landlord smiled pityingly when I arrived in the night, and told me I could have come all the way by rail to the other end of the lake and taken the steamer direct to his landing, thereby saving some hours and team hire.

It was no part of my plan to idle about a hotel and listen to the chatter of the veranda; and so I inquired of the landlord if any of the crowd had found an old camp by a certain spring in the woods some miles away. He assured me that none of his guests would think of venturing out of sight of the house without a guide, and as there were no longer guides to be hired—all the old-timers having steady jobs on the steamboats or in the mill down the river—it was not likely that the camp was occupied.

In the morning I stowed blankets, provisions, and an ax in a canoe and paddled away up the lake, around the point and up a stream that comes into the lake through a part of the forest not yet devastated by the pulp mill Philistines, and then I took the short trail to the camp. The old, open bark shelter was there, but it was occupied by a party of lads who had made it air-tight with tarpaulin, and installed a stove inside with iron pipe sticking up through the roof. They were afraid of the night air, and had sealed themselves up to avoid catching colds. Their camp equipage would have foundered the pack train of a cavalry troop, and it had been transported in big trunks and packing cases. They had all the modern conveniences and comforts of home.

They were good boys, but they were totally ignorant of all the forest laws and of the rights of a stranger in camp; for it is the law of the woods that no man may monopolize an open camp when a forest traveler arrives and seeks shelter. However, I soon had shelter of my own making, and as the boys looked as if they were about tired of camping out, I prepared to stay by the spring, confident that soon I would be alone.

There was one disturbing feature of the situation. Someone had built a closed camp, a small frame house, close by. It was locked and the windows were boarded up, and perhaps it would remain so for a week or two, I thought. Vain thought. Two days later a man came and opened the house and set it in order. I meditated flight deeper into the woods; but the woods might be full of campers, and it would be as well to remain and see what sort of an outfit would turn up.

The next morning a little steamboat came tooting up the creek, shoved her nose against the bank and landed a party of three men and three women, with a wagon-load of baggage, including two barrels of beer, cases of liquor, and a stack of guns. The outfit was installed in the closed camp, and as soon as the trunks were unpacked the newcomers got out the guns and began practicing at marks.

It was still in the close season for game, and the deer had been coming down to the creek fearlessly and playing in the open grassy places. I had sat quietly in the canoe and watched a half-grown fawn play for an hour within fifty yards, and I had heard the bucks at night feeding among the lily-pads in the backwater, and passing my bivouac on their way to an old salt-lick in the woods. No more of that, I thought, when my new

neighbors began shelling the woods. They were up bright and early the next morning to try their guns again, and for an hour or more the forest rang with the roar of their artillery.

Just as well, after all, I reflected, that the wild things should be notified early and thoroughly to get out of the neighborhood before the opening of the hunting season, and my approval of the bombardment became more pronounced when several would-be deer slayers, each one accompanied by a guide, paddled up the stream before night to get into the "flow" on one of the adjacent ponds, and I saw that all of them were provided with jack lights for illegal use in floating for deer. The season would open at midnight, which accounted for the influx of hunters.

Not wanting a deer, and carrying no rifle, the bombardment kept up at intervals through the day by my neighbors of the beer barrels did not worry me, and so I chuckled as I thought of the other fellows floating around in the chill mists all night looking and listening for the game that would not come. It occurred to me, too, that the safest place in the Adirondacks that night would be elsewhere than on any pond in the immediate vicinity, and I wondered if the season would be opened with the usual "mistaken for a deer" incident.

Several of the floaters had tales in the morning of having heard and fired at deer in the dark, and all had excellent excuses for missing. The favorite excuse, given in confidence, was that the man who paddled wiggled the boat at the critical moment. I didn't believe there was a deer within a mile of the flow during the night, and I reflected upon the inscrutable wisdom of Providence that denied to the average "vacationer" the skill to hit anything he thinks he aims at with a rifle. Surely Providence stood watch that night in the Adirondacks.

During the day I wandered deep into the forest, out of hearing of the guns, and sat upon a moss-covered log for an hour or two to renew acquaintance with the wood folk. If one wishes really to meet and know the wood folk, it is well to cultivate the difficult art of sitting on a log.

I had the pleasure of making the acquaintance of a spotted fawn within an hour. The dainty little thing came trotting out of a thicket straight toward me, and stopped, wide-eyed and inquisitive, a dozen yards away. Rather an odd looking stump she thought, perhaps; but obviously a stump, because it did not move. A step nearer, and still no movement. Then she turned her side toward me and pretended to look away, but kept me within the angle of her vision. In a few moments her confidence in the harmlessness of the strange stump was established, and she played fearlessly in the open, jumping over low bushes and capering like a young calf in the fields.

Soon the mother came into view, looking for her little one, and being older and wiser than little Spotted-sides, she had serious doubts about that stump as soon as she saw it. She stopped short, alert and suspicious, glancing alternately at the motionless figure and at the fawn. The instant she caught the attention of the little one, the doe turned toward the thicket with a quick movement that said almost as plainly as words, "Come along, quick. There's danger!" Her head was turned over her shoulder toward the fawn, and her ears were erect and stiffened. In that attitude she made one short, quick step. In pantomime of that expressive sort the mother communicated her alarm to the fawn. Not knowing why or wherefore, the little one bounded to her side, and in a moment they were gone like shadows.

It was worth an afternoon of sitting on a log to see that lesson in caution given to the fawn, and to watch through the screen of a bush for half an hour the busy rummaging of a small black bear through a swamp at the foot of the slope about a hundred yards distant.

When the bear had wandered out of sight in his search for small game among the rotted logs and tussocks, the stump arose, stretched its joints, and went back toward camp.

Early in the morning I tumbled all my duffle into the canoe and paddled down stream to the lake, and thence back to the hotel. Why? Well, mainly because on the way back to camp I heard something "spat" against a dead spruce a few feet from my head, and picked up a .45-90 bullet that had hit the tree hard enough to flatten its nose. Air infected by microbes of that size must be unhealthy.

Arrived at the end of the lake, I beached the canoe, gathered up the duffle and went into the hotel, and in the doorway I bumped against a man carrying a bag of golf clubs. Aversion to the railroad vanished. Any other method of locomotion would be too slow to get me away from the improved Adirondack lake and its hotels with modern conveniences.

Yet, after all, is it anything better than selfishness that inspires us—who like to have a whole county to ourselves when we go to the woods—with such violent aversion to "improved" resorts and summer crowds? The "vacationer" who lives in a hotel goes rowing for exercise and steamboating for pleasure; who calls a trout-rod a fish pole, and is quite capable of losing himself in a ten-acre pasture, possibly gets as much pleasure out of his visit to the lakes as the woodsman gets out of a season of roving in the wilderness. And there are a great many more of him.

It is quite possible that my way of enjoying an outing is not so vastly superior to that of the man with the golf outfit as it seems to me, and as all we vagabonds of the woods are in the habit of assuming. Of course we are the elect, and some of us prate a good deal about "love of nature," as if that were a special virtue distinguishing us from the rest of the crowd and entitling us to special consideration, not to say admiration. Perhaps love of sociability on a hotel porch also is a virtue, and it may be maintained that two barrels of beer are as enjoyable in camp as an insufficiency of blankets and a plethora of bacon and beans.

Suppose we substitute for "love of nature," which is a badly worn phrase and commonly an affectation, just plain survival of the primitive traits in man. But that is getting into the domain of philosophy where the trails are crossed and hard to follow. The common, every-day selfish human nature of the matter is that I despise an "improved" wilderness because the improvements, which make it possible for hundreds to enjoy themselves, spoil my sport and interfere with my enjoyment of what was the day's work of primitive ancestors. ALLEN KELLY.

Rebuild the Earth.—III.

The Result.

It was a fearful drop, but I had the plan. I would proclaim it and save a thousand years of the busy world's time. If there was to be irrigation, there must be water. The only source of supply is what is brought inland by the wind. It has been demonstrated that the freight of the winds is not regular enough unless it can be longer held. The only possible place to hold it is in the hollows between the hills. If floods are to be prevented, water must be held from rushing pell-mell down the slope to the ocean at least until the streams can carry it off without overflow. To hold it would surely supplement all known plans of flood prevention. Every reservoir completed would advance both causes just so much, and help build up a road system beside.

As I sit here I notice that travel on the road in this farming community is represented by three carriages to one lumber wagon; three of leisure and pleasure to one of business. Could the horses that draw the carriages back and forth be put to work on the road for six months the grade over which they travel would be completed. Concentrate the effort, township, county, State and nation, and it is soon done.

The material is nearly all on the ground. A few thousand reservoirs in the Kaw River country would have saved Kansas City and other towns along that stream. A thousand along the upper Cottonwood, and that stream would not have gone out of its banks during the freshet of 1903. But it is not for me to figure. There are thousands of engineers and other officials who are paid large sums to figure out just such problems and act on them. I will simply call attention to the fact.

Picking up a paper, I note that Senator Blank has seen

and comprehended the plan advanced by the Stubville Daily Yell, and proposes to act upon it. All that is needed to make the plan complete is to tack on road grading. On the spur of the moment I wrote thus:

"Senator Blank, Capitol. Dear Sir—I take the liberty of addressing you on a subject I deem of great importance—i. e., irrigation and flood prevention, and wish to call your attention to a plan to reach that end by a system of road grading. Grade all the roads to a level across all dry ravines, and the water that falls on each section of land will be impounded there. Such a system throughout the Mississippi Valley would control the flow of that stream as well as all its tributaries. In most hill countries the ravines have sufficient capacity to hold all the water that falls there until evaporation redistributes it. Such a system would make the half desert lands of western Kansas, Texas, Nebraska, and the Dakotas the most productive lands on the face of the globe. It would make possible the rearing of splendid forest there, and the withered plain could be turned into the most productive farms. All countries would be benefited greatly, whether subjected to extreme drouth or not, by the operation of such a system.

"The building of levees to control the floods after they have gathered is vain, without supplemental work, and only makes disaster worse by its suddenness when they do give way. In detail the floods may be safely controlled. Each reservoir should have its drain to switch the water from sections where it is not needed to other sections where it is; and also for letting the water off gradually where a reservoir proves unequal to its task.

"Irrigation can be accomplished by running the water to the hill top lower down by means of ditches as of old or by the pump system of the Louisiana rice farms. The cost would not be so stupendous as it might seem, and the improved road system would be worth all its cost, while the millions of acres of overflow lands redeemed,

the saving from floods and consequent irrigation would be clear gains. When the battle of the Mississippi is successfully fought, it will be fought not in the valleys, but in the hills. I remain,

"Respectfully yours,

DURHAM, Kas., Nov. 13, 1903.

When an answer came, it was so irrelevant that I could only conclude that the heading and signature only had been read, and the letter answered at random to fulfill the demands of courtesy.

In the meantime, irrigation and good roads conventions were of daily occurrence. To each of these I sent a similar letter. I kept this up for a month, and watched for the upheaval. But no upheaval came. Everything went on as calmly as if no bomb had been exploded among them. One after another they adjourned with a plan to get an appropriation to raise money to make plans for another appropriation. Then I tried the magazines and newspapers, but time after time the cat came back, with a note of thanks, and evidence of not having been even opened.

The Mail and Breeze answered on a postal card that it could not use our article on "Immigration." It might also have added "There are no good articles on immigration unless we write them."

I am in despair. The plan is a good one. In fact, for the purpose in hand, there is no other possible way. Yet I am convinced that there are obstacles in the way which nothing less than the erosion of a thousand years can wear away. The trouble with the ship of progress is in the pilot house. The powerful engines are all in shape and work smoothly; they were made by practical mechanics. The coal bunkers are full. The engineer has steam escaping from the safety-valve. The roustabouts are idle and demanding employment. Where are the pilots?

E. P. JAGUES.

NATURAL HISTORY

Some Animals I Have Studied.

VIII—More About Canine Character.

I BELIEVE I have heretofore declared that, according to my experience, dogs possess a more striking individuality than is observable in any other species of animal lower than man; and that this is one of the most convincing evidences of superiority, of the possession of mind, thinking power—almost reason, even. Dogs can, and do, adapt themselves to a greater variety of conditions than any other beast—than any two others. For instance, take horses and cats—probably the dog's greatest rivals, as to intelligence, in man's estimation*—the world over. Are they found occupying as many positions of their own will, not compelled save by affection for some human being, living under as diverse conditions, as dogs? To make my meaning plainer, horses dislike to be anywhere but on solid ground, and cats are usually afraid of water; yet any even ordinary dog is perfectly happy with the man he loves anywhere, not excepting positions of peril and very evident discomfort. Of course his entire confidence must be won ere he will willingly accompany you in a balloon, or remain in any entirely new and startling position (and this is also true of your human friend), but he can be won to it by love alone, and no horse or cat could be.

Now, I lay down this general rule concerning instinct and reason: The more nearly the individuals of a species are like each other in character, the more they are governed by instinct instead of reason, and vice-versa.

Whenever any animal performs an act unnatural to its species—contrary, say, to its supposed instincts—is it not fair to allow that the act resulted from thinking? If animals think at all, can they not be encouraged to think more than they naturally do? Yes, I say, and guided by this opinion of their powers I need only to be assured of an animal's strong affection for me to undertake cheerfully and confidently to teach it to develop extraordinary and unsuspected powers; and often they astonish me by going beyond my utmost hopes. Understand, I am not a professional animal trainer; only a lover of nature keenly alive to latent possibilities, and always ready to take advantage of every opportunity that comes into a very busy life to drink new inspiration from her inexhaustible fountain.

In writing of "Coallie the Snake Dog," I mentioned her queer self-taught habit of bringing rocks out of the water, and stated that she had been known to carry out some that were quite heavy, but did not say how heavy. Since that writing I weighed one of her larger trophies obtained in water not quite deep enough to swim her, but requiring her to put her head under and keep it there half a minute or more while trying to get a firm hold on it. The rock was not put there at that time, either, nor pointed out to her, but was discovered by herself while she was wading about, and while I was preparing, with the boy Chester, to take a bath. Of course, though, after she had taken it from its mossy bed and was carrying it shoreward, struggling with a zeal worthy of a better cause, we encouraged her by calling her a good dog, and shouting and laughing boisterously.

The rock was white and yellow quartz in black granite, very hard and slippery, and weighed eight pounds strong. She weighs twenty-three. Since then she has brought out a slightly larger looking rock which I have not yet weighed.

Later: The last mentioned rock is still unweighed, but last night (August 1) she found another near the place

whence she brings the greater number of them, and I promptly weighed it after we came back to the house, finding its weight to be a little more than nine pounds. Why she took a fancy to this particular stone would be impossible to tell, but I guess it's because she prefers to do something difficult. It is not only hard and slippery, but it is thick and without any part small enough for her to take squarely between her jaws. She can get but one hold on it, and that is at a very slight steeply sloping projection, and to take hold of it there requires a pressure many times greater than the mere weight. The stone is 4 inches thick at thinnest part (Coallie could, perhaps, open her mouth that wide at the extremity, but when a dog's mouth is opened its widest, there is no power to grip even the lightest object), $4\frac{1}{4}$ inches at thickest, and $4\frac{1}{2}$ by 6 inches wide. It is quartz, stained yellow in every cavity or seam by the action of iron in the water; there is iron in everything here.

I am sorry there was no camera near to take Coallie in her struggling with that very elusive stone. I should like a picture of her in at least two positions—with her head under the water trundling the stone, now this way, now that way, while trying to find a gripable spot; and again, triumphantly wading out with it.

Chester and I rendered such an encore that she trundled it back into the water, using her nose on it as effectively as the scarab uses its hindlegs on the ball of manure, only even more energetically, several times, never stopping until it found some place deep enough to completely cover it, and each time carrying it out with greater ease and skill; although the last time she came out where the bank was steep, so that she had to stand on her hindlegs in order to lift it above the first step. Talk about grit, tireless energy, etc.!

Some day I mean to find how large a stone she can swim with without allowing her head to be submerged. In the Ouachita I once tested her ability and willingness to swim out with quite small ones from a place too deep for her to get to the bottom. Swimming slowly outward, I would call her from the shore, then dive and bring up any stone I could get hold of, and hand it to her. At one time she had gotten directly over me before I came up. I saw her (the water was delightfully clear) and held the stone above my head as far as I could reach as I rose. She was whirling round and round, all alertness, and snatched the stone from my fingers just under the surface! I consider this a valuable experiment. It suggests a number of useful things a brave, gritty dog, so trained, might do in emergencies.

She carried every rock to shore, without hesitation. But none of them were large enough to strain her powers, the largest being scarcely as big as a goose's egg.

We have a much smaller dog than Coallie—a terrier named Gipsy—who was mothered by two cats, Tommy and Lucy, having been weaned prematurely. The weather was chilly at nights, and they slept with her in her little nest, keeping her warm. They adapted themselves to this task of their own accord, and probably not without selfish motives, for the bed was snug and comfortable and in a safe place. Tommy, who was "a mighty hunter," soon began to bring in game and give to her. Sometimes, when he came in very late, and perhaps like other Tommies, with a reprehensible smell to his breath, she would growl at him and refuse to let him come to bed. But he took the rebuke very meekly, and calmly waited for her to change her mind. If Lucy happened to rise and look out at that time, Gipsy would violently throw her out to keep Tommy company. She could easily conquer either or both of the cats at the first, owing to their good nature and her own willfulness and masterful impetuosity, although less than half the size of the smaller one (Lucy), and with undeveloped teeth. Perhaps Mrs. M. was correct when she opined that "Maybe they know she will grow to be powerful here-

after, and are wise enough to try to win her friendship now!"

However that may have been, they did win her. Never, under any circumstances, did they resent any of her rough treatment or erratic ways, or fail in their kindness to her, and she was too proud and honorable to greatly injure any intelligent creature that did not resist.

Tommy would implore her in the humblest manner to let him in. He would reach over the top of the box and rub his cheek against her, even while she was growling, then prostrate himself on the floor, as if to say, in the exaggerated Oriental fashion, "Behold, my queen! I gladly lick the dust that is honored by being near thee," and go through all the well-known ingratiating tactics of felines; and finally she would relent, sigh, and say: "Well, get in, confound you!" and Tommy always understood. My own bed was near, and I suppose I heard the row every time, for I am a very light sleeper whenever there's trouble about.

The three became very affectionate, especially as Coallie, who was at first jealous, carefully avoided the new dog, or threatened her if the latter came near her, and Tommy was always at her service. As Gipsy merged from puppyhood to doghood, Coallie made friends with her, finding that she was not to be treated coldly on the newcomer's account, and the whole menagerie would stand on their hindfeet under the sassafras in the front yard to be fed, bite by bite; no, not Lucy, by the way; she was always bashful, and would not, and still will not, "perform."

Last summer we added a pet pig to the attractions, and he also quickly learned to stand on his hind feet and beg for even a very small bite of bread. The unscientific fact is, too, that he learned the trick merely from watching the dogs, and not with human help. Of course he stood up very awkwardly, but that was all the more amusing.

Coallie has had two litters of pups, and I will now mention another instance of the difference in the disposition of dogs. We went down to the brook with the two grown dogs and took one of the pups along to initiate it into the "Amphibian Club"—composed of certain domestic animals and ourselves. We crossed over and the dogs went with us. After some hesitation, the pup leaped in and attempted to follow us. Unfortunately, in his effort to avoid deep water and select a place that seemed shallow enough for wading (surely a case of thinking, although erroneous thinking), he fell into very swift water and was washed helplessly down stream. Then what happened? Why, while his mother sat unperturbed watching him, as if sure he would make it all right, and smiling encouragingly, little Gipsy walked swiftly out on a willow that almost touched the water, said willow very slender and trembling, directly in his course, and when he was hurled against it she reached out and caught him by the "scruff o' the neck" and jerked him ashore! Another case of thoughtfulness or I don't know what thinking is. It certainly required presence of mind, quick judgment, and no little skill, though the pup was in no real danger, for there was a calm pool a little further down.

At some other time I would like to describe Gipsy's power over almost all other animals hereabouts—a power which I attribute chiefly to a human-like mind, which gives her an imperious, confident, overawing manner toward brutes, while in man's society she is humility itself.

One other tiny dog—also a terrier—I have known who possessed the same mysterious power. I called him Terry, the Dog King, for all dogs everywhere seemed to fear or admire him; even big, surly dogs never known to show respect for small or weak creatures. I saw him catch "old Jumbo" (probably a 70-pounder) by his tail as he was trying to jump over the fence at his own home, and jerk him back into the yard, and the shaggy giant didn't even growl about it, although we expected to see

*Certain unenlightened tribes of men place the monkey in the front rank, and say that it could talk human language, but is too cunning. But it, in its free state, occupies too small a part of the globe to be considered here.

him literally eat the impudent little interfeerer. Woe to any other dog hereabouts that had dared so insult him! But when he turned to look at his captor, who stood bristling, with head held high, chest expanded, growling in a low, authoritative way, he bowed as to a superior—a lawful ruler, and quietly went away. There were more than a dozen men present, and I think half of them witnessed the incident. At another time I saw this insolent little monarch chase a large young hound, who was howling in ridiculous terror, into his own yard, into the very faces of three more (grown) hounds. And then he retreated, slowly and in good order, as they stood growling helplessly. In both instances the punished dog had started to "get after" something in the street, which Terry would never allow. He seemed to consider himself a peace officer.

In my next I shall tell about a pig more remarkable than any I ever heard of. L. R. MORPHEW.

[TO BE CONTINUED.]

"Sleeping" Wild Ducks "Awakened" by "Telepathy."

Populus vult decipi.

Editor Forest and Stream:

When some "students of natural history" who "write" are at a loss for some topic, a standard means of seeing themselves in print is to loudly deny as critics, various statements about animal intelligence that have been made by Mr. W. J. Long or Mr. Seton. These attacks, inaugurated by Mr. John Burroughs, whose especial antagonism to Mr. Long's books is well known, enable the smaller critics to call Mr. Burroughs the "dean of our natural historians," and to speak in reverence (in which the writer joins) of his old age, which is somehow supposed to clinch the truth of their "criticism" of Mr. Long and Mr. Seton.

I have seen the famous swinging bird's nest that hangs by its twine string over the table in Mr. Long's study at Stamford, Conn., and also two or three written certificates that the nest was actually so fashioned and suspended by the parent birds, whose movements, the certificates say, were watched from day to day as the nest was constructed by them. There were further certificates that Mr. Long's equally famous woodcock with a broken leg actually did make, adjust and wear a clay jacket or cast around that leg while it was healing; and that the bird had brothers elsewhere that had done the same thing.

Without venturing an opinion on the merits of these somewhat amusing controversies, and the judgment and taste with which they have been waged in various magazines, it may be stated that some very instructive sidelights have been thrown upon them.

For example, a certain sporting club invited Mr. Long to speak before it at a club dinner. He talked to the hundred or more diners over an hour, paid his own expenses to and from New York to do this, and received no compensation other than what must have been most desired by him—the gratification of knowing that he had been honored by the invitation, and that his courtesy had been much appreciated by brother sportsmen who expressed to him their interest and delight.

More, several members of that sporting club have stated to me that they were present and heard Mr. Long's address, and that they are positive that it contained no direct or implied reference to Mr. Burroughs, much less any mention of his (Mr. Burroughs') name, and that Mr. Long was not aware that soon, at the next dinner of the club, Mr. Burroughs would speak, and attack Mr. Long's books.

Mr. Burroughs did speak at the next dinner, although he stated in opening that he had not expected to do so. Mr. Long, who had been invited to be a guest at the second dinner, was finally quietly advised that he had better not be there.

I was present at the second dinner. The first half of the speeches consisted of a carefully prepared attack on Mr. Long, and the lauding of Mr. Burroughs, who was preceded by a student of the behavior of monkeys in cages. Their observed conduct while thus imprisoned was supposed, by implication, to enable that speaker to say whether birds could build swinging nests, and wear their broken legs in clay casts. At least, "monkeyshines" was about all he mentioned. That speaker smoked eight cigarettes during his talk of one hour: I counted them. Then he retired in favor of Mr. Burroughs, who mentioned Mr. Long by name at least twenty times as one who had published as facts, what he must know were not facts.

Result, a feeling of revolt on the part of a considerable percentage of the members and diners, who in some cases did not hesitate to stigmatize the speeches as the height of bad taste, as showing grievous lack of courtesy and appreciation to a speaker whom they had asked to be their guest, and who had gratuitously journeyed to town and furnished them with a free talk. And several were very bitter, asserting that no one man owned a monopoly of bird lore, and should not be encouraged to believe he did.

That is one side light. It is submitted without comment.

Another side light may be found in a communication or article by Mr. Burroughs in the July issue of Outing. See second column of page 497:

"For some years I have noticed that ducks can seem to 'feel' the presence of the hunter when asleep. Certainly I have found sleeping ducks more difficult of approach than ones whose minds were occupied in feeding, watching, swimming, etc. Here is one example among many that come to mind. Hunting one day on the Hudson, I saw four black ducks (*Anas obscura*), or dusky mallards asleep on a large ice floe. When I paddled slowly near I found the ice so placed that I had great difficulty in getting within gunshot, and only succeeded in so doing after working around the ice, requiring half an hour or more. During this time my mind was most active in getting through these obstacles, hardly thinking of the ducks, who slept soundly without ever looking up. Then all changed; my mind turned on the ducks, so to speak, a furious current as I dropped the paddle for the gun. Instantly up went every duck's head—not one, but all four at the same instant. Time and again, with but one exception, I have had the same thing happen. And this

without showing myself above the battery, or making any noise or rocking the boat or even checking its slow forward movement."

No man ever actually saw two or more dusky mallards (*Anas obscura*) that were all actually asleep together.

I studied and followed ducks during portions of my angling vacations and summers for over twenty years, and not only on the comparatively duck-deserted waters of the Hudson River, but at Currituck, Albemarle, and Pamlico Sounds, in Virginia and North Carolina, and at Monroe Flats, Michigan, Campbell Lake on Vancouver Island, Mabel and Sugar lakes in British Columbia, and along the Seymour and Anesty Arms of the Shuswap lakes. Dusky mallards were at all these places. They swarmed on the east shore of James Bay and along the north shore of Lake Nepigon, flying in separate bands as a rule, but sometimes with myriads of other ducks. I have seen at least fifteen acres of ducks, with many dusky mallards among them, on Devil's Lake in southern Michigan; and there especially, as well as at most of the other places mentioned, I watched the birds through field-glasses from blinds, masked boats, shore thickets, from among tall water-weeds and reeds, and behind bars with my head scarcely above the marsh grass. Often groups of them would come, swimming or propelled by wind, close to shore, around points or into coves; and dozens of times carried right along within from 20 to 150 feet of the field-glasses and the man behind them. I assert with utmost emphasis that I never saw even one group of dusky mallards whose members were all asleep or that all really seemed to be asleep at the same time. Always at least one of the immediate company of ducks, even while burying the end of his bill or part of his head under feather or wing, or while resting his head down close to his back, kept a very keen peep-eye open and busy, watching, acting as sentinel, looking for possible danger signals.

More, how could any man, be his years and observations many or few, know that ducks riding on either stationary or drifting ice upon or along a river, and that he had "great difficulty" in approaching within gunshot, were actually asleep; and not only that, but "sleeping soundly?" No man could tell that, even when within ten feet of them, much less when trying to "approach within gunshot." And what shall we say of the model sportsman and naturalist who, "time and again," drops his paddle and reaches for his gun to shoot at ducks who are not only sitting at rest upon ice, but are believed by that would-be shooter to be asleep?

Does not the above extract from Outing demonstrate that Mr. Long is not the naturalist who should be charged with lack of accurate observation and correct statement, and as asserting something he never knew? I have seen ducks literally by hundreds of thousands right in their best homes, on floating ice in rivers, lakes and streams, feeding in sedges and among aquatic vegetation, or squatted down on shore or bars, singly and in couples, companies, flocks and groups; ducks that were quiet, with heads laid back and with half-closed or shut eyes; and hundreds of times these birds were dusky mallards, or, to be pedantic, the *Anas obscura*. And always without fail, even casual scrutiny through field-glasses showed one or more vigilant members of that duck party. No swoop of eagle or osprey, approach of beaver, otter or fox, bear, seal, hunter, or other danger, would have been unnoticed. I have fifty times reached for my own gun before putting dusky mallards to flight before I shot, and that act merely, with my "mind turning furiously on the ducks," never budged them. But showing myself to the sight of the sentinels raised them instantly. This was the experience of other hunters also.

These watch birds of the dusky mallards may always be known by the slight jerks of their wings at intervals of five to ten seconds, by their sinuous wriggles slowly passing through body and wings; by slower, deliberate expansion and contraction of the feathers of the lower neck and body, by a low quacking that cannot be heard by a human being more than thirty feet distant, and by slow change of the position of the head.

That was the only way in which the four dusky mallards on some ice floe of the almost duckless Hudson were "sound asleep." Yet they were buried in defenseless slumber, with consciousness lost, a prey to dangers, and with "minds not occupied!" Their wakefulness when swimming about is asserted to be a less sure protection than their "sound sleep;" for when an unseen shooter reaches for his gun, no matter how silently, on the same and next instant all wake!

This is asserted to be duck-and-man telepathy!

Numerous other inaccuracies in the writings of Mr. Burroughs could be mentioned. The above is merely a sample.

No sport could be more full of fascination and harmless joy than the pursuit, with field-glass and camera, of web-footed wildfowls in their really remote, undisturbed haunts. Success with the field-glass will then be easy. But real results with the camera will be difficult to obtain. This means careful and patient concealments, alert observation, and availability of the direction, shifting, and power, of the wind and light. Best results mean absolute banishment of the dog and gun, and becoming a harmless part of the environment of the birds that are to be watched and studied. Only such observers as are, in a certain sense, the unintruding guests of the ducks, can secure closest knowledge of them. "Studying" them from parlor-car windows and steamer portholes when a guest of exalted personages, or while using club houses at Currituck Sound or steamers on the Columbia River, and then coming back to New York and writing, "When I was in Alaska" or "At Currituck Sound," etc., means practically nothing of actual truth or knowledge of these birds.

Later, space will probably be requested by me for mention of personally watched conduct of these same dusky mallards; of their pride in the white color of the feathers on the under coverts of their wings, and their display of that ornament during the selection season, when they coquette and mate; and how and from where they gather feathers and down for lining their nest and for covering the eggs when the female temporarily leaves it, the males already having deserted the female right after incubation; and two photographs, secured after several fruitless attempts to snapshot other couples, one of a pair of these birds engaged in building a nest, the important male bird bossing the job, and indicating to the working female what dry sticks, twigs, dead bulrush and plant stalks,

withered marsh grass, etc., it was his lordly pleasure that she should use; and the other photograph showing another pair very busy punishing, with dilated neck-feathers and partly extended wings, a too inquisitive muskrat strenuously defending himself while beating a hasty retreat. Also mention of the slight variations in size and faint green tinge, of the usually grayish-white eggs; and how these dusky ducks turn their heads to look and watch from side to side when in flight; and how, while among thousands of other ducks, they yet as a rule feed and fly in their own groups, doing this also at night while swimming about with surprising restlessness and sleep-destroying quacks, when most of the other ducks are comparatively quiet, the dusky mallards being identified by their own well-defined cries. And specific instances will be added of actual observation in widely separated regions, and not from club houses and trains and steamers, of some other kinds of ducks that either drive away, or will flee from, dusky mallards; and how, when their ducklings are hatched, at the very first alarm the coward father, solely concerned about his own safety, and having already deserted the female, leaves by limited express, while the mother bird remains to share the danger of her little balls of brown fuzz, measuring her own speed of retreat to the swimming or flying strength of her ducklings. Also giving specific instances to show that the scent of this, perhaps the most ceaselessly vigilant and cautious of all the wild ducks, can detect the "wind" of a human presence that has been and remains quite silent, and concealed entirely from the sight of the birds, but from whom toward the birds the wind is blowing. Further, how, while feeding among marsh grass or plants on low or even partly submerged ground, they crossed the trails of then absent sportsmen, detected them by a scent quite as keen as that of a hound on the track of a fox, and flew away.

All this, however, will be another story. If detailed here, each allegation would probably be used as a peg on which to hang a dispute, and thus befog the force of the already demonstrated absurdity of the extract from Outing as quoted above. That method of defense is well known, and cannot be permitted here on the real and sharply defined allegation, denial, and demonstrated inaccuracy. What is vital here, is to emphasize the manifest and stern duty of Mr. Burroughs, viz., that before he criticizes statements about bird life and conduct as made by others, until he reaches a condition of antagonism to them personally (however much he might disclaim that in self-deception), he should first keep himself well within the safe rule for the serious student of nature as laid down in his own admirable words in the August issue of the Century Magazine, viz.: "This" (the truth) "he will not get from our natural history romancers."

L. F. BROWN.

Cyclones.

We had a blow here in St. Paul two weeks or so ago. I was away from home at the time, as, in fact, were all the family, and further than having the yard fence blown down and an attic window blown in, I suffered no damage. Cyclones are measurable in intensity like other things, and while there was certainly some damage done in the way of uprooted trees, distributed chimneys, broken windows, and uplifted roofs, I am inclined to think that in its severity this late blow was a zephyr as compared to the one experienced at Lake Vadnais, in the vicinity of this city, one Sunday evening thirteen years ago.

The storm cloud assumed the shape of a gigantic funnel, whirling and twisting like a top over the surface of the earth, bounding along and seemingly hitting the high spots only.

I went out to see the effects of the storm the following day. As we neared the scene of disturbance, I noticed a plowed field well planted, more or less irregularly, with small tombstones, which proved to be nothing more or less than shingles driven narrow end down well into the soft earth. These came from one of the destroyed farmhouses half a mile or so away. In the middle of the field was planted an immense girder, erect, and several feet in the earth, like a mighty javelin.

Before reaching the banks of the lake, we rode by a tamarack swamp. Of all the inextricable tangles, that was one. Trees uprooted and standing upside down with branches and roots and trunks in one tangled mass, were there by the score. It seemed as if nothing short of a first-class forest fire would or could ever straighten out that mess.

Presently we emerged from the swamp road and came in sight of the lake. Two farmhouses had been there, but now nothing was left but the bare foundations. The houses themselves had been scattered to the four corners of the earth, and the occupants whirled into the lake, whence their bodies were afterward recovered.

In one corner of a demolished snake fence I saw a bundle made up of a bed quilt, a part of a rocking-chair, a lamp-stand, and a window-sash, all wrapped and secured by some strands of barbed-wire fencing into a bundle that defied the hand of man to unloosen except with an ax. The houses had been shaded by a couple of fine trees, which now stood branchless and with trunks naked of any bark and white as the driven snow.

These trees had been in the worst of the storm, for they were filled with seams caused by the torsion of the tornado twisting the tree like unto a rope and then the tree recovering. Against the trunk of this tree, well up, were three dead chickens. One of them had been caught by the head, another by the leg, and a third by the wing. In each case the fowls had been blown into and nipped by the open seams of the tree as they closed when the tree righted itself. At the moment when the seams had opened, the chickens had been carried up against them, and the gaping seams had closed in upon the head, wing, and leg of each bird. There was the tree and there were the chickens, and—wait a minute. I have in my possession a photograph of the tree, showing the birds hanging dead from the surface of the stump, just exactly as I have described it.

The surrounding field of corn was standing, but only a foot or so above ground. The stalks were frayed into threads by the action of the sand-laden wind. The leaves of the smaller trees and saplings that bent before the storm showed the leaves frayed and stripped by the current of sand that swept over them. Many theories were advanced as to why and how the large trees were de-

nuded of their bark. I have always contended that the whirling mass of sand carried along by the rotating cloud simply acted like a gigantic sheet of sandpaper, and rasped the bark loose from the trees. The suction did the rest.

Many and curious are the effects of a wind of this kind. It has been frequently stated that wheat straws have been found driven an inch or more into a fence rail. This is on a par with the fact that a candle can be driven through an inch board.

Somewhere up in the Dakotas I heard of a light of glass showing holes through which a cambric needle could be passed, the holes presumably having been made by particles of sand driven by the wind through the glass. I think this story is a matter of evidence, and is on record in connection with some evidence given in a matter which arose in relation to a tornado insurance case. I will admit myself that I have wondered how the glass withstood the impact.

When this cyclone hit Lake Vadnais, I was at River Falls trout fishing. The rain commenced about 5 P. M., and then it began to hail. I can remember a cow in an adjoining pasture driven almost frantic by the ceaseless pelting of the hail stones. Lightning played vividly until dark, the sky assuming a brassy hue that lasted all during the night. Every time the electric fluid lighted up the sky we could see the ugly, brassy clouds above. I remember the night well, for it was my fate to sit up with a sick comrade who was as near the cholera without actually having it as one could imagine.

All night long the lightning flashed and mirrored back the brassy clouds. And ever since then a high wind, lightning, and a collection of brass-hued clouds has led me to believe that there was "something doing" in that quarter.

On the prairies of Kansas, cyclone cellars—dugouts sometimes connected by a passageway from the cellar—are in order, and as far as they go are all right in their way, but the propensity of running into one's house cellar during a cyclone, in a case of fire accompanying the collapse of the house, becomes a very serious undertaking. Cyclones may be necessary now and then to clear up the atmosphere, but if they must come, it's just as well that they be over in the next county. CHARLES CRISTADORO.

A New Sheep from Kamchatka.

In the Bulletin of the American Museum of Natural History, Dr. J. A. Allen describes a new sheep from Kamchatka, which is to be known as Storck's sheep. Mr. Allen writes:

"The Museum has recently received from Mr. George H. Storck, a well-known fur dealer and taxidermist of this city, two fine skulls of sheep from Kamchatka, representing two species, one being the *Ovis nivicola*, and the other an apparently undescribed species. Both were obtained in that country personally by Mr. Storck, and their history is thus beyond question. The *nivicola* specimen was taken between Milko and Petropavlovsk, southwestern Kamchatka; the other 'was taken about 110 verst east of Fort Tigil on the west side of Kamchatka.' Mr. Storck adds: 'I have seen several skulls up there, taken in that section, and they are all the same; that is, the horns are thin at the base and have a double curve. * * * Specimens of this sheep are very hard to get, as they are found only in the central range of mountains in the northwestern portion of Kamchatka; and it is the most difficult place to travel in that I have ever faced, both on account of the roughness of the country and the almost constant storms that rage all

through the winter, which is practically the only season when one can travel in the interior.'

"The Fort Tigil specimen is strikingly different from any previously described species, having somewhat the type of horns of *Ovis ammon*, but it is much smaller than any of the known forms of the *O. ammon* group. It may bear the name of its discoverer, and be called *Ovis storcki*, sp. nov.

"In answer to my inquiries about the occurrence of white bighorns in Kamchatka, Mr. Storck's reply is of interest, as he has traversed the whole interior of the peninsula, from north to south, on commercial expeditions for the purchase of sable and other furs. He says: 'In reference to white mountain sheep, I do not believe that any exist in Kamchatka. I have never seen or heard of any, or seen any fragments of skins. If there is such a sheep it must come from north latitude 59 degrees. That part of the country is never hunted; it is inhabited by wandering Koraks, who live entirely on the reindeer, and never kill anything except wolves, and then only to protect their herds.'

Grouse for Stocking.

STAMFORD, N. Y., Sept. 10.—*Editor Forest and Stream:* A fund has been raised by the sportsmen of this town with which to try the experiment of interbreeding the ruffed grouse with a view to increase the number in coverts. If you can tell me where live birds can be procured you will greatly oblige me, and assist this laudable enterprise. Is it legal to import them from Canada?

G. LENOX CURTIS.

[The birds might be supplied by E. B. Woodward, 302 Greenwich street, New York. For permit to import from Canada, apply to the Secretary of Agriculture, Washington.]

GAME BAG AND GUN

Success at Last.

ON September 8, with my friend, W. W. Tracy, we were met as the train rolled into Boiestown, N. B., by my guide, Daniel Munn, whom I had engaged on my trip of the year before to take us to the home of the big antlered moose, and by that whole-souled purveyor of quaint hospitality, Ambrose Holt, of Pleasant Ridge, who was ready to drive us seven miles to his farmhouse, where we were to stop over night on our way to the woods. Our greetings were hearty. In response to my inquiry if there were many signs of game this fall, Daniel said, "Yos, there be plenty." Continuing, "Archie saw the largest moose the other day at Harris Lake that he ever saw." This was encouraging. Archie had returned only a few days before from the Dungarvon (whither we were bound), where he had spent part of the summer in place of Daniel, who had been with a gentleman from Connecticut on a salmon trip, as warden on that stream. After the greetings were over, we found Mr. Adams, who relieved us of several "cart wheels" for some yellow bits of paper, which gave us permission to shoot one moose and one caribou each. Besides our own, we also secured one for Daniel, Archie, and Thos. Munn, who were to accompany us as guides and cook. Soon we were off, stopping only once at Thibodeaux's, where Daniel had had our provisions put up for our six weeks' trip, until the Holt farm was reached.

We awoke by 5 A. M. the next morning, and after breakfast packed our duffle for the woods. We found plenty of trees across the logging road, and with four to handle the axes, we made but slow progress with our heavy load, part of which we were obliged to leave for the team to come back for later. We made camp near Salmon Stream, pretty tired after our first day's tramp, not having seen any big game, although moose and deer signs were plenty. Partridges, however, were much in evidence. We counted fourteen spruce in one covey.

Early in the morning we started again. No game, but lots of birds were seen. Will was anticipating great sport with the fly-fishing, for which mainly he was going into the woods, although he proposed to keep a weather eye out for fear a bull should charge him in the two or three weeks he was to stay.

By three o'clock we reached the fish house of Mr. Neal's of Fredericton, who had been guided by Daniel for seven years, and who had kindly given him permission to use it on this trip. We at once started for the dam at the foot of the deadwater, about a mile from camp, and here it was a pleasure to see Will catch trout enough in half an hour weighing from ¼ up to 5 pounds for the supper and breakfast for six hearty eaters.

By the time we got back to camp the others had come and were making things ready for the night. It did not take Thomas long to cook the fish. We began to realize the pleasures of camping in the deep woods where fish and game were plenty. We had some time on our hands before the season opened on the 15th.

Daniel sent Archie to get his canoe, which he had left about a mile below camp hid in the bushes, but he found that someone had "borrowed" it and had forgotten to return it. This caused us all much concern, as we had planned to use it in hunting the deadwater with. But the guides were equal to the occasion, and by night they had made a raft which under the circumstances answered our purpose very well.

September 12. Will and Daniel went up the deadwater to try the fishing and to look for game signs. They got plenty of fish, and reported fresh signs abundant. Archie and I went on a tour of investigation to Harris Lake, thence to the big barren. We saw some ducks and lots of partridges. At the lake it looked as though there had been a big drove of moose there all summer. The shore was all cut up with the many fresh tracks, mixed in now and then with the round hoof marks of the caribou.

When we reached the barren we found the signs just as plenty there, too. It was then that we wished it were the 15th, and we wished so a good deal more a little later, when, coming away from the bog, we met a bull headed for the barren. We admired for a moment or two the 12-inch palms he carried, and as he trotted off expressed the wish that he would hang around a few days longer, when we were in hopes to call again.

On our way back I nearly stepped on a porcupine, which I did not notice in the twilight. Watching him moving off in his slow, peculiar way, Archie asked, "Why don't you shoot him?" "What for?" I asked. "For game," he said. I preferred other game, I thought, and did not believe in killing anything that I did not have a use for. A gentleman who was with me on a previous trip seemed to have a perfect mania for destroying every porcupine he came across, even killing one in the tent, where he had taken refuge; afterwards he spent two or three hours trying to pick up the quills scattered around.

On the 13th we all went up to the deadwater at the dam, where Will, Daniel and I took the raft and went up the river. We had not gone more than sixty rods when a good bull swam across a bog only a short distance ahead. When he got across as he went ashore he acted as though he had got a faint scent of us, starting to run one way, then changing right back again, not seeming to know just where the scent came from. At last he took a course right to the west and was out of sight.

Next day the guides cut out the trails to the Peaked Mountain lakes and felled trees so that we would be able to get across the streams.

On the morning of the 15th we got an early start, Will with Daniel heading for McConnell Brook barren and Harris Lake, while Archie and I took the trail for Bamford Lake. Neither had been there before, but just at noon we came in sight of it. We saw a moose just coming down to the water's edge; he stood some time looking around, then, taking a long drink, waded out. There was a moose path around the shore which we followed, getting within fifteen or twenty rods of him. We saw that he had only a small set of antlers, so quietly watched him. He seemed to enjoy himself hugely as he waded and swam around after the lily-pads for half an hour or more.

As he was working our way, I thought of the camera which we had left with our dinner when we first saw him, and sent Archie back for it. He had gone but a little way when I noticed the moose started as a change of the wind carried the scent to him. Swimming to the shore he trotted across the bog, stopped for a moment, then disappeared in the woods.

At camp we found the others had returned before us. They seemed very much excited, and they could not eat until they had told all about "their troubles." At first they went to the barren and stayed until well into the afternoon. Not seeing anything, they went to the lake. They had been there but a little while when two deer came in at the lower end. While they were watching these, two moose came in on the opposite side. Then interest centered in their direction at once. After half an hour they saw the bull come out of the woods and cross the beach to get a drink. He had a very large set of antlers, but was too far off for a shot (about 500 yards). He turned and went back into the edge of the woods again to wait for the cows. Daniel proposed that they work their way around the pond and try and sneak up to him, for he rightly judged that he would not leave while the cows were in the water. Proceeding cautiously they had gone nearly to where the cows were still feeding on the lily-pads, when Daniel, who was a few steps ahead, saw the old fellow standing broadside directly across the path they were following, some six or eight rods from them. Leaning far back to one side, he motioned to Will to shoot, but Will did not see the bull nor understand his signs, so he stepped up and asked, "What?" When he spoke, away went the bull. He saw him then, but too

late to shoot. They were so near that Daniel could almost count the points on the wide blades, with a spread of about 5 feet; he thought there were about thirty. They were greatly disappointed to lose the chance of getting the big head, but pleased to think they had seen three moose the first day of the season. On their way back they counted eighteen partridges.

The next day Daniel and Will went to Bamford Lake, where they saw a bull, but with small antlers, and started another. I went to Harris Lake and the barren, and saw only a porcupine and a doe, which I tried to photo at thirty feet, but was a little slow; she jumped when I was trying to center her in the finder.

September 17 it rained all night and to nearly noon. Will with Archie went to the deadwater, but did not see any game, while Daniel and I started for Bamford Lake. Just as we came in sight of Peaked Mountain barren in a bend of the path we met "Tim Lynch" not over twelve rods away, his antlers reaching across the logging road we were following. I was ahead when I saw the big fellow as he stood facing us. I raised the rifle, and as I did so, Daniel, who had just come up close to me, said: "Shoot quick! Shoot quick! Shoot quick as lightning or he will jump!" This disconcerted me, and I fired before I had the sights fairly on him. He made one or two jumps and was out of sight. We followed him some distance by a few drops of blood now and then, but he went to a hardwood ridge and although we managed to find blood for about a quarter of a mile, it seemed to stop, and we lost the track and the widest set of antlers I ever saw. After it was all over, Daniel remarked, "I never saw nothing like it." Apparently the beams extended out 18 inches before the palms began to widen, then there were wide palms spreading out as they extended very high, and with the extreme top points spreading out on each side 6 or 8 inches more. No wonder we both exclaimed that it was a 6-foot spread. I am well aware that it is almost as hard to find an authentic case of a 6-foot head being taken outside of Alaska as it is to pick up hen's teeth in the winter. Nevertheless this one had every indication of reaching or even exceeding that much looked for size. It goes without saying that we were bitterly disappointed, but took our medicine as every moose hunter should. There seems no reason, excepting Daniel's great haste for fear the moose would jump, causing me only partly to get my sights in place, why I should not have got him. Perhaps some may say that it is only the big fish that get away. However, to illustrate the great spread of the antlers, suppose we call the distance between the burrs 7 inches, beams extending out 15 inches instead of 18 inches, as these looked to be, the very long blades only 12 inches each instead of 15 or 18 inches, spreading outward, and the tip points spreading out at least 6 inches more. This makes 73 inches. I honestly believe a tape would have shown at least the 6-foot mark, perhaps more.

September 18. Weather clearing up. At the McConnell Brook barren Daniel called out a big bull, the first one that had answered. He came out on the opposite side of the barren about 400 yards off, but would not come any further, and while they followed the edge of the barren for a quarter of a mile, they could not cross a deadwater nor get any nearer, so they did not shoot.

September 19. We had not had any moose meat yet, although we had had chances to get small specimens which we refused, and as Will was only intending to stay about two weeks, we decided to get the first one with antlers that we could. Well, that evening found us with one to our credit, but with only a spread of 41 inches. However, the meat came in handy at that time. We saw one deer to-day.

September 21. Will and Daniel saw three deer at Bamford Barren. I went to the deadwater; saw a dead salmon of about 15 pounds which probably had been killed with dynamite.

September 22. Archie started for the settlement for a

team to take out Will and his moose head, as his time was about up. Daniel and Will went for a few fish for dinner. While they were on a raft fishing, a bull with a good set of antlers came down to the water about fifty yards from them. They watched him for a few minutes, when he turned and went back to the woods.

September 23. Went to Bamford Lake. When I was coming back, heard something break a stick only a few rods away, followed by an inquiring grunt from a bull. I could not see him, but listened for four or five minutes to the low grunting, then decided to try and sneak up to him. Went toward him a little way and stopped; not hearing anything, gave a low call, which started him right in front and not over three rods from me. But I was too slow and lost the chance. That evening Archie came back with William and his team. Said that he had seen two bulls and a cow on his way out. He had to climb a tree, as they came by him in the road, and he did not have a rifle. He said that one had a fine set of antlers, and he had a good chance to examine them, as they went by within ten or twelve feet of him. Will proposed to start for home in the morning. Daniel had been troubled with a sore ankle for four days. It was paining him a good deal and was becoming worse, so advised him to go out to the settlement and have a doctor attend to it. I agreed to wait at least two weeks for his return, hoping that he would get back in time for the calling season, which evidently, owing to the very warm weather, was extremely late.

September 24. Will got an early start for home, having had a very pleasant time. From this time until October 2, Archie and I hunted faithfully every day all the surrounding country within a radius of fifteen or twenty miles, seeing some moose, but nothing that equaled our expectations. Late one afternoon as we were coming toward camp, Archie said: "Look at those two porcupines." Looking in the direction he pointed, I saw one of them, but not the other, so I went into the bushes, and just as I came in sight of him, he was going across a small open space. Then I noticed it was a small bear cub instead of a porcupine. I did not suppose that a bear and a porcupine would be together.

October 2 we selected a new route to a distant pond, and from a point of observation on its shore Archie saw two moose some 200 yards away, standing in the bushes near the edge of the water. They were cows. It seemed as if they wanted to go into the water; but for some reason each one evidently was waiting for the other to go. One would go in a few steps, then the other would start the other way, and the first one would come back. This was repeated several times, and led us to mistrust that perhaps they had other company near, and were showing signs of much jealousy. It was not long before we heard the grunt of a bull. Then the cows soon waded out, and evidently enjoyed themselves drinking and swimming around, biting off the lily-pads now and then.

Our interest centered in the direction the bull was coming, as we could tell by his frequent grunts; but half an hour elapsed before the old fellow broke through the bushes and stepped out in full view. He had enormous antlers.

For full five minutes he stood facing us with head erect, taking in his surroundings, and making a grand scene for a camera. Then he lowered his head and drank so long that we looked to see if the pond was lower. Raising his head he looked for a moment or so toward the cows, then turned to go back. This was the opportunity I was looking for; I was on my knee with rifle ready, and as he turned and exposed his shoulder, I fired, and missed. Turning back again to see where all the noise came from, he again faced us. Getting on to my feet I looked for a place where I could see him through the bushes (we were about five rods from the water), and finding one waited for him to turn again. For nearly ten minutes he stood without moving, then slowing swung his great antlers round and took one step backward. As his shoulder came again in view, the express rang out, and down he went as if struck by lightning. The rifle was a .50 caliber, 130-440 charge. Going to the edge of the water we watched to see if he would attempt to get up, but he did not; so we started to go around the pond to where he lay. We had got nearly to the upper end when we heard another bull grunt several times, calling the cows which were still in the water. When we got nearly abreast of them they decided to leave their dead mate and away they went in a hurry. A few steps more and we came in sight of our game. One of the big antlers with its 14 points was out of sight in the mud and water. Here our troubles commenced. First we took a snap with the camera just as he fell, showing both the game and the point 200 yards away where we stood when I shot him. Then we scoured the woods for logs to place in the water so we could get out to him. After working two hours we found that we could not move him at all, but had to give it up and go back to camp, intending to bring an ax in the morning. I suggested that we use our compass and blaze a way over the ridges in an almost direct line toward camp. It was hard work with our knives, but we managed to save about three miles, and in due time reached the supper that was waiting. Daniel came in that night. This was the second time we had been in luck to-day. He had a story to tell. Starting before light that morning, he had made about six miles from home when he heard some moose. With his birch horn he called a few times, the bull coming so close that he backed out of the logging road a few steps, so as to be handy to a tree in case it charged. Soon it came in sight about two rods from him; placing the sights on the shoulder he fired, then again and again, as rapidly as he could work the lever of the .38 Winchester. At the fifth shot, down the bull went, and another one finished it. After having shot six times, and as he was admiring the pretty set of antlers, spreading 42 inches, he heard another bull. Once more taking up the horn, he gave a low call, then another as the game came in sight with two cows. This one had a fine big set of antlers, large in every way, but Daniel had his quota and was obliged to wait for the one with the big head to leave, so that he could attend to the one he had. All three stayed there ten minutes, the bull standing within ten feet of the dead one all this time, before leaving. Daniel quickly dressed the game and went back to the settlement for help to get him home. Then giving directions for taking care of it when it reached his house, he shouldered his pack once more and started for camp. He was pretty tired after his long walk, for it was twenty-six miles from his home to camp, and

he was in four miles when he killed the moose, and went back to the edge of the settlement, four miles, and back again, making thirty-four miles he footed it that day.

By day-break Thomas called us to breakfast, and soon we were off. Crossing the river on some logs we had arranged there the evening before, they started in to brush out a trail to get the big head through. When we reached the pond, a little after 10, Daniel admired the big antler sticking up out of the water, but incidentally remarked that it was a small moose even if it did have big antlers. I thought he would be very apt to change his mind before we got it out of that hole. For the next two hours we put in some of the hardest work I ever did on my hunting trips. Finally, with the aid of the rope by means of a lever pulley, as the pointer noted the noon hour we got the carcass on to solid ground, only eight feet from where it had lain. Not until then did we have a chance to see the huge proportions and examine the very long, widespread antlers (over 5 feet), with their extremely even points, 14 points on each side. At last Daniel broke the silence: "What a big moose! What awful large antlers! Never saw one that would begin to compare with it." A friend with me in the same region in 1902 got the largest one secured in New Brunswick that year, and had it set up free of expense by Emack Bros., of Fredericton, who had advertised that they would mount free the largest head got in New Brunswick that season. Although the head secured by my friend was an extremely large one, this was much larger and much more symmetrical, the first five brow points on each side being almost as near alike as two peas. We were all very willing to rest a while as the kettle boiled again for dinner. Hanging up all the meat but one hindquarter, we at last started for camp. Daniel went first with the head with its weight of about 95 pounds. It afterward weighed, when thoroughly cleaned and the bone, etc., inside chopped

READY TO SLED IT OUT.

out, leaving only the shell, 64 pounds. Then came Archie with a leg of meat, and I with a whole load in the scalp. We were a tired though happy lot when we struck camp that Saturday night. After breakfast the next day, Daniel and Archie started for a load of the meat, while I stayed to salt the scalp. Two young men from a near-by lumber camp appeared on the scene. Their surprise was great when they saw the antlers, which they greatly admired. Just before they started back one of them said that Mr. Rice, the genial photographer of Boiestown, was at their camp. Being acquainted with him and Mr. Pond, the foreman in charge, I sent an invitation to them to come down to our camp to see the head, and at three o'clock they came.

The next day we went together to a barren ten miles away; I in hope of meeting one of those "woodland tramps," he looking for a moose to equal mine. When we got there we found a large beaver dam nearly twenty rods long and two empty houses. We saw where the beaver had been caught the spring before, and noticed the stakes used to slip the chain ring over, also where the trappers had cut the dam twice to set their traps, the last time almost to the very bottom to catch the last one left. It is a pity, but it seems that, in spite of the law, the last one will soon be caught, and it will not be long before the beaver will be numbered with the buffalo. We drew a blank as to moose, and the following day, too. Daniel called a bull up very close, but the fickle wind spoiled their chance before he came in sight. Mr. Rice stayed a few days longer, and while the moose were plenty, still he was unable to find what he was looking for. We greatly enjoyed his company. I afterward saw him at Boiestown, and he told me that as he was passing McConnell Brook barren on his way out he had called out a big bull, but could not get near enough for a shot, and did not see any more.

The next day we went to the region where Will got his moose, and found that a bear had nearly finished what was left there of the carcass. The track, deeply indented in the hard ground, showed that he was very large and heavy, so we decided to build a deadfall for him. It took us all day to build it, for we wanted to make it heavy and strong enough to hold him sure, if he got into it.
